HISTORY

Four-footed Beasts

AND

SERPENTS:

Describing at Large

Their True and Lively Figure, their several Names, Conditions, Kinds, Virtues (both Natural and Medicinal) Countries of their Breed, their Love and Hatred to Mankind, and the wonderful work of God in their Creation, Preservation, and Destruction.

Interwoven with curious variety of Historical Narrations out of Scriptures, Fathers, Philosophers, Physicians, and Poets: Illustrated with divers Hieroglypnicks and Emblems, & e. both pleasant and profitable for Students in all Faculties and Professions.

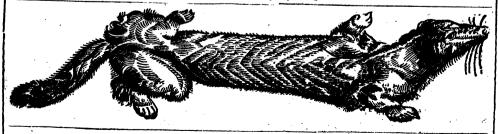

Collected out of the Writings of CONRADUS GESNER and other Authors,

By EDWARD TOPSEL.

Whereunto is now Added,

The Theater of Insects; or, Lesser living Creatures: As Bees, Flies, Caterpillars, Spiders, Worms, &c. A most Elaborate Work: By T. MUFFET, Dr. of Physick.

The whole Revised, Corrected, and Inlarged with the Addition of Two useful Physical Tables, by J. R. M.D.

LONDON:

Printed by E. Cores, for G. Sambridge at the Bible on Ludgate-hill, T. Williams at the Bible in Little-Britain, and T. Fohnson, at the Key in Pauls Church yard. M DC LVIII.

TO THE RIGHT HONOURABLE

THE

Lord Marquesse

OF

DORCHESTER.

Earl of KINGSTONE,

Vicount NEWARKE, &c.

My very Noble Lord,

Our Lordship well knows that Honour attends upon Virtue, as the shadow doth upon the substance; there is such a magnetick force in Goodness, that it draws the hearts of men after it. The world observes that Your Honour is a great Lover of the works of Learned Writers, which is an infallible argument of an excellent mind residing in You. Wherefore I here humbly offer unto Your

Noble Patronage the most Famous and Incomparable History of CONRADUS GESNER, a great Philosopher and Physitian, who by his vast expences, and indefatigable pains, Collected and Digested into two Volums, what ever he found scattered here and there in almost infinite Authors, concerning Fourfooted-Beasts and Serpents, adding also what he could possibly attain to by his com experience, and correspondence held with other famous Scholars every where. After him Mr. Edward Topsel a Learned Divine, Revised and Augmented the same History; as it is not altogether so difficult to add something to what is first begun, and to build upon such a foundation which was before so artificially laid. He hath deserved well of our English Nation in so doing; and the more, that he doth mith fo much modesty attribute the praise of the whole work to the Master-workman to whom it was chiefly due. The same Gesner, after Mr. Edward Wotton had begun, undertook to compose the History of Insects; which as it is a business of more curiosity and difficulty to write exactly of; so all things considered, they ferve as much to fet forth the Wifdom and Power of God as the greatest Creatures he hath made, and are as beneficial to Mankind, not only for dainty Food, but for the many Physical uses that arise from them. John Baptist fed upon Locusts and

The Epistle Dedicatory.

wilde Honey, and we read that our Saviour eat a piece of a Honey comb. Thele little Insects are not so contemptible as the World generally thinks they are, for they can do as much by their multitudes, as the other can by their magnitude, when as one Hornet shall be able suddenly to kill a Horse, and Gnats, Ants and Waste to bid resistance to Bears, Lions and Elephants, and to depopulate whole Countries. The Frogs, Locusts, and Lice, were none of the least Judgements in the Land of Egypt. Mr. Thomas Pennius, another Physitian, lighting his Candle by the former lights, succeeded them in this great undertaking. But all these vigilant and painful Men never could bring it to perfection, being every one of them prevented by death. And indeed, things of deep search, and high concernment are very seldom begun and ended by the same persons. Hippocrates gives the reason for it, that Art is long, Life Shore, Experience difficult, occasion precipitate. Judgement uncertain. I may fay farther, which he also comprehends in the close of that Aphorism, that all must perform their several offices: which is not often done, but ingenious men frequently labour under the want of means, and find [mall encouragement to proceed in their great designs, especially in this latter age of the World. Gesner makes a sad complaint in behalf of himself, and Topsel doth the like, and so do all the rest who spent their Estates, and wasted their Spirits for the common good. Which is sufficient proof to convince many rich men of blindness and ingratitude, and confirms that truth the Poet speaks;

> Haud facilè emerguunt, quorum virtutibus obstat Res angusta domi

Good and well meaning men cannot proceed, Virtue is crushe by want, opprest by need.

After the death of the forementioned four Worthies of their times, Mr. Thomas Muffet a noted English Physitian undertook the same task, and compleated it; whose Encomium is excellently well penned by the late Honourable Doctor of Physick Sir Theodore Mayerne, in his Epistle to Dostor William Paddy of samous mes mary, premised to this Book; Wherein to his own immortal praise, he hath so Anatomically diffected many of the chiefest Infects, even to admiration, that he hath let the World understand by it, that be was a deep Philosopher, and a most accurate searcher into the secrets of Nature, and worthy of those places of Honour he enjoyed in Great Princes Courts. This large History is not, nor could possibly be the production of one Age; both able Divines, and Physitians contributed what they had. and employed their Talents, and greatest studies, for many years in their severall generations, to bring it forth; whereby it may appear bor necessary this Work is for the fouls and bodies of Men, to teach them to know the Wifdom and Omnipotence of God in the Creation of these Creatures, and Goodness to bestow them upon Man, both for profit and delight; and though many of them be Dangerous and Venomous, yet they were not so when God first made them. For the Wiseman faith, That God made not death, neither takes he pleasure in the destruction of the living, for he created all things that they mighe have their being, and the Generations of the World were healthful, and there was no poison of destruction in them, no Kingdom of death upon the earth, but ungodly

The Epistle Dedicatory.

men by their wicked works and words, called it to them. This Book will plentifully furnish us with Remedies against most of these inconveniences, which is no small occasion to put us in mind how much we stand obliged to the memories of the learned Authours of it; who spared no cost nor pains that they might prove beneficial to the then present, and to succeeding Ages. And the same reason is very strong in behalf of those who now have been at this vast charge to Reprint and to perfect the same, that it never should be lost by time or casualties, which consume all things; and to supply the whole Work with a double Physical Index, to ease the Readers labour, that he might not wander up and down, and lose himself in this great wilderness of Beafts and Insects, searching after that he stands in need of but may in an instant be provided with all those known remedies these several Creatures can afford him. Should such a Fabrique as this decay and come to ruine, the dammage were unspeakable and irreparable; the Mausolean Sepulchre, the Colosfus of Rhodes, or the Pyramids of Egypt might sooner be renewed and built again. Wherefore Men are bound in conscience, by the Laws of God, of Nature, and of Nations, to confider of the great Expence and Pains now taken in it, and to promote the Work to the best advantage of the present undertakers for the publick good, who have now brought it to this perfection, that they may fay of it, what Ovid did of his Metamorphosis;

> Jamque opus exegi, quod nec Jovis ira, nec ignis, Nec poterit ferrum, nec edax abolere vetustas.

The Work is ended, which can envies fume, Nor Sword, nor Fire, nor wasting time consume.

Never was there so compleate a History of the Creatures as this is since the daies of Solomon, who writ the story of Beasts and Creeping things: and indeed it requires a Kingly Treasure and Understanding to accomplish it. And Petrus Gillius writes, that in former Ages, all the Histories of Creatures were compiled by Kings, or Dedicated to them; who are best able to bear the charge of it, and most fit be honoured with it. What would the World now give for that Book of Solomons, which by the negligence of ungrateful men and length of time is utterly lost? How highly then ought we to esteem of this History of Gesner and Musfet, which is inferiour to none but that? For what Aristotle set forth upon this subject at the appointment of Alexander the Great, and for which he received from him 490 Talents as a Kingly reward, is all comprehended in this, with the addition of many hundreds more that have travelled in the same way. Orpheus, whom the Poets so much magnifie for drawing the Beasts after him, could do no more with all his melodious harmony, then these famous and ingenious Men have done. And because I cannot but think, what the Poets fancied concerning him, was but an Hieroglyphical representation (according to the dim light they had) of all the Creatures coming to Noah into the Ark, this History seems to me to be like another Ark of Noah, wherein the several kinds of beasts are once again met together, for their better preservation in the understanding of Man, & however there were multitudes of Birds in the Ark which are not here (it may be because Aldrovandus and others have written

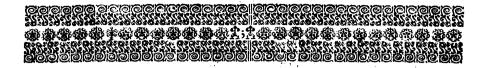

The Epistle Dedicatory.

written largely to that purpose) yet here are abundance of Insects that never were in Noahe Ark, and whereof we never had, or we can find extant, any compleate History untill this was made: which is like to another Paradise, where the Beasts. as they were brought to Adam, are again described by their Natures and named in most Languages; which serves to make some reparation for the great loss of that excellent knowledge of the Creature, which our first Parents brought upon their posterity when they fell from God. We read in the 10th of the Acts, that when a veffel was let down from heaven wherein there were all manner of Fourfooted-Beafts and Creeping things, that St. Peter wondered at it: who then can choose but admire to fee fo many living Creatures that Nature hath divided and scattered in Woods, Mountains and Vallies, over the face of the whole earth, to come all together to a general muster, and to ast their several parts in order upon the same Theater? I confess there are many Men so barbarous, that they make no account of this kind of learning, but think all charge and pains fruitless that is imployed this way : shew. ing themselves herein more unreasonable and brutish then the irrational Beasts. For next unto Man are these Creatures rankt in dignity, and they were ordained by God to live upon the same earth, and to be Fellow-commoners with Man: having all the Plants and Vegetables appointed them for their food as well as Man had: and have obtained one priviledge beyond us, in that they were created before Man was; and ever fince they are obnoxious to the same casualties, and have the same coming into the World, and going out that we have; For that which befals the Sons of Men befals Beasts, even one thing befals them both, as the one dyeth, so dyeth the other; so that Man hath no preeminence above the Beasts. All go unto one place, all are of the dust, and all return to dust again: Eccles. 3. 19, 20. And the Prophet David doubts not to compare Man being in honour, and having no understanding, unto the Beasts that perish. As for Minerals, they are yet another degree below Beafts, all the Gold, Jewels, and Diamonds in the World, are not comparable to any one of the meanest Creatures that hath within it the breath of life. God hath bountifully bestowed them all on Man, whom he bath advanced above them all, for food, and raiment, and other necessary uses; also for his pleasure and recreation: and so long as we use them with Sobriety and Thankfulness, we shall finde an infinite benefit and advantage by them; but when we prove ungratefull unto God, they become fo many Instruments of his vengeance against sinners, to make up that fourfold Judgement, with the Sword, Famine, and Pestilence, the Prophet threatens the Jews with. I fear to be tedious, therefore I befeech Your Honour to accept this History in good part from him who humbly prayeth for Your Lordships temporal and eternal happines, and who is

Your Honours most affectionately

humble Servant

JOHN ROVVLAND.

To the Reverend and Right Worshipful RICHARD NEILE, D. of Divinity,

Dean of Westminster, Master of the Savoy, and Clerk of the King his most Excellent Mai ties Closet: all felicity Temporal, Spiritual, and Eternal.

HE Library of English Books, and Caralogue of Writers, (Right Worthy and Learned DEAN, my most respected PATRON) have grown to the height, not only of a just number, but almost innumerable : and no marvel for God himfelf hath in all ages preferved Learning in the next place to Life; for as Life is the Ministerial Governor and Mover in this World, so is Learning the Ministerial Governor and Mover in Life: As an Interpreter in a strange Countrey is necessary for a Traveller that is ignorant of Languages

(or else he should perish,) so is Knowledge and Learning to us poor Pilgrims in this our Perigrination, out of Paradise unto Paradise; whereby confused BABBLS tongues are again reduced to their fignificant Dialects, not in the builders of BABBL to further and finish an earthly Tower, but in the builders of JERUSALRM, to bring them all to their own Countrey which they feek, and to the defired rest of souls. Litera obstetrices artium, quarum beneficio ab interiin vindicantur. As Life is different and divers, according to the Spirit wherein it is feated, and by which it is nourished as with a current; fo also is Learning, according to the tast, use, and practise of Rules. Canons, and Authors, from whom as from a Fountain it taketh both beginning and encrease: even as the spirit of a Serpent is much quicker then the spirit of an Ox a and the Learning of Aristotle and Pliny more lively and lightfome then the knowledge of other obscure Philosophers, unworthy to be named, which either through Envy or Non-proficiencie durft never write. Si sum hac exceptione detur (apientia, ut illam inclusam teneam, nec enuntiem, rejiciam. Nullius boni fine focio jucunda est poffesio. And therefore I fay with Petrus Blefen : Scientiarum generosa possessio in plures dispersa, non perditur, & diffributa per parces, minorationis detrimentum non fentit : fed co diuturnius perpetuata senescit, quo publicata facundius se diffundit.

The greatest men stored with all helps of Learning, Nature and Fortune, were the first Writers, who as they did excell other men in Possessions and Worldly dignity, so they manifested their Virtues and Worth in the edition of excellent parts of knowledge, either for the delight or profit of the World, according to the Poets

profession:

Aut prodesse volunt, aut delectare Poeta, Aut simul & jucunda & idonea dicere vita. Omne tulit punctum, qui miscuit utile dulci, Lettorem delettando, pariterque monendo.

Yet now of late daies this cuftom hath been almost discontinued to the infinite prejudice of facred inviolable Learning and Science, for Turpis Jape fama datur minoribus, (as Aufsnim wrote in his time) for indeed the reason is pregnant:

The Epifile Dedicatory.

Hand facile emergunt, quoium virtutibus obstat Res angusta domi .-

But yet the great Rector and Chancellor of all the Academies in the World Fesus Christ, in whom are hid all the treasures of swisdom and knowledge, the Master of that Colledge wherein he was but a Servant or Steward, that was learned in all the learning of the Egyptians, (I mean Mofes) the first writer, the first Author, the first commender of knowledge, and the first ordainer of a lawful Common-wealth, and Ruler of Church and State, hath not left our age without some monuments of great Princes, Earls, Lords, Knights, for the ornament and honour of Learning, who for general and particular causes and benefits have added their Names to the society of Writers, and divulged their works in Print, which are likely to be remembred till the Worlds end. Such are our most Temperate, Just, Wife, and Learned King and Soveraign. The Right Noble, and Honourable Earl of Surry, long ago departed out of this earthly Horizon. The now living Earls of Dorfet, Northampton, Salibury; and many Knights, Sir Philip Sidney, Sir George Moore, Sir Richard Bartlet, Sir Francis Haftings, and others. But of Aarons, and such as sit at the Helme of the Church, or are worthily advanced for their knowledge in Learning and State, I mean both Bishops and Doctors, almost innumerable, of all whom I can fay no more, if I were worthy to fay any thing, then apply unto them particularly that which was faid of one of the greatest Scholars and Divines that ever England had:

> Dic obsero sancta Posteritas, nec enim mibi fas est dicere : tantum De tantis tacitum, aut tantos audire juvabit.

Then why should I presume, being every way the least and meanest of all other, uow the third time to publish any part of my conceived studies for the age present and succeeding, and fo to have my Name inrolled amongst the benefactors and Authors of Learning:

Qua fugiamus habet, seris venit usus ab annu.

Alas Sir, I have never abounded in any thing, except want and labour, and I thank God that one of these hath been prepared to feed the other, therefore I will not stand upon any mans objections, who like Horses as it is in the Fable being led empty, well fed, and without burden, do scorn the laden Asse, adding misery to his load, till his back was broke. and then was all laid upon the pampred disdainful Horse : even so these proud displeasing spirits are eased by the labors of us that bear the burnhens, and if they content not themselves with ease, but will also sit in the seat of the scornful, let them remember, that when our backs be broak, they must take up the carriage. But pardon me (I beieech you) if by way of Preface I open my heart unto your Worship, who is better able then ten thousand of the Momus's, and more charitably generous in receiving such gifts with the right hand (as these are) although they were given with the left; for seeing I have chosen you the Patron of this Work, I will briefly declare and open my mind unto you concerning the whole Volum, sparing any other praises of your demerits then those which by Martial are ascribed to Regulus, which I will without flattery or fear of the envious thus apply unto you:

> Cum sit Sophia par fama & cura deorum, Ingenio pietas nec minor ipfa tuo. Ignorat meritis dare munera, qui tibi librum Et qui maratur [Neille] Thura dari.

[SSS.Trinitatis]

So then leaving these perorations, I will endevor to prove unto you that this Work which I now publish and divulge unto the world, under the Patronage of your Name, is Divine, and necessary for all men to know; True, and therefore without flander or suspicious The Epifile Dedicatory.

scandall to be received; and that no man ought rather to publish this unto the World. then a Divine or Preacher. For the first, that the knowledge of Beasts, like as the knowledge of the other creatures and works of God, is Divine, I fee no cause why any man should doubt thereof, seeing that at the first they were created and brought to man as we may read Gen. 1. 24, 25. and all by the Lord himself, so that their Life and Creation is Divine in respect of their Maker, their naming Divine, in respect that Adam out of the plenty of his own divine wisdom, gave them their several appellations, as it were out of & fountain of Prophetic, foreshewing the nature of every kind in one elegant and significant denomination, which to the great loffe of all his children was taken away, loft and confounded at Babel. When I affirm that the knowledge of Beafts is Divine, I do mean not other then the right and perfect description of their Names, Figures, and Natures, and this is in the Creator himself most Divine, and therefore such as is the Fountain, such are the streams iffuing from the same into the minds of men. Now it is most clear in Genesis how the Holy Ghost remembreth the creation of all living creatures, and the Fourfooted next before the creation of Man, as though they alone were appointed the Ushers, going immediately before the race of Men. And therefore all the Divines observe both in the Hebrew, in the Greek and Latin, that they were created of three feveral forts or kinds. The first Jumentum, as Oxen, Horse, Affes and such like, Quia hominum juvamenta. The second, Reptile, quia hominum medicina. The third, Bestia, i. à vastando, for that they were wilde and depopulators of other their affociates, rifing also against Man, after that by his fall he had loft his first image and integrity. Now were it not a knowledge D.vine, why should the holy Scriptures relate it, and divide the kinds : Yea, why should all holy Men take examples from the natures of Beaft, Birds, &c. and apply them to heavenly things, except by the ordinance of God they were both allowed and commanded fo to doc and therefore in admiration of them the Prophet David cryeth our, Quam magnifica funt opera tha Dominel omnia in sapientia fecisti. The old Manichees among other blasphemics accused the creation of hurtful, venomous, ravening, and destroying Beasts, affirming them to be made by an evil God, and also they acculed the creation of Mice and other unprofitable creatures, because their dulness was no kinder to the Lord, but like cruel and covetous Mifers, made no account of those Beasts, which brought not profit to their purse. You know (Right Learned Dean) how that grave Father answered that calumny, first affirming that the same thing which seemed idle to Men, was profitable to God; and the same that appeared ugly to them, was beautiful to him, Qui omnibus utitur ad gubernationem universi. He therefore wisely compareth a fool that knows not the use of the creatures in this world, to one ignorant that cometh into the workhouse of a cunning Man, viewing a number of strange tools, and having no cunning but in an Aze or a Rake, thinketh, that all those rare inventions of a wife workman are idle toiestand whilst thus he thinketh, wandring to and iro, not looking to his feet, suddenly falleth into some furnace in the same Work-house, or chance to take up some sharp tool whereby he is wounded, then he also thinketh that the fame are hurtful and dangerous. Quorum camen usum quia novit artifex, insipientiam ejus irridet, & verba inepta non curans officinam suam constanter exercet. But we that are ashamed to deny the use of instruments in the shops of rare Artifans, but rather admire their invention, yet are not afraid to condemn in Gods storchouse fundry of his creatures, which are rare inventions, although through folly we be wounded or harmed by them, and therefore he concludeth that all Beafts are either utilia, and against them we date not speak; or perniciosa, whereby we are terrified that we should not love this perilous life, or elfe they are superflue, which to affirm were most ridiculous: for as in a great house all things are not for use, but some for ornament, so is it in this World, the inferiour Palace of God. Thus far Anftin.

Therefore I will conclude this first part, that not only the knowledge of the profitable creature is divine, and was first of all taughe by God, bue also of the huttful : For a mife Man, faith Solomon, feeth the Plague (by the tevelation of God) and hideth himself from it. And John Baptift, Quis wes docuit ab ira ventura fugere : Thefe things have I principally laboured in this Tregtlie, to frew unto Men what Boatts are their triends, and what their enemies, which to truff, and which avoid, in which to find nourishment, and which to thun as poilon. Another thing that perswadeth me in the necessary use of this History, that it was divine, was the preservation of all creatures living, which are ingendred by copulation (except Fishes) in the Ark of Noah, unto whom it pleased the Creator at that time to infuse an instinct, and bring them home to man as to a fold: surely it was for that a man

Billi. Juel.

might gain out of them much Divine knowledge, such as is imprinted in them By hater, as a type or spatk of that great wildom whereby they were created. In Mice and Surpethe a foreknowledge of things to come, in the Ant and Pilmire a providence against old agen in the Beat the love of young sin the Lion his stately pace, in the Cock and Sheepichange of weather; as S. Basil in his Hexameron, Bitam in Brutis quidem future sensus of present with non additi simus, sed de fusuro saculo omne studium habemus.

For this cause there were of beasts in holy Scripture three holy uses, one for Sacrifice.

another in Vision, and athird for Reproof and Instruction.

In Sacrifices were the clean beafts, which Men were bound first to know, and then to offer, for it is unreasonable that those things should be facred at the Lords altar, which are refused worthily at private mens Tables. Now although we have no use of Sacrificing of Beafts, Nam ficut bruta pro peceatis immelabantur, it a jam vitia pro corporibus, yet we have use of clean Beafts for food and nourishment, and therefore for the inriching of the minds and tables of men, it is necessary to know not only the liberty that we have to eat, but also the quality and nutriment of the Beast we eat, not for any Religion, but for health and corporal necessary. This point is also opened in this story, and the other of Sacrifice, wherein I have not omitted to speak of the Divine use of every Beast, both among the

Ferrs and among the prophane Gentiles.

Now for the iccond holy use of Beasts in Visions, the Prophet Daniels Visions, and Exchiels, and S. Johns in the Revelation do testific of them, whereby the most Divines have observed how great Princes and Kingdoms after they have shaken off the practise of Tustice and Picty, turn Tyrants and ravening Beasts. For so Man being in honour under-Itandeth not, but becometh like the Beasts that perish, and so as Dienysius saith by Visions of Beafts, Infima reducuntur pur media in suprema. Now there were as S. Augustine faith, three kinds of visions, Sensibiles, intellectuales, & imaginaria : the first were most pregnant, because to the understanding and conceiving, a Man never lok his senses, and therefore God did suddenly create savage Beasts both of natural and extraordinary shapes, whereby he shewed to his servants the Prophets, the ruine or uprising of beastly States and Kingdoms. And not only thus, but also in heaven (as St. Fohn faith) there are 4 Beafts ful of eyes before the throne of Godsboth which must needs magnifie the knowledge of these Quadrupedes; for seeing God hath used them as Sacraments or Mysteries to contain his will, (nononly in monitrous treble-headed, or seven-horned shapes, bur alfo) in pure, ordinary, natural limbs and members; how shall we be able to ghesse at the meaning in the secret, that do not understand the revealed . And what use can we make of the invisible part of that Sacrament, where we know not the meaning of the visible? Doth the Lord compare the Devil to a Lion; evill Judges to Bears; false Prophets to Wolves, secret and crafty persecutors to Foxes; open enemies in hostility to wilde Boars, Heretickes and falle Preachers to Scorpions, good men to the Fowles of heaven. and Martyrs to Sheep, and yet we have no knowledge of the natures of Lions, Wolves, Bears, Foxes, wilde Boars, or Scorpions ? Surely when Solomon faith to the fluggard, Go to the Pifmire, he willeth him to learn the nature of the Pifmire, and then according thereto reform his manners: And so all the World are bid to learn the natures of all Beafts, for there is alway formething to be learned in them, according to this faying of St. Bafil, A deo nibil non providum in natura rebus eft, neque quicquam pertinentis ad le cura expers, & fi ipfas animalium partes consideraveris, inventes quod ineque superfluum quid conditor opposuit, neque necessaria detraxit. Then it being clear that every Beaft is a natural Vision, which we ought to see and understand, for the more clear apprehension of the invisible Majesty of God, I will conclude that I have not omitted this part of theuse of Beasts, but have collected, expressed, and declared, what the Writers of all ages have herein observed.

Now the third and last holy use that is made of Beasts in Scripture, is for Reproof and Instruction, so the Lord in #6.38, & 39. mentioneth the Lion, the Raven, the wilde Goats, the Hinds, the Hinds Calves, the wilde Asses, the Unicorn, the Ostrich, the Stork, the puissant Horse, the Hawke, the Eagle, the Vulture, the Whale, and the Dragon, that is, the Fowles, Fishes, Serpents, and Four-stooted Beasts: All which he reckoneth as known things to #66, and discourseth of as strange things in their natures as any we have inserted for truth in our History, as may appear to any man whatsoever, that will look studiously into them.

The Epifile Dedicatory.

Shall I add hereunto how Moses, and all the Prophets, St. John Baptist, our most bleffed Saviour, St. Panl, and all the Writers since his time (both ancient and later) have made profession of this part of Divinity; so that he was an unskilful Divine and not apt to teach, which could not at his singers speak of these things: for (saith our Saviour) If I tell you earthly things and ye believe not, how shall ye believe when I tell you beavenly

things ?

Solemen, as it is witnessed in holy Scripture, wrote of Plants, of Birds, of Fishes and Beafts, and even then when he stood in good favour with God, therefore it is an exercise of the highest Wisdom to travel in, and the Noblest minds to study in: for in it as I will thew you (with your good patience, for I have no other Preface) there is both the knowledge of God and Man. If any man object, Multa multi de mufca, de apicula, de vermicule, pauca de Deo : I will answer with the words of Theodorus Gaza, Permulta enim de Deo is tractat, qui doctrina rerum conditarum exquisitifima, conditorem ipsum declarat, neque mufca, neque vermiculus omittendus est ubi de mira folertia agitur. Whereunto St. Aultin agreeth when he faith, Majestatem divinam aque in formica membris atque magno jamento tranante fluvium. And for the knowledge of man, many and most excellent rules for publick and private affaires, both for preferving a good conscience, and avoiding an evill danger, are gathered from Beasts: It were too long to run over all, let me (I beseech you) be bold to reckon a few which descend from Nature onr common parent, and therefore are neither frained, counterfeit, inconstant, or decenful; but free, full of power to perswade, true, having the seal of the Highest for their evidence; constant and never altred in any age; faithful, such as have been tryed at fire and touch-stone.

Were not this a good perswasion against murder, to see all Beasts so to maintain their natures, that they kill not their own kind? Who is so unnatural and unthankful to his Parents, but by reading how the young Storkes and Wood-peekers do in their parents old age feed and nourish them, will not repent, amend his folly, and be more natural? What man is so void of compassion, that hearing the bounty of the Bone-breaker Bird to the young Eagles, will not become more liberal? Where is there such a sluggard and drone, that considereth the labours, pains, and travels of the Emmet, little Bee, Field-mouse, Squirrel, and such other that will not learn for shame to be more industrious, and set his singers to work? Why should any man living fall to do evill against his Conscience, or at the temptation of the Devill, seeing a Lion will never yeeld? Mori sit, vinci nessis, and seeing the little Wren doth sight with an Eagle, contending for Soveraingty? Would it not make all men to reverence a good King set over them by God, seeing the Bees seek out their King is the lose himself, and by a most sagacious smelling sense, never cease till he be found out, and then bear him upon their bodies if he be not able to slie, but if he die they all forsake him? And what King is not invited to elemency, and dehorted from tyranny, seeing the

King of Bees hath a fting, but never useth the same?

How great is the love & faithfulness of Dogs, the meekness of Elephants, the modesty or shamefastness of the adulterous Lioness, the neatness and politure of the Cat and Peacock the justice of the Bee, which gathereth from all flowers that which serveth their turn, and yet destroyeth not the flower; the care of the Nightingale to make her voice pleasant the chastity of a Turtle, the canonical voice and watchfulness of a Cock, and to conclude, the utility of a Sheep? All these and ten thonsand more I could recite, to shew what the knowledge of the nature of brutish creatures doth work or teach the minds of men , but I will conclude this part with the words of S. Ferom against Fovinian. Ad Herodem dicitur propter malitiam, Ite & dicite vulpi huic, Enik. 13. ad Scribas & Phuvifaet genimina viperarum, Mat. 23. ad libidino os equi hinmentes in proximorum fuminas, Jet. 5. de voluptuofo, Nolise mittere margaritas vestras ante porcos. De impudentibus, neque sanctum date canibus, Mat. 7. de infidelibus, Ephesi cum bestiu pugnavs in similitudine hominum. And thus far S. Ferom. Whereby we may boldly aver by way of induction, that wherein the knowledge of God, the knowledge of Man, the precepts of Virtue, the means to avoid evill are to be learned, that Science is Divine and ought of all men to be inquired and fought after: and fuch have I manifested in this History following:

Now again the necessity of this History is to be preferred before the Chronicks and Records of all ages made by Men, because the events and accidents of the time past, are peradventure such things as shall never again come in use; but this sheweth that Chronicle which was made by God himself, every living Beast being a word, every Kind.

being a sentence, and all of themetogether a large History Containing admirable k nowledge and learning, which was, which is, which shall continue, (if not for ever) wee to the Worlds end. In the rate of the control of the same some control of T. of the world of the same some control of the

Membranis intes positis delere licebit Quod non edideria

The second thing in this discourse which I have promised to affirm, is the truth of the History of Creatures, for the mark of a good Writer is to follow truth and not deceivable Fables. And in this kind I have passed the straightest passage, because the relation of most things in this Book are taken out of Heathen writers, fuch as peradventure are many times superstitionally credulous, and have added of their own very many rash inventions, without reason, authority, or probability, as if they had been hired to sell such Fables; For, Non bene conducte vendunt perjuria teftes. I would not have the Reader of these Histories to imagine that I have inferred or related all that ever is faid of thefe Beafts, but ordy to much as is faid by many, For in the month of two or three witnesses standeth every wind: and if at any time I have fet down a fingle Testimony, it was because the matter was clear and needeth not farther probation, or else I have laid it upon the Author with special words, not giving the Reader any warrant from me to believe it.

Besides, I have taken regard to imitate the best Writers, which was easie for me touth, because Gesner relateth every mans opinion (like a common place or Distinary, as he professes, and if at any time he seemed obscure, I turing to the Books which I had at hand to glusse their meaning, putting in that which he had list out of many good. Authors; and leaving out many magical devises. Now although I have used no small diligence or care in collecting thosethings which were most essential to every Beast, most true without exception, and most evident by the Testimony of many good Authors; yet I have delivered in this Treatife many strange and rare things, not as Fictions, but Miracles of nature, for wisemen to behold and observe to their singular comfort, if they love the power, glory, and praise of their maker, not withholding their consent to the things expressed, because they intreat of living things made by God himself. Si ergo quarimus quis fecerit, Deut eff: Si per qued, dixit, Fiat, & fatta funt : Si quare fiat, quia bonus eft. Nec enim autor eft excellentior Deo, nec ars efficacior Dei verbo, nec causa melior, quam ut bonum crearetur a Deo beno, and this Plate faid was the only cause of the worlds creation, at a Dee bono opera

Now I do in a fort challenge a consent unto the probability of these things to wise and learned men, although no belief. For Fides, is credere invifibilia, but confensus is a cleaving or yeelding to a relation untill the manifestation of another truth; and when any man shall justly reprove any thing I have written for false and erroneous, I will not stick to release the Readers consent, but make satisfact on for usurpation. But for the rude and vulgar fort (who being utterly ignorant of the operation of Learning, do presently condemn all ftrange things web are not ingraven in the palms of their own hands, or evident in their own herds and flocks) I care not, for my ears have heard some of them speak against the History of Sampson, where he tied fire-brands to the tails of Foxes, and many of them against the miracles of Christ. I may remember you (R.W.) of a Countrey tale of an old Masse-Priest in the daies of Henry the eight, who reading in English after the translation of the Bible, the miracles of the five Loaves and two Filhes, and when he came to the verse that reckoneth the number of the ghests or eaters of the banquet, he paused a little, and at last faid, they were about five hundred: The Glark, that was a little wifer, whispered into the Pricits ears that it was five thousand, but the Pricit turned back and replyed with indignation, Hold your peace firrah, we shall never make them believe they were five

Such Priests, such People, such persons I shall draw upon my back, and although I do not challenge a power of not erring, yet because I speak of the power of God, that is unlimitable, I will be bold to aver that for truth in the Book of Creatures (although first observed by Heathen men) which is not contrary to the book of Scriptures.

Loftly, that it is the proper office of a Preacher or Divine to fet forth these works of God, I think no wiseman will make question, for so did Moses, and David, and Selemon,

. The Epifle Dadicatory.

and Christ, and S. Paul, and S. Fehm, and S. Frency, S. Gregory, S. Bafil, S. Auften, S. Ferom, S. Bornardan his warrations or Sermons upon the Canticles, and of latter daies Ilidora. The Monks of Melluen, Geminianus, and to conclude, that ornament of our time Feronimus Zanchius. For how shall we be able to speak the whole Counsel of God unto his people, if we read unto them but one of his books, when he hath another in the world. which we never fludy past the title or outside; although the great God have made them an Epistle Dedicatory to the whole race of Mankind?

This is my indevour and pains in this Brook, that I might profit and delight the Reader, whereinro he may look on the Holiest daies, (not omitting prayer and the publick service of God) and passe away the Sabbaths in heavenly meditations upon earthly creatures. I have followed D. Gefner as neer as I could, I do profess him my Author in most of my Stories, yet I have gathered up that which he let fall, and added many Pictures and Stories as may appear by Conference of both together. In the names of the Beafts, and the Phyfick I have not swarved from him at all. He was a Protestant Physician, (a rare thing to finds any Religion in a Physician) although St. Luke a Physician were a writer of the Gospell. His praises therefore shall remain, and all living Creatures shall witnesse for him at the last day. This my labor whatsoever it be, I consecrate to the benefit of all our English Nation under your Name and Patronage, a publick Professor, a learned and rewerend Divine, a famous Preacher, observed in Court and Countrey, if you will vouchfafe to allow of my Labors, I stand not upon others, and if it have your commendation, it shall incourage me to proceed to t' residue, wherein I fear no impediment but ability to carry out the charge, my case so standing that I have not any accesse of maintenance, but by voluntary benevolence for perfold pains, receiving no more but a laborious wages, and but for you, that had also been taken from me: Therefore I conclude with the words of St. Gregory to Leontine, Et nos bona qua de vobis multipliciter pradicantur addiscentes, afidne pro gloria veftra incolumitate omnipotentem valeamus Dominum deprecari.

THE HISTORY

Four-Footed Beafts.

The ANTALOPE.

HE Antalope called in Latin Calopus, and of the Grecians Analopos, or Aptolos: of this beaft there is no mention made among the Ancient Writers, except Suidus, and the Epiftle of Alexander to Aristotle, inter-Writers, except Suidus, and the Epittle of Alexander to Ariffole, interpreted by Cornelium Nepotium. They are bred in India and Spria, neer the Countrey of River Euphrates, and delight much to drink of the cold water thereof: Their breed, body is like the body of a Roe, and they have horns growing forth of the crown of their head, which are very long and sharp; so that Alexander affirmed they pierced through the shields of his Souldiers, and fought with them very irefully: at which time his company slew as he travelled to India, eight thousand five hundred and fifty; which great slaughter may be the occasion why they are so raire, and seldom seen to this day, because thereby the breeders and means of their continuance (which consisted in their multitude) were weakeed and destroyed. Their horns are great and made like a saw and they with them can cut adjuder the branches

Their horns are great and made like a faw, and they with them can cut asunder the branches of Ofier or small trees, whereby it cometh to passe that many times their necks are taken in the twists of the falling boughs, whereat the Peast with repining cry, bewrayeth himself to the Hunters, and so is taken. The virtues of this Beast is unknown, and therefore Suides saith, an Antalepe is but good in part.

Cicers. Cladian. Martial. Herace. Of the name.

The fmall ufe of Apes.

aughter.

Qualities of Apes.

* Varinus. Doc:bility of Apcs.

by Aprs.

N Are called in Latin Simia, and sometimes Simius and Simiolus; of the Greek word Simos A (vix.) fignifying the flatnesse of the Nostrils; for so are an Apes: and called of the Hebrews Koph, and plurally Kophion; as it is by S. Jerom translated, I King. 10. 22. From whence it may be probably conjectured, came the Latin words Cepi and Cepbt, for Apes that have tails. Sometimes they are called of the Hebrews Boglab, and of the Chaldees Kokin. The Italians Samada Majonio, and Bernecia, and a Munkey Gatto Maimone. The ancient Grecians Pithecos and the later Mimon, and Ark lizanes, by reason of his imitation. The Moors Bugia, the Spaniards Mona, or Ximio, the French Singe, the Germanes Aff, the Flemish Simme or Schimmekell, the Illyrians Opieze, and generally they are held for a lubtill, ironicall, ridiculous and unprofitable Beaft, whose flesh is not good for meat, as a sheep, neither his back for burden, as an Asses; nor yet commodious to keep a house, like a Dog; but of the Grecians termed Gelotopoios, made for laughter.

* Anschafu the Philotopher, being at a banquet wherein divers Jesters were brought in to make them merry, yet never laughed, among the residue; at length was brought in an Ape, at Apermade for the light whereof he laughed heartily; and being demanded the cause why he laughed not before, answered, that men do but faign merriments, whereas Apes are naturally made for that purpose. Moreover Apes are much given to imitation and derision, and they are called Cercoper, because of their wicked wasts, deceits, impostures and flatteries: wherefore of the Poets it is faigned, that there were two brethren most wicked fellows, that were turned into Apes, and from their feat or habitation came the the Pubecusan Islands, which Virgil calleth Inarime : for Asime was an old Hethunan word for an Ape, and those Islands being the seats of the * Giants (who being by God overthrown for their wickedness) in derission of them, Apes were planted in their rooms. Apes have been taught to leap, fing, drive Wagons, reigning and whipping the horses very artificially, and are very capable of all humane actions, having an excellent memory either to flew love to his friends, or hateful revenge to them that have harmed him, but the faying is good, that the threatning of a Huns received flatterer, and the anger of an Ape, are both alike regarded. It delighteth much in the company of Dogs and young Children, yet it will itrangle young Children if they be not well looked unto. A certain Ape seeing a Woman washing her Child in a bason of warm water, observed her diligently, and getting into the house when the Nurse was gone, took the Child out of the cradle, and setting *n Hiftory.

Of the Ape. water on the fire, when it was hot, stripped the Child naked,, and washed the Child therewith un-

The Countreys where Apes are found, are Lybia and all that defert Woods betwixt Erpst, Etbio- Countreys pig and Lybia, and that part of Caucajus which reacheth to the red Sea. In Ir dia they are most abundant, breeding Apes. both red, black, green, dust-colour, and white ones, which they use to bring into Cities (except red ones, who are so venereous that they will rayish their Women and present to their Kings, which grow fo tame, that they go up and down the ftreets fo boldly and civilly, as if they were Children, frequenting the Market places without any offence : whereof fo many shewed themselves Book of to Alexander standing upright, that he deemed them at first to be an Army of enemies, and commanded to joyn battel with them, until he was certified by Taxilus a King of that Countrey then in his Campe, they were but Apes,

this Campe, they were but Apes.
In Caucajue there are trees of Pepper and Spices whereof these are the gatherers, living among Labour of those trees to for the Inhabitants come, and under the trees make plain a plat of ground, and after- Apes,

ward cast thegeupon boughs and branches of Ropper, and other fruits, as it were carelesty; which the Apes fectetly observing in the night season they gather together in great abundance all the branches loaden with Pepper, and lay them on heaps upon that plat of ground, and fo in the morning come the Indians and gather the Pepper from shole boughs in great measure, reaping no small advantage by the labor of Apes, who gather their fruits for them, whiles they sleep : for which cause they love them and defend them from Lions, Dogs, and other wild Beafts. In the region of Balman, Subject to the great Cham of Tarturia, are many and divers forts of Apes, very like mankind, which when the Hunters take, they pull of their hairs all but the beard and the hole behind, and afterward dry them with hot spices, and poudering them, sell them to Merchants, who carry them about the world, perswading simple people that there are men in Islands of no greater stature. To conclude, there are Apes in Trogled to which are maned about the neck like Lions, as big as great Bel-weathers. Divertity of So are some called Cercopitheci, Munkies, Charopithesi, Hog Apes, Cepi, Callitriches, Marmosits, Con cephali, Apes. of a Dog and an Ape, Satyres, and Sphinges, of which we will speak in order, for they are not all alike. but some resemble men one way, and some another : as for a Chymers, which Albertus maketh an Ape, Chymers. it is but a figment of the Poets. The same man maketh Pigmeys a kind of Apes, and not men, but lib. 7. 1. de and Niphus proveth that they are not men, because they have no perfect use of Reason, no modelty, no. mal. honesty, nor justice of government, and although they speak, yet is their language impersect; and above all they cannot be men, because they have no Religion, which (Plajo faith truly) is proper to Promeys. every man. Besides, their stature being not past three, four, or five spans long, their life not above eight years, and their imitation of man, do plainly prove them rather to be Apes then Men: and also the flatness of their Noses, their combats with Cranes and Partridges for their egges, and other cir- Onesieritus. cumstances I will not stand upon, but follow the description of Apes in general Apes do outwardly refemble men very much, and Vefalius sheweth, that their proportion differeth from mans in more The anatomy; things then Galen observed, as in the nuscles of the breast, and those that move the armes, the cloow of Ares. and the ham, likewise in the inward frame of the hand, in the muscles moving the toes of the feet, and the feet and shoulders, and in the instrument moving in the sole of the foot, also in the fundament and mesentery, the lap of the liver, and the hollow vein holding it up, which men have not ; yet in their face, nostrils, ears, eye-lids, breafts, armes, thumbes, fingers and nails, they agree very much. Their hair is very harsh and short, and therefore hairy in the upper part like men, and in the neather part like beafts: they have teeth before and behind like men, having a round face, and ey-lids above and beneath, which other Quadrupedes have not, Politianus laith, that the face of a Bull or Lion is more comely then the face of an Ape, which is like a mans. They have two Dugs, their breatts and armes like men, but rougher, such as they use to bend, as a man doth his foot. So their hands, fingers and nails, are like a mans, but ruder and nimbler ; and nature having placed their Dugs in their break, gave them armes to lift their young ones up to such them. Their feet are proper, and not like mans, having the middle one longest, for they are like great hands, and confist of fingers like hands, but they are alike in bigness, except that which is least to a man, is greatest to an Ape, whose sole is like the hand but that it is longer, and in the hinder part it is more fleshy, somewhat resembling a heel, but put backward it is like a fift.

They wie their feet both for going and handling; the neather parts of their armes, and their thighes are shorter then the proportion of their elbows and shins : they have no Navel, but there is a hard thing in that place; the upper part of their body is far greater then the neather, like other Quadrupedes, confishing of a proportion between five and three; by reason wereof they grow out of kind, having feet like hands and feet. They live more downward then upward, like other four-footed Beafts, and they want Buttocks, (although: Atherius faith they have large ones) they have no tail, like two legged creatures, or a very small figue thereof. The genitall or privy place of the semale is like a Womans, but the Males is like a Dogs: their pourishment goeth more forward then backward, like the best Horses, and the Arabian Seraph, which are higher before then behind; and that Ape whose meat goeth forward by reason of the heat of heart and liver, is most like to a man, in standing upright: their eyes are hollow, and that thing in men is accounted for a figne of a malicious mind, as little eyes are a token of a base and abject spirit. Men that have low and flat Nostrils are Libidinous as Apes that attempt women, and having thick lips, the upper hanging over the neather, they are deemed fools, like the lips of Asses and Apes, Albertus faith, he saw the heart of a Male Ape, having two tops or sharpe ends, which I know not whether to term a wonder or a Monster. An

Ape and a Cat have a small back, and so hath a weak hearted man, a broad and stong back signifieth a valiant and magnanimous mind. The Apes nails are half round, and when they are in copulation, they bend their Elbowes before them, the finews of their hinder joynts being turned clean about, but with a man it is clean otherwise. The veins of their armes are no otherwise diffected then a mans, pur with a main to be controlled wife, the veins of their armes are no otherwise america mains, having a very small and ridiculous crooked thumb, by reason of the Muscles which come out of the hinder part of the leg, into the middle of the first, and the fore museles drawing the leg backward; they cannot exactly fland upright, and therefore they run and fland; like a man that counterfeits & And as the body of an Ape is ridiculous, by reason of an indecent likeness and imitation of man,

The disposition of Apes.

fo is his foul or spirit; for they are kept only in rich mens houses to sport withall, being for that cause easily tamed, following every action he seeth done, even to his own harme without discretization on. A certain Ape after a shipwrack swimming to land, was seen by a Countrey-man, and thinking on. A certain Aperiter a important imining to have him, yet in the mean time asked him what Countreyman he was, who answered, he was an aboutant well, laid the man, dost thou know. An History. Pireus' (which was a port in Athens) very well faid the Ape; and his wife, friends, and children, where

Places of their at the man being moved; did what he could to drown him. They keep for the most part in Caves at the man being moved, did what he could to drown mm. I ney keep for the most part in Caves and hollow places of hils, in rocks and trees, feeding upon Apples and Nuts, but if they find any bitterness in the shell, they cast all away. They eat Lite; and pick them out of heads and garments. They will drink wine till they be drunk, but if they drink it oft, they grow not great, specially they lose their nails, as other Quadrupedes do. They are best contented to six although tied with Food of Apes, The manner of chains. They are taken by laying for them shoos and other things, for they which hune them will

taking Apes.

anoint their eyes with water in their presence, and so departing, seave a pot of sime or hony in stead of the water, which the Ape espying, cometh and anointeth her eyes therewith, and so being not able to see, doth the hunter take her. If they lay shoos, they are leaden ones, too heavy for them to wear, wherein are made such devises of gins, that when once the Ape hath put them on, they cannot be gotten off without the help of man: So likewise for little bags made like breeches, where cannot be gotten on without the nerp of man; so mewhe for fittle bags made into precent, whereof withal they are deceived and taken. They bring forth young ones for the host part by twins, whereof they love the one and hate the other; that which they love they bear in their armes, the other hange eth at the damns back, and for the most part the killeth that which the loveth, by preffing it too

Apes.

Their love.

Their fear.

hard; afterward the fetteth her whole delight upon the other.

The Egyptians when they describe a Father leaving his inheritance to his Son that he foveth not, picture an Ape with her young one upon her back. The male and female abide with the young one,

picture an Ape with her young one upon her back. A herhale and remare abuse with the young one, and if it want any thing, the male with fift, and ireful afpect punisheth the female. When the Moon and if it want any thing, the male with fift, and ireful afpect punisheth the female. When the Moon and if it want any thing, the male with fift, and ireful afpect punisheth the female. When the Moon and if it want any thing, the male with fift, and ireful afpect punisheth the female. at the change: for as other Beafts, fo do thefe, fear the defect of the Starsand Planets. They are full of Their imitati- diffimulation, and imitation of man, they readilyer follow the evil then the good they fee. They are very fierce by nature, and yet tamed forget it, but still remain subject to madness. They love Conies very tenderly, for in England an old Ape (fearfe able to go) did defend tame Conies from the Weafel, as Sir Thomas More reported. They fear a shell fish and a Snail very greatly, as appeareth

In Rome, a certain Boy put a Snail in his hat and came to an Ape, who as he was accustomed, leaps upon his shoulder and took off his hat to kill Lice in his head, but espying the Snail, it was a wonder to fee with what hafte the Ape leaped from the Boys shoulder, and in trembling manner looked back to fee if the Snail followed him. Also when a Snail was tied to the one end of another Apes chain, so that he could not chuse but continually look upon it, one cannot imagine how the Ape was tormented therewith, finding no means to get from it, caft up what soever was in his stomach, and fell into a grievous Fever till it was removed from the Snail, and refreshed with wine and water. Gardane reporteth, that it was an ancient custom in former time when a Parricide was executed, he was (after he was whipped with bloudy firipes) put into a fack, with a live Serpent, a Dog, an Ape and a Cock : by the Serpent was signified his extreme malice to mankind in killing his Father, by the Ape that in the likeness of man he was a Beaft, by the Dog how like a Dog he spared none, no not his own Father, and by a Cock his hateful pride, and then were they all together hur? d headlong into the Sea. That he might be deemed unworthy of all the Elements of life, and other bleflings

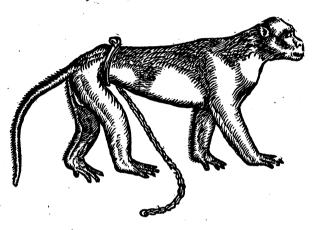

An antiquity.

A Lion ruleth the Beafts of the Earth, and a Dolphin the Beafts of the Sea; when the Dolphin is in age and fickness, the recovereth by eating a Sea-ape: and so the Lion by eating an Ape of the earth, and therefore the Egoptians paint a Lion eating an Ape, to fignifie a fick man curing himself. The heart of an Ape sod and dryed, whereof the weight of a groat drunk in a draught of stale Hony, sod in water, called Melicraton, strengthneth the heart, emboldneth it, and driveth away the pulse and pufillanimity thereof: sharpeneth ones understanding, and is foveraign against the salling evill.

The medicine of Apes

The MUNKEY.

He Munkey called in Greek Cercopithecos, and fo in Latin Cercopithecus, that is, a tailed Ape: not to Their names. distinguish it from all other Apes, but from other vulgar and common Apes, for there be Apes with tails belides a Munkey, but not fo often feen. It is thought of some that the Hebrew Ziim, fignifi- Munfler. eth a Munkey, other Ochim. Ifa. 1 3. Babel fhal be deftroyed, and the fearful beaft Ziim fhal lie there, and Ochim Chalfill their boufes. Which Ochim, is interpreted Munkeys, but not generally; wherefore there is an opi- Albertus. nion that this kind of Ape is generated of a wild Cat very like an Ape, and an Ape having two black Generation of spots on the cheeks, a long tail, and black at the end thereof, it is called of the Italians Gatto maimone, of a Munkey. the French Marmot of Marmona, that is, the Ape of a male, for Mona fignifieth an Ape, of the Germans Maris-mona. Meerkatz, that is the Cat of the Sea, of the Illyrian, Morska, and Koczka; as for Mammonet, it is a beaft leffe

then an Ape, of the Celts it is called Abranas. They are very sportful, and given to imitate the actions Inclination of of men like Apes, it being a question, whether Dogs, Elephants, or Munkeys, have the most understanding among Brutes, and as was faid before, when the Moon waneth, it is heavie and dull, but in the new Moon joccond and pleasant. Betwixt the Mammonets and Apes is continuall war, and the ture. Mammonet being the weaker, yet the wifer and craftier creature, is much more couragious in fight Contention. then an Ape. These Munkeys of all things most abhor a Crotodile, for at the fight of the skin afar The sear of a off, it hath been seen how the creature hath run through fire and water, crying and trembling for Munkey.

the naturall dread thereof.

They are bred in the hils of Constance, in the woods of Bugia and Mauritania. In Ætbiopia, they fob. Leo. have black heads, hair like Asses, and voices like to other. In India they report that the Munkeys will African. clime the most steep and high rocks, and fling stones at them that prosecute to take them. When the King of logs in India for Religion goeth on Pilgrimage, he carryeth with him very many Munkeys. and breed. In like fort, Munkeys are brought from the new found Lands, from Calechut and Profia; and not far from Aden a City of Arabia, is a most high hill abounding in these beasts, who are a great hinderance to the poor vintagers of the Countrey of Calechut, for they will climb into the high Palm trees, and Hurt of Munbreaking the vessels set to receive the Wine, pour forth that liquor they find in them: they will keys. eat hearbs and grain, and ears of graffe, going together in great flocks, whereof one ever watcheth Their food. at the utmost bounds of their camp, that he may cry out when the husbandman cometh, and then all flying and leaping into the next trees escape away : the females carry their young ones about with them on their shoulders, and with that burden leap from tree to tree.

There be of this kind of Munkeys two forts, one greater, the other leffer, as is accounted in England, Divertities of and Munkeys are in like fort to divided, that there be in all four kinds differing in bigness, whereof the Munkeys, least is little bigger then a Squirrel, and because of their marvellous and divers mowings, movings, voices and gestures, the Englishmen call any man using such Histrionical Actours a Munkey.

The only difference betwixt these and other Apes aforesaid, is their tail; they differ from men in Solinus. their nerves, in the joints of their loynes, and their processes, and they want the third muscle Their anatomy moving the fingers of their hands. Mammonets are leffe then an Ape, brown on the back, and white and parts. on the belly, having a long and hairy tail, his neck almost so big as his body, for which cause they are Vessilla. tied by the hips that they flip not collar. They have a round head, a face like a man, but black and Mammonets. bald on the crowd; Re nose in a reasonable distance from his mouth like a mans, and not continued like an Apes, his stones greenish blew, like a Turkey stone. They are caught after the manner of

The History of Four-foot Beasts.

Apes, and being tamed and taught, they conceive and work very admirable feats, and their skins pulled off them being dead are dressed for garments. The foolish Arabians dedicated Memnonius cerresim.

Another kind, copinherm unto heaven, and in all afflictions implored his aid. There is one other kind of Munkeys, whose tail is only hairy at the tip, called Cercolipis.

The CEPUS, or Martine Munkey.

The names.

He Martin called Cepus of the Greek word, Kenos, which Ariffolle writeth Kehos, and fome translate Cabu, some Cephus or Gepphus or more barbarously Celphus, the Latines sometimes Ontw, for indeed this kind of Ape in his best estate is like * a garden set with divers flowers, and

Diodorus therefore the best kind of Siculus. them is discerned and known by the sweetest savour, such

being alwayes the most ingenious imitators of men. It is very probable that this name Cepm is derived of the Hebrew Koph and Kophin fignifying A pes in general, as is before faid, but yet this kind is distinguished from other by Strato, Alianu and Pliny, although Ariffoile doth make no difference betwixt this and another ordinary Munkey. The games of great Pomtey

first of all brought these Mar-tines to the fight of the Ro-

mans and afrerward Rome faw

no more; they are the same which are brought out of Æibiopia and the fartheft Ara-

Pliny. The firft knowledge of Mutines.

ther, being as big as a wilde Goat or Roe-buck, or as one of the Dogs of Erithrea, and a

Their colour. long tail, the which such of them as have tasted slesh wil eat from their own bodies. Concerning their colour, howfoever they are not all alike, for some are black with white spots, having a greater voice then others, some yellow, some Lion-tauny, some golden-yellow, and some cole-black : yet for the most part, the head and back parts to the tail, are of a fiery colour, with some golden hair aspersed among the residue, a white snowt, and certain golden strakes like a collar going about the neck, the inferiour parts of the neck down to the breast, and the foreseet are white, their two dugs as big as a mans hand can gripe, are of a blewish colour, and their belly white, their hinder legs black, and the shape of their snout like a Cynochephale: which may be the difference betwixt Alianus and Strato their Cepus, and Ariffolics Cebus, for nature many times bringeth forth like beafts which are not of the same kind. In England there was a Martine that had his back and sides of a green colour, having here and there white hair, the belly, chin and beard (which was round) white, the face and finns black, and the nose white, being of the lesser kind, for in bigness it exceeded not a Coney. Some of them in Ætbiopia have a face like a Satyre, and other members in part resembling a Bear, and in part a Dog, so are the Prastan Apes. This Martine did the Babylonians, inhabiting neer Memphis, for the stangeness, the colour, and shape thereof, worship for a God. They are of evill disposition like Apes, and therefore we will spare both their pictures and further description, finding very little of them in Histories worth commemoration.

Cay.

Ælianıa.

THe Calitrich so called by reason of his beard, and The name. may be termed in English a bearded Ape, will live Pline. no other where then in Ethi- Countrey of opia and India, which are casie bice is to take but very hard to bring away alive into these Countrys. They differ in appearance Their parts from all other Apes, having and colour, a long beard and a large tail, hairy at the end, being in India Albertus. all white, which the Indians hunt with darts, and being tamed, they are fo apt to play, that a man would think they were created for no other purpose; whereupon the Gre- Eralmus. cians use in proverbe, an Ape having a beard, for a ridiculous and foolish jesting man.

Of the Prasyan Apes.

Fgastbenes (faith Ælianus and Strabo) writeth of Apes in Prasia a Region in India, Their refemwhich are no lesse then great bance. Dogs, and five cubits high, having hair like a Man coming forth of their forehead and beards, being altogether white except their tails, which are two cubits and a half long, very like a Lions; and unto a simple man it might feem, that their tufts of hair were artificially trimmed, though it grow naturally. Their beard is much like a Satyres, and although their body be white, yet is their head and tip of their tail yellow, so that the Martins before mentioned, seem to be affianced to these. These Prasyan Apes live in Mountains and Woods, and yet are they not abode. wilde, but so tame that oftentimes in great multitudes they come down to the Gates and Suburbs of Latagis, where the King commandeth them dayly fodden Rice for their food, which Their food. they eat, and being filled return again to their home and usuall places of harbour in great moderation, doing no harme to any

Place of their

L.F. 4. Occan. Dual 3

Peter Muthr telleth this flory of one of these, that he being like to a great Munkey, but having a longer tail, by rowling over and over three or four times together taketh such streng h, that he leapeth from bough to bough, and tree to tree, as if he flew. An archer of that Sea-voyage hurt one of them with an arrow, the wounded beast presently leapeth to the ground, and setteth upon the archer, as fiercely as a mad Dog; he drew his sword and struck off one of Peter Martyr. his armes, and fo at last with much ado took the maimed beaft, who being brought to the Navy, and accustomed to the society of men, began by little and little to waxe tame.

The hatred of their Apes.

His love.

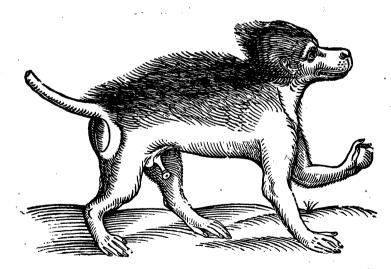

Aristotle.

While he was in the ship bound with chains, other of the company having been on land to forrage, brought out of the Marishes a Bore, which Bore was thewed to the Munkey; at the first fight either of other set up their bristles, the raging Munkey leapeth upon the Bore, and windeth his tail round about the Bore, and with the one arme which he had left, caught him, and held him fo fast by the throat, that he ftifled him.

There is another kind of Munkey, for stature, bignesse and shape like a Man, for by his knees, secret parts and face, you would judge him a wilde man, fuch as inhabit Numidia, and the Lapones, for he is altogether overgrown with hair; no creature, except a man can stand so long as he; he loveth wo-

men and children dearly, like other of his own kind, and is so venereous that he will attempt to ravish women, whose Image is here described, as it was taken forth of the book of the description of the holy Land.

Of the CYNOCEPALE of BABOUN.

nocephales, are a kind of Apes, whose heads are like Dogs, and their other parts like a mans; wherefore Gaza translateth them Canicipites, (to wit) dog-heads. In the French, German, and Illyrian tongues, they are called of some Babion, and Babuino in Italian, is a small kind of Ape; but Aristotle faith, that a Cynocephale is bigger then an Ape. In English they are called Babount.

Pliny. There are many kinds of Baboons, whereof some are much given to fishing, so that they will tarry Determion. Prefler John a whole day in the deep hunting for fish, and at length come forth with a great multitude. Again, ad Kom pont. there are some which abhor sisses, (as Orm saith) which kind the Egyptians Emblematically vie to

paint, when they will decipher a facrifice. Some there are which are able to write, and naturally The interest of the control to discern letters; which kind the old Egyptian Priests bring into their Temples, and at their first of Babo entrance the Priest bringeth him a writing Table, a pentil and inke, that so by seeing him write. he may make tryall whether he be of the right kind and the beaft quickly sheweth his skill: wherefore in ancient time, they were dedicated to Mercury, the fained god of learning.

may make tryall whether he be of the right kind, and the beau quickly theweth his skill; wherefore in ancient time, they were dedicated to Mercury, the fained god of learning.

The reason why the Egyptians do nourish them among their hallowed things is, that by them they may know the time of the conjunction between them and Moon; because the nature of this beast their is, to have a kind of seeling the conjunction, for after that these two signs meet, the male barbon neither will look up no the fact that the ground, as it were lamenting the ravishment of the Moon with disagnation of the moon, the rising the fact that the fact that time sendeth forth bloud out a fact that the fact whereupon the Egyptians significant the fact with the fact of the fact that time fendeth forth bloud out a fact that the fact whereupon the Egyptians significant the fact with the fact that the fact with the fact the fact with the fact that the fact that the fact with the fact that the fact th

The West region of the and Ethipsia have great store of Cynocephals, Babouns, and Acephals, beasts without a head suppose a great store in the continent cases, and the suppose of their about the Continent cases and the suppose of their about the Continent cases and the suppose of their about the continent cases and the suppose of their about the region; and the suppose of their about the region of their about the suppose of their about there are man the suppose of their about there are man the suppose of the su

bright eyes, a long Dogs face, and teeth stronger and longer then Dogs: the face of a Lion must not my and parts, be attributed to this beaft, nor yet a Satyres, though it be more like. It hath a grim and fearful face, Albertue. and the female hath naturally her womb cast out of her body, and so she beareth it about all her life long: their voice is a shrill whizing, for they cannot speak, and yet they understand the Indian Thir voice. language; under their beard they have a chin growing like a Serpents, and bearding about the Alianua. lips like a Dragon; their hands are armed with most strong nails, and sharp; they are very swift of foot, and hard to be taken, wherefore they will run to the waters when they are hunted, being not ignorant that among waters they are most hardly taken; they are very fierce and active in leaping, ignorant that among waters they are most hardly taken; they are very herce and active in leaping, biting deep and eagerly where they lay hold, neither do they ever grow so tame, but that they remain surious also. They love and nourish sheep and Goats, and drink their milk; they know how to take the kernels out of Almonds, Walnuts and Nuts, as well as men, finding the mear within, food, though the shell be unprofitable: they will also drink wine and eat fielh, sod, rosted, or desiciously dressed, and they will eat Venison, which they by reason of their swittness take easily, and having taken it tear it in pieces and rost it in the Sun; they can swim safely over any waters, and therefore in swimming.

They are evill mannered and natured, wherefore also they are pictured to figuiffe wrath, they are Their nature fo unappealable. The Latins use them adjectively to fignific any angry, hubborn froward, or rave- in particular. ning man. They will imitate all humane actions, loving wonderfully to wear garments, and of their love of own accord they clothe themselves in the skins of wilde beaths they have killed they are as sufful and garments, venereous as Goats, attempting to defile all forts of women, and yet they love little children, and venereous as Goats, attempting to defile all lorts of women, and yet they love little children, and their females will suffer them to suck their breads if they be held to them, and some say they will suck womens breasts like little children. There was such a beast brought to the French King, his head being like a Dogs, and his other parts like a mans, laving legs, hands and armes naked like An History, a mans, and a white neck; he did gat lod flesh so mannerly and modelity, taking his meat in his side designate hands, and putting it to his mouth, that any man would think he had understood humane conditions: he ftood upright like a man, and fat down like a man. He differned men and women alunder, and above all loved the company of women, and young maidens ; his genital member was greater then might match the quantity of his other parts: he being moved to wrath, would rage and let upon men, but being pacified, behaved himself asmoskly and gently as a man, and was overcome with fair words: shewing himself well pleased with those that sported with him. The Namades people of Ethlopia, and the Nations of Menitimer, live upon the milk of Cancephales, keeping great herds of them, and killing all the males, except fome few preferved for procreation.

a limitara mitadi, e

A TARTARINE.

Theod. Beza.

Here was at Paris another beaft calleda Tartarine, and in some places a Magot (much like a Baboun, as appeareth by his natural circumcifion) being as great as a Gray-hound, and walketh for the most part upon two legs, being cloathed with a Souldiers coat, and a sword girded to his side, so that the most part thought him to be some Monster-little-man, for being commanded to his kennel, he would go and tarry there all night, and in the day time walk abroad to be seen of every man, it was doubtful whether he were of the Manker kind or the Baboun, his voice was like the fqueeking of a Moufe, but his afpect and countenance was fierce, truculent and fearful, as his image is here deciphered.

Superflitious. tyres.

Their name.

S the Conocephal or Baboun Apes have given occasion to some to imagine (though falsely) there Awere such men, so the Satyres a most rare and seldom seen beast, hath occasioned other to think it was a Devil; and the Poets with their Apes, the Painters, Limmers, and Carvers, to encrease that superstition, have therefore described him with horns on his head, and feet like Goats, whereas Satyres have neither of both. And it may be that Devils have at some time appeared to men in this likeness, as they have done in the likenesse of the Onvermance and wild Affe, and other shapes; it being also probable, that Devils take not any denomination or shape from Satyres; but rather the Apes themselves from Devils whom they refemble, for there are many things common to the Satyre-Apes and Devilish-Satyres, as their humane shape, their abode in solitary places, their rough hair, and lust to women, wherewithall other Apes are naturally infected: but especially Satyres. Wherefore the Ancient Grecians conjecture their name to be derived as it were of Stather, fignifying the yard or virile member: and it is certain that the Devils have exercised their prestigious lust, or rather their imagination of lust upon mankind, whereof cometh that distinction of Fauni; that some are Incubi defilers of Women, and some Succubi des filed by men. Peradventure the name of Satyre is more fitly derived from the Hebrew Sair, Ifa. 34. whereof the plural is Seitim, Ifa. 13. which is interpreted monfters of the Defert, or rough hairy

Fawnes ; and when iffim is put to feir, it fignifieth Goats. The Chaldeans for Seirim, render Schedin; that is, evill Devils: and the Arabians, Lesejathin; that is, Satanas : the Persians, Devans the Illyrians, Devadai and Dewas ; the Germans, Teufel. They which passed through the world and exercised dauncing and other sports, for Dionysius, were called Satyres, and fometimes Tytiri, because of their wanton songs; sometimes Sileni (although the difference is, that the smaller and younger beasts are called Satyri, the elder and greater Sileni:) Also Sacha and Nympha, whereof Bacchus is pictured riding in a Chariot of Vinebranches, Silenus riding beside him on an Asse, and the Bacche or Sapres shaking together their stalkie Javelines and Paulmers. By reason of their leaping they are called Scirit, and the antick or Satyrical dancing Sicinnis, and they also sometimes Sicinnifie; sometimes Ægipane: wherefore Pliny reporteth, that among the Western Ethiopians , there are certain little hils of the Satyrique Ecipane, and that in the night time they use great fires, piping and dancing, with a wonderful noise of Timbrels and Cymbals: and so also in Atlas amongst the Moores, whereof there was no footing, remnant, or appearance to be found in

The

Gyraldus.

Grapaldus.

the day time.

The Satyres are in the Islands Satyrida, which are three in number, standing right over against India Peol. 2,7, on the farther fide of Ganges; of which Euphemus Conrehearseth this History. That when he failed Countreys of into Italy, by the rage of wind and evil weather they were driven to a Coast unnavigable, where breed, were many defert Islands inhabited of wilde aren, and the Mariners refused to land upon some Islands, having heretostore had trial of the inhumane and uncivil behaviour of the inhabitants; fo that they brought us to the Satyrian Islands, where we saw the inhabitants red, and had tails joyned to their back, nor much less then horses. These being perceived by the Mariners to

run to the Ships and lay hold on Their lufful the women that were in them, disposition. the Ship-men for fear took one of the Barbarian women and set her on the ' among them, whom in most odious and filthy manner they abused, not only in that part that nature hath ordained, but over the whole body most libidinously, whereby they found them to be very brute beafts.

There are also Saiyres in the Pline. Eastern mountains of India, in the Paul. Venet. Countrey of the Cartaduli, and in the Province of the Comari and Corude, but the Cebi spoken of before bred in Ethiopia, are not Satyres (though faced like them:) nor the Prafyan Apes, which resemble Satyres in short beards. There are many kinds of these Sa- Divertity of tyres better distinguished by kinds. names then any properties natural known unto us. Such are the Ægipanæ before declared. Nimphes of the Poets, Fawnes, Pan, Pliny. & Sileni, which in the time of the Gentiles were worshipped for gods; and it was one part of their Religion, to fet up the picture of a Satyre at their doors and gates, for a remedy against

the bewitching of envious perfons; and the statue of Priapus in the Agains of a Satyre in their Gardens: for which cause we read of many pictures made of Satyres. Antipbalu made a very noble one in a Pambers skin, calling it Pliny, Apoleopon, that is, Wry-faced. Another Painter of Arifides, painted it crowned with a drinking cup, fignifying thereby the beaftlineffe of drunkards. Miron had one painted hearing and admiring pipes, and Hermolaus. another called Periboetos at Atbens, as is reported, & that Praxiteles was wonderfully in love therewith; whereupon being at supper with Phyne the noble harlot, who had begged of him the best piece of work he had, consented with this condition, that he would not tel her which he loved best; whereupon the to fatisfie herfelf, privately suborned one of his flaves, to come in at supper time, and tell him his house and most of his goods were burned; whereat being amazed, demanded if Cupid, and the Satyre were safe; by which she knew the best piece, and asked Cupid, refusing the Satyre. Protognes had one Pliny. painted holding pipes in his hand, and was called Anapauomenos: & Timambes had painted Cyclos feeping in a little tablet, with Satyrs standing beside him, measuring with a javelin the length of his thumb.

Satyres have no humane conditions in them, nor other resemblance of men beside their outward shape: though soling speak of them like as of men. They cary their meat under their chin as in a Mila. florehouse, and from thence being hungry they take it forth to eat, making it ordinary with them Resemblance ftorehouse, and from thence being nungry they take it forth to eat, making it ordinary with the revery day which is but annual in the Formice Lions; being of very unquiet motions above other of Salyres.

Apes. They are hardly taken, except fick, great with young, old, or alleep; for Sylla had a Satyre Their provisionough him which was taken asseep neer Apollonia, in the holy place Nympheum, of whom he (by on of food, divers interpreters) demanded many questions, but received no answer, fave only a voice much like Their taking.

Their taking. the neying of a horse, whereof he being afraid, sent him away alive. Philostratus telleth another history, how that Apollonius and his colleagues supping in a village of Ethiopia, beyond the fall of Nilus, they heard a sudden outcry of women calling to one another; some saying, Take bim, others, I'olow him; likewise provoking their husbands to help them : the men presently took clubs, stones, or what came first to hand, complaining of an injury done unto their wives. Now some ten moneths before there had appeared a fearful fhew of a Saryre, raging upon their women, and had flain two of them, with whom he was in love : the companions of Apollonius quaked at the hearing hereof, and Nilus

Paulenias.

Macrolins.

Men like Sa-

tyrés.

one of them sware (by fove) that they being naked and unarmed, could not be able to refift him in his outragious luft, but that he would accomplish his wantonness as before : yet faid Apollonium, there is a remedy to quail these wanton leaping beasts, which men say Midas used (for Midas was of kindred to Satyres, as appeared by his ears.) This Mids heard his mother fay, that Satyres loved to be drunk with wine, and then sleep soundly, and after that be so moderate, mild and gentle, that a man would think they had loft their first nature.

Whereupon he put wine into a fountain neer the high-way, whereof when the Satyre had tafted he waxed meek suddenly, and was overcome. Now, that we think not this a fable (faith Apollonius) let us go to the governor of the Town, and inquire of him whether there be any wine to be had that we may offer it to the Satyre : whereunto all confented, and they filled four great Egyptian earthen veffels with wine, and put it into the fountain where their cattel were watered; this done, Apollonius called the Satyre, secretly threatning him, and the Satyre inraged with the savour of the wine came; after he had drunk thereof, Now faid Apollonius, let us facrifice to the Satyre, for he sleepeth, and so led the inhabitants to the dens of the Nymphes, distant a furlong from the Town, and shewed them the Satyre, faying. Neither beat, curse, or proyoke him henceforth, and he shall never harme you. It is certain, that the Devils do many wayes delude men in the likeness of Satyres, for when the drunken feasts of Bacchus were yearly celebrated in Parnassus, there were many fights of Satyres, and voices, and founding of Cymbals heard; yet isit likely that there are Men alfo like Satyres inhabiting in some desert places ; for S. Jerom in the life of Paul the Eremite, reporteth there appeared to S. Antony an 1-lippocentaure, fuch as the Poets describe, and presently he saw in a rocky valley adjoyning, a little man having crooked notirils, hornes growing out of his forehead, and the neather part of his body had Goats feet: the holy man not difmayed, taking the shield of Faith, and the breastplate of Righteousness, like a good Souldier of Chrift, pressed toward him, which brought him some fruits of palms as pledges of his peace, upon which he fed in the journey; which St. Anony perceiving, he asked him who he was, and received this answer, I am a mortall creature, one of the inhabitants of this Desert, whom the Gentiles (deceived with error) do worship and call Fauni, Satyres, and Incubi: I am come in ambassage from our flock, intreating that thou wouldst pray for us unto the common GOD, who came to fave the world; the which words were no fooner ended, but he ran away as fast as any fowl could flie. And left this should feem falle, under Constantine at Alaxandria, there was such a man to be seen alive, and was a publick spectacle to all the World; the carcass whereof after his

Emperor himself might see it. Satyres are very seldom seen, and taken with great difficulty, as is before said : for there were Two beafts like two of those sound in the Woods of Saxony towards Dacis, in a Defert, the female whereof was killed batytes taken. by the darts of the hunters, and the biting Dogs, but the male was taken alive, being in the upper parts like a Man, and in the neather part like a Goat, but all hairy throughout; he was brought to be tame, and learned to go upright, and also to speak some words, but with a voice like a Goat, and without all reason: he was exceeding luftful to women, attempting to ravish many of what condition soever they were, and of this kind there are store in Ethispia.

death was kept from corruption by heat, through fair, and was carried to ANTIOCHIA that the

The figure of another Monster.

Of the Ægopithecus.

He famous learned man George, Fabrician, the weed me this shape of a monstrous beast (the figure whereof see p. 12.) that is the to be joyined to the story of Satyres. There was (said he) in the like a Sa. the Territory of the Bishop of Salizburgh, in a forcest called Famesbergh, a certain four-footed beast, of a yellowish-carnation colour, but so wild that he would never be drawn to look upon any comman, hiding himself in the darkett places, and being watched diligently, would not be provoked nature. to come forth so much as to early shear, so that in a very short time it was samished. The hinder legs were much unlike the former, and also much longer. It was taken about the year of the Lord, One thousand six bundred there whole image being here so lively described. One thousand five hundred thirty, whose image being here so lively described, may save us further labour in discoursing of his main and different parts and proportion.

of the Norvegian Monsters.

Hen as certain Ambassadors were sent from James the fourth of that name, King of Scotland, Hell Boet. among whom was James Ogill that famous Scholar of the University of Aberdenc, they no sooner took shipping and hoisted sail, but there sudainly arose such a tempessuous storm, that they were driven to the coasts of Normay: and there going on shoar, they were very strangely affrighted, to fee (as to them it appeared) certain wild, monstrous men, running on the tops of the mountains. Afterward they were told by the inhabitants that they were beafts (and not men) which did bear Monfters like mortal hatred to mankind, although they could not abide the presence of a mans countenance, yet in Men. dark nights, when the reverend vilage of humane creatures are covered, they will come down by Haured to troops upon the Villages, and except the barking of Dogs drive them back, they break open doors, and enter houses, killing and devouring whosoever they find; for their strength is so unrelistible and great, that they can pull up by the roots a tree of mean stature, and tearing the boughs from The great the body, with the Rock or ftem thereof they fight one with another. Which when the Ambassa- ftrength of dors heard, they caused a sure watch to be kept all night, and withall made exceeding great fires, their beasts. and when the light appeared, they took their farewel of those Monster-breeding-shores, recovering with joy, the course which before they had lost by tempest.

Of the &GORITHECUS.

TNder the Equinotical toward Divers flings of the East and South, there is Apres. a kind of Ape called Agopitheom, an Ape like a Goat. For there are Apes like Bears, called Artio. pitheei, and some like Lions, called Leontopitheci, and some like Dogs. called Cynocephali, as is before expressed; and many other which have a mixt refemblance of other creatures in their members. Amongst the rest is there a The descripti-

is dayly and hourly amongst

the Chymera, Chymera by Orthus the Sphina, and the Nemean Lion: now this Orthus was one of the Geryons Dogs. This Sphina they make a treble formed monster, a Maidens face, a Lions legs, and the wings of a Fowl; or as Aufonius and Various say, the face and hand of a Maid, the body of a Dog, the wings of a Bird, the voice of a man, the claws of a Lion, and the tail of a Dragon: and that the kept continually in the Sphincian mountain; propounding to all travellers that came that way, an Enigma or Riddle, which was this, What was the creature that fift of all, goeth-ort four legs safterwards on two, and laftly on three : and all of them that could not diffolve that Riddle, the presently flew, by taking them and throwing them down headlong from the top of the Rock. At last Oedipus came that way and declared the fecrot, that it was (a Man) who in bis infincy creepeth on all four, afterward in youth, goeth upright upon two legs, and laft of all in old age, taketh unto bim a staffe which maketh bim to go a it were on three legs; which the moniter hearing, the presently threw down her self from the former rock, and so the ended. Whereupon Oedipm is taken for a fubtle and wife opener of mysteries.

But the cruth is, that when Cadmus had maried an Amazonian woman, called Sphinx, and with her came to Thebes, and there slew Draco their King, and possessed his Kingdom; afterward there was a sister unto Draco called Harmona, whom Quantus maried, Sphine being yet alive: She in revenge (being affisted by many followers) departed with great store of wealth into the Mountain SPHINCIUS, taking with her a great Dog which Cadmus held in great account, and there made daily incursions or spoils upon his people: Now Enigma in the Theban language, fignifieth an inrode or warbke incursion, wherefore the people complained in this fort, This Grecian Sphinx robbeth ur, in fetting upon with an Anigma, but no man knoweth after what manner fhe maketh this Ænigma.

Cadmus hereupon made Proclamation, that he would give a very bountiful reward unto him that would kill Sphinx, upon which occasion the CORINEHIAN Oedipus came unto her, being mounted on a fwift Courfer, and accompanied with fome Thomas in the night feafon, flew her. Others fay, that

Of the Sagoinal

Ordina by countertesting friendship, slew her, making shew to be of her faction; and Paulantes faith that the former Riddle was not a Riddle, but an Oracle of Apolio, which Cadmus had received. whereby his posterity should be inheritors of the Thebay Kingdom; and whereas O.diput, being the Son of Lains a former King of that Countrey, was taught the Oracle in his fleep, he recovered the Kingdom usu: ped by him his Sitter, and afterward unknown, maried his own Mother Jecofia. But the true moral of this Poetical fiction, is by that learned Alciatus in one of his emblems deciphered, that ther montrous treble-formed-shape, fignified her fulftul pleasure under a Virgins face. her cruel pride under the Lions claws, her winde driven levity under the Eagles or Birds fea. Suide thers, and I will conclude with the words of Suidas concerning fuch Montters, that the Tritons, Meaning this Sphinger, and Gentaures, are the images of those things, which are not to be found within the com- Poerical

passe of the whole world.

The true Sphine first described, is of a fierce though a tameable nature, and if a man do first of all perceive or difcern these natural spinger, before the beatt difcern or perceive the filan, he The nature of shall be fafe : but if the bealt, first descript be man, then is it mortal to the man. These Sphines were the Sphines. of great account for their frangenels : with their image did Aug. flus fignall his Grants, Libels, and Suctonius. of great account for their irrangencies of more than age und angujus right and this Orants, pipels, and Epittles: afterward he left that, and figned with the image of Alexander the great, and last of all with his own. Syelis the King in the City of the Berifthenter, had a fair house, about which there were brighten the City of the Berifthenter, had a fair house, about which there were brighten the City of the Berifthenter, and a fair house, about which there were brighten the City of the Berifthenter, and a fair house, about which there were brighten the city of the Berifthenter. his own. Sychothe King in the City of white stone. At athens, in the Temple Parther na, there is Paulanian. described the contention betwixt Pallas and Noptune, about the earth, and the image of Pallas made of Ivory and gold, hath in the midit of her shield the picture of a Sphine. Amasis the King of Eg pt. built in the porch of Pallas, an admirable work called Sar: where he placed fuch great Coloffes and A dro-Sphinger, that it was after ward supposed he was buried therein, and was lively to be feen imputrible. To conclude, the Egystians in the porches of their Temples painted a Sphinx, whereby they infinuated that their divine widom was but dark and uncertain, and to covered with fables, that there fcarce appeared in it any sparkles or footsteps of yenity.

Of the SAGOIN, called GALEOPITHE CUS.

His figure of the Sagoin, I received of Peter Cordenberg, a very learned Apothecaty at Antwerpe, wch is three times as big as my picture, and John Cay that famous English Doctor hath advertised me, that it no way resembleth the Sagoin it felf. which is not much

a little Conny, or a young Hedghog; for he had feen feveral ones of that bigness, of a griffeld colour, a near heard, and somewhat ash-coloured, a rail like a Bar, but hairy the Colour, feet of a Squirrel, and the face almost like a Martine, or, Satyre, a round ear, but very thore Paris. feet of a Squirrel, and the face almost like a Martine or Sasyre, a round ear, but very short, and open, the hair black at the root, and white at the end, and in other conditions like a Manakey. They are much set, by among women, and by the Brassland where they are bred and called Sagoins, it being very probable that they are conceived by a small Ape and Weasell, for, in Proceeding that Countrey, by reason of the heat thereof, there are many such unatural commixtions. It says is a nimble, lively, and quick spirited beast, but searful; it will cat white bread Apples Sweet. Their meat grapes, dryed in the Sun, Figs or Pears. There was one of them at Answerpe sold for histy Crowns. In France they call a Sagoin a stirle beast not much bigger them a Squirrel, and not able to ensure any cold. Some other affirme that a Sagoin is a beated resture, but without a tail, of an assume that a Sagoin is a beated resture, but without a tail, of an assume them is already rehearsed. then is already repearfed, the collection with the state of the state

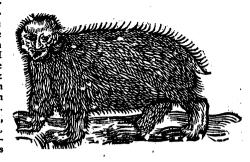

Of the Bear-Ape ARCTOPITHECUS.

Here is in America a very deformed beast which the inhabitants call Haut or Hauti, and Theucius. the Erenchmen, Quenon, as big as a great African Munkey, His belly hangeth very low, Of the name, his head and tace like unto a childs, as may be feen by this lively picture, and being taken His parts. it will figh like a young child. His skin is of an ash-colour, and hairy, like a Bearis he hath but three claws on a foot, as long as four, fingers, and like the thornes of Privet, whereby he climeth up into the highest trees, and for the most part liveth of the leaves of a certain tree being of any exceeding height, which the American call Amabut, and the gof this beast is call

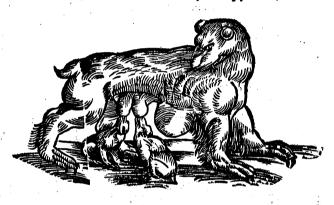

A fecret in

Nature.

led Haut. Their tail is about three fingers long, having very little hair thereon a it hath been often tried, that though it fuffer any famine, it will not eat the flesh of a living man; and one of them was given me by a Frenchman, which I kept alive fix and twenty dayes, and at the last it was killed by Dogs, and in that time when I had fet it abroad in the open aire, I observed, that although it often rained, yet was that beaft never wet. When it is tame it is very loving to a man, and defirous to climb up to his shoulders, which those naked Americans cannot endure, by reason of the sharpeness of his claws.

Of the SIMIVULPA, or Apilh-Fox.

Pilonius. Gillius. The descripti-

Hose which have travelled the Countrey of Payran, do affirme, that they have seen a fourfooted beait, called in Latin, Simivulpa , in Greek , Alopecopithecor, and in German, Fuchffaffe : in the forepatt like a Fox, and in the hinder part like an Ape, except that it had mans feet, and ears like a Bat, and underneath the common belly, there was a skin like a bag or fcrip, wherein the keepeth, lodgeth, and carryeth her young ones, untill they are able to provide for themin the receptus, outhout the help of their dam; neither do they come forth of that receptacle, except it be to fuck milk, or sport themselves, so that the same under-belly is her best remedy against the surito such milk, or sport themselves, so that the same under-belly is her best remedy against the suritor out Hunters, and other ravening beaks, to preserve her young ones, for she is incredibly swift, running with that carriage as if the had no burthen. It hath a tail like a Munkey: there was one of them with three young Whelpes taken and brought into a thip, but the Whelps died quickly in the old one living longer was brought to Stull, and afterward to Granado, where the King of spain faw it, which foon after by reason of the change of aire and incertainty of diet, did also pine away and die. The like things doth Gardan report of a beaft called Chiurca, in Hipanta Nova, and Stedimius of a Surapoy in America : but I conjecture that the former is this Fox-Ape called in Greek, Alopecopithecos, and of the Germani Pulchfaffe, the latter the Female Cynotephal, which carryeth her Momb wherein lie her young ones without her belly. There is a fifth called Glaucus, whereof the male swalloweth up all the young ones when they are indangered by other, and afterward yeeldeds thing of a fish. them forth again fafe and found.

Of the ASSE.

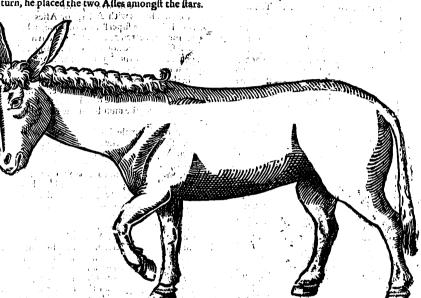

Of the name and the reasons thereof.

Varinus.

"He Affe, is called in Latin, Afinus, in Greek, Ones and Killos, be reason of his sabour in bearing burdens, and of some Megamucos, because of his unpleasant voice: Of others Cochusus, or Canthon, flom whence cometh Cantharus, that is, a Scarabee or Flie, bred of the dung of The Hebrew call it Chamor, Deut. 5. and the Perfiant, Care, the latter Hebrews do indifferently take Gajedor, Tartak, and Gaur for an Affe; the Italians, Lufino, the Spaniards, Afro, the French, Ung ajm, the Germant, Efel, Mul, Mulle refel, and the Hightone, Ofel; the which Beaft is

intituled or phrased with many Epithets among Poets; as flow, burthen-bearing, back-bearing, Epithets of an vile cart-drawing, mill-labouring, fluggish, crooked, vulgar, flow-paced, long-eared, blockish, Affe. braving, idle, devil-haired, filthy, faddle-bearer, four-foot, unfavoury, and a beatt of miferable condition; besides many other fuch titles in the Greek. Yet this filly beast hath among the Astronomers found more favour, for in the fign Cancer there are two Stars called the two Affes, placed there'as some say, by Bacchus, who in his sury which June laid upon him, travelled to the Dodanean Pline. Temple of Apalle to recover his wits, by the counsel of the Oracle, came to a certain lake of water, Affes in celefte over which he could not passe, and meeting there two Asses, took one of them, upon whose back he al signs, was fafely carried over drie foot, Afterward, when he had recovered his wits, in thankfulness for that, Hyginm. good turn, he placed the two Asses amongst the stars.

Of the Asse.

Howfoever this may be a fabulous commendation of this beaft, yet holy Writ teacheth us, that Numb. 22. an Asse saw an Angel, and opened his mouth in reproof of his master Balaam; and our most blessed Saviour rode on an Affe to Jerusalem to shew his humility: and Sampson out of the jaw-bone of an Affe, quenched his thirst. Apuleius in his eleven books of his golden Affe, taketh that beast for an Emblem, to note the manners of mankind; how some by youthful pleasures become beasts, and Morals of the afterward by timely repentant old-age, are reformed men again: Some are in their lives Wolves, discourses of some Foxes, some Swine, some Asses, and so other may be compared to other beasts: and as Ori- Asses, gen faith, only by pleasure is a man a horse or Mule, when a beastly soul liveth in a humane shape. Proclus. This world is unto them as an inchanted cup of Circes, wherein they drink up a portion of oblivion, Berealdus, error and ignorance; afterwards brutizing in their whole life, till they tafte the Roses of true science and grace inlightning their minds, which is their new recovery of humane wit, life, and understanding.

Affes are bred in Arcadia, wherefore proverbially, the best Affes are fignified by the Arcadian Countreys Affe. and the greatest Asses by the Arcamican Affe. In Timochain in Persia, are very beautiful breeding Affee. Affes, whereof one hath been fold for thirty pounds of filver. Likewife in Rea, in Italy, in Paul. Venet. Illyria, Thracia, and Epirus, there are Asses but very small ones, although all other Cattel there Pondera. are very large. In India among the Pfilians, they are no greater then Rams, and generally all their Cattel are of a very small growth. In Scythia, Pontus, Celta, and the regions confining them. Elianm. are no Asses bred, by reason of extremity of cold, for Asses are very impatient of cold. In Mylia there are also affes: but their flanks are crooked, and indented as if they were broken; whereupon a proverbial common speech ariseth (one having a broken flanke) for a Mysi-

Affes are ingendred both by their own kind, and also by horses, for they chose stallions and put Their breed. them to their Asses, who have large bodies, well-set legs, strong necks, broad and strong ribs, brawny and high creasts, thighes full of sinews, and of black or flea-bitten colour (for a Mouse-colour is not approved) wherefore he that will have a good flock of Asses, must look that the male and semale be found, and of a good age, that they may breed long time, and out of a good Seminary, as of Palladius, Arcadia or Rea : for as the best Lampreyes are in Sicilia, and the delicate fish Helops in Rhodes and

Absirius. Ariffotle.

not elsewhere; fo are best Asses in those forenamed places. When they make choise of a Stallion, they look principally that he have a great head. An Affe is more defirous of copulation then an Horse and both male and female do couple at thirty moneths, although it prove not untill three years or three and a half. Men fay that Anna the father in faw of Elan, did first invent the copulation of Horses and Asses together; for as a Horse doth cover a she Asse; so an Asse will cover a Mare, and an Affe will fooner fill the luft of a Mare then a Horfe.

Iliny. I'my.

Leonicenus.

If a Horse cover a female Asse which hath been entred by a male Asse, he cannot after the seed of the Affe: but if an Affe cover a Mare which a Horse hath formerly entred, he will deftroy the seed of the Horse, so that the Mare shall suffer abortment, by reason that the leed genital of an Asse is more frigid then an Horses. The Mares of Elis cannot at all conceive by Affes copulation, and there is more abortments falleth out by commixtion of Horses with Asses, or Asses with Mares, then when every kind mingleth amongst themselves. It is but a superstition of the which assistance which assistance with the superstition of the superst that an Asse cannot conceive for so many years, as she hath eaten grains of Bally corn defiled with womens purgation ; but this is certain, that if an Affe conceive not at the first offing of her teeth, the remaineth barren. They are not coupled in generation in the Spring Equinalium like Mares and other beafts; but in the Summer Soffice, by reafonof their cold natures, that they may bring forth their young ones about the same time, for in the twelfe moneth after their copulation, they

Ariftotle. Aristotle.

Pliny.

render shelr Foles. If the males be kept from labour they are the worfe for generation, wherefore they are not to be suffered idle at that time; buait is not so with the female, the mink reft, that the Fole may be the ftronger: but presently after she is covered, she must be coursed and driven to and

Varro. Pliny. fra, or else she will call forth again the received seed.

The time that she goeth with young, is according to the male kind by which the is covered, the long as the male lay in the belly of his dam, so long will the Asse carry her young before deliverance : but in the flature of body, ftrength, and beauty, the young one taketh more after the female then the male the best kind of Asses are the Poles of a wild Asse and a tame semale Asse. They greater, which Folkis called to take it from the dam, and put it to fuck a Mare, that it may be the greater, which Folkis called Hippaters, that is, a Horse suckling; and Mares will not be covered by Asse, except by such a one as was a horse-suckling. A the Asse will engender till she be thirty years old, which is her whole life long, but if she conceive often, she will quickly be barren; whereof their

Pliny. Ælianu.

old, which is her whole life long, but if the conceive often, the will quickly be barren; whereof their keepers must take such care, that they cause them to be kept from often copulation.

They will not kole in the light of man, or in the light, burinklarkness; they bring forth but one a time, for it lath not been heard of in the life of man, that an Asse hath ever brought forth twins. As soon is they are conceived they have milk in their udders, but some hold not untill the tenth moneth. They love their young ones very tenderly, for shey will run through fire to come at them, but if their beans water betwitt them, it cooleth their affections; for of all things they love not to wet their feet. They will drive their young ones from sucking at the fixth request, because of the pain in their udders but their keepers wear them not fill a whole wear moneth, because of thepain in their udders, but their keepers wean them not till a whole year after their foaling, Their milk is fo thick that it is ufed in flead of fodder: a Mares is more thin, and a Camels is thinnest of all. It is mortal to their young ones to tast the dams milk for two dayes after their foaling, for the food is fo fat that it breedeth in their mouthes the Coloffracion or Beeftings. Touching their several parts, they have teeth on either chap like a Man and a Horse, an Asse and a

Mule have 36 teeth, and joyned neer together: the bloud of Asses and Buls is the thickest of all other.

Ælianus.

Abjirtus.

as the bloud of man is the thinnest : His head is great and his ears long and broad : both male and female lose their fore-teeth in the thirtieth moneth of their age, and the second to the first, in the fixt moneth; their third and fourth teeth are called Gnomons, that is, Regulars, because by them there is a tryed rule to know their age; and those teeth also they lose in the fixt moneth. The heart of an Affe is great, as all other fearful beafts have. The belly is uniform as in other beafts that have a folid or whole hoof. It wanteth a gall, and hath two udders betwixt the thighes, the forepart of the back neer the shoulder is weakest, and there appeareth the figure of a Crosse, and the hinder part neer the loins is stronger. The hoofs are whole and not parted : the Stycian water is so cold that nothing can hold it, except the hoof of an Affe or Mule; although Ælianus affirme, that It cannot be contained but in the horns of Scythian Asses. Their tails are longer by one joint then a horses (though not so hairy). They are purged with monethly courses more then Sheep or Goats, and the urine of the female is more thin then the males. If an Asse was hindered by any disease from making water, certain superstitious persons for the ease of the beast, muttered this charm:

Gallus bibit & non meilt, Myonus meilt & non bibit : that is, The Cock drinketh and maketh not water.

The Dormouse maketh water and never drinketh. They will eat Canes or Reeds, which to other bealts is almost poison : wherefore in the old time an Affe was dedicated to Bacobus as the Canes were facred unto him: and at the time of their copus Philemon died lation they give them herb Bafill to ftir up their lust: They will be satisfied with any never so base with laughing food, as chaffe, whereof there is abundance in every Countrey, young thornes and fruits of trees, when he faw an twiges of Olier, or a bundle of boughs to browfe upon : in fo much as Q. Hortentius was wont to Thy, that he had more care that his Barbels should not hunger in his fish-pools, then his Asses in Rofea: but the young ones newly weaned must be more tendered, for they must be fed with hay, chaffe or Barley, green corn, or barley bran. Affes will hardly drink but at watering places in their folds, or such as they have been accustomed withall, and where they may drink without wetting

their feet; and that which is more strange, they cannot be brought to go over hollow bridges, through which the water appeareth in the chinks of the planks; and when intravail they are very thirsty, they must be unladen and constrained to drink; yea, Herodius reporteth, that there are certain Asses among the African shepherds, which never drink. When they sleep they lie at length, and in their fleep conceive many forceable dreams, as appeareth by their often beating back their hinder legs, which if they ftrike not against the vain aire but against some harder substance, they are

for every tree in land. When the Affect have eaten Hemlock, or an herb much like unto it, they fleep fo Mathecht. long and frangely, that oftentimes the Country men begin to flea them, and on the fuddain their skins half talen of and the other balf on, they awake, braying in such horrible manner, that the poor manage most dreadfully affrighted therewith. Their voice is very rude and fearful. as the Post faid

2. odr ob . Quirrital verres, tardus gudit, uncar affellus.

And thereforethe Grecian to express the same, haved faigned many new words, and call it Opkethmos, Eraflothenes. as the Louise, Rusere; that is, to utter forth a voice in a base and rude manner. The Poets seign shat at that time, when further, same to war with the Gyants, Bacchus and Vulcan, the Sayres and Sileni affiled, and attended, him, being carryed upon Asses. When the time came that the battell began, other Assessment for ear brayed most horribly, whereat the Gyants not being acquainted, with strange and unknown voices and cries, took them to their heels and so were

overgome, 1999.
In the facrifice of the Godeffe Vacuna, an Asse was feasted with bread, and crowned with flowers, hung with rich Jewels and Beytrels, because (as they say) when Priapus would have ravished Vefta Ovid. being affeep, the was suddenly awaked by the braying of an Asse, and so escaped that infamy. And the Lamplaceni in the disgrace of Priapus did offer him an Asse. But this is accounted certain, that among the Softmans by reason of cold, an Asse is never heard or seen; and therefore when, the Seythiant fet upon the Persians, their Horses will not abide the braying of Ladantus. Asses, wondring both at the strangeness of an Asses shape, and rudeness of his cry: wherefore there are certain birds, resembling in their chartering, the braying of Asses, and are therefore termed Onacratuli;

When an Alle dyeth, out of his body are ingendred certain Flies, called Scurabees. They are A good hotle-infested with the same diseases that Horses be, and also cured by the same meanes (except in leach is a good letting of bloud) for by reason their veint be small and their bodies cold, in no case must any bloud Afteleach,

be taken from them.

Affes are subject to madness when they have tasted to certain herbs growing neer Pointas; as are Vegetius. Bears Horses, Leopards and Wolves: they only among all other hairy beasts are not troubled with either tikes or lice, but principally they perish by a swelling about the crown of their pasterne, or by a Catagribe called Malis, which falling down apon their liver they die, but if it purge out of their nostrils they shall be safe: and Columella writerly, that if sheep be stabled where Mules or Asses have been housed, they will incurate sab. There is great use made of the skins of Asses, for the Germanes do make thereof a substance to paint and write upon, which is called Efelfout. The Arabians have a cloth called Mesha, made of Alles and Goates hair, whereof the inhabitants of their deserts make them tents and lacks. It is reported that Emperheles was called Colyfanomas, because when the Aprigenines were troubled with winds by hanging about their City innumerable Asse skins, he safeguarded them from the winds: whereupon long have thought (but falfly) that there was some secret in Asses skins, against outragious Tempestes.

The bones of Asses have been used for pipes, the Artificers made more reckoning of them then Pliny. of the bones, of Harres, and therefore Hop in Plutarch wondereth that so grosse and dull a creature, should have such should and musical bones; and the Business called the Philosophers Naucratites, begause they played musick upon Asses bones, for they cannot abide the found of a trumpet, begause it resembleth the voice of an Asse, who is very hateful to them for Typhons

Mecense allowed the flesh of young Asses to be eaten, preserving it before the flesh of wilde Asses, and this custome also prevailed at Asben, where they did eat the flesh of old Asses, which hurteth the Romach, having in it no good juice or sweetness, and is very hard to be digested. In like fort about the coasts of Alexandria, men use to eat the flesh of Asses, which begetting in Galenne. their body much melancholick and adulted humor, causeth them to fall into the Elephantia or footted leprofie.

Affes are tamed at three years old, and taught for those businesses which they must be applied unto; some for the mill, some for husbandry and the plough, some for burthens and carriage, fome for the wars, and fome for draught. Merchants use Affes to carry their wine, oil, corn, and Collumella. other things to the sea-side; wherefore the Countrey man maketh principal account of this beast for his carriage to and fro, being fit to carry both on his neck and on his back : with them they go to market with their wares, and upon them bring home their houshold necessaries.

Ælianw.

Ælianus.

They grind in their mils and fetch home their corn, they plough their land, as in Campania, Lybia, and Batia, where the ground is foft, and in Byzantium that fruitful Countrey, which repayeth the Mulis, equis, afi- husbandmans labor with increase of an hundred and fifty times more then the feed, and where in ni feria malla drie weather their ground is not arable with the whole strength of Buls, yet after a little rain, one nifi, in familia Asse in one end of a yoak, and an old woman at the other end, do easily draw the plough, and open the earth to fow their feed : wherefore Cato faid merrily, that Mules, Horfes and Affes, keep no holy-dayes, except they be such Asses as keep within doors. In like fort they drawfrom place to place

the carts of Bakers, or Carts laden with any other carriage, if it be not over great.

The people Carmani (by reason they want Horses) use Asses in their wars, so also do the Scaracori, who never use them in mils or any such base works, but upon them undertake all their martial perils. There was a custome amongst the Cumani, that when a Woman was taken in Adultery, she was led to the Market, and there fet upon a bare stone, afterwards she was fet upon a bare Affes back, and fo carryed throughout the City, then brought back again to the former stone for a publick spectacle to all the City, whereby the remained infamous all her life after, and was called Onobation that is, one that had ridden an Affe; and the stone whereupon she stood, was accounted an und lucky, and an odious place for all posterity. In like fort among the Parthians, it was held a difgraceful thing to ride or be carryed upon a bare Asses back. The dung of Asses is pretious for a garden, especially for Cabages; and if an Apple tree be dying, it may be recovered by washing it in Asses dung by the space of fix dayes; and some have used to put into Gardens the skull of a Mare Him caput Ar- or she Asse that hath been covered in copulation, with perswasion that the Gardens will be the more fruitful.

Affes are of very foolish conditions and stender capacity, but yet very tame, not refusing any manner of burthen although it break his back : being loaded, it will not out of the way for any man or beaft, and it only understandeth the voice of that man, with whom it is laboured, knowing also the way whereunto it is accustomed. Ammontanus was in such love with an Asse, and holdding him of fo great a capacity, that he had one continually to hear his Lectures of Philosophie; Galen affirmeth, that an Affe underftandeth genn, species & individuum, because if you shew him a Camell that never faw one before, he is terrified and cannot indure his fight: but if he have been accustomed to such a fight, if you shew him never so many, he is not moved at them. In like fort, he knoweth men in general, being not affraid of them, but if he fee or hear his keeper, he knoweth him for his keeper or master.

There was a cunning player in Africa, in a City called Alcair, who taught an Affe divers strange tricks or feats; for in a publick spectacle, turning to his Asse (being on a scaffold to shew sport) faid, The great Sultan purposeth to build him an house; and shall need all the Asses of Alcair to fetch and carry wood, Rones, lime, and other necessaries for that business; presently the Asse falleth down turneth up his heals into the air, groneth, and shutteth his eyes fast, as if he had been dead: while he lay thus, the Player defired the beholders to confider his estate, for his Asse was dead; he was a poor man, and therefore moved them to give him money to buy another Asse. In the mean time having gotten as much money as he could, he told the people he was not dead, but knowing his masters poverty, counterfeited in that manner, whereby he might get money to buy him provender, and therefore he turned again to his Asse and bid him arise, but he stirred not at all. Then did he strike and beat him fore (as it feemed) to make him arife, but all in vain, the Affe lay still.

Then faid the player again, our Sultan hath commanded that to morrow there be a great triumph without the City, and that all the noble women shall ride thither upon the fairest Asses, and this night they must be fed with Oates, and have the best water of Nilus to drink. At the hearing whereof, up started the Asse, snorting and leaping for joy: then said the Player, the Governor of this Town hath desired me to lend him this my Asse for his old deformed wife to ride upon; at which words the Asse hangeth down his ears, and understanding like a reasonable creature, began to halt as if his leg had been out of joint; why, but said the Player, had thou lifer carry a fair young Woman? The Asse wagged his head in token of consent to that bargain, go then (faid the player) and among all these fair Women, chuse one that thou mayest carry; then the Asse looketh round about the Affembly, and at last went to a sober woman and touched her with his nose, whereat the refidue wondered and laughed, shutting up the sport, with crying out, An Affes Woman, An Alles Woman, and so the Player went unto another Town.

Such things do serve to teach us that Asses are not altogether indocible, besides in their own nature they know how to refresh themselves in their weariness, by wallowing on the ground, and being overcome with melancholy humor, they naturally look for the hearb Ceterach or Finger-featne to cure them. When the Asses of Maurusium are bound to a journey, they set forward so fast, that a man would think they rather flew then ran; but being overwearyed they are so abased, that they fend forth tears, and then are they drawn at Horses tails to their journeys end.

The Asse is never at peace with the Crow, because it longeth for the Asses eyes, likewise the bird Salem, for when the Affe cometh to the thornes, to rub himself where the faid bird buildeth her

neft, the Asse spoileth it, wherefore the said bird maketh continual assault upon him. In like fort the Colora or Stellio, for it fleepeth in the mangers, and creepeth up into the Affes note to hinder him

The Wolf is also an enemy to the Asse, for he loveth his stefn, and with small force doth he Alianut. compaffe the destruction of an Asse, for the blockish Asse when he seeth a Wolf, layeth his head on his fide, that fo he might not fee, thinking that because he seeth not the Wolfe, the Wolfe cannot fee him; but the Wolfe upon this advantage fetteth upon the beaft on the blind fide, and cafily destroyeth the courageless Asse. Another argument of an Asses stupidity, is that he careth not for his own life, but will with quietness starve, if meat be not laid before him. Wherefore it is apparent that when a dull Scholar not apt to learn, is bid to fell an Affe to fignifie his blockishness, is Ariffolli no vain sentence; therefore they which resemble Asses in their head, round forchead, or great face. are faid to be blockish; in their fleshie face, fearful; in broad or great eyes, simple; and like to be mad in thick lips, and the upper hanging over the neather, Fools; and in their voice, contumelious and disdainful. To conclude, the ancients have made many fignifications of Asses and their shapes, making a man with an Asses head to signifie; First, one ignorant of manners, histories, and Countryes. Secondly, immoderate riot of stubborn persons in Scripture is deciphered in an Asse. Thirdly, impudency and shamelesness, because an Asse will not for any stripes for sake his own waves. Fourthly, the Jewish people, who like Asses could not understand the evident truth of Christ in the plain text of Scripture, wherefore our Saviour secretly upbraided their dulness, when he rode upon an Affe. Fiftly, the Egyptians by an Affe, noted a man without all divine knowledge; wherefore they used to take an Asse and follow him with all despight, beating him from place to place till he brake his own neck; for they believed that an Affe was poffeffed of a Devil. Sixtly. Indocibility, by an Affe bridled. Seventhly, the mares of flatterers; for their Priests fet an Affe between flowers and ointments, neither of both partaining to an Affes skill; teaching thereby how mighty men fall by treachery of flatterers. Eightly, a Woman diffembling her Pregnancy. Ninthly, by a man weaving a cord, and an Asse behind him biting it asunder; they signific, a painful husband and a prodigal wife. Tenthly, a good Vine-dreffer, for when an Affe did bite of the branch of a vine, it was observed that the next year the Vine was more fruitful. Finally, hase service v. trifling fluggishness, good fortune, Tyrants, and fools, are Hierogliphically comprized under the

Touching such medicinal vertues as have been tried and found to be in the several parts of Asses, by learned and approved writers, now in the conclusion of this History they shall be briefly remembred, and so this Narration be finished.

A draught or two of the same water whereofan Asse or an Oxe hath drunk; will ease the head. Marcelliti ache, the forehead of an Affe tied to the flosh of one that hath the falling evill, cureth him; and the brain of an Affe fleeped in fweet water and infumed in leaves, whereof taken for certain days, Italfan Pline. ounce, easeth the falling evill : the number of which dayes cannot be less then thirty, but this is very ridiculous, that if a man hurt by a Scorpion, do whifper his harme in the ear of an Affe, pre-fently the hurt ceafeth. When one is vexed with a Quotidian Fever, with three drops of blond out Pling. of the vein of an Affes ear, put into eighteen ounces of water and drunk by the patient, eafeth that pain.

The liver of an Asse burne, driveth away venomed things, and the same dried and beat to powder, Haly. helpeth the Cough and shortness of breath, and rosted to be eaten, if it be eaten fishing it is against the falling evill. Other fay, if it be mixed with Opponax, and infilled into the mouth forty days to. gether, defendeth infants from the aforesaid sickness. Also the heart of a male black Asse, eaten Pling. with bread at the evening, in the first or fecond day of the Moon, is good against the falling evill. The liver dried with Parfely, and three Walnuts clenfed from the pill and pilt into hony, is mare Marcellat vellous good for one that is liver fick; the ashes of it mixt with oil, taketh away Wens; and the Avicence affices of the liver and the fieffi is good against the chapping, clefts, or slifters in the body, which come by evid but Dioferide; whom I rather follow, attributeth both these virtues to the assess of the hook. He that is fick of the milt, may be holpt with the old milt of an Affe, if he eat thereof every day dryed and faffing, he shall find ease by it within three days. The same first dryed and Seximo. then steeped in water, maketh the dugs full of milk, so also doth the Spleen, and the Spleen with fewet of a Bear and oil made as thick as horly by amointing the eye-lids therewith refloreth the hairs which are wanting. The reins exenterated priviled and put into new pure wine, do help the bladder, and flay the incontinency of the Urine. The fame dried, burned, and beaten into very fittall Marcellini. powder, whereof a nut fiell full put into two cups of pure wine and drunk off, cureth the

It is thought, that with the powder of the Affes genital, the hair may be made grow thicker: Pliny. and the fame beaten with lead and oil, and annointing the head where gray hairs are Mayen off, keep! eth from more gray hairs. The flones of an Affe kept in falt and fprinkled in a porion of Affes milk or Water, helpeth the falling evill. The Gall of an Affe or a Bull, either of them, severally broke into Water, taketh away the spots in the face, if after the patients skin be pilled, he must keep himfelf from fun and wind.

The bloud of an Affe flayeth the flux of the und coming from the skin or films of the brain; and E endpine; two or three drops of the fame drunk with wine, cureth the Quotidian Fever: the felf fame thing Plins. is reported of the bloud let out of the vein in the ear. The bloud of the Fole of an Affe with wine,

cureth

Dissociates. cureth the Kings evil. The froath or fcum of Nure with the fat of an Affe or the fat of a Sow, cureth the bitings of Dogs: and if there be any scars in the body, the fat maketh them of the same colour with the residue of the body. And if one vexed with the Falling evill, be annointed with the fuet or fat of an Asse, it will ease them very much; likewise the marrow of Asses helpeth the Scabs from a man, and with the suet the places insected with Catarrhs, Leprosies, or Scars, receive their former colour; and the skin laid upon young Infants, maketh them without Rafis. fear. Andif the bill of a Heron wrapped in an Assesskin, be bound to ones forehead, it provo-Pliny.

keth sleep.

A Pallie man will fall down if he taste of the persume made of the hairs of an Asse or Mule. The ashes of the hairs of Asses, stayeth bleeding; and the same hath the more force if they be of a male, and be mixed with Vinegar and laid in wooll to the issue bleeding. The bones of an Asse broken and sod, are very soveraign against the venom of a Sea-hair-fish. The powder of an Asses hoof drunk a moneth together, two spoonfuls at a time, helpeth the Falling evill very greatly: and the same mixed with oil, helpeth the Kings evill; and being put upon Kibes or Chil-blanes, cureth them. The hoofs of Asses burned and beaten to powder, given to them that have the Falling evill in drink, helpeth them speedily; also a burned hoof is mingled with many medicines, to cure the swelling of the Navel in children; and the hoofs perfumed procure speedy deliverance in travel of young, that the dead thing may come forth, otherwise it is not used, for it will kill the living

The dust thereof with the milk of on Asse, by annointing cureth the Scars and Webs of the eyes, and as Marcellus faith, only the parings of an Affes hoof scraped and mingled with a womans milk; and they fay, that if an Epileptick man wear a ring made of an Asses hoof wherein is no blackness, it will preserve him from falling. The powder of an Asses hoof burned and beaten, laid in Vinegar and made in little bals, and one of them put into the mouth and there held, helpeth the looseness and pain in the teeth. There is a collection of certain hard matter about an Asses legs, called Lichen, which if it be burned and beaten, and put into old oil, will cause hairs to grow out of baldness, and it is of fuch force, that if it be applyed to a womans cheek, it will produce the same effect, and mingled

with Vinegar it raiseth up the Lethargike man. /

And if a man take the Ring-wormes growing naturally on Asses legs, and shredding them into powder put them in Vinegar, it stayeth all pain in the head, which maketh one sleepy. The slesh of Asses sod in pottage helpeth them that have the Philists or disease of the Lungs, and there are some which prescribe the taking of Asses sign, or the bloud of Asses mingled with Vinegar, to be taken forty days together against the salling evill. The milk of an Asse mingled with hony and drunk, loofneth the belly, and therefore Hippocrates gave it for a gentle purgation, being moister then any other kind of milk, and fitter to take down the belly. It will also ease the tooth-ach, if the teeth be washed in it, and fasten them that are loose, being very good to wash the teeth withak Galen gave Asses milk mixt with hony, to one in a Consumption when he came newly from a bath, and therefore it is given in Fevers Hellicks, and all confuming diseases, because the substance of it is sitter for detersion then nutriment: when the brests are in pain, by drinking Assemilk they be holpt; and the same mingled with hony, causeth Womens purgation; by drinking Asses milk, an exulcerate stomach is relieved: likewise all other pains in the stomach, which come of sadness or iorrow, fighing, and desperation: and Heraelides gave Asses milk with Anniseed to one that had his lights stopped, and it is likewise commended against the Cough, extenuation, spitting of bloud, Dropsie, and hardness of the Spleen, but it is not good for a weak head troubled with giddiness or noise, yet will it loosen the hardness of the belly in a Fever.

It is also privately used against eating of Morture, White-lead, Sulphur, and Quicksilver; and when a mans meat doth not neither nourish nor digest, let him drink Asses milk safely : and it is also good to gargarize in fore chaps or throats. Likewise in a Fever when there is no head-ache. The ancient in old time gave Asses milk to children before meat, and for want thereof Goats milk; for fore mouthes it must be gargarized. It is very profitable against the Colick and Blondy-flux, if hony be put thereto; loofnels or defire of stool is taken away by drinking Asses milk; the whay or milk of an Asse did Hippocrates prescribe against the Consumption of the reins or back; and the same with the root of a pomgranat against the looseness and other diseases of the belly to be drunk-

Also there are examples where the whay of Asses milk have helped the Gowt, both in hand and foot : sweet water with Asses milk is wholesome against poison of Hen-bane, and other poisons, but it must be used new, or esse soon after warmed : This milk will make womens skins whiter; wherefore Popper, the wife of Demitim Nero carryed about with her in her progress fifty milch Affes, wherewith

the did use to bath her self.

The Urine with the own dung, healeth straight shooing, scabs in a man, and the roughness of the nails. It taketh away the scure of Oxen. It is given in drink, to cure them that have ache in their reins, and with Profer wort it is profitable against Suppurations and Apostems in the steff. If any be hurt by the Stars, wash them in Assessable, mingled with Spiknard; the same force hath it against cornes and all hardness or thickness of skin. The dung of Assessable new with oil of Roses, distilled warme into the ears, helpeth deafnels; and pushes or suddain boils of the head, are cured with the juice of Asses dung, and of Sea-onions beat to powder, and the fat of beef, layed to the boils like a plaister: both the dung of Asses and Horses either raw or burnt mingled with Vinegar, restraineth bleeding both in Fluxes and Wounds, used like a plaister, being new and mingled with Vinegar; and

Of the Hinnus, Innus, &c.

for the bleeding at the nose, snuffe in the ashes of Asses dung burnt to powder. The dung Actions of Asses cureth the Piles, and the same dried and moistened in wine being drunk of Cattel which are stung with Scorpions, cureth them if it be at grasse; and it is found true by long experience, that the dung of an Asse rubbed, in quantity two spoonfuls, and taken every day, deli-

> mitis prodest ex ubere succus asella. Si tepido vino infundas ac mella piperque.

This is good against the gall and running over thereof, if it be mingled with warm wine, pepper, and hony. The Syrian call the dung of a young Fole which it first cattest up after the foling, Polean; and give it against the straight of the milt.

In fand decouling colo magnopere prodeft.

The same is good against the Colick and the Bloudy-flux. The juice of Asses dung, Asses milk, and fweet wine, and inted on the fick member, cureth the Gowt : and the same stayeth the flowres of women with child; the juice hereof cureth the clofing up of the eyes in the night. The skin wherein the young Fole lyethin the dams belly being smelled unto by him that hath the Falling evill, it easeth him. Analiau hath reported, that if the excrements of a Mares copulation be burned, there will appear montheous thapes of Horses heads. If a Horse have a web in his eye. mingle rogether the milk of an Affe, the bloud of a Dove, and the dew of Cabages, and anoint him therewith: and there be some which take of the dirt where an Asse hath made water in the way, and therewith aboint the Scabs of theep for their recovery: but when one is strucken with a Scorpion. the Asses dung must be presently applyed, or else it profiteth nothing in that malady,

Of the Hinnus, Innus, and Ginnus, Mannus, mannulus, Befi & Burdones, &c.

Here is no language besides the Greek that have any words to express these Beasts, and the Latins have derived these termes from them. These are beasts of a small size, as dwarfes among men. and therefore seldom seen in these parts parts of the world. They which are called Himi, are Calius Rhod. conceived of a Horse, and a she Asse, who although they take their denomination from the male. Columelle. vet do they more resemble the semale. In ancient time, the males which were conceived of a Horse Pliny. and a she Asse, were called Hinnuli, and likewise of an Asse and a Mare, Muli : so are the young ones of little Goats, Deer, Hares, and other like : although some take Innuli for the young Harts, and the Hermolaus. Himi and Himuli for the breed of a Horse and an Asie; so that there appeareth two kinds, and both Varro. of them transplanted out of other.

The Himus is leffe then the Mule, but more ruddy, having ears like a Horse, and a mane and tail like an Affe, lying in the womb before the foling twelve moneths like a Horse, and are brought up Noning, like little Horses, whose age is discerned by their teeth, and they are sometimes procreated of a Horse and a Mule, and because of their aptness to beare, they are called Burdones, or else of Bardus by reason Perot.

of their folly and flowners.

Manni and Mannuli are very little low horses, being very gentle and easie to be handled, being cal- Porphyrius. led also among the Civilians, Burdi. There is in France, not far from Grationopolis, a kind of Mules which in the Countrey speech are called Iumar, being bred of an Asse and a Bull, and in the Helvetian Alpes beyond Curia, about the Town Speluga, I have been sincerely informed, that there was a Horse conceived of a Bull and a Mare, and therefore Scaliger saith, that such a sole is called Hinnulus, whereof he reporteth he had feen many, and he himself had two of them, and at that instant had only one female, betwixt whose ears there were two bony bunches about the bigness of half a Wal-nut, giving evident testimony by the forehead, that her father or Syre was a Bull: and some say that this kind want their upper teeth : and their underchap doth in a deformed manner fretch forth it felf beyond the upper, as it is in many fishes, being called of the Gabala and Arverni, Befi : And at this day there is in the Court of France a certain beaft which in the former part is like an Affe, and in the hinder a Sheep. In Ferraria among other strange beasts, they nourish dwarvish Aurgne Affes, of whom Marti-I made a Diffiction to this effect, that they are not fo high as a man, when he Lodgie Navers fitteth on the ground.

His tibi de mulis non est metuenda ruina: Altius in terris pene federe foles.

For the Innus, and Ginnus, or Himnus, they are conceived by a Mule and a More, which are very small by reason of some disease the dam that beareth them hath in her belly : the word Inu fignifying a young or new born Nephew, and is attributed to this kind of beafts, because they never exceed the quantity of a young fole. Both the Mule and the Burdo remain barren and never conceive, these neigh A bertus. like a Horse, and that brayeth like an Asse. A Musimon is a short Horse, Asse, or Mule.

Of

Of the Wild Affe.

Wild Affe, called of the Latins, Onager; of the Hebrews, Arod and Ere, and as Sebastian Munster Aaffirmeth, Meroda and Arda; in the German tongue it may be termed Ein Waldefell, and the young ones are called Lalifions.

Martial.

Dum tener est Onager, solaque lalifio matre Pajcitur : hoc infant, fed breve nomen habet.

Countrey of

Pliny.

These wild Asses are not Elks, as some have reported of Elks, nor that Oryze which the ancient writers do constantly affirm to live in a continual thirst, as for the most part wild Asses do. Of these Affes are great flore in Phrygia, Lycaonia, and Africa, and it is faid, that the Saracen King of Tunis in Africk, fent unto Ferdinand King of Napler, a goodly great wild A sie, such an one as hath not been feen in this part of the world.

Apoloniu affirmeth, that he saw wild Asses in great plenty beyond Catadupa in Egypt; so are there many in Cauda, an Island neer Crest: in Perfit, in Afia, in Madera, and Abasia, Arabia delert, Mauritania, and Armenia. Callissus reporteth that there are such wild Asses in that region under the Equimilial towards the East and South, of wonderful stature, their skins (beside the usual manner) being of divers colours, interlined variably with white and black, and the Zones and strakes descending from the top of the back unto the fides, and there divided by their winding and turning, make the foles

appear of admirable variety.

These Assessione the highest Mountains and rocks, as holy Scripture teacheth, Jer. 14. The Asses Hood in the high places and drew in the wind like Dragons: which words gave occasion to some to imagine, that wild Asses would quench their thirst with the wind without water; whereas it is the manner of all wild beafts, in extremity of thirst, to gape wide and greedily draw in the cold refreshing air, and they will not drink but of pure fountain water. They live in flocks and great companies together, but in desolate places: the males going before the females, and commonly one male will lead and rule the whole flock of females, being exceeding swift, and fearful, and therefore do they often change their places of abode; and yet it is observed, that the wild Asses of Lisia never go over the mountain that divideth them from Cappadocia.

Their copula-

They engender among themselves, their females being much more lustfull then the males, and therefore do the males observe and watch them with a jealous eye toward their own foles, especially after they have conceived; and the female as warily avoideth the fight of the male, especially at the time of her foling, for if the bring forth a female, the male receiveth it with all love, joy, and welcome; but if a male, then doth he with angry and envious countenance look upon it, taking it heavily that another male is bred, which in time may in the fathers place posses his dam; wherefore in a raging madness he falleth upon the fole feeking by all his power to bite off his stones; the poor female although weakned with pain of delivery, yet helpeth her young one against the fathers rage, and like a Mother who feeing her Son flain in war, embraceth his bleeding corps, and cryeth out with doleful voice, tearing her cheeks and bleeding betwixt her brefts: fo would you think this filly female Affe, to mourn for her fole, now ready to die by the Sires cruelty; faying, Omy kusband who is thy aspect to ireful? Why are thy eyes now become so bloudy, which even now were as white is light? Doft thou look upon the face of that monfter Medula? which turneth men into ftones ; or doft thou look upon some new batched horrible Dragon, or the whelp of some Lion lately littered ? Why wilt thou geld this our young one which nature halb given unto us both by procreation? O wretched beaft that I am, which have congeived an unhappy fole by the fathers wickedness ! O my poor and unhappy lon, n hich for a jealous fear art deprived of thy natural parts, not by the claws of Lions (for that I would endure) but by the unnatural and more then hoffile teeth of thy own father.

These wild Asses have good and strong hoofs, their swiftness is compared to the wind, and in the time that they are hunted, they cast backward with their heels stones with such violence, as they pierce the brefts of them that profesute them if they be not very wary. They are of a large, broad, tall and beautiful body; long ears, and a filver colour, (that is as I gheffe) a bright cloud-colour, for it is but vain to imagine, that an Affe can be all white, for then were all the ancients deceived, which with one voice affirm, that he hath a black lift on the back, at either fide whereof are two

white lines.

Their food is only graffe and herbs of the earth, whereby they grow very fat, their heart being the fattest part of their body, and they will not abide any flesh-eating beast, especially the Lion whom he feareth very much, for all these strong beasts devour and eat them. These Asses are very sit for civil uses, as for plowing and sowing, for being tamed they never grow wild again, as other beasts will, and they easily grow tame. It is observed, that the same being tamed, is most tame which before time was most wild. They love figs and meal above all things, wherefore the Armenians use to take a certain black fish bred in their waters which is poison, and covering it with meal the wild Asses come and lick thereof, and so are destroyed. The best of them are generated of a Mare and a wild Asse tamed, for they are the swiftest in course, of hardest hoof, a lean body, but of a generous and untireable stomach. The Indian wild Asses have one horn in their forehead, and

Ælianus. Albertus. Oppianus. Varro.

Æliansu.

Of the wilde Affe.

their body all white, but their head is red : So is there another beatt in India very like a wild Affe: which the Inhabitants eat (as we have read) about the straight sof Magellana: When these Affes Phylics. are hunted with Dogs, they cast forth their fime or dung, with the favour whereof the Dogs are Piny. flaved while it is hot, and by that means the beaft escapeth danger : but the Asses of Mauritania are very short winded, and subject to weariness and stumbling, for which cause they are more easily taken, and the best of all are not so swift as a Barbary horse; besides their nature is, when they see a man to stand stone still, crying, braying, and kicking, till you come at them, and when one is ready to take them, they take their heels and run away. The Inhabitants of Arabia Desert, by many gins and other deceitful devises take them, and on horseback follow them till they tyre, or can strike them with their darts. Their flesh being hot, doth stink and taste like an other Asses, but boyled and kept two dayes hath a pleasant taste; yet doth it not breed good bloud, because it is viscous and hard to be concocted, although there be many which eat that, as also the flesh of Panthers and

Pliny teacheth that there is more vertue in the wild Affes milk and bones against venome and Medicines. poison, then in the tame. Likewise, in the heel of an Asse, is a principal remedy against Apostema- Milke. tions and bunches in the fesh, if it be applied to the inner part of the thigh. The gall draweth out Plint. botches, and must be anointed upon impostumate scars. It is used also in Emplasters against Saint Antonies fire, the leprofie, and swelling in the legs and guts. The fat with oil of herbe Mary by anointing the reins of the back, helpeth and easeth that pain which was engendred by wind. The spleen dryed to powder and drunk in wine or drink, is good against the sickress of the spleen. The flesh is good against the pain in the ridge and hip-bones : and Galen affirmeth, that the urine breaketh and dissolveth the stone in the bladder. The ashes of the hoof helpeth the falling evill, and mingled with oil, cureth the kings evill, and the looseness of the hair. The marrow easeth the Gowt, and the dung mixed with the yolk of an egge and applyed to the forehead, stayeth bleeding: also the same curleth the hair if it be mingled with an Oxes gall and dryed: put into wine and drunk, cureth the shing of a Scorpion: and Zoi an Hebrew affirmeth very constantly, that if a man look into an Affe; eye, it preserveth the fight, and hindereth the water that descendeth into the eve.

Of the Scythian Affes.

The Asses of Soubla have horns wherein it is reported that the Sigian water of Arcadia may Eliania. be contained, although it will eat through all other vessels be they never so hard. Sosipater brought of them to Alexander the great, who admiring the rareness, would not put them to any private use, but sent them to Delphes, to be offered to Pribias; but that these can be properly called Affes, no man can defend, although Herodotte alfo affirm, that among the Africant called Aratourt, Lib. 4. there be Affes with horns.

Of the Indian Affes?

Tis questionable whether the Monoceror, commonly called a Unicorne, the Rhinoceros, the Orya, and the Indian Affe be all one beaft or divers : for the Vnicorn and Rhinoceros have the fame things attributed to them in stories, and differ in very few reports : but for the Asses of India, both Ariftotle, Pliny and Elianus, joyntly, agree, that they differ from all other whole-footed beafts, because they have one horn in the forenead, and so also have the Rhinoceros, Monaceros, and Oryx, but the Inthey have one horn in the forehead, and so also have the Rhimocerof, Monocerof, and Oryx, but the Indians call a Unicone, Cartakoffo; and the Horn so highly prized at this day, is thought to be of the Rhimocerof; but Ellanus and Philes acknowledge no other Unicone then the Indian Asse, who in bigness equalleth a Horse among the Indians, being all white on the body, but purple headed or red (as some say) black eyes, but Volaterania lairh blew, having one horn in the forehead a cubit and a half long, whose upper part is red or bay, the middle black, and the neather part white, wherein the Kings and mighty men of India use to drink, adording it for that purpose with sundry bracelets, pretibus stones, and works of gold, holding for truth that all those which drink in those horns, shall be freed from anhoyance of incurable distates as Convulsions, the Falling evil, and deadly notions. deadly poylons.

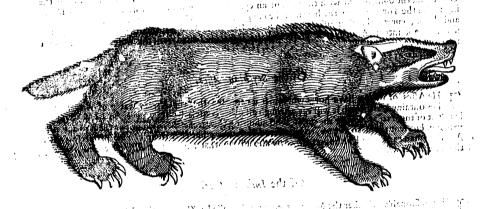

These wilde Asses exceed all other, both instature of body, and also switchels of foot, for at the first, they set forth very gently, and afterward speed their journey with better pace, so that it is very hard for any to follow them, but impossible to overgo them. The males take great pains in keeping their young ones, whom they continually watch and filled in the most remote and defert places they can finde. When they are hunted, they keep their was young ones behind them, and fight for them very furiously, heither fear they to encounter horsemen. They are fo strong, that no beast may stand before them, for they will receive the charge of Horses with such violence, that in their encounter they bite out their sides and tear their guts out of their belly: for which cause they are dreadful to Horses, who are most unwilling to joyn with them, for they never meet but they both belish.

They fight with their heels, but their teeth are most dangerous, for what they apprehend in them

Of the ALBORACH and AXIS.

Here are two other beafts to be added to the end of this rank, namely the Alberech among the Turks, being a fair white beaft like an Asse, whereupon the Turkish Priests blasphemous idolas ters, perswade the filly Pilgrims of Mecha, that Mabbinet was carryed up to heaven. The Axis, of which Pliny speaketh, is a wilde beast, having a skin like the Hinnulus aforesaid, but spred over with whiter spots, which is bred in India. Bellonius affirmeth, that he saw two of them in the Castle of Cair, a male and a female, and either fex wanted horns, having long tails down to their mid-legs like Deer, and differ very little from Deer, faving in their large white spots and yellow colour, yeelding a much more clear and sounding voice then a Deer, and the female thereof is smaller then the males This beaft is by idolatrous people, dedicated to their drunken god Bacchus. and oubard

Of the BADGER, otherwise called a Brocke, a Gray, or a Baufon.

He Badger could never find a Greek name, although some through ignorance have soisted into a Greek Dictionary Mela, whereas in truth that is his Latin word. Mela or Mela, and so called, because above all other things, he loveth hony, and some later writers call him T axus, Tassa, and Albertus Magnus, Danas. But whereas in the Scripture some translate Tellon, Tabas, on Tackasis, and plurally Techasism. Badgers, we is not the matter, so clear for there is not high beauty in a Badgers skin, as to cover the Arke, or is omake Princes shooes thereof: therefore some treberent skin of divers colours; Symmachus and Aguila a jacing toolour, which capnot be is but the Irabiansa Darasis, and the Persians, Asbass, yet is may be rather laid, that those skins igoken on Exod, 25. Numb. 4. Bzek. 26. be of the Lynx, or some such other beast: for Tachasis comes, but import in signifying a kind of Wolf not hurtful to men, being rough and have in Winter, but imooth in figuifying a kind of Wolf not hurtful to men, being rough and hairy in Winter, but imooth in

Summer.

The Italians call a Badger Taffo, the Rhetians, Tajon the French, Taylon, Taixin, Taffors, Tellan, and sometime Grifart, for her colour: sometime Blareau, and at Paris, Bedavo. The Spaniarde, Taffors, Texon; the Germans, Tabb, or Dant; the Illyrians, Greyses.

Badgers are plentiful in Napler, Sicily, Lucane, and in the Alpine and Affinition coalls, 19 are they also in England. In Liegaye there is a certain wilde healt, resembling both a Bear and a Hog, not in quantity, but in form and proportion of body; which therefore may fitly be called in 1878 & Suartly, for a Grey, in thort legs, ears and feet, is like a Bear, but in faintly like a Swing, Therefore it is observed, that there be two kinds of this bealt, one resembling a Dog in his feet, which is is cald. Canine; the other a Hog in his cloven hoof, and is cald. Swingish: also these differ in the is cald Conine; the other a Hog in his cloven hoof, and is cald Swinish also thele differ in the families of their showt, one relembling the showt of a Dog, the other of a Swine; and in their

meat, the one eating fleth and carrion like a Dog, the other roots and fruits like a Hog, as both kinds have been found in Normandy and other parts of France and Sie lie. This beaft diggeth her a den or cave in the earth, and there liveth; never coming forth but for meat and eatement, which it maketh out of his den : when they dig their den; after they have entred a good depth for avoiding the earth out, one of them falleth on the back, and the other layeth all the earth on his belly, and to A fecres in taking his hinder feet in his mouth, draweth the belly-laden Badger out of the cave, which disburde their manner neth her cariage, and goeth in for more till all be finished and emptied. The wily Fox never makth It dam. a Den for himself, but finding a Badgers cave, in her absence, layers his excrements at the hole of Abbrus.

the Den, the which when the Gray recurrent, if the smell (as the layour is strong) she forbeareth to enter as noisome, and so leaveth her elaborate house to the Fox. These Badgers are very sleepy, especially in the day time, and stir not abroad but in the night, for which cause they are called Lucifuge; that is, avoiders of the light. They eat hony, and wormes, and hornets, and fuch like things, be- Their meating cause they are not very swift of foot to take other creatures. They love Orchards, Vines, and places

of fruits also, and in the autumn they grow therewith very fat.

They are in quantity as big as a Fox, but of a shorter and thicker body; their skin is hard, but rough and rugged, their hair harfh and stubborn, of an intermingled grifard colour, sometime white, fometime black, his back covered with black, and his belly with white, his head from the top thereof to the ridge of his shoulder, is adorned with strakes of white and black, being black in the middle, and white at each fide. He hath very sharp teeth, and is therefore accounted a deep-biting beast. His back is broad, his legs (as some say) longer on the right side then on the lest, and therefore he runneth best when he getteth to the side of a hill, or a cart-road-way. His tail is short but hairy, Cardanns. and of divers colours, having a long face or snowt like the Zibetbus: his forelegs being a full spen long, and the hinder legs shorter, short ears and little eyes, a great bladder of gall, a body very fat betwirt the skin and the slesh, and about the heart; and it is held that this fat increaseth with the Moon, and decreaseth with the same, being none at all at the change : his forelegs have very sharp nails, bare and apt to dig withall, being five both before and behind, but the hinder very fhore ones and covered with hair. His favour is strong, and is much troubled with lice about his secrets; the length of his body from the nose which hangeth out like a Hogs nose, to the tail or rump, is some thirty inches and a little more, the hair of his back three singers long; his neck is short and like a Dogs: both male and female have under their hole another outwardly, but not inwardly in the male. If she be hunted out of her Den with Hounds, she biteth them grievously if she lay hold on Her defence athem, wherefore they avoid her carefully, and the Hunters put great broad collars made of a Grayes gainst Hunters them, wherefore they avoid her carefully, and the Hunters put great broad collars made of a Grayes gainst thursdays. skin about their Dogs neck, to keep them the fafer from the Badgers teeth! her manner is to fight and their dogs, on her back, using theteby both her teeth and her nails, and by blowing up her skin above meafure after an unknown manner, the defendeth her felf against the strokes of men, and the teeth of Dogs: wherefore she is hardly taken, but by devises and gins for that purpose invented; with their skins they make quivers for arrows, and some shepheards in Italy use thereof to make sacks, wherein they wrap themselves from the injury of rain.

In Italy and Germany they eat Grays fiesh, and boil with it pears, which maketh the fiesh tast like Badgers eaten, the flesh of a Porcupine. The flesh is best in September if it be fat, and of the two kinds, the Swinish Platina. Badger is better flesh then the other. There are fundry vertues confected out of this beast; for it Medicine made is affirmed, that if the lat of a Badger mingled with crude hony, and anointed upon a bare place of of Bidgers, a horse, where the former hairs are pulled off, it will make new white hairs grow in that place : and Gratius. it is certain (although the Grecians make no reckoning of Badgers grease, yet) it is a very soveraign Brasavolus. thing to foften, and therefore Serenus prescribeth it to anoint them that have Fevers or Inflama-

tions of the body.

Net Spernendus adept dederit, quem bestia melis.

Alberius

And not to be despised for other cures: as for example, the eating of the pain of the reins if it be given in a glyster, and likewise the fat of a Dog and a Badger mingled together, do loosen contracted sinews.

The ashes of a Badger is found to help the bleeding of the fromach, and the same sod and drunk, preventeth danger by the biting of a mad Dog; and Brumfelsius affirmeth, that if the bloud of a Badger be instilled into the horns of Cattel with salt, it keepeth them from the murrain, and the fame dryed and beat to powder doth wondenfully help the Leprofic. The brain fod with oil eafeth Boullut. all aches; the liver taken out of water, helpeth swellings in the mouth; and some affirm, that if one wear soles made of Badgers sking in their shoots, is giveth great ease unto the Gowt. The biting of this beaft is venemous, because it seedeth aponall venemous meats which creep upon the earth, although Armidus be of a contrary judgement a and of this beaft I can report no other thing Brajevolus, worth the noting, fave that the Noble family of the Taxons in Ferraria, took their name from this creature. series 12 de la companya del companya del companya de la companya

Of the BEAR.

Of the name.

A deans, Duba, Aldub and Daboube ; of the Greenhell Artion; of fome Dalyllie, because of the roughness of his hair; of other Beires, and Monios, fignifying a folitary Bear. The Little call him Vilus, which some conjecture to betanquam or sua figurationing that it is but begun to be framed in the dams belly, and perfected after the littering thereof Phe Mallans call it Orfo, fo allo the Spant ards; the Erench, Auts; the Germans, Bean, and Beer whe Bobennin, Nedred; the Polonian, Vuluver: and the attributes of this beaft are many among Authors, both Greek and Latin; as Entitlets of the Amenian Bears, armed, filthy, deformed, cruel, dreadful, fierce, greedy, Calydonian, Erymanhean, bloudy, heavy, night ranging, Lybican, menacing, Numidian, Offean, head-long, ravening, rigid and terrible Bear; all which serve to set forth the nature hereof, as shall be afterward in particu-

lar discoursed.

First, therefore concerning several kinds of Bears, it is observed, that there is in general two: a Of the kinds of greater, and a leffer; and these leffer are m ore apt to clime trees then the other, neither do they Bears. ever grow to fo great a stature as the other. Besides there are Bears which are called Ambibia, be-Agricola. cause they live both on the Land and in the Sea, hunting and catching fish like an Ouer or Beever, and Albertus. these are white coloured. In the Ocean Illands towards the North, there are Bears of a great sta- Olaus. ture, fierce and cruel, who with their fore-feet do break up the the hardest congealed Ice on the Sea. or other great Waters, and draw out of those holes great abundance of files: and so in other frozen Seas are many such like, having black claws, living for the most part upon the Seas, except tempestuous weather drive them to the Land.

Of the Bear.

In the Eastern parts of India, there is a beast in proportion of body very like a Bear, yet indued with no other quality of that kind, (being neither fo wild, nor ravenous, nor strong) and it is called a Formicarian Bear; for God hath fo provided, that whereas that Countrey is abundantly annoyed A Formicarian with the Emmets or Ants, that beaft doth so prey and feed upon them, that by the strength and an Bear. vertuous humor of his tongue, the filly poor Inhabitans are exteedingly relieved from their grie. Cardanus.

yous and dangerous numbers.

Bears are bred in many Countreys, as in the Helvetian Alpine region, where they are fo firong Countrey of, and full of courage, that they can tear in pieces both Oxen and Horses, for which cause the Inhabis breed. tants study by all means to take them. Likewise there are Bears in Persia, which do raven beyond Marcellinus all measure, and all other; so also the Bears of Numidia, which are of a more elegant form and composition then the residue:

> Profuit ergo nibil misero, quod cominus ursos Figebat Numidas , Albena nudus arena.

And whereas Pliny affirmeth, that there are no Bears in Africk, he miltook that Countrey for Creet, and so some say, that in that Island be no Wolves, Vipers, or other such venemous creatures; whereof the Poets give a vain reason, because Jupiter was born there: but we know also, that there be no Bears bred in England.

In the Countrey of Arabia, from the Promontory Dira to the South, are Bears which live upon Volaterian. eating of flesh, being of a yellowish colour, which do far excel all other Bears, both in activity or swiftness, and in quantity of body. Among the Kovolani and Limanians, are Bears, which being tamed are presents for Princes. Ariftotle in his wonders reportetil, that there are white Bears in A sere in t Missa, which being eagerly hunted, do send forth such a breath, that putrifieth immediately the flesh natures of of the Dogs, and what soever other beast cometh within the savour thereof, it maketh the stefn of Bears, them not fit to be eaten : but if either men or dogsapproach or come nigh them, they vomit forth fuch abundance of phlegm, that either the hunters are thereby choked or blinded.

. Thracia also breedeth white Bears, and the King of Æthiopia in his Hebrew Epistle which he wrote to the Bishop of Rome, affirmeth, that there are Bears in his Countrey: In Muscovia are Bears, both of a Snow white, yellow, and dusky colour, and it hath been feen that the Noble womens Chariots drawn by fix Horses, have been covered with the skins of white Bears, from the pastern to the head : and as all other creatures do bring forth some white, and some black, so also do Bears, who in general do breed and bring forth their young in all cold Countreys, some of a dusky and some of a brown

A Bear is of a most venereous and lustful disposition, for night and day the females with most ar- Lust of Bears dent inflamed desires, do provoke the males to copulation; and for this cause at that time they are most fierce and angry.

Philippus Coffeus of Constance, did most confidently tell me, that in the Mountains of Savoy, a Bear Gillius. carryed a young maid into his den by violence, where in venereous manner he had the carnal use of A History. her body, and while he kept her in his den, he daily went forth and brought her home the best Apples and other fruits he could get, presenting them unto her for her meat in very amorous sort; but always when he went to forrage; he rouled a huge great stone upon the mouth of his den, that the Virgin should not escape away: at length her parents with long search, found their little Daughter in the Bears den, who delivered her from that favage and beaffual captivity.

The time of their copulation is in the beginning of Winter, although sometime in Summer; (but) Time of their fuch young ones feldom live) yet most commonly in February or January. The manner of their co-copulation. pulation is like to a mans, the male moving himself upon the belly of the semale, which lyeth on the earth flat upon the back, and either embraceth other with their fore-feet: they remain very long time in that act, inalmuch as if they were very fat at their first entrance, they disjoin not themfelves again till they be made lean,

Immediately after they have conceived, they betake themselves to their dens, where they (with Pling. out meat) grow very fat (especially the males) only by sucking their fore-feet. When they enter A secret. into their den, they convey themselves in backwards, that so they may put out their soot-fleps from the fight of the hunters. The males give great honor to the females great with young, during the Honor to the time of their secresse, so that, although they lie together in one cave, yet do they part it by a semale, division or small ditch in the midst, neither of them touching the other. The nature of all of them is, to avoid cold, and therefore in the Winter time do they hide themselves, chusing rather to suffer famine then cold; lying for the most part three or four months together and never see the light,

Avoiding of

unperfect as some have reported.

Number of young ones.

Remedy in Nature.

A fabulous

The meat of Bears.

members.

A Tuperflicious lard or fat.

When they first enter into their den , they betake themselves to quiet and rest, sleeping without any awaking, for the first fourteen dayes, so that it is thought an easie stroke cannot awake them, Time of hear- But how long the females go with young is not certain, some affirm three months, others but ing the young thirty dayes, which is more probable, for wild beafts do not couple themselves being with young (except a Hare and a Linx) and the Bears being (as is already faid) very luftful, to the intent that they may no longer want the company of their males, do violently call their Whelps, and so presently after delivery, do after the manner of Conies betake themselves to their luft, and nourishing their young ones both together: and this is certain, that they never come out of their caves, till their young ones be thirty dayes old at the least; and Pliny precisely affirmeth, that they litter the thirtyeth day after their conception; and for this cause, a Bear bringeth forth the least whelp of all The bigness of other great beasts; for their whelps at their first littering are no bigger then rats, nor longer then ones a Beat-whelp, finger. And whereas it hath been believed and received, that the whelps of Bears at their first littering are without all form and fashion, and nothing but a little congealed blood like a lump of flesh, which afterwards the old one frameth with her tongue to her own likeness, as Pliny, Solinnes, Alianus, Orm, Oppianus, and Ovid have reported, yet is the truth most evidently otherwise, as by the eye-witness of frachimus Rhetious, and other, is disproved : only it is littered blind without eyes, haked without hair, and the hinder legs not perfect, the fore-feet folded up like a fift, and other members deformed by reason of the immoderate humor or moystness in them, which also is one cause, why the Womb of the Bear cannot retain the seed to the persection of her young ones.

They bring forth sometimes two, and never above five, which the old Bear daily keepeth close to her breft, so warming them with the heat of her body and the breath of her mouth, till they be thirty days old; at what time they come abroad, being in the beginning of May, which is the third Month from the Spring. The old ones being almost dazled with long darkness, coming into light again feem to flagger and reel to and fro, and then for the straightness of their guts, by reason of their long faiting do eat the hearb Arum, commonly called in English Wake-Robbin or Calves-fost, being of very harp and tart tafte, which enlargeth their guts, and so being recovered, they remain all the time their young are with them, more fierce and cruel then at other times. And concerning the same Arum, called also Dracunculus and Orye, there is a pleasant vulgar tale, whereby some have conceived that Bears eat this herb before their lying feeret; and by vertue thereof (without meat; or sense of cold) they pass away the whole Winter in sleep.

There was a certain Cow-herd in the Mountains of Helvetia, which coming down a hill with a great Caldron on his back, he faw a Bear eating of a root which he had pulled up with his feet; garly believed. the Cow-herd ftood ftill till the Bear was gone, and afterward came to the place where the beat had caten the fame, and finding more of the same root, did likewise eat it; he had no sooner tasted thereof, but he had such a desire to sleep, that he could not contain himself, but he must needs lie down in the way and their fell afleep, having covered his head with the Caldron, to keep him-felf from the vehemency of the cold, and their flept all the Winter time without harm, and never rose again till the Spring time : Which fable if a man will believe, then doubtless this hearb may cause the Bears to be sleepers, not for sourteen days, but for sourscore days toge-

The ordinary food of Bears is fish : for the Water bear and others will eat fruits, Apples, Grapes, Leaves, and Pease, and will break into Bee-hives sucking out the Hony; Likewise Bees, Snayls, and Emmets, and flesh if it be lean or ready to putrifie; but if a Bear do chance to kill a Swine, or Velhatinm et a Bull, or Sheep, he eateth them presently, whereas other Beasts eat not hearbs if they eat fiesh: likewise they drink water; but not like other beasts, neither sucking it or lapping it, but as it were, even biting at it.

Some affirm, that Bears do wax or grow as long as they live, that there have been feen fome of ty and parts of them five cubits long; yea I my felf faw a Bears skin of that length, and broader then an Oxes

The parts of The head of a Bear is his weakest part (as the hand of a Lyon is the strongest) for by a small blow on his head he hath often been ftrucken dead, the bones of the head being very thin and tender's yea more tender then the beak of a Parrot. The mouth of a Bear is like a Hogs mouth, but longer; being armed with teeth on both fides, like a flaw, and standing deep in his mouth, they have very thick lips, for which cause, he cannot easily or hashily with his teeth break a funder the hunters nets, except with his fore-feet.

His neck is short, like a Tygers and a Lyon, apt to bend downwards to his meat; his belly is very large, being uniform, and next to it the intrals as in a Wolf : It hath also four speans to her Paps. The genital of a Bear after his death waxeth as hard as horn, his knees and elbows are like to an Apes, for which cause they are not swift or nimble: his feet are like hands, and in them and his loins is his greatest strength, by reason whereof, he sometimes setteth himself upright upon his hinder legs : the pastern of his leg being sleshy like a Cammels, which maketh them unfit for travel; they have tharp claws, but a very small tail as all other long haired creatures have.

They are exceeding full of fat or lard-greafe, which some use superstitiously beaten with Oyl, of Bears wherewith they anount their Grape-fickles when they go to vintage, perswading themselves that if no body know thereof, their tender Vine-branches shall never be consumed by Caterpillers.

Other attribute this to the vertue of Bears blood, and Treophrastus affirmeth, that if Bears greate be kept in a veffel, at such time as the Bears lie secret, it will either fill it up, or cause it to run over. A secret, The flesh of Bears is unfit for meat, yet some use to eat it, after it hath been twice sod; other Meat of Bears eat it baked in pasties; but the truth is, it is better for medicine then for food. Theophrasius like- fielh, wise affirmeth, that at the time when Bears lie secret, their dead flesh encreaseth which is kept in houses, but Bears fore-seet are held for a very delicate and well tasted food, full of sweetness; and Another se-

The skins of Bears are used in the far Northern regions for garments in the Winter time, which The skins, they make so artificially, covering themselves with them from the crown of the head to the feet, that (as Munster affirmed) some men deceived with that appearance, deemed the people of Lapponia to be hairy all over. The fouldiers of the Moors wear garments made of Lyons, Pardals, and Bears skins, and fleep upon them; and so it is reported of Herodotus Megarensis the Musitian, who in the day time wore a Lyons skin, and in the night lay in a Bears skin.

The constitution of the body of a Bear is beyond measure phlegmatique, because he fasteth in the Winter time fo long without meat : His voyce is fierce and fearful in his rage, but in the night time mournful, being given much to ravening. If a Bear do eat of Mandragoras, he presently dueth. except he meet with Emmets, by licking of whom he recovereth: fo likewife if he be fick of a Surfeit.

A Bear is much subject to blindness of the eyes, and for that cause they desire the Hives of Bees, not only for the Hony, but by the stinging of the Bees, their eyes are cured. It hath not been seen that a female Bear was taken great with young, which cometh to pass, by reason that they go to their Dens fo foon as they are conceived, and come not out thence till they have littered: And because Taking of of the fierceness of this beast, they are seldom taken alive, except they be very young : so that Bears, some are killed in the Mountains by poyson, the Countrey being so steep and rocky that Hunters cannot follow them; some taken in ditches of the earth, and other gins. Oppianus relateth, that near Tygris and Armenia, the Inhabitants use this stratagem to take Bears. The people go often to the Woods to find the Den of the Bear, following a Leam-hound, whose nature is so soon as he windeth the Beaft, to bark, whereby his leader discovereth the prey, and so draweth off the Hound with the leam; then come the people in great multitude, and compassing him about with long nets, placing certain men men at each end: then tye they a long rope to one fide of the net as high from the ground as the small of a mans belly : whereunto are fattned divers plumes and seathers of Vultures, Swans, and other resplendent coloured birds, which with the wind make a noise or histing, turning overfand gliftering 4 on the other fide of the net they build four little hovels of green boughs, wherein they lay four men covered all over with green leaves, then all being prepared, they found their Trumpets, and wind their Horns; at the noise whereof the Bear ariseth, and in his fearful rage runneth to and fro as if he faw fire: the young men armed make unto him, the Bear looking round about, taketh the plainest way toward the rope hung full of feathers, which being stirred and haled by them that hold it, maketh the Bear much affraid with the ratting and hiffing thereof, and so flying from that side half mad, runneth into the nets, where the Keepers entrap him so cunningly, that he seldom escapeth.

When a Bear is set upon by an armed man, he standeth upright and taketh the man betwirt his fore-feet, but he being covered all over with iron plates can receive no harm, and then may eafily with a sharp knife or dagger pierce through the heart of the beast.

If a the Bear staying young ones be hunted, the driveth her whelps before her untill they be wearied, and then if the beamer prevented, the climbeth upon a tree, carrying one of her young in her mouth, and the other on her back. A Bear will not willingly fight with a man, but being hurt by a man, he gnasheth his teeth, and lioketh his fore-feet: and it is reported by an Ambassa. dor of Poland, that when the Sarmalians find a Bear, they inclose the whole Wood by a multitude of people, standing not above a cubit one from another, then cut they down the outmost trees, so that they raise a wall of wood to hem in the Bears; this being effected, they raise the Bear, having certain forks in their hands made for that purpose, and when the Bear approacheth, they (with those forks) fall upon him, one keeping his head, another one leg, another his body, and fo with force muzzle him and tie his legs, leading him away. The Rhatians use this policy to take Wolves and Bears: they raife up great polts, and crossthem with a long beam laded with heavy weights, unto the which beam they fasten a cord with meat therein, whereunto the beast coming, and biting at the meat, pulleth down the beam upon her own pate.

The Inhabitants of Helvalia hunt them with mastiff Dogs, because they should not kill their Cattel left at large in the field in the day time; They likewife shoot them with guns, giving a good fum of money to them that can bring them a flain Bear. The Sarmatians use to take Bears by this fleight; under those trees wherein Bees breed, they plant a great many of sharp pointed stakes, putting one hard into the hole wherein the Bees go in and out, whereunto the Bear climbing, and coming to pull it forth, to the end that he may come to the Hony, and being angry that the stake flicketh fo fall in the hole, with violence plucketh it forth with both her fore-feet, whereby she looseth her hold and falleth down upon the picked stakes, whereupon the dieth, if they that watch for her come not to take her off. There was reported by Demetrius Ambassador at Rome, A Sistory from the King of Musco, that a neighbour of his going to feek Hony, fell into a hollow tree up to the brest in Hony, where he lay two days, being not heard by any man to complain; at length

Herus.

Pellux.

came a great Bear to this Hony; and putting his head into the tree, the poor man took hold thereof, whereat the Bear suddenly affrighted, drew the man out of that deadly danger, and so ran away for fear of a worse creature.

But if there be no tree wherein Bees do breed neer to the place where the Bear abideth, then thev use to anount some hollow place of a tree with Hony, whereinto Bees will enter and make Honycombes, and when the Bear findeth them she is killed as aforesaid. In Normay they use to saw the tree almost asunder, so that when the beast climbeth it, she falleth down upon piked stakes laid underneath to kill her: And some make a hollow place in a tree, wherein they put a great pot of water, having anounted it with Hony, at the bottom whereof are fastened certain hooks bending downward, leaving an easie passage for the Bear to thrust in her head to get the Hony, but impossible to pull it forth again alone, because the hooks take hold on her skin: this pot they binde fast to a tree, whereby the Bear is taken alive, and blindefolded, and though her strength break the cord or chain wherewith the pot is fastened, yet can she not escape or hurt any body in the taking by reason her head is fastened in the pot.

To conclude, other make ditches or pits under Apple-trees, laying upon their mouth rotten flicks, which they cover with earth, and frow upon it herbs, and when the Bear cometh to the An-

ple-tree, the falleth into the pit and is taken. The herb Wolfeban or Libardine is poison to Foxes, Wolves, Dogs, and Bears, and to all beasts that are littered blinde, as the Alpine Rhatians affirm. There is one kinde of this called Coclamine. which the Valdensians call Tora, and with the juyce thereof they poylon their darts, whereof I have credibly received this story; That a certain Valdensian, seeing a wilde Bear, having a dart poya foned herewith, did cast it at the Bear being far from him, and lightly wounded her; it being no fooner done, but the Bear ran to and fro in a wonderful perplexity through the woods, unto a very sharp cliffe of a rock, where the man faw her draw her last breath, as foon as the poyfon had entered to her heart, as he afterward found by opening of her body. The like is reported of Henbane, another herb: But there is a certain black fish in Armenia, full of poyson, with the powder whereof they poyfon Figs, and cast them in those places where wilde beasts are most plentiful, which

Concerning the industry or natural disposition of a Bear, it is certain that they are very hardly tamed, and not to be trufted though they feem never so tame; for which cause there is a story of Diana in L) fish, that there was a certain Bear made so tame, that it went up and down among men and would feed with them, taking meat at their hands, giving no occasion to fear or mistrust her cruelty: on a day, a young maid playing with the Bear lascivionsly did so provoke it, that he tore her in pieces; the Virgins brethren seeing the murther, with their darts flew the Bear, whereupon followed a great pestilence through all that region: and when they consulted with the Oracle, the paynim God gave answer, that the plague could not cease, untill they dedicated some Virgins unto Diana for the Bears sake that was slain; which some interpreting that they should facrifice them: Embarus upon condition the Priesthood might remain in his family, slew his only daughter to end the pestilence, and for this cause the Virgins were after dedicated to Diana before their marriage, when they were betwixt ten and fifteen year old, which was performed in the month of January, otherwife they could not be marryed: Yet Bears are tamed for labours, and especially for sports among the Roxolani and Lybians, being taught to draw water with wheels out of the deepest wels; likewise Rones upon fleds to the building of walls.

A Prince of Lituania nourished a Bear very tenderly, feeding her from his table with his own hand, for he had used her to be familiar in his Court, and to come into his own chamber when he listed, so that she would go abroad into the fields and woods, returning home again of her own accord, and would with her hand or foot rub the Kings chamber door to have it opened, when the was hungry; it being locked: it happened that certain young Noble-men conspired the death of this Prince, and came to his chamber door, rubbing it after the custom of the Bear, the King not doubting any evill, and supposing it had been his Bear, opened the door, and they presently slew

There is a fable of a certain wilde Bear, of huge stature, which terrified all them that looked upon her, the which Pythagoras fent for, and kept to himself, very familiarly using to stroke and milk her; at the length when he was weary of her, he whispered in her ear, and bound her with an oath, that being departed the should never more harm any living thing, which saith the sable, she observed to her dying day. These Bears care not for any thing that is dead, and therefore if a man can hold his breath as if he were dead, they will not harm him; which gave occasion to Esope, to fable of two companions and sworn friends, who travelling together met with a Bear, wherear they being amazed, one of them ran away and gat up into a tree; the other fell down and countetfeited himself dead, unto whom the Bear came and smelt at his nostrils and ears for breath, but perceiving none, departed without hurting him: foon after the other friend came down from the tree, and merrily asked his companion what the Bear faid in his ear, Marry (quoth he) she warn'd me that I should never trust such a fugitive friend as thou art, which didst forfake me in my greatest necessity: thus far Elop.

They will bury one another being dead, as Tzetzer affirmeth, and it is received in many Nations, that children have been nursed by Bears: Paris thrown out of the City, was nourished by a Bear. There is in France a Noble house of the Urson, whose first founder is reported to have been certain

years together nourished by a Bear, and for that cause was called Vison: and some affirm, that Arcefins was fo, being deceived by the name of his mother who was called Arctor, a Bear: as among the Latines was U sula. And it is reported in the year of our Lord 1274, that the Concubine of Sebab. Frank. Pope Nicholas (being with childe as was supposed) brought forth a young Bear, which she did not by any unlawful copulation with fuch a beaft, but only with the most holy Pope; and conceived fuch a creature, by firength of imagination, lying in his Palace, where the faw the pictures of many Bears: fo that the holy Father being first put in good hope of a ion, and afterward seeing this monster (like himself, Rev. 13.) for anger and shame detaced all his pictures of those beasts. There is a mountain called the Mountain of Bears in Cyxicus, betwixe Cherfonefus and Propontus; so called, because as some have affirmed, Helice and Cynofur a were turned into Bears in that place, but the reason is more probable because it was full of Bears, or else because it was so high that it seemed to touch the Bear-star.

There is a Constellation called the Bear in the figure of seven Stars like a Cart, whereof four stand in the place of the wheels, and three in the roun of Horses. The Septembions call them Tri- Highus. ones, that is yoked Oxen. But there are two Bears, a greater and a leffer. The greater is called Callifto, after the name of Lycaons daughter, who reigned in Arcadia, whereof many give divers reasons. For they fay Calliffo was a companion of Diana, and used to hunt with her being very like unto her. and one day Jupiter came to her in the likeness of Diana, and deflowred her, and when she was with childe, Diana asked how that happened, to whom Callifo answered, that it happened by her fact: wherewith the Goddels being angry, turned her into a Bear, in which shape she brought forth Arcas, and they both wandering in the Woods, were taken and brought for a present unto Lycaon her father: And upon a day, the Bear being ignorant of the law, entered into the Temple of Jupiter Lycam, and her son followed her, for which the Arcadians would have slain them both, but Inpiter in pity of them took them both into Heaven, and placed them among the Stars.

Other say that Callifo, was turned into a Bear by Iuno, whom afterward Diana slew, and coming to knowledge that it was Callifto, fhe placed her for a fign in Heaven, which is called Urfa Major, the great Bear; which before that time was called Hamaxa; but the reason of these fables is rendred by Palaphanus, because that Calliflo going into a Bears den, was by the Bear devoured, and so her foolish companions seeing none come forth but the Bear, fondly imagined that the Virgin was turned into a Bear.

There is another Confectation next to the great Bear, called Artiophylax, Bootes, or the little Bear, in whose girdle is a bright Star called Arthmid, and from this confectation of Bears, cometh the denomination of the Ardique and Antastique pole. Other affirm, that the two Bears were Helice and Cynofura, the two Nurses of Iupiter, because sometime they are so named; the cause whereof is. apparent in the Greek torigue, for Helide is a Star, having as it were a tail rowled up ; and Comfura, a tail at length like a Dog. They are also notirished for sport; for as their bodies do in one fore refemble Apes, fo do also their dispositions being apt to sundry gostures and pastimes, lying upon their backs, and turning their hands and feet, rockthemfelves upon them as alwoman rocketh her childe in a cradle; but principally for fight: for which occasion they were preserved of old time by the Romans: For when Messala was Conful, Enbarbas Domittes presented in one ring or circle, an hundred Bears, and so many hunters with them. time to describe to

and will not fight with them if they can be avoided, for they know they shall be overcome. Great is the fierceness of a Bear, as appeareth by holy Scripture, Hos. 13. I will meet them as a Bear robbed of ber whelps (faith the Lord) and will tear in pieces their froward beart : And Chufat telleth Ablalon, 2 Sam. 17. Thou knowest that thy Father and the men that be with him be most valiant and sierce, like a

(he Bear robbed of her Whelps: for a she Bear is more couragious then a male.

There is a filthy Nation of men called Taifab, who are given unto a Sodomitical buggery, to commit uncleanness man with man, and especially with young boyes; but if any of them take a wilde Bore, or kill a Bear, he shall be exempted from this kind of beastly impudicity. Heliogabalus was wont to shut up his drunken friends together, and suddenly in the night would put in among them Bears, Wolves, Lyons, and Leopards, muzled and disarmed, so that when they did awake, they should finde such chamber-fellows, as they could not behold (if darkness did not blind them) without fingular terror; whereby many of them fell into swounds, sickness, extasse and madness.

Æneas Sil.

Violdus King of Lituania, kept certain Bears of purpose, to whom he cast all persons which spoke against his tyranny, putting them first of all into Bears skins; whose cruelty was so great, that if he had commanded any of them to hang themselves, they would rather obey him then endure the terror of his indignation: In like fort did Alexander Pheram deal with his subjects, as is reported by Textor. Valentinianus the Emperor nourished two Bears devourers of men, one of them called golden Mica, the other Innocentia; which he lodged neer his own Chamber: at length after many flaughters of men, he let Innocentia go loofe in the Woods for her good deferts, in bringing fo many people to their funerals.

ved of Bears. Columella.

Arnoldus. Virtues medi.

There are many natural operations in Bears. Pliny reporteth, that if a woman be in fore travail of childe-birth, let a stone or arrow which hath killed a Man, a Bear or a Bore, be thrown over the house wherein the woman is, and she shall be eased of her pain. There is a small worm called Volvox, which eateth the Vine-branches whon they are young, but if the Vine-fickles be anounted with Bears blood, that worm will never hurt them. If the blood or greafe of a Bear be fet under a bed, it will draw unto it all the fleas, and so kill them by cleaving thereunto. But the vertues medicinal are very many: and the first of all, the blood cureth all manner of Bunches and Apostumes in the flesh, and bringeth hair upon the eye-lids if the bare place be anounted therewith.

The fat of a Lyon is most hot and dry, and next to a Lyons, a Leopards; next to a Leopards, a . Bears; and next to a Bears, a Buls. The later Phylitiansuse to cure convulsed and distracted parts, spots, and tumors in the body. It also helpeth the pain in the loyns, if the sick part be anounted therewith, and all Ulcers in the legs or thins, when a Plaister is made thereof with Bole-Armorick. Also the Ulcers of the feet, mingled with Allom. It is soveraign against the falling of the hair, compounded with wilde rofes. The Spatiards burn the brain of Bears when they die in any publick sports, holding them venemous, because being drunk, they drive a man to be as mad as a Bear; and the like is reported of the heart of a Lyon, and the brain of a Cat. The right eye of a Bear dryed to powder, and hung about childrens necks in a little bag, driveth away the terror of dreams, and both

the eyes whole, bound to a mans left arm, easeth a quartain Ague.

The Liver of a Sow, a Lamb, and a Bear put together, and trod to powder under ones shooes easeeth and defendeth Cripples from inflamation: the gall being preserved and warmed in water, delivereth the body from cold, when all other medicine falleth. Some give it mixt with water, to them that are bitten with a mad Dog, holding it for a fingular remedy, if the party can fast three days before. It is also given against the Palsie, the Kings Evill, the Falling-fickness, an old Cough, the Inflamation of the Eyes, the running of the Ears, the difficulty of Urine, and delivery in Childebirth, the Hemorrhoides, the weakness of the Back. The stones in a Persume are good against the Falling evill, and the Palite; and that women may go their full time, they make Amulets of Bears nails, and cause them to wear them all the time they are with childe.

Of the BEAVER Male and Female.

Of the name, Silvaticus.

of Beaft a Beaver is,

Beaver is called in Greek, Cofter; in Latine, Fiber; in Italian, Bivarro, or Bivero, and Ilcaftoreo;

A Beaver is canted in Greek, Cajtor; in Latine, 2007; in Illyrian, Bobr; in Germain, Biber: all which words at the first fight seem to be derived from the Latine: There is no certain word for it in Hebrew ; in Arabia it is called Albednefter : it is alfo called in Latine, Canis Ponticus, but Canie Fleviatilie, is another Beaft, as we shall manifest in the succeeding discourse of an Otter: and the reason why in Latine it is called Fiber, is, because (as Varro faith) it covereth the fides, banks, or extre-The notation mities of the river, as the extremities or laps of the ear and liver are called Fibre, and the skirts of of Piber from garments Fimbrie : but the reason why the Gracians call it Castor, is not as the Latines have supposed, the Latine. because it biteth off his own stones, quasi castandro sepsum, as shall be manifested soon after, but of Castrando, because for the stones thereof it is hunted and killed; or rather of Gaster, signifying a bel-The notation of the Greek ly for that the body is long and almost all belly; or rather because of the colour & ill savour thereof. word Cafter. This Beaver is no other then that which Ariftotle calleth Latar, and it differeth from an Otter only What manner

Beaver with a Badger, but they attribute to him a longer body and smoother hair, but shorter and fofter then a Badgers : their colour is fomewhat yellow and white, afperfed with afh-colour, which fland out boyond the horter hairs, double their length: they are nest and loft like unto an Otters. and the hairs length of the one and others colour, is not equal. Some have feen them brown declining to black, which Albertus preferresh, and Silvin affirmeth, that his long hairs are like well il a Dogs, and the thort ones like an Ottere: They, are mottellen- Countrey of tiful in Bontus, for which cause breed, es and the old it is called Gange, Pantianny they are also bred in the Rivers of Spain, and in the River Memin Frances Padus, in Lialy , in Savoy, in the Rivers Ifara and Rhoun, and in the Island called Camargo, and in Helvetia, near Arula, Vila and Limague: Likewile throughout all Germany, Polonia Scigronia Ruffia and Fruffa and Ithere are Bravers in the woods of Molco and Litrania, of excellent perfection and figure, above others, having longer white hairs which glifter, aboye other. from whence came the Proverbe, That sweet is that sight which is not fifth at all.

These beasts use to build them Caves or Deny near the Waters, so as the Water may come into
them, or else they may quickly leap into the water, and their wit or natural invention in building

Their building of Dens,

Bellonius.

of their Caves is most wonderful: for you must understand that in the night time they go to land, and there with their teeth gnaw down boughesand trees which they likewife bite very fhort fitting their purpose, and so being busied about this work, they will often look up to the tree when they perceive it almost asunder, thereby to discern when it is ready to fall, lest it might light upon their own pates: the tree being down and prepared, they take one of the oldest of their company, whose teeth could not be used for the cutting, (or as others say, they constrain some strange Beaver whom they meet withal) to fall flat on his back (as before you have heard the Badgers do) and upon his belly lade they all their timber; which they fo ingeniously work and fasten into the compasse of his legs that it may not fall, and fo the refidue by the tail, draw him to the water fide, where these buildings are to be framed : and this the rather feemeth to be true, because there have been some fuch taken, that had no hair on their backs, but were pilled; which being espied by the hunters, in

Albertus. Qlam Mag.

Albertus.

A fecret.

pity of their flavery, or bondage, they have let them go away free. These beasts are so constant in their purpose, that they will never change the tree that they have once chosen to build withal, how long time so ever they spend in biting down the same : it is likewife to be observed; that they never go to the same, during the time of their labour, but in one and the same path, and so in the same return to the water again. When they have thus brought their wood together, then dig they a hole or ditch in the bank fide, where they underfet the earth to bear it up from falling, with the aforesaid timber; and so they proceed, making two or three rooms like several chambers, one above another, to the intent that if the water rise they may go further, and if it fall they may descend unto it. And as the husbandmen of Egypt do observe the buildings of the Crocodile, fordo the inhabitants of the Countrey where they breed, observe the Beavers, that when they build high, they may expect an inundation, and fow on the Mountains; land when thep build low, they look for a calm or droughe, and plow the vallies. 11 There is nothing worth on this beaft as his stones, for they are much foughwafter and defined by all Merchants, to that they hard hibitance, for with them they ettle rindes on ! will give for them any great price. There is both in male and female, vertain bunaires under their belijdas great an Coofes effet which some have unskilfully taken for their code, asibetween the lengthe fecret be privile photos post fexes : which sumours or bunches are nothing elfes but a little fleshie hag within a little thin skin, in the middle whereof is a hole or passage, out of the which the beast sucketh a certain liquor, and asterio

Of the Beaver.

ward therewith anointeth every part of her body that the can reach with her tongue. Now it is very The cods or plain that these bunches are not their cods, for these reasons; Because that there is no passage either stones of the of the feed into them, or from them into the yard: Besides, their stones are found within their beast, body: neither ought this to feem strange, feeing that Hares have the like bunches, and also the Rondoletius. Molebus or Musk-cat: the female hath but one passage for all her excrements, and to conceive or bring forth young ones.

It hath been an opinion of some, that when a Beaver is hunted and is in danger to be taken. The biteth off her own stones, knowing that for them only her life is fought, which caused Alcians to

make this Bublem.

Et pedibus (etnis, tumida es propendulus alvo, Hac tamen insidias effugit arte fiber : Mordicus iple fibi medicata virilia vellit: Atque abiicit fele gnarus ob illa veti. Hujus ab exemplo disces non parcere rebus Et vitam ut redim is hostibus era dare.

The Beaver doth not bite off her own ftones.

Teaching by the example of a Beaver, to give our purse to theeves, rather then our lives, and by our wealth to redeem our danger, for by this means the Beaver often escapeth. There have been many of them found that wanted stones, which gave some strength to this errour, but this was exploded in ancient time for a fable; and in this and all other honelt discourses of any part of Philosophy, the only mark whereat every good student and professor ought to aime, must be verity and not tales; wherein many of the ancient have greatly offended (as is manifelted by Marcella Virgiliw) especially Plato: and this poyson hath also crept into and corrupted the whole body of Religion. The Egytians in the opinion of the aforesaid Castration, when they will signifie a man that hurteth himself, they picture a Beaver biting off his own stones. But this is most falle, as by Sertim, Pli- Herur. nius, Dioscorides, and Albertus, is manifested. First, because their stones are very small, and so placed An emblem. in their body as are a Boars, and therefore impossible for them to touch or come by them. Secondly, they cleave fo fast unto their back, that they cannot be taken away but the beast must of necessity lose his life; and therefore ridiculous is their relation, who likewise affirm, that when it is hunted (having formerly bitten off his stones) that he standeth upright and sheweth the hunters that he hath none for them, and therefore his death cannot profit them, by means whereof they are averted and feek for another

These Beavers eat fish, fruits, and the bitter rindes of trees, which are unto them most delicate, Their food especially Aldern, Poplar, and Willow; whereupon it is proverbially said, of one that serveth another for gain: Sic me subes quotidie ut fiber salicem, you love me as the Bever doth the Willow, which eateth the bark and destroyeth the tree.

They are taken for their skins, tails, and cods, and that many wayes; and first of all when their There cause of Calves are found, there is made a great hole or breach therein, whereinto is put a little Dog, which taking, the beaft espying, flyeth to the end of her den, and there desendeth her self by her teeth, till all her structure or building be rased, and she laid open to her enemies, who with such instruments as they have preset, beat her to death : some affirm that she rouzeth up her body, and by the strong savour of A scree, her stones she driveth away the Dogs, which may be probable, if the stones could be seen. These Dogs are the same which hunt wild fowl and Otters.

It is reported that in Pruffia they take them in bow-nets, baited with the rinde of trees, whereinto Agricola.

they enter for the food, but being entrapped cannot go forth again. They cannot dive long time under water but must put up their heads for breath, which being espied by them that beset them, they kill them with gun-shot, or pierce them with Otters speares, so that one would think seeing such a one in the water, that it was some hairy kind of fish; and his nature is, if he hear any noise to put his head above water, whereby he is discovered and loseth his life. His skin is pretious in Polonia, either for garment, or for Gloves, but not fo pretious as an Otters, yet it is used for the edging of all other fur garments, making the best shew and enduring longest; they are best that are blackest, and of the bellies which are like felt wool, they make caps and stockings against rain and foul weather.

The medicinall vertues of this beaft are in the skin, the urine, the gall and the cods: and first, a The medicinal garment made of the skins, is good for a Paralytick person; and the skins burned with dry Onions vertues. and liquid pitch, stayeth the bleeding of the nose, and being put into the soles of shooes easeth the Albertus. Gowt. The urine preserved in the bladder, is an antidote against poyson: and the gall is profita- Actius. ble for many things, but especially being turned into a glew it helpeth the falling evill. The ge- Pliny. nitals of a Beaver are called by the Phy sitians Castoreum, and therefore we will in this discourse use Pling. that word for expressing the nature, qualities, remedies, and miraculous operation thereof, where-fore they must be very warily and skilfully taken forth, for there is in a little skin compassing them about a certain sweet humor (called Humor Melleus) and with that they must be cut out, the utter skin being cut asunder to make the more easie entrance, and the Apothecaries useto take all the sat about them, which they put into the oil of the Castoreum, and fell it unto fisher-men to make bait for fishes. The females have stones or Castoreum, as well as the males, but very small ones. Now you must take great heed to the choise of your Beaver, and then to the stones which

must grow from one root conjoyned, otherwise they are not precious, and the beast must neither be a young one nor one very old, but in the mean betwixt both, being in vigor and perfection of

Hermolaus. The carmoungot Caplo-1.1103.

The Beavers of Spain yeeld not such virtuous Castoreum as they of Pontus, and therefore if it be possible, take a Pontique Beaver, next one of Gallatia, and lastly of Africk. Some do corrupt them putting into their skin Gum and Ammoniack with blood, other take the reins of the beaft, and fo make the Cafforeum very big, which in it felf is but finall. This beaft hath two bladders, which I remember not are in any other living creature, and you must beware that none of these be joyned to the Cafforeum. You may know if it be mingled with Ammoniack by the taft, for although the colour be like, yet is the favour different. Platearius sheweth, that some adulterate Cassoreum, by taking off his skin, or fome cod newly taken forth of another beaft, filling it with bloud, finews and the powder of Coffseeum, that fo it may not want his strong smell or savour; other fill it with earth and bloud: other with bloud, rosen, gum, finews and pepper, to make it tast sharp: but this is a falsification discernible, and of this fort is the Caftoreum which is fold in Venice, as Brasovala affirmeth: and the most of them fold at this day are bigger then the true Castoreum, for the just weight of the right thones is not above twelve ounces and a half, one of them being bigger then the other, being fix fingers breadth long, and four in breadth. Now the fubstance contained in the bag is yellowith, folid like wax, and sticking like glew, not sharp and cracking betwixt the teeth (as the counterfect is). These stones are of a strong and stinking sayour, such as is not in any other, but not rotten and fharp, as Grammarians affirm; yer I have smelled of it dryed, which was not unpleasant, and things once seasoned with the sayour thereof, will ever tast of it, although they have not touched it, but lie covered with it in the same box or pot; and therefore the Castoreum of Persia is counterfeit, which hath no fuch fmell, for if a man fmell to the right Cafforeum, it will draw bloud

After it is taken forth from the beaft, it must be hung up in some place to be dryed in the shadow, and when it is dry, it is foft and white: it will continue it strength fix years, and some say seven; the Persians affirm, that their Custoreum will hold his virtue ten years, which is as falle as the matter they speak of is counterfeit. Archigenes wrote a whole book of the virtue of this Cafforeum, whereunto they may refort, that require an exact and full declaration of all his medicinal operations: it shall only be our purpose, to touch some general heads, and not to enter into a particular

discovery thereof.

Being so dryed as is declared, it must be warily used, for it falleth out herein as in other medicinal subjects, that ignorance turneth a curing herb or substance, into a venemous and destructive quality; therefore we will first of all fet down the dangers to be avoided, and afterward fome particular cures that come by the right use of it. Therefore it must be understood that there is poyson in it, not naturally, but by accident, as may be in any other good and wholesome matter: and that especially in the smell or savour thereof, whereunto if a woman with childe do smell, it will kill the childe unborn and cause abortment; for a womans womb is like a creature, nourished with good fayours, and destroyed with evill; therefore burning of feathers, shoo-foles, woollen clothes, pitch, Galbunum, gum, onions, and garlick is noyfom to them. It may be corrupted not only as is before declared; but also, if it be thut up close without vent into pure aire, when it is hanged up to be dryed, or if the bag be kept moilt, fo that it cannot dry ; and it is true (as Avicen faith) that if it be used being so corrupted, it killeth within a dayes space, driving one into madness, making the fick person continually to hold forth his tongue, and infecting him with a Fever by inflaming the body, loofing the continuity of the parts, through sharp vapors arising from the stomach: and for a proof that it will inflame, if you take a little of it mingled with oil, and rub upon any part of the

body, or upon your nail, you shall feel it.

But there is also a remedy for it being corrupted; namely, Asses milk mingled with some tharp fyrup of Citron, or if need require, drink a dram of Philons Antidote at the most; or take butter and sweet water which will cause vomit, and vomit therewith so long, as you feel the savour of the stone, and afterward take syrup of Limmons or Citrons: and some affirm upon experience, that two penny weight of Coriander-feed, scorched in the fire, is a present remedy for this evill. And it is most strange, that seeing it is in greatest strength, when the favour is hottest, which is very displeasing to a mans nature in outward appearance, yet doth it never harm a man taken inwardly. (being pure and rightly compounded) if the person be without a Fever, for in that case only it doth hurt inwardly, otherwise apply it to a moist body lacking refrigeration, or to a coldbody wanting excalfaction, or to a cold and moist body, you shall perceive an evident commodity thereby, if there be no Fever: and yet it hath profited many where the Fever hath not been over hot, as in Extatics and Lethargies, ministred with white Pepper, and Melicrate, and with Rose cakes laid to the neck or head. The same virtues it hath being outwardly applied and mingled with oil, if the bodies be in any hear, and purely without oil, if the body be cold, for in heating it holdeth the third degree, and in drying the second. The manner how it is to be administred is in drink, for the most part, the sweet liquor being taken from it, and the little skins appearing therein cleansed away; and to it hath among many other these operations following: Drunk with Vinegar, it is good against all venom of Serpents, and against the Chameleon, but with this difference, against the Scorpion with wine, against Spiders with sweet water, against the Lizzards with Myrtite, against Dhifa and Cerafter, with Oponax, or wine made of Rem, and against other-Serpents with wine fimply.

Take of every one two drams, for a cold take it a scruple and a half in four cups of wine, used Castorecas erawith Ladanum, it cureth the Fiftulaes and Ulcers, provoking fneezing by finelling to it : procureth vi miller foste fleen, they being anointed with it; Maiden-weed and Conserve of Roses, and being drunk in water, recumbit, bejoeth Phrenfie, and with the Roles and Maiden-weed aforefaid, eafeth head-ach: being laid to the head like a plaister, it cureth all cold and windy affections therein; or if one draw in the smoak of it perfumed, though the pain be from the mothers womb, and given in three cups of fweet Vinegar falting, it helpeth the Falling fickness, but if the person have often fits, the same given in a Glytter, giveth great ease: Then must the quantity be two drams of Castoreum, one sextary of honey and oil, and the like quantity of water, but in the fit it helpeth with Vinegar by fmelling to it. It helpeth the Palfie, taken in Rew or wine, fod in Rew, fo alfo all heart trembling, ach in the ftomach, and quaking of the finews. It being infused into them that lie in Lethargies with Vinegar and Conferve of Roses doth presently awake them, for it strengthneth the brain, and moveth sternutation. It helpeth oblivion coming by reason of sickness, the party being first purged with Hiera Ruffi, Castoreum, with oil bound to the hinder part of the head, and afterward a dram drunk with Materate, also taken with oil, cureth all Convultion proceeding of cold humors, if the Convulsion be full and perfect, and not temporal or in some particular member, which may come to passe

The same mixed with hony helpeth the clearness of the eyes, and their inflamations: likewise used with the juice of Popy, and infused to the ears, or mixed with hony, helpeth all pains in them, With the feed of Hemlocks beaten in Vinegar, it sharneth the sense of hearing, if the cause be cold, and it cureth toothach infused into that ear with oil on which side the pain resteth; for Hippocrates fent unto the wife of Aspassus (complaining of the pain in her cheek and teeth) a little Cafforeum with Pepper, advising her to hold it in her mouth betwixt her teeth. A persume of it drawn up into the head and stomach, easeth the pains of the lights and intrails, and given to them that figh much with sweet Vinegar sasting, it recovereth them. It caseth the Cough, and distillations of rhume from the head to the stomach, taken with the juyce of black Popy. It is preservative against inflamations and pains in the guts or belly (although the belly be swoln with cold windy humors) being drunk with Vinegar, or Oyxycrate; it easeth the Colick being given with Annis beaten small, and two spoonfuls of sweet water; and it is found by experiment, that when a horse cannot make water, let him be covered over with his cloth, and then put underneath him a fire of coals, wherein make a perfume with that Cafforeum till the Horses belly and cods smell Vegeting. thereof, then taking away the coals, walk the horse up and down covered, and he will present-

To foften the belly they use *Caftoreum* with sweet water two drams, and if it be not forcible enough, they take the root of a fet Cucumber one dram and the fome of Salt Peter two drams. It is also used with the juice of Withy and decoction of Vinegar applyed to the reins and genital parts like a plaister against the Gonorrhean passion. It will stir up a womans monethly courses, and cause an easie travail, two drams being drunk in water with Penny-royal. And if a Woman with childe go A scree; over a Beaver, she will suffer abortment; and Hippocrates affirmeth, that a persume made with Casio-

reum, Asses dung, and Swines greafe, openeth a closed womb.

There is an Antidote called Diacostu, made of this Castorcum, good against the Megrim, Falling fickness, Apoplexies, Palfies, and weakness of lims, as may be feen in Myrep/w: against the impotency of the tongue, trembling of the members, and other fuch infirmities. These vertues of a Amiraculous Beaver thus described, I will conclude this discourse with a History of a strange beast like unto Monter, this, related by Puntanus Camput-tellus (a noble Knight) who affirmed, that there are in Arcadia, feaven great lakes fome 30 miles compais, and fome leffe, whereof one is called Garloil, out of which in Anno 1510 about the midft of Summer, in a morning came a beast about the bigness of a water Dog, having feet like a Goofe, who with his tail easily threw down small trees, and presently with a fwift pace he made after some men that he saw, and with three strokes he likewise overthrew three of them, the refidue climbing up into trees escaped, and the beast without any long tarrying, returned back again into the water, which beaft hath at other times been feen, and it is observed, that this appearance of the Monster, did give warning of some strange evils upon the Land : which flory is recorded by Hellor Bostbius.

Of the BISON.

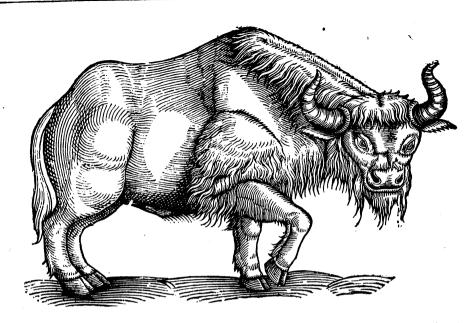

Bison called of some Latins, though corruptly, Vrson, and Veson; of the Grecians, Bison; of the Of the name, Lituanians, Suber; of the Polonians, Zuber, from whence some Latins derived Zubro, for a Bison. Of the Germans, Vijent, and Vafent, and Wifent: a beaft very strange as may appear by his figure prefixed, which by many Authors is taken for Urus, some for a Bugil, or wilde Ox; other for Rangifer, and many for the beast Tarandus a Buffe. By reason whereof there are not many things, which can by infallible collection be learned of this beaft among the writers; yet it is truly place of their and generally held for a kind of wilde Ox, bred in the Northern parts of the World for the most breed. part, and never tamed, as in Scylbia, Moscovia, Hercynia, Thracia, and Pruffia. But those tall wilde Philoslephan. Oxen which are said to be in Lapponia, and the Dukedom of Angermannia, see more truly said The reason of to be Uri, as in their flory shall be afterward declared. Their name is taken from Thracia, which their name.

was once called Biffonia, and the people thereof Biffones, from Biffo the Son of Cicas and Terpfichore; and thereof came Bissonia Grues, cranes of Thracia, and Bissonia Lacus, for the lake or sea of A ferretin the Dicaa, near Abdera, where never living thing, or other of leffe weight was cast in but it presently Lake Dicas. funk and was drowned.

This Bison is called Taurus Paonicus, the Paonian Bull, whereof I finde two kinds, one of greater, and another of leffer fize, called the Scotian, or Calydonian Bifon, whereof you shall fee the picture and qualities at the foot of this History.

The greater is as big as any Bull or Oxe, being maned about the neck and back like a Lion. and hath hair hanging down under his chin or neather lip like a large beard : and a rifing or little ridge down along his face, beginning at the height of his head, and continuing to his nose very hairy; his horns great and very sharp, yet turning up towards his back, and at the points hooked like the wilde Goats of the Alpes, but much greater: they are black of colour, and with them through the admirable through of his neck can be toffe into the air, a horfe and horfeman both together. They are as big as the Destarii which are the greatest Stallions of Italy. Their face looketh downward. and they have a strange strength in their tongue, for by licking they grate like a file any indifferent hard substance, but especially they can therewith draw unto them any man or beast of inserior conf.heir congue. dition, whom by licking they wound to death.

Their hair is red, yellow, or black, their eyes very great and terrible; they fmell like a Moschw or Muk-cat, and their mane reacheth over their shoulders, shaking it irefully when he brayeth; their face or forehead very broad, especially betwixt their horns, for Sigismond King of Polonia, having kild one of them in hunting, flood betwixt his horns, with two other men not much leffer in quantity then himlelf, who was a goodly well proportioned and personal Prince.

There are two bunches on his back, the former near his shoulders, which is the higher, and the other near the rump, which is somewhat lower. I have seen the horns of a Bison, which was in the hands of a Goldinith to tip with filver and gilt, that it might be fit to drink in: it did bend like the talon of an E gle or Gryphin, or some ravenous bird. The flesh in Summer time is most fat, but it talteth fo much of wilde Garlick, or Ramsens, that it is not pleasant to eat, being full of small veins and strings, and is accounted a noble and strong kind of flesh: the bloud is the most purest in the world, excelling in colour any purple, and yet for all that it is so hot, that being let forth when the Bealt dyeth, within two houres space it putresieth, and the sless it self in the coldest Winter will not keep sweet many hours, by reason of the immoderate heat thereof, if the Hunter do not after the fall of the beaft, separate from it the intrails: and which is most strange of A fecret in the all, being pierced alive with any hunting spear, dart, or sword, the weapon by the heat of the body inward heat of is made so weak and soluble, that it cometh forth as flexible as lead: and to conclude, it is a most this bealt. , noble and fierce spirited b alt, never afraid, or yeelding till breath faileth, neither can be be taken Their hunting with any nets or gins, untill they be thoroughly wearyed: wherefore they which hunt him, must

Of the Bison.

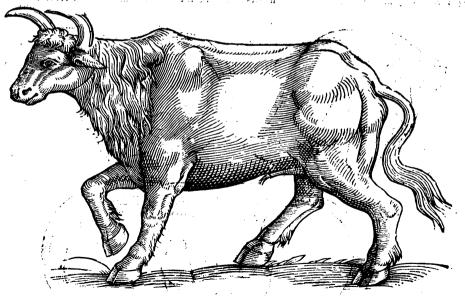

be very firong, nimble and skilful men, or elfe that foort will be their own undoing and over-

wearied and out of breath, then doel he cast a red cap unto the beatt, who maketh at it with head and feet, never leaving till it beall in pieces; and if another come to help him as hunters must, if they will returnalive, then shall he easily draw the beast to combate, and forsake the first man, if he

Therefore when they go to hunt this Bison, they choose a place replenished with large trees. neither fo great that they cannot eafily wind abour them, nor fo little that they shall not be able to cover their bodies from the horn or tongue of the beaft : behind which the hunters place themfelves out of fight : and then the Dogs rouze up the beath, driving him to that place where the hunters stand; whom the beast first espyeth, to him he maketh force, who must warily keep the tree for his shield, and with his spear wound him where he can, who will not fall without many mortal flrokes, but waxe more and more eager, not only with horn, but with tongue, for if he can but apprehend any part of the hunters garment with his tongue, he lofeth no hold but draweth him unto him, and with his horn and feet killeth him: but if the fight be long, and fo the hunter

cey Lu-lu-lu. Paulanias sheweth how these Bisons are taken alive, in this fort. The hunters (saith he) chuse out In Processe some steep and slippery down hill, whereupon they lay skins of beasts newly taken off, and if they How Brions want fuch then anoint they old skins with oil, and to leave them foread upon those steeping or ben- are taken slive ding passages; then raise they the beasts, and with Dogs and other means on horseback drive them along to the places where they laid their hides, and as foon as they come upon the skins they flip and fall down, rowling headlong till they come into the valleys, from whence they constrain them back again some other way, three or four times a day, making them fall down the hils as aforefaid, and so wearying them with continual hunting, and fasting. At the last they come unto them, when they are no more able to rife for faintness, and give them Pine-apples taken out of the shels, (for with that meat are they delighted) and so while they eagerly feed and lie weary on the ground, they intoil them in bands and manacles, and lead them away alive. The medicines coming from The medicines this beaft may be conject wied to be more forcible, then of common and ordinary Oxen, but because not known. they were not known to the Greciant and Arabians, and we finde nothing recorded thereof; we will conclude the story of this great Bison, with good opinion of the virtues, though we are not able to learn or discover them to others.

Of the white SCOTIAN BISON.

N the Woods of Scotland, called Callender or Caldar, and in ancient time Calydonia, which reacheth Places where I from Monteth and Erunal, unto Atholia and Loqubabria, there are bred white Oxen, maned about their Bilons the neck like a Lyon, but in other parts like ordinary and common Oxen. This wood was once full abide. of them, but now they are all flain, except in that part which is called Cummittald. This beaft is fo

E 3

The History of Four-footed Beasts. The nature of hateful and fearful of mankind, that it will not feed of that graffe or those hearbs, whereof he favoureth a man hath touched, no not for many days together; and if by art or policy they happen to be taken alive, they will die with very fullen grief. If they meet a man, presently they make force at him, fearing neither Dogs, Spears, nor other weapons. Their flesh is very pleasant, thoughfull of sinews, and very acceptable to the greatest Nobles, for which cause they are grown to a small number; their qualities being like to the former beaft, excepting their colour and beard, I will term them a white Calydonian, or Scotian BISO N.

BONASUS, the figure of the Head and Horns.

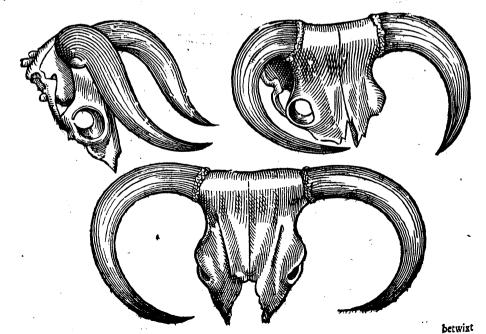

Of the name.

His beaft is called in Greek Bonglos, and in Latin, Bonalus, and is also called Monops, or Monopios, and once in Ariftotle Bolinthus, the Bohemians, Loli, now the German, & Englift call the long hair about the neck of any beaft, a Mene or Mane, from whence cometh this word Monapies, which fignifi-The reason of eth a maned Ox. This Bijon is the name Mo- the greatest beast, Bull or Ox, though it be shorter in length, yet are the fides larger and broader then all other. Piaces of their They are bred in Raonia in the mountain Mesapus, not in Lydia and Phrygia, as Solinus and

Albertus have delivered; being

deceived because the Paonians

which they derive from Madi a people of Afie, whereas the Panient and Medi in Pliny, (as is observed by Hermolaus in his Cafligations of Pliny) are a people of Thracia in Europe: so called of Paon the Son of Endymion and brother of Epeus, who was feated near the river Axius in Macedonia: for it was agreed

betwirt the two brethren striving for the kingdom, that he which was overrun by the others should veeld the kingdom in quietness to his brother.

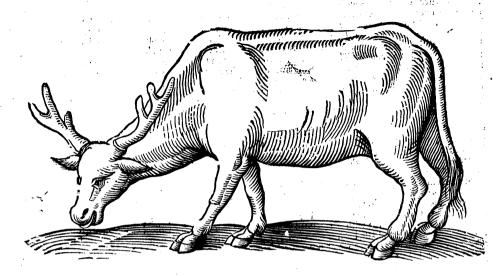

The head of this beait is like the head of an Oxfor Hulling horns bending round to the fides of the His parts, cheek, by reason whereof he hath no desence by them, neither can a man be hurt that is east upon them. His neck is very thick with a large mane, from his eyes down to his shoulders in length like Aristotle. an Horses, but the hair thereof is much lofter, and lyeth more smoothly, the uppermost hairs being harfher, and the undermed fofter like wool. Their colour between red and afth colour, but black and yellow appeared not in them. They have no upper reeth, in this point relembling an Ox and other horned bears, their horns being in compals about one inche and somewhat more, are very smooth and black like variation. Their voice is like the roice of an Ox, their legs all hairy, and their feet cloven, their tail too fhort for the other members of the body like a Bugles, their back stretched out at length, is as long as a feat for feaven men; their flesh is very sweet for which cause he is much foughtfor in hunting; he, will with his feet dig up the ground like and on or Bull in his rage; His flesh, and when he is once struck, he style haway, fighting with his heels backward; and whereas nature hath diposypen to denved him the banefit of horns, which other beafts have, fo that he is only adorned and not armed His ight in by those weapons, like a Souldien that cannot draw forth his Sword; the hath given him the fecret thing. operation of his dung, which in his chafe becasteth forth of his body so plentifully uponithe Does or The feat other that purfue him, by the that pare of four paces buckward, that he flayoth their course, and the operation of heat of his shing is to adminable that it forcherts or burneth the hair or skin of any beatts or men that hunt him: neither high this fime fuch werenous operation at any other time, but only when the bealt flyeth, being hunted and pursued for life, at other times it lying quier, there is no such virtue therein; neither ought this to feem incredible, feeing many other beafts in their chafe, have the like or at the least do then eject their excrement more plentifully and noisomly then at other Thereason of times: as the Cuttell-fish, for when in chase the intrails are heated, and the passage somewhat re- the heat and strained, so that the holding in of breath breedeth more wind in the guts, it may very naturally their excechance, the excrement being with the inclosed wind and heat fent forth by violent eruption, that it ment, may flie far backward, and also burn as aforefaid. These beafts Calve in the Mountains, and before that Their place time cometh the chufeth a place, which the walleth in with the abundance of her own dung, to high and fuccour as it may cover her young one, for there is no beast that is naturally so full of excrement as a Bonufus, for Calving, Their ears are very broad as the Poet faith, Patula camuru Jub cornibus aures, broad ears, under crooked winding blunt horns; the skin is so large, that it hath covered a good part of a house, the inward colour whereof is like the earth whereon the beaft did use to feed. That excellent Physician of England John Cay, did ferm fend me the head of this heaft, with this description, in an Epittle, faying.

Send unto thee the head of a great wilde beaft, the bare mouth and the bones supporters of the The relation horns being very weighty, and therefore bearing up fome like heavy burden, the horns are of John Caya recurred and bending backward, so that they do not spiredirectly downward but rather forward. Doctor of "though in a crooked manner, which because it could not appear forward, as they do when the England, "beaft is alive, therefore they are described turning on the one side : the space betwixt the horns or "breadth of the forehead, is three Roman palms and a half; the length of the horns, three palms one finger and a half; and their compals where they are joyned to the head, is one foot one palm " and a half. In the Castle of Warnick where are preserved the Armor and Spear of one Earl Guy of "Warwick a most valiant strong man, I have seen the head of a beast not unlike to this, saving that "if the bones whereon the horns grow should be joyned together, then would the horns be longer, "and of another crooked fashion. And in the same place there is also the neckbone of the same beaft, the compasse thereof is at the least three Roman feet two palms and a half, whereunto I may ef also add that shoulder-blade which hangeth on the North gate of the City of Coventry, being in "the lowest part three foot broad and two fingers, and four foot long and two palms: and the er compasse of the arme hole wherein the shoulder is joyned, is three foot and one palm, and the es whole compasse of them both in breadth and length, is eleven foot one palm and a half.

"In the Chappel of the faid great Guy, distant from Warnick about one thousand paces (or a mile) "there hangeth a rib of this beatt (as I suppose) the compasse whereof in the smallest place is three " palms, and in length it is fix foot and a half, the rib is dry and rotten in the superficies thereof. The "vulgar people affirm, that it is the peece of a Boar, which was slain by Earl Gmy; other say, es by tradition of their elders, that it is a piece of a wilde Cow remaining neer Coventry, and did much " harm to many people; which latter opinion I embrace, taking it for a Bondus, who in most things " is like a Cow, and therefore some affirm it is an Indian Cow (but ignorantly) because any thing "that is not common is usually attributed to some strange Countrey breed (with an addition to that "it most of all resembleth.) Thus far D. Cay.

Whereunto I affent, holding his conjectures to be very probable, untill by the diligent industry of some other, or my own eye-fight we may deliver to the world some more assured and perfect knowledge in these kind of beasts. Exhorting in the mean season all learned men, to discover more exactly their present or future knowledge herein, to the high benefit of all them that are diligent fludents in this part of Gods creation.

Of the BUFFE.

Of the name and kind of

Buffe is called in Greek, Tarandos; and in Latine, Tarandus; which some have corrupted barharoully, tearming it Parandrus and Pyradus; and I conjecture that it is the same beast, which the Polonians call Tur or Thuro; howsoever other confound this Tarandus with another beaft, called Rangifer; and some with a kinde of Urus, which have many properties in common with a Buffe, yet my reason, why the Polonian Tur can be no other then a Buffe, is, because the head and mouth differeth from those beafts; and also because this is taken in Sarmatia, where the common people call it Daran, or Darau; although the later Writers call it Duran and Duran, and translate it a Bonalus, which can by no means agree with this beaft; and the name of Daran is easily derived from Tarandus, or Tarandos.

Also that the Polonian Tur should not be a Buffe, all that can be objected, is, that the horns thereof are cragged or branched, which thing Pliny attributeth to a Buffe: whereunto I answer, that the Ancients did confound a Buffe with an Elk, and a Rangifer; for in the description of an Elk they vary, divers times militaking one for another, by reason that they wrote altogether by report, none of them being feen in their Countries, and therefore may eafily be deceived in a Buffe, as well as in an Elk. The chief Authors of this opinion have been Sir Thomas Eliot, and Georgius Agricola, with whom I will not contend, nor with any other man that can give better reason : for Pliny maketh a Buffe to be a beaft proportioned betwixt an Hart and an Oxe, of which fort is not a Rangifer, as shall be manifested; and if it be, yet can it never appear that a Rangifer doth change colour like a Buffe, as also we will make more evident : So then distinguishing a Buffe from a Rangifer, and presuming that the Polonian Thuro, or Tur, is a Buffe; we will proceed to his description.

The head of this beatt is like the head of a Hart, and his horns branched or ragged; his body for the most part like a wilde Oxes, his hair deep and harsh like a Bears, his hide is so hard and thick, that of it the Scylbians make breast-plates, which no dart can pierce through. His colour, for the most part, like an Asses, but when he is hunted or feared, he changeth his hew into what soever thing he feeth; as among trees he is like them; among green boughs he feemeth green; amongst rocks of Itone, he it transmuted into their colour also; as it is generally by most Writers affirmed: as Pliny and Schnus among the Ancient; Stephanus and Enflathius among the later Writers.

This indeed is the thing that feemeth most incredible, but there are two reasons which draw me to subicribe hereunto : firit, because we see that the face of nien and beates through fear, joy, anger, and other pattions, do quickly change; from ruddy to white, from black to pale, and from pale to ruddy again. Now as this beaft hath the head of a Hart, fo also hath it the fear of a Hart, but in a higher degree; and therefore by fecret operation it may eafily alter the colour of their hair, as a patiion in a reatonable man, may alter the colour of his face.

The same things are reported by Pliny of a beast in India called Lycaon, as shall be afterward declared; and besides these two, there is no other among creatures covered with hair, that changeth

colour. Another reason forcing me to yeeld hereunto is, that in the Sea a Polipus fish and in the earth among creeping things, a Chameleon, do also change their colour in like fort and fashion: whereunto it may be replyed, that the Chameleon and Polypus-fish, are pilled or bare without hair. and therefore may more easily be verse-coloured; but it is a thing impossible in nature, for the hair to receive any tincture from the passions: but I answer, that the same nature can multiply and diminish her power in lesser and smaller Beasts, according to her pleasure, and reserveth an operation for the nails, and feathers of birds, and fins and scales of fishes, making one fort of divers colour from the other: and therefore may and doth as forcibly work in the hairs of a Buffe, as in the skin of a Chamaleon; adding so much more force to transmute them, by how much farther off they stand from the blood, like as an Archer, which fetteth his arm and bow higher to shoot farther, and therefore it is worthy observation, that as this beast hath the best desence by her skin above all other, so the hath a weakest and most timerous heart above all other.

These Busses are bred in Scythia, and are therefore called Tarandi Scythici; they are also among Countries of the Sarmatians, and called Budini, and neer Gelonis, and in a part of Poland, in the Duchy of Maza- Buffes. via, betwixt Ofzezke and Garvolyin. And if the Polonian Thuro before mentioned, have a name (whereof I amignorant) then will I also take that beast for a kinde of Bijon. In Phrygia there is a Stephanue. territory called Tarandros, and peradventure this beaft had his name from that Countrey, wherein it may be he was first discovered and made known.

The quantity of this beaft, exceedeth not the quantity of a wilde Ox, whereunto in all the parts The quantity of his body he is most like, except in his head, face, and horns: his legs and hoofs are also like an or stance of a Oxes. The goodness of his hide is memorable, and defired in all the cold Countries in the world, Butte.

Wherein only these beatts and all other of strong thick hides are found, for the thinnest and most most profitable skips of healts are in the horsest many of the countries in the world with the countries in the countries in the horsest most profitable. unprofitable skins of beafts, are in the hot and warmer parts of the world: and God hath provided to man, thick, warm, most commodious, and precious covers for those beasts that live farthest from the Sun. Whereupon many take the hides of other beafts for Buffe, for being tawed and wrought artificially they make garments of them, as it is daily to be feen in Germany.

Of the Vulgar B UGIL.

Bugil is called in Latine, Bubalus; and Buffalus; in French, Beufle; in Spanish, Busano; in Ger- The several Aman, Buffel; and in the Illyrian tongue, Bouwol. The Hebrews have no proper word for it, but names. comprehend it under To, which fignifieth any kind of wilde Oxen; for neither can it be expressed by Meriah, which signifieth fatted Oxen; or Bekarmi, which signifieth Oxen properly; or Jachmur, which the Persians call Kutzcobi, or Buzcobi, and is usually translated a Wilde- fie. For which beast the Hebrews have many words; neither have the Gracians any proper word for a vulgar Bugil, for Boubates and Boubates, are amongst them taken for a kinde of Roe-buck. So that this Bubalus was The Original first of all some modern or barbarous term in Africk, taken up by the Italians, and attributed of the term to this beast, and many other for whom they knew no proper names. For in the time of Pliny, Bubalus. they used to call strange beasts like Oxen or Bulls, Vii; as now a days (led with the same error, or rather ignorance) they call such Bubali, or Buffali. The true effigies of the vulgar Bugil, was fent unto me by Cornelius Sittardus, a famous Physitian in Norlmberg ; and it is pictured by a tame and familiar Bugil. such as liveth among men for labour, as it seemeth to me. For there is difference among these beaits, (as Aristotle hath affirmed) both in colour, mouth, horn, and strength.

This vulgar Bugil, is of a kinde of wilde Oxen, greater and taller then the ordinary Oxen, their Of the vulgar body being thicker and ftronger, and their limbs better compact together; their skin most hard, Bugil and Beg their other parts very lean, their hair short, finall, and black, but little or none at all upon the tail, paics. which is also short and small. The head hangeth downward to the earth, and is but little, being compared with the refidue of his body; and his aspect or face betokeneth a tameable and simple disposition. His fore-head is broad and curled with hair, his horns more flat then round, very Bellining. long, bending together at the top, as a Goars do backward: infomuch as in Crete, they make bows Use of their of them: and they are not for defence of the beaft, but for distinction of kinde and ornament. His horns, neck is thick and long, and his rump or neather part of his back is lower then the refidue, descending to the tail. His legs are very great, broad and strong, but shorter then the quantity of his body would feem to permit. They are very fierce being tamed, but that is corrected by put- Erasmus. ting an Iron ring through his Nostrils, whereinto is also put a cord, by which he is led and ruled, as a Horse by a bridle (for which cause in Germany they call a simple man over-ruled by the advise of another to his own hurt, a Bugle, led with a ring in his nose)

His feet are cloven, and with the formost he will dig the earth, and with the hindmost fight like a Horse, setting on his blows with great force, and redoubling them again if his object remove not. His voyce is like the voyce of an Oxe; when he is chased he runneth forth right, seldom winding Albertus. or turning, and when he is angred, he runneth into the water, wherein he covereth himself all The mannet over, except his mouth, to cool the heat of his blood; for this beaft can neither endure outward of his flight. cold nor inward heat : for which cause, they breed not but in hot Countries, and being at liberty are Nature of feldom from the waters. They are very tame, to that children may ride on their backs; but on a fotheir breeding
dain they will run into the waters, and to many times indender the children lives. dain they will run into the waters, and so many times indanger the childrens lives.

Pet. Crefcent.

Their

Pliny. The feveral parts. Silvius. Heychius. A miracle in his colour.

Of their young ones and milk.

Their love to their young ones is very great, they alway give milk from their copulation to their Calving; neither will they suffer a Calf of another kinde (whom they discern by their smell) to fuck their milk, but beat it away if it be put unto them : wherefore their keepers do in fuch case. anoynt the Calf with Bugils excrement, and then she will admit her suckling.

hides.

Bellonine.

They are very strong, and will draw more at once then two Horses; wherefore they are tamed Their thrength for fervice, and will draw Waggons and Plows, and carry burdens also, but they are not very fit for Carts: yet when they do draw, they carry also great burthens or loads tyed to their backs with Pet. Ciescent. ropes and wantyghtes. At the first setting forward they bend their legs very much, but afterward they go upright, and being over-loden they will fall to the earth, from which they cannot be raised Use of their by any stripes untill their load or carriage be lessened. There is no great account made of their hides, although they be very thick : Solinus reporteth, that the old Britons made Boats of Ofier twigs or reeds, covering them round with Bugils skins, and fayled in them: and the Inhabitants of the Kingdom of Caraiani, make them bucklers and shields of Bugils skins, which they use in Wars; the fiesh is not good for meat, which caused Baptista Fiera to make this Poem :

> Bubalus hing abeat neve intret prandia noftra : Non edat bunc quifquam: Jub juga femper eat.

For they ingender melancholy, and have no good tafte, being raw they are not unpleasant to behold, but fod or rosted they shew a deformed substance. The milk of this beast maketh very hard Cheese, which tasteth like earth.

The phylick made out of Bugils.

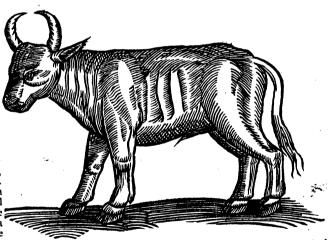

The Countrey

of this beatt.

The medicines made of this beaft are not many: with the horns or hoofs they make rings to wear against the Cramp, and it hath been believed (but without reason) that if a man or woman wear rings made of the horns or hoofs of a Bugil in the time of carnal copulation, that they will naturally fly off from their fingers; whereas this fecret was wont to be attributed to rings of Chryfolyles or, Smaraude stones. To conclude, some teach husbandmen to burn the horns or dung of their Bugils on the windy fide of their corn and plants, to keep them from Cankers and blafting : and thus much of the vulgar Bugil, called Bubalus Recentiorum: whose beginning in this part of the world is unknown, although in Italy, and other parts of Europe they are now bred and fostered.

Of the African BUGIL.

Belonius reportin Cair a small beast, which was in al things like a little Oxe, of a beautiful body, full of flesh, well and neatly limmed, which he could take for no other then the African Oxe, or Bugill of the old Gracians, which was brought out of the Kingdom of A amia, unto the City Cair ; it was old, and not so big as a Hart, but greater then a Ree; he never in all his life took more pleasure to behold a beaft, then in the

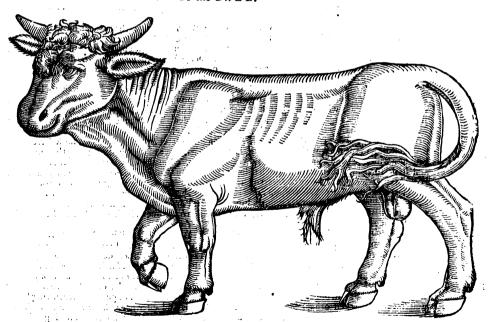

beauty of every part in this creature. His hair was yellowish, glistering as if had been combed and trimmed by the art of a Barber, under his belly it was somewhat more red and tauny then upon his back. His feet in all things like a vulgar Bugils, his legs short and strong, the neck short and thick, whereon the two dew-laps of his creft did scarse appear. His head like an Oxes, and his horns growing out of the crown of his head, black, long, and bending like an half Moon; whereof he hath no ule to defend himfelf, or anoy another, by reason their points turn inward. His cars like a Cows, and shoulder blades standing up a little above the ridge very strongly. His tail to the knees like a Camelogardals, from whence hangeth some few black hairs, twice to great as the hairs in a Horses tail. His voyce was like an Oxes, but not so strong and loud: to conclude therefore, for his description; if a man conceive in his minde a little yellow neat Oxe, with smooth hair, strong members, and high horns above his head, like a half Moon; his minde cannot erre from the true and perfect shape of this beatt. There was such a one to be seen of late at his reme, under the name of an I dian Oxe, faving his head was greater and longer, his horns not high nor bending together, but standing up right, and a little wreathing into spires above their root, and the hinder part of the back much lower then the shoulders, but it may be the observer of this beast failed and took not the true description of it.

This creature or African Bugil, must be understood to be a wilde heast, and not of a tame kinde, The nature of although Kellonius expresseth not so much. Lee in his description of Africk, relateth a discourse this beatle, of a certain beath called Laut, or Daut, who is less then an Oxe, but of more elegant feature in his legs, white horns, and black nails, which is so swift, that no beast can out-run it, except a Barbary Horse: it is taken most easily in the Summer time: with the skin whereof they make targets and shields, which cannot be pierced by any weapon, except Gunshot; for which cause they sell them very dear; which is conjectured to be the Bugil that Bellonius describeth, although it be not just of the same colour, which may vary in this beast as well as in any other, and I have a certain Minufeript without the Authors name, that affirmeth there be Bugils in Lybia, in likenels refembling a Hart and an Oxe, but much leffer, and that thefe beatls are never taken afleep, which caufeth an opinion that they never fleep; and that there is another Bugil beyond the Aipes, neer the River Rhene, which is very fierce and of a white colour.

There is a horn in the Town-house of Argentin; four Roman cubits long, which is conjectured to Or a strange be the horn of some Vrus (or rather as I think of some Bugil) it hath hung there at the least two or horn in Agrathree generations, and by scraping it I found it to be a horn, although I forgat to measure the compass thereof, yet because antiquity thought it worthy to be reserved in so honourable a place for a monument of some strange beatt, I have also thought good to mention it in this discourse: as when Philip King of Macedon, did with a dart kill a wilde Bull at the foot of the Mountain Orbelus, and confecrated the horns thereof in the Temple of Hercules, which were fifteen yards or paces long, for pollerity to behold.

Of the BULL.

Bull is the husband of a Cow, and ring-leader of the herd, (for which cause Hom r com-A pareth Agamemnon the great Emperor of the Grecian Army to a Bull) reserved only for procreation, and is sometimes indifferently called an Oxe, as Oxen are likewise of Authors taken for Bulls, Virg. are 138 oda a

> Pingue Jolum primis extemplo mensibus anni, Fortes invertant boves .-

The Hebrews call him Tor, or Taur ; which the Challes call Abir, for a strong Oxe : fo the Aramologic of the biant, Taur : the Gracians, Tauros; the Latines, Taurus; the Italians, Tauro; the French, Taureau; name lau.in. the Germans, ein Stier, ein Vuncherstier, das Vucher, ein Mummelstier, ein Hogen, and ein Bollen; the Illyrians, Vul, and Iunecz: by all which several appellations, it is evident, that the name Taurus in Latine is not derived from Tanouros, the stretching out the tayl; nor from Gauros, fignifying proud; but from the Hebrew, Tor; which fignifieth great; upon which occasion, the Gracians called all large, great, and violent things, by the name of Tauroi, and that word Taurus among the Latines, hath given denomination to Men, Stars, Mountains, Rivers, Trees, Ships, and many other things, which caused Lachimus Camerarius to make thereof this anigmatical riddle.

A Riddle up. in the word Tanius.

Machus eram regis : sed lignea membra sequebar. Li Cilicum mens jum : fed mons fum nomine folo. Li vehor in calo: fed in ipfis ambulo terris.

That is in divers senses, Taurus was a Kings Pander, the root of a tree, a Mountain in Cilicia, a Bull, a Mountain in name, a Star or fign in heaven, and a River upon the earth : fo also we read of Statilius Taurus, and Pomponius Vitulus, two Komans. It was the custom in those days, to give the names of beatts to their children, especially among the Troglodyta, and that Adulterer which ravished Europa, was Taurus the King of Crete; or as some say, a King that came in a Ship, whose Enfign and name was the Bull; and other affirm, that it was lupiter in the likeness of a Bull, because he had so defloured Geres when he begat Proferpina, and afterward defloured Proferpina his daughter. in the likeness of a Dragon. It is reported that when Achelous did fight with Hercules for Deianeirathe Daughter of Geneus King of Calydon, finding himself to be too weak to match Hercules, turned himfelf fuddenly into a Serpent, and afterward into a Bull; Hercules feeing him in that proportion, speedily pulled from him one of his horns, and gave it to Copia the companion of Fortune, whereof cometh that phrase of Cornucopia. Afterward, Achelous gave unto Hercules one of the Horns of Amalibea, and so received his own again, and being overcome by Hercules, hid himselfin the River of Thoss, which after his own name bending forth into one horn or crook, was called Achelous. By these things the Poets had singular intentions to decipher matters of great moment under hidden and dark Narrations.

Reasons why rivers are called TaureGrani.

But there are four reasons given, why Rivers are called Tourocrani: that is, Bul-heads. First, because when they empty themselves into the Sea, they roar or bellow like Buls, with the noise of their falling water. Secondly, because they surrow the earth like a draught of Oxen with a plow, and much deeper. Thirdly, because the sweetest and deepest pastures unto which these cattel resort, are near the rivers. Fourthly, because by their crooking and winding, they imitate the fashion of a horn, and also are impetuous, violent, and unresistible.

and Several

The prodigicus ftrength of Inomus.

The thrength of the head and neck of a Bull is very great, and his fore-head seemeth to be made for tight: having horns thort, but strong and piked, upon which he can toss into the air very great rarts of Bulls. and weighty beaits, which he receiveth again as they fall down, doubling their elevation with renewed thrength and rage, untill they be utter ly confounded. Their strength in all the parts of their body is great, and they use to strike backward with their heels: yet is it reported by Callus Titernus a Neat-head of Atolia, that being in the field among the cattel, took one of the most fierce and throngest Buls in the herd by the hinder-leg, and there in despite of the Bull striving to the contrary, held him with one hand, untill another Bull came by him, whom he likewise took in his other hand, and so perforce held them both: which thing being feen by Milo Crotoniates, he lifted up his hands to heaven, crying out by way of Interrogation to Jupiter, and faying : O Jupiter, haft thou fent another Hercules amongst ut? Whereupon came the common proverb of a strong armed man : This is another Hercules. The like story is reported by Suidas of Polydamas, who first of all slew a Lyon, and after held a Bull by the leg so fast, that the beast striving to get out of his hands, lest the hoof of his The Entities of this beaft are many among Writers, as when they call him Brazen-footed, wilde,

chearful, sharp, plower, warrier, horn-bearer, blockish, great, glistering, fierce, valiant, and louring, which seemeth to be natural to this beast; insomuch as the Grammarians derive Towns, grimness or lowring, from Taurus, a Bull, whose aspect carryeth wrath and hatred in it : wherefore it is Proverbially said in Westphalia, of a lowring and scouling countenance, Eir sie als ein ochs der dem, flesch in-Their feveral wer Entlofferist: That is, he looketh like a Bull escaped from one stroke of the Butcher. Their horns are leffer but stronger then Oken or Kie, for all beafts that are not gelded, have smaller horns and thicker skuls then other, but the Buls of Scythia as is faid elsewhere, have no horns. Their heart is full of nerves or finews, their blood is full of small veins, for which cause he ingendereth with most speed, and it hardneth quickly. In the gall of a Bull there is a stone called Guers, and in some places the gall is called Mummasur. They are plentiful in most Countries, as is said in the discourse of Oxen, but the best sort are in Epirus, next in Thracis, and then in Italy, Syria, England, Maceconia, Physia, and Belgia: for the Bulls of Gallia are impaired by labour, and the Buls of Ethiepe are the Rhinocerotes, as the Buls of the woods are Elephants.

Countries of their bulk breed.

parts.

Their time of copulation.

They defire the Cow at eight months old, but they are not able to fill her till they be two years old, and they may remain tolerable for breeders untill they be 12. and not past. Every Bull is fufficient for ten Kie, and the Buls must not feed with the Kie, for two months before their leaping

Of the Bull.

time, and then let them come together without restraint, and give them Peate, or Barley, if their that to also patture be not good. The best time to suffer them with their females, is the midst of the Spring, and procession. if the Bull be heavy, take the tayl of an Hart and burn it to powder, then moisten it in Wine, and rub therewith the genitals of a Bull, and he will rife above measure into lust : wherefore, it it be more then tolerable, it must be allayed with Oyl. The violence of a Bull in the act of copulation is fo great, Quintilius, that if he miss the females genital entrance, he woundeth or much harmeth her in any other place : fending forth his feed without any motion except touching, and a Cow being filled by him, he will never after leap her, during the time the is with Calf: wherefore the Egyptians decipher by a Bull in health, without the itch of luft, a temperate continent man, and Epitlelia faying of Suffine and Mafline: that is Bear and Forbear, was emblematically described by a Bull, having his knee bound and and tyed to a Cow in the hand of the Neat-herd, with this subscription. Hard fortune is to be endly el with patience, and happiness is often to be feared, for Epictetus said, hear and ferbear; we must suffer nan, things, and with-hold our fingers from forbidden fruits; for fo the Bull which swayeth rule among leasts, Leine bound in his right knee, abstaineth from his female great with young.

When they burn in luft, their wrath is most outragious against their companions in the same paflure, with whom they agreed in former times, and then the conquerer coupleth with the Cow: but when he is weakened with generation, the beaft that was overcome, fetteth upon him afreth, The fight or and oftentimes overcometh: which kinde of love-fight is elegantly described by Oppianus, as follow- combac of eth. One that is the chiefest ruleth over all the other herd, who tremble at the fight and presence E.d. of this their eager King, and especially the Kye, knowing the insulting jealousie of their raging husband. When the herds of other places meet together, beholding one another with disdainful countenances, and with their loughing terrible voices provoke each other, puffing out their flaming rage of defiance, and dimming the gliftering light with their often dust-beating-feet into the air, who presently take up the challenge, and separate themselves from the company, joyning together at the found of their own trumpets-loughing voyce, in fearful and sharp conflicts, not sparing, not yeelding, not retiring, till one or both of them fall wounded to the earth: fometimes turning round, fometimes holding heads together, as if they were Coach-fellows: and as two mighty ships well manned, with fufficient arms and firength, by force of winds and floods violently rushing one against another, do break and split asunder, with the horrible cry of the Souldiers, and ratling of the armour: so do these Buls, with voice, legs, horns, and strength, like cunning and valiant Martialists, make the founds of their blows to ring betwixt heaven and earth, untill one of them be vanquished and over-

The poor over-comed beast, with shame retireth from the herd, and will no more appear, untill he be enabled to make his party good against his triumphant adversary: then he feedeth folitary in the Woods and Mountains, for it is proverbially said, to signific a single and unmarryed life, abin Taurus in silvam: that is, the Bull is gone to the Wood to live solitarily without his female, often exercifing himself like a studious Champion against the day of a new combate, and when he findeth his strength increased, and his courage armed for the day of battel, then roareth he in the Woods and Mountains, to provoke his adversary to answer; and perceiving his own voyce to be more fierce and violent then is his enemies, forth he proceedeth like some refreshed Giant, consident in his itrength, descending the lists of a second combate, where he easily overcometh the Victor, weakned with copulation, and not exercised or fitted to such a triall through fulness and venery: so the sirit that was vanquished becometh Conqueror.

The very same is in other words described by Virgil: Bulls are enemies to all beasts that live up- George 3. on prey, as Bears, Lyons, and Wolves: when they fight with Wolves, they winde their tails toge- Then en mity ther, and so drive them away with their horns; when the Bear fighteth with an Oxe, she falleth on to other bealfs. her back, watching opportunity to take his horns with her fore-feet; which if the catch, with the weight of her body she wearieth the beast, who is so earnest in combate with these beasts, that they will fight their tongues hanging out of their mouths. The Crow is enemy to Buils and Asses, for in her flight she will strike at their eyes; and it is easier for the Bull to be revenged of a Lyon, then on such a bird: Red colour stirreth up a Bull to fight neither can the Neat-herds govern these with such facility as they do the females, for when they wander and go aftray, nothing can recall them but the voice of their females for copulation, which they understand and hear, being a mile or two distant.

The voyce of a Bull is sharper and shriller then is the loughing of a Cow; they are most couragious that have short and thick necks, and in their greatest wildeness, if their right knee can be bound, Hor. Apollo they will not fir; or if they be tyed to a wilde fig-tree, which is fo fearful to the nature of an Oxe A fectet in the or Bull, that it hath been feen, how a very few flicks of that wood have fod a great quantity of Buls taming of a flesh in shorter time, then a far greater number of other wood set on fire could perform: which Bull. caused the Egyptians in ancient time, to picture a Bull tyed to a wilde fig-tree, to fignific a man that changed his manners through calamity.

Out of the hides of Bulls, especially their ears, necks, and genitals, is most excellent glew confected, Their hides, but for the most part it is corrupted, by seething with it old leather of shooes or boots: but that of Rhodes is without all fraud, fit for Physicians and Painters, and evermore the whiter the better, for that which is black is good for nothing; wherefore that which is made out of Bulls hides, is so white, that it sendeth forth a brightness, whose vertuous conjunction in conglutination is so powerful, that it is easier to break a whole piece of wood then any part so glewed together therewith: and for this invention, we are (faith Plin) indebted to Dedalus the first author thereof. They used it in instruments of mufick, and fuch other tender and pretious actions.

The History of Four-footed Beasts.

Or the gall. Of the fleth.

The gail of an Oxe put upon Copper or Brass, maketh it glitter like Gold; for which cause it is uled by Piayers, to colour their counterfeit Crowns. The flesh of a Bull is good for meat, but vet not fo good as an Oxe or Cow; yet did the Egyptians abiliain from eating Cows flesh, and not from the fless of Bulls.

These beatts are used in some places to plow, in some to fight; and it is reported by Æltanus, that Mythridates King of Pontus, beside his guard of men, had also a guard of a Bull, a Horse, and a Hart. which he tamed with his own hands; to that when his followers were afleep, if any flranger came neer, they failed not to awake him, by one of their feveral voyces. It is reported alfo, that if the nostrils of a Bull be anounted with Oyl of Roses, he will presently lose his eye-fight: and that in the Lake Alphilutes there can no living creature abide, and yet many Bulls and Camels swim therein safely. It is but fabulous that there were Bulls in Colchia, which did breath out fire, except by that fiction The factificing the Poets understood the beastly rage of the rich Inhabitants. Touching the facrificing of Bulls ; it was also the cultom of the old Egyptians to facrifice a Bull unto Epaphus: and their manner was. first

of all to try him whether it were fit for facrifice, by laying meal before them, whereof if they re-

fused to talte, they were adjudged not apt for the Temple.

Calius. Gyraldw.

Paulanist.

Leo Afric.

of Buils.

The Doude call a general facrifice Viscum, whereby they affirm all grievances may be cured. First they prepared a banquet with facrifice under fome tree, then brought they two white Bulls fastened together by the horns, and then they gave a drink to any barren creature, woman, or brute beatt, holding religiously, that by that drink they should be made fruitful, and free from all poyson: Unto fo great a height did the folly of blinde people arife, to put religion in every unreasonable invention, under pretence of any good intention devifed by idolatrous Priests. As often as they slew and offered a Bull, and poured Frankincense and Wine upon the hoast, they said; The Bull is increased with Frankincense and Wine: but the Ionians did best comfort themselves in their facrifices, where the Bull before his death did lough at the Altar : and the Meffenians did binde their Bull which was to be facrificed to the ghost of Aristomene, unto certain Pillars in his Sepulchre: if therefore the Bull did Make the pillar while he leaped to and fro to get liberty, they took it for a good fign or Omen, but if it stood immoveable, they held it a mournful and lamentable thing.

It is likewise reported by Various, that when Agamemon ignorantly killed one of the Harts of Diana in Aulis, the was so wroth, that she stayed the winds from blowing upon his Navy, so as they could not thir out of harbour; hereupon they went to the Oracle, where aniwer was given, that the goddess was to be pacified with some one of Agamemnons blood, therefore Uhffes was sent away to fetch Iphigema, the daughter of Agamemnon from her mother Clitemnestra, under pretence to be marryed to Achiller; but when the was ready to be facrificed, the goddess took pity on her, and accepted a Bull in her itead, which ought not to be thought incredible, feeing that in holy Scripture a Ram was sub-

thruted in the place of Ilago.

They were wont also to facrifice a Bull to Neptune, and to all the Rivers, because of that affinity which they held a Bull hath with all waters; and to Apollo, according to this Virgilian verse, Tanium Negluno, Taurum tibi pulcher Apollo. But unto Jupiter it was unaccustomed to be offered, perhaps because he had often shewed himself in that likeness, to ravish and deflour women. There be certain Proverbs of a Bull, which are not altogether impertinent in this place. First, it is commonly Proverbs of a faid, that he may bear a Bull that hath born a Calf; whereby is meant, that he may be more subject to filthinels in age, which was so in youth. Quartilla was a woman of most vile reputation for uncleanness, because she said, that when she was little, she lay with little ones like her felf, and when the grew bigger, the applyed her felf to the pleasure of elder men, growing in filthiness as the had Like the Fing- increased in years. Likewise they were wont to say of an absurd or impossible thing; that if a Bull could reach his head over Taygette, he might drink of the river Eurora: and the beginning of this proverb, was taken of an Apollogme of Gerada, when his Hoast upon a time did ask him what punishment the Lacedemonians had appointed for adulterers, he answered: there was no adulterers in Lacedemon, and therefore the punishment and question wete frivolous. His Hoast replied; But if there should be an adulterer there, what punishment would they appoint for him? Marry (faid Geradus) he should pay such a Bull as would reach over Taygetu to drink of the water Eurota; whereat the hoft laughed, demanding where such a Bull could be found? then said Geradas, and where can you finde an adulterer in Lacedemon? so putting off one absurdity with another. And thus much of the natures and properties of a Bull in general. In the next place before this beaft be turned into the Woods, we will describe his medicinal vertues, and so let him loose.

The medicines of Eulls.

The powder of a Bulls horn drunk in water stayeth a flux of blood, and the loofness of the belly. Sextur and Ejeulatius tay, that if a Bulls horn be burned in a place where Serpents abide, it driveth them away. The blood of Bulls mingled with Barley flower, driveth away hardness in the flesh, and being dryed cureth Aposthumes in every part of the body. It taketh away spots in the face, and killeth Serpents: It is commended warm against the Gout, especially in Horses, It is not good for to drink, because it is easily congealed, except the little veins be taken out. It is accounted among the chiefest poyfons, and therefore it is thought by Plutarch, that Hannibal poyfoned himself by drinking Bulls blood, being thereunto perswaded by his servant: for so dyed Themistocles, and Pfammentus King of Egypt, taken by Camby is, was confirmed to drink the blood of a Bull; whereupon immediately he gave up the ghost. For remedy hereof, it is good to beware of vomiting, because the blood congealed in the stomach into lumps, stoppeth the throat; wherefore all those things which dissolve milk in the flomach, are also medicinable against the blood of Bulls. In these cases let the

party be first or all purged by GI, ster or otherwise, and then anoynt the stomach and belly with Barly meal and sweet Water, laying it unto them like a plaster: likewise Lupines, Oxymel, and Nitre, are loveraign in this, as all Physitians know. The dry leaves of Neppe and Calamach is profitable against this Malady; so also are ashes made of the lees of Wine burned.

The fat of a Bull is profitable to many things. First therefore, it must be plucked out warm from the reins of a Bull and washed in a River or Brook of running Water, pulling out the skins and tuni- Dieferider. cles, then melt it in a new earthen pot, having cast among it a little falt, then let it in fair cold Water, and when it beginneth to congeal, rub it up and down in the hands, wringing out the water, and letting it soke in again, untill it appear well washed; then boylit in a pot with a little sweet Wine; and being fodden, let it stand all night : if in the morning it favour strong, then pour in more Wine, feeche it again, untill that favour cease, and so all the poyson be removed: and beware of Salt in it. especially if it be to be used in diseases, whereunto Salt is an enemy, but being thus used, it looketh very white : after the same manner may be used the fat of Lions, Leopards, Punthers, Camels, Boars,

The lackall about the guts melted in a frying pan, and anounted upon the genitals and breaft, helpeth the Difenterie. The marrow of a Bul beaten and drunk, cureth the pain in the final of the belly: and Kafis faith, that if it be melted at a fire, and mingled with one fourth part of Myrrhe and Oyl of Bays, and the hands and feet be therewith anointed and rubbed, morning and evening; it helpeth

the contractions of the Nerves and Sinews.

The fat of a Dormouse, of a Hen, and the marrow of a Bull, melted together, and poured warm into the ears, eafeth their pain very much: and if the liver of a Bull be broyled on a foft fire, and put into ones mouth that hath the Tooth-ach, the pain will go away fo foon as ever the teeth tough it. The gall of a Bull is sharper then an Oxes, and it is mingled with Hony for a Wound-plaister, and in all outward remedies against poyson. It hath also a quality to gnaw the deadness or corruption out of Wounds, and with the juyce of Leeks and the Milk of women, it is applyed against the Swine-pox, and Fiftulaes; but the gall alone rubbed upon the biting of an Ape, cureth that Malady. Likewife the Ulcers in the head, both of men, women, and children. And if the wool of an Hare be burned to ashes, and mingled with oyl of Myrtles, Bulls gall, and beaten Alome, and so warmed and anoynted upon the head, it stayeth the falling away of the hair of head.

With the gall of a Bull, and the white of an Egge, they make an Eye-salve, and so anoynt therewith dissolved in water four days together ; but it is thought to be better with Hony and Balfam ; and instilled with sweet new Wine into the Ears; it helpeth away the pains of them of pecially running-mattry Ears, with Womans or Goats milk. It being taken with Hony into the mouth, helpeth the clifts and fores therein; and taken with the Water of new Coloquinida and given to a woman in travel, causeth an easie childe-birth Galen was wont to give of a Bulls gall the quantity of an Almond, with two spoonfuls of Wine, called (Vinum Lymphatum) to a woman that hath her childe dead within her body, which would presently cause the dead Embryon to come forth. The genital of a red Bull, dryed to powder, and drunk of a woman, to the quantity of a golden Noble, it maketh her to loath all manner of copulation: but in men (as the later Physitians affirm) it causeth that desire of lust to increase. The dung of a Bull laid to warm, helpeth all hardness; and burnt to powder, helpeth the member that is burnt. The urine or stale of Buls with a little Nitre taketh away Scabs and Leprosie.

Of another Beast called BUSELAPHUS.

Here was (faith D. Ca) a cloven-footed beast brought out of the Deserts of Mauritania into England, of the bigness of a Hinde, in form and countenance betwixt a Hinde and a Cow, and The description therefore for the resemblance it beareth of both, I will call it Bussaphus, or Bovicerous, or Moscheldfrance both,
france and a cow, and
on of this
france beautiful and a cow, and
france beautiful and and ear, a lean and flender leg and fhin, to that
The name. it may feem to be made for chase and celerity. His tail not much longer then a foot, but the form The several thereof very like a Cows, and the length like a Harts; as if nature feemed to doubt whether it should paris, encline to a Cow or a Hart: his upper parts were yellowish and smooth, his neither parts black and rough; the hair of his body betwixt yellow and red, falling close to the skin, but in his fore-head standing up like a Star; and so also about the horns which were black, and at the top smooth, but downward rough with wrinkles meeting on the contrary part, and on the neeres fide spreading from one another, twice or thrice their quantity. These horns are in length one foot and a hand-breadth, but three hands-breadth thick at the root, and their distance at the root was not above one fingers breadth, so arising to their middle, and a little beyond where they differ or grow asunder three hands breadth and a half; then yeeld they together again a little, and fo with dnother crook depart afunder the second time, yet so, as the tops of the horns do not stand afunder above two hands-breadth, three fingers and a half. From the crown of the head to the nostrils, there goeth a black strake which is one foot, two palms and one finger long, in breadth above the eyes where it is broadest, it is feven fingers, in thickness one foot and three palms, it hath eight teeth, and wanteth the uppermost like a Cow, and yet cheweth the Cud, it hath two udders under the belly like a Heifer that never had a Calf, it is a gentle and pleasant beast, apt to play and sport, being not only swift to run, but Pausenias. light and active to leap: It will eat any thing, either bread, broth, fatted or powdred beef; grafe or herbs, and the use hereof being alive is for hunting, and being dead the fieth is sweet and plea-

Of the OXE and COW.

E are now to describe those beasts which are less forein and strange, and more commonly known to all Nations then any asker for a foreign and strange, and more commonly known to all Nations, then any other four-footed beaft : for howfoever Bugils, Buffes, Lyons, Bears, Tigers, Beavers, Porcupines and such other, are not alway found in every Nation, yet for the

most part are Oxen, Kine, Buls and Horses, by the Providence of Almighty God, differninated in all the habitable places of the world: and to speak the truth, Oxen and Horses were the first riches. and fuch things wherein our Elders gat the first property, long before houses and lands : with them they rewarded men of highest desert, as Melamous, who opened an Oracle to Neleus that sought out the loft Oxen of Ichiclus. And Erix King of Sicily, fo much loved Oxen, that Hercules recovered from Geryon; that when he was to contend with Hercules about these, he rather veelded to depart from his Kingdom then from his Cattel: and Iuliur Pollux affirmeth, that there was an ancient coin of mony, which was flamped with the figure of an Oxe, and therefore the Crvet in every publick spectacle made proclamation, that he which deserved well, should be rewarded with an Oxe. meaning a piece of mony having that impress upon it : which was a piece of Gold compared in value to an English Rose-noble) and in my opinion the first name of mony among the Latime is derived from Cattel, for I cannot invent any more probable etymologie of Pedunia, then from Pe- Pling. cus, fignifying all manner of Cattel: howfoever it is related by fome Writers, that on the one fide of their coin was the Kings face cand on the other an Oxes picture : and that Servini was the first that ever figured money with Sheep or Oxen. Miron the great painter of Eleutherin, and disciple of Agelas, made an Heifer or Cow of Brais, which all Poets of Greece have celebrated in fundry Epigrams, because a Calf came unto it to suck it, being deceived with the proportion, and Ausmins also added this following theo the faid Calfand Cow, saying:

> Ubera quid puls frigentia matris abene, Q vitula ? & succum lattis ab ere petie ?

Whereunto the brazen Cowin caused to make this answer following :

Hunc quoque praftarem, feme pro parte paraffet , Exteriore Miron, interiore Dens.

Whereby he derideth their vain labours, which endeavour to fatisfic themfelves upon mens devifes, which are cold and comfortless without the bleffing of Almighty God. To begin therefore with Valla. these beasts, it must be first of all remembred, that the name Bo, or an Oxe as we say in English, is the most vulgar and ordinary name for Buglish, Busts, Cows, Bustes, and all great cloven-stooted horned beasts; although in proper speech; it signifies a beast gelded or libbed of his stones; and Boss fignifieth a huge great Serpent whereof there were one found in Ital, that had swallowed a childe whole without breaking one of his bones, observing also in Oxen the distinction of years or age: which giveth them feveral names, for in their young age they are called Calves, in their second age Steeres, in their third Oxen, and the Latines adde also a fourth, which they call Vetuli, old Oxen. Their are also distinguished in sex, the Male Calf is Vitulus, the Female Vitula; likewise Iuveneus, a Steer, and Iuvenca, an Heifer, Bos, an Oxe, and Vacca, a Cow; Taurus, a Bull; Taura, a barren Cow; and Horda, a bearing and fruitful Cow: of whom the Romans observed certain festival days called Hordicalia, wherein they factificed those Cattel. The Latines have also Vaccula and Bucula for a little Cow :

Vaccula non nunquam secreta bubilia coptans. Virg. And again. - Ant Bucula Cælum.

And Bucalus or Bos novellus for a little Oxe. Schor in the Hebrew fignifieth a Bull or Oxe, Bakar, Herds, or a Cow. Thor in the Chaldee hath the same signification with Sobor, and among the later Writers you may finde Tora a masculine, and Torata a feminine, for a Bull and a Cow, accustomed to be handled for labour. The Gracians call them Bous and Boes, the Arabians, Bakar: and it is to be noted, that the holy Scriptures distinguish betwixt Tzon, fignifying flocks of Sheep and Goats, and Bakur for Herds of Cattel and Neat: and Meria is taken for Bugils, or the greatest Oxen, or rather for fatted Oxen, for the verb Marah fignifieth to feed fat. Egela is interpreted Jer. 46. for a young Cow; and the Perfians, Gojalai: It is very probable that the Latine, Vacca, is derived from the Hebren, Bakar, as the Saracen word, Baccara; fo in Hebrem, Para is a Cow, and Par, a Steer, and Ben Bakar, the son of an Oxe, or Calf: and whereas the Hebrews take Parim, for Oxen in general, the Chaldees translate it Tore; the Arabs, Bakera; the Persians, Nadgacab, or Midagaucha; the Italians, call it Bue; the French, Beuf; the Spaniards, Buey; the Germans, Ochs, and Rind; the Illyrians, Wull. The Italians call a Of the name Cow Vacca at this day; the Grecians, Bubalis, and Damalis, or Damalat; Tfor a Cow which never was of a Cow, covered with a Bull, or tamed with a yoke) and Agelada. The French, Vache; the Spaniard, Vaca; the Germans, Ku, or Kube; and the Citizens of Allna, Geva: from which the English word Cow seemeth to be derived; the Latine word is, a young Heifer, which hath ceased to be a Calf.

There are Oxen in most part of the world, which differ in quantity, nature, and manner, one The divertity from another, and therefore do require a several Tractate. And first, their Oxen of Italy are most of Oxen in all famous, for as much as fome learned men have affirmed, that the name. Italia, was first of all derived Vario. of the Greek word Italons, fignifying Oxen; because of the abundance bred and nourished in those parts, and the great account the ancient Roman made hereof, appeareth by notable example of punishment, who banished a certain Countrey man for killing an Oxe in his rage, and denying that he eat thereof, as if he had killed a man: likewise in Italy their Oxen are not all

alike, for they of Campania are for the most part white and slender, yet able to manure the Countrev wherein they are bred; they of Unbrid, are of great bodies, yet white and red coloured. In Hetruria and Latium, they are very compact and well fet or made, strong for labour, but the most strong are those of Apennine, although they appear, not to the eye very beautiful.

Aristotle. Oppianus. Aonia. Ælianus. Leo Afric. African oxen.

The Egyptians, which dwell about Nilus have Oxen as white as snow, and of exceeding high and great flature, (greater then the Oxen of Grecia) yet so meek and gentle, that they are easily ruled and governed by men. The Aonian Oxen are of divers colours, intermingled one within another, having a whole round hoof like a borfe, and but one horn growing out of the middle of their forehead.

The domestical or tame Oxen of Africk are so small that one would take them for Calves of two years old : the Africans (faith Strabe) which dwell betwixt Getulia and our Coast or Countrey have Oxen and Horses which have longer lips and hoofs then other, and by the Grecians are termed Macrokeilateroi.

Armenian oxen. Alianus. Varinue.

The Armenian Oxen have two horns, but winding and crooking to and fro like Ivie which cleaveth to Oaks, which are of such exceeding hardness that they will blunt any sword that is stroke upon them, without receiving any impression or cut thereby. Some are of opinion, that the only excellent breed of Cattel is in Bartia, neer the City Tanagra (called once Pamandra) by Baoisan Oxen. reason of their famous Cattel, the which Oxen are called Coprophaga, by reason that they will eat Carician oxen. the dung of man; so also do the Oxen of Cyprus, to ease the pains of their small guts. The Caricians in a part of Asia are not pleasant to behold, having shaggie hair, and bunches on either shoulders, reaching or swelling to their necks; but those which are either white, or black, are refused for

Friens yeeldeth also very great and large Oxeh, which the inhabitants call Pyrrici, because that their first stock or seminary were kept by King Pyrrhus: howsoever other say, that they have their name of their fiery flaming colour: they are also called Larani of a Village Larinum, or of Larinus, a chief Neat-herd: of whom Atheneus maketh mention, who received this great breed of Cattel of Hercules when he returned from the flaughter of Gerion: who reigned about Ambigeia and Ampholochi, where through the fatness of the earth and goodness of the Pasture they grow to lo great a stature. Other call them Cestrini, I know not for what cause, yet it may be probable that they are called Larini, by reason of their broad Nostrils, for Rines in Greek fignifieth Nostrils : but the true cause of their great bont and flature is, because that neither sex were suffered to couple one with another, untill they were four years old at the least, and therefore they were called Atauti, and Setauti, and they were the proper goods of the King: neither could they live in any other place but in Epirui, by reason that the whole Countrey is full of sweet and deep pastures.

All the Oxen in Ful as are white at the time of their Calving, and for this cause the Poets call that Countrey Argobacon. If that Oxen or Swine be transported or brought into Hilpaniola, they grow fo great, that the Oxen have been taken for Elephants, and their Swine for Mules, but Itake

this relation to be hyperbolical. Peter Martyr.

There are Oxen in India, which will eat flesh like Wolves, and have but one horn, and whole hoofs; fome also have three horns; there be other as high as Camels, and their horns four foot broad. There was a horn brought out of Indialto Ptolemy the fecond, which received three Amphoraes of water, amounting the least to thirty English gallons of wine measure; whereby it may be conicctured of how great quantity is the beaft that bare it. The Indians, both Kings and people, make no small reckoning of these beasts, (I mean their yulgar Oxen) for they are most swift in courfe, and will run a race as fast as any horse, so that in their course you cannot know an Ox from a Horse, waging both gold and silver upon their heads; and the Kings themselves are so much delighted with this paltime, that they follow in their Wagons, and will with their own mouths and hands provoke the beatts to run more speedily: and herein the Ox exceedeth a Horse, because he will not accomplish his race with sufficient celerity, except his rider draw bloud from his fides with the spur, but the Oxes rider need not to lay any hands or pricks at all upon him, his only ambitious nature of overcoming (carrying him more fwiftly then all the rods or spurs of the world could prevail on him). And of this game, the lowest of the people also are very greedy, laying many wagers, making many matches, and adventuring much time and price to fee their event.

Among the Indians there are also other Oxen which are not much greater then great Goats, who likewife in their yoaks are accustomed to run many races, which they performe with as great speed as a Getican Horse; and all these Oxen must be understood to be wilde Oxen.

Leustrian Garamante. Solinus.

Ælianus.

There be Oxen in Leadria (which Ariffotle affirmeth) have their ears and horns growing both together forth of one stem. The Oxen of the Garamanis, and all other Neat among them, feed with their necks doubled backward, for by reason of their long and hanging horns, they cannot eat their meat, holding their heads directly straight. The self same is reported of the beasts of Troglodyte; in other things they differ not from other Oxen, save only in the hardness of their skin, and these Oxen are called Opifitionomi.

Herodotus. Pangala. Aristotle.

In the Province of Bangala, are Oxen (faith Paulus Venetus) which equal the Elephant in height. The Oxen in Missia have no horns, which other affirm also of the Scythians, whereof they assign this reason, because the universal bone of the skull hath no Commissive Originat opened, and cannot receive any humour flowing unto it, by reason of the hardness redsiting, and the weins belonging to this bone are weaker and imaller then in other if for which affinithey are more wifit to convey nourishment to the place : and so the neck of these heads must preds he more day and less strong, because the voins are very little. The Oxen have bundles growing on short backes like Oxmels, and upon them do they bear their burdens, being taught by olicidifcipline of men; to bend on heir knee to receive their load.

Among the Nomades (which minter their Castellabout the Mabilies of Martin of the file affor Elianus. their knee to receive their load.

certain Cattel without horns; whereof some are fo naturally, the sother have their horns Normadian fawed off, as loon as they grow forth, because of all the parts of their body, they billy can endute Oxen.

There be Oxen in Phrygia and Erythrea which are are of a flaming red colour, of a very high and Alisnut. winding neck, their horns are not like any other in the world, for they are moved with their ears Oppianus. turning in aflexible manner sometime one way and sometime another.

The Sysian Oxen called taker are of great firength, having though forchead, firong horns, and Explorer fearful or couragious affect their neither too fact or too fear of their bodies; and they are used both for war and also for running.

Oxen of Society and Course of Society and Course

The Oxen of the Belgian Provinces, especially Frileland and Elgland, are also of very great flature. for it hath been found by good experience, that one of them hash weighed fixteen hundred pounds Troy weight: and when the Earl of Hoschhar was at Machinian Frieland, there was presented unto him a great Ox, which being killed weighed above two choniand five hundred twenty and eight pound. The which thing being so frange as the the had not been beforetime observed to the intent that succeeding ages might not misself such a memorable report, the said Earl caused the full picture of the said Ox, to be set up in his Palace, with an inscription of the day and year when this Ox was

Aving thus noted briefly the Countries wherein Ogen are bred and nourithed) with their feveral forme: in must be also observed that Kine or Cowes which are the temale of this kind, arelikewife found in all the places aforefaid wiel correspondent and femblable quantities, qualities, manhors, parts, and other accidence of such creatures appertaining; excepted alwayes those things which belong so their lex, which principally concern their milk. And first of all the Kine of most plentiful Milkin all Italy, are about Altinus a City of the Venetians, neer Aquileia, Milk of Kine which Kine are antheir mallest body, and yet the greatest labourers, who are not yoaked or coupled in traly. together by their neeks as in other Countries, but only by their heads.

The Cowes of Meable have the most beautiful horns, by reason of aboundance of humours Arabian

which flow to diem, feeding them continually with such generous liquor as naturally doth en- Cowes, The Pyrrhean Kigage notadmitted to the Bull till they be four year old at the leaft, which thing Pyrrhean

caused them to grow to a very high and tall stature: whereof there were ever four hundred kept for Cowes, the Kings store.

These Kie do Rive at one time seaven or eight gallons of Milk, of Wine measure, and they are so tall, that the person which milketh them mult frand upright, or elfe stoop very little : neither ought Phenician this seem incredible, for it is evident that the Cowes of the Phanicians were so high, that a very tall Cowes. man could not milk them except he stood upon a footstool.

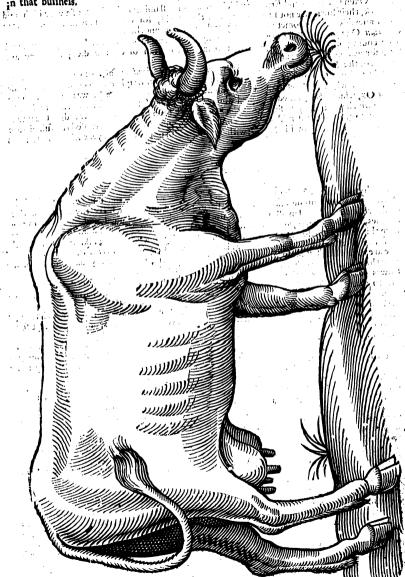

The manner is in Germany and Helvetia, that about April Some take Kie to hire, which have none Hiring of of their own, and other buy Kie to farme them out to other; and the common price of a Cow Cowesin Gera for fix moneths is payed in Butter, and is rated at seventy five pounds, twelve ounces to the many and Hele pound; which payment is due to the owner, or money to that value. Other again, buy Kie and vetta, let them forth softarm, referving the Calf to themselves; and if by the negligence of the Cowherd or farmer of them, the Cow cast the Calf then is the hirer bound to answer the value, but if it miscarry wishout his negligence (as officient they may) then is the loss equal to the Locatour or Farmer. Yet it is noted, that the Kie of greatest bodies, are not alway belt or most pleating. full in Milke; for the Comes or Cane of Altina in Italy, are of little bodies, but yet very full

The principal benefit of Cowes Milk is for making of Butter, for the Milk it felf, the Cheese and The use of Whay, are not fo fit for nourishment of man, as are those of Sheep; and the reason is, because the Cow milk, Milk of Kie is fatteft of all other, and therefore the name of Butter, which is in Greek, Boylyros Pet. Crefcent. and Boutyran, and Butyrum in Latin, is derived properly from this hande of Cattel. The Cow herds Arifotle. do also for their profit, observe the patture and food, which doth above other multiplie/Milk; Marc. Ving. and therefore they give their Kie Trifolie, or Three-leaved graffe; and Medica, (which is a kinde Cowes ever of Claver graffe) Verches, Pulle, and Beans, for Beans have a great virtue to multiply Milk: likewife Milk, I have feen bundles of Hemlock, or an herb much like unto it, (which we call Harts tongue) given to

Phygian and Ælianus.

Oxen of Syria Belgian Oxen. Guicciardine.

There is an herb much like Crow-foot, called of the Germans, Butterblommen, and in English Butter-flower, which is used to colour Butter, for thereby is the whiteness thereof taken away; they will not est. Wal-wort or night made (commonly called Deaths herb) but if they eat herbs whereupon falleth an Hony-dew, then will their Milk be wonderful fweet and plentiful : there is no food fo good for Cowes, as that which is green, if the Countrey will afford it gelpecially Kie love the wet and water places, although the Butter coming from the milk of fuch beafts, is not fo wholes fome as that which is made of fuch as are feed in dryer Paftures. The like care is liad of their drink. for althoughthey love the coldest and clearest waters, yet about their time of Calving it is much for better them to have warmer waters, and therefore the Lakes which are heated and made to fome by the rain; are most wholesome to them; and do greatly help to ease their burden and pains in that business.

Paulan as reporteth a wonder in nature, of the Rivers Millebus and Charadeus, running through the City Patra, that all the Kie which drink of them in the Spring time, do for the most part bring forth males, wherefore their herdmen avoid those places at that time. Kie for the most part before their Calving, are dry and without milk (especially about Torona), They are also purged of their menstrua in greater measure, then either Goats or Sheep, which especially come from them a little before or after they have been with the Bull; howfoever Ariffule faith, that they come from them after they have been five moneths with Calf, and are differened by their urine; for the urine of a Cow is the thinnest of all other.

These beasts are very lustial, and do most eagerly desire the company of their male, which if Allanus. they have not within the space of three hours after they mourn for it, their lust asswageth till another time. In a Village of Egypt called Schuffs (under the government of the Heimspolites) they worthin Venus under the title Urania in the shape of a Cow, perswading themselves that there is great affinity betwirt the Goddesse and this beath; for by her mournful voice she giveth notice of her love, who receiveth the token many times a mile or two off, and fo prefently runneth to accomplish the luit of nature: and for this cause douthe Egyptians picture Ists with a Cows horns, and likewife a Bull to fignifie hearing. The fignes of their Bulling (as it is tenmed) are their cries, Signes of a and disorderly forfaking their fellows, and resisting the government of their keeper. Like- Cower defice wife, their fecret hangeth forth more then at other times, and they will feap upon their fellows to the Euli. as if they were males: besides after the manner of Mares, they oftner make water then at other

The most cunning heardmen have megate to provoke them to desire the Bull, if they be slack, Secrets to profirst of all they withdraw from them some pirt of their meat (if they be fat) for that will make them were hill in fitter to conceive; then take they the gentals ar frones of a Bull, and hold it to their nofe, by finelling Cattell. whereof they are provoked to defire copulation; and if that prevail not, then take they the tendreit part of Shrimps, which is their fish, and beat them in water till they be an ointment, and therewith Collumella. anoint the breatts of the Cow, after they have been well washed, untill it work upon her. And some affirm, that the tail of an Eel put into her hath the same virtue; other attribute much force to the wilde willow, to procure lust and conception.

They are a great while in copulation, and fome have gheffed by certain figures at the time of copu- Signes at the lation, whether the Calf prove male or semale; for say they, if the Bull leap down on the right side copulation to of the Cow, it will be a male, if on the left, it will be a semaje : which conjecture is no longer true, the Calf will then when the Cow admittath but one Bull and conceiveth at the first conjunction, for which cause be Male or Fethe Egyptians decipher a woman bringing forth a maiden childe, by a Bull, looking to the left hand, male, and likewife bearing a man childe, by a Bull, looking to the right hand.

They are not to be admitted to copulation before they be two year old at the leaft, or if it may be four , yet it hath been feen, that a Heifer of a year old hath conceived, and that another, of four moneths old hath likewise desired the Bull; but this was taken for a monster, and the other never thrived

One Bull is sufficient for fifteen Kie, although Varro faith, that he had but two Buls for threescore and ten Kie; and one of them was two year old, the other one. The best time for their copulation is about the time of the Daulphins appearance, and so continueth for two or three and fourty daies, which is about June and July, for those which conceive at that time, will bring forth their young ones in a most temperate time of the year 1 and it hath been observed, that an Ox immediately after his gelding, before he had forgotten his former d fire and inclination, his feed not dryed up, bath filled a Cow, and the proved with Cali.

They go with Calf ten moneths, except eighteen or twenty daies; but those which are Calved Arifforle. before that time, cannot live; and a Cow may bear every year (if the Countrey wherein the liveth

be full of graffe, and the Calf taken away from her at fifteen days old).

And if a man desire that the Calf should be a male, then let him tie the right stone of the Bull Means to at the time o copulation; and for a female bind the left. Others work this by natural observati- cause the Calf on; for when they would have a male, they let their Cattel couple when the North wind bloweth; and when a female, they put them together when the sir is Southerly. They live not above be cither male fifteen years, and thereof ten times they may ingender. The best time to Calve in, is April, or semale, because then the Spring bringeth on graffe, both for themselves, and to increase milk for the The length of

They bear not but in their right side, although they have twins in their belly, which happeneth very seldom, and the beast immediately after her delivery, must be nourished with some good meat, for except the be well fed, the will forfake her young to provide for her felf: therefore it is requifite to give her Vetches, Millet-feed, and milk mingled with water, and feorched Corne; and unto the Calves themselves, dryed Millet in milk in the manner of a mash : and the Kie must also be kept A fretet in co] up in stables, fo as they may not touch their meat at the going forth, for they are quickly brought pulation. to forfake and loath that which is continually before them : and it is observed that when Kie in the Summer time do in greater number above cultom go to the Bull then at other times, it betokeneth and foresheweth a wet and rainy winter, for it cannot be (faith Albertin) that a beat for dry as is a Cow, can be increased in moisture, which firreth up the desire of producation, except also there be a mutation in the air unto abundance of moisture. And to conclude this discourse of a Cow, in ancient time they were wont to call light women Heifers, Harlots, and Kine, by reason

their age.

of two famous harlots of Athens, Cuina and Salanachha, and from this came the fiction of lo, whose fable is at large profecuted by (buil, how the being the daughter of Inachus, was in a darkness brought upon her by Jupiter, by him ravished, which mist being espied by Juno, she descended to the earth, and Jupiter fearing his wives jealoufie turned the faid lo into a Heifer, from which shape she was afterwards delivered and maried to Ufiris the King of Fgyt, and after her death was wor shipped by the Fgyptiam for a god, and called Ifit, unto whom they facrificed Geele which were called Sacra

Of the choise of Kic.

In the choise of Kie, you must observe this direction, you must buy them in the moneth of March, let them be young, not past their first or second Casf, their colour black or red, seldom brown or white, bright coloured, specially red, brown legs, blackish horns smooth and beautiful, high foreheads, great eyes and black, hairy and grifty ears, flat Nostrils like an Apes, but open and wide, their back bones bending somewhat backward, black lips, long and thick necks, most broad fair crefts descending from the neck, well ribbed, a great belly, the back and shoulders very broad, the buttockes broad, with a long tail hanging down to their heels, and their neather part in many places crifped and curled, well fet and compacted legs rough and fhort, ftraight knees, and their bunches hanging over; their finall feet, not broad but round, standing in good distance one from other, not growing crooked or splay-footed, and their hoofs smooth and like one another every way. Finally, it were a profitable thing to profecute natures perfection in every one of their several parts, but I spare to speak any more of the Females, and returning again to the story of Oxen from which we have digressed, leaving the readers who desire to hear more of this discourse of Kie to other Authors, who purposely describe every part more particularly. To begin therefore with their description, because among solded beasts they are of most dignity

first of all declared and layed out, by the lowing together of an Ox and a Cow in one yoak. Mago

Carthaginenfis teacheth, that the time to provide or buy oxen, is best in the time of March, because then

also if they should be unruly and stubborn, they may be the more easily tamed, before their fiest

sides, broad loins, a straight back descending a little, and a round pair of buttocks, straight, sound and sinewy, short legs, good knees, great hoofs, and long tails rough and grisly. And it is to

be noted, that the Oxen of a mans own Countrey breed, are better and to be preferred before

strangers, becanse he is already naturally fitted to the air, food, water, and temper of the foil: for

it is not good to bring them from the Mountains to the Vallies, because then they will grow laste and

fat, and fo into diseases; neither from the Vallies to the Mountains, because they will quickly grow

out of heart through want of their first deep and fat pasture; and above all, have regard to

match them equally in yoak, so as one may not overbear the other. Oxen loose their teeth at two

or three year old, but not all as a Horse doth, their nerves are harder, but not so hard as a Buls;

their fiesh is dry and melancholick, their horns are greater and larger then are a Buls, for the same

reason that Eunuchs and gelded persons can never be bald; for copulation weakneth the brain, only

a Bull hath a stronger forehead then an Ox, because the humour that should grow forth into

horns, is hardned under the bone: and the horns of Kie which are also bigger then a Buls; may

through heat be made flexible with wax or water, and bend every way: and if when they are

thus made foft, you do flit or cut them into four, that is, every horn in two, they will fo grow af-

terward, as if every beaft had four horns, and fometime through the thickness of their scull,

feed the horns, there come no horns at all, but remain polled; And it is reported that they have

a little stone in their head, which in the fear of death they breath out. Their teeth do all touch one

another, and are changed twice, they chew the cud like sheep, wanting a row of their upper teeth,

that is four of them, their eyes are black and broad, and their heart full of finews, yet with-

out any bony lubstance, although Phny affirmeth that fometimes in the hearts of Oxen and Horses

Their notes or markes must be these, let them be young, having square and great lims, a sound

The parts of a Cow different from Oxen.

Galen.

the concoction, for they do better preserve their fat which cat slowly, then those that eat hastily and

Their crest called Palea cometh of Pilus their hair, and it is nothing else but long strakes in their hair, whereby the generofity and stomach of the beast is apparent. A Cow hath two udders under her loins, with four speans, like a Goat and a Sheep, because the concoction and juice of their meat may better descend to the lower parts then to the upper; their navell is filled with many veins, their hair short and soft, their tail long, with harder hair then in the other parts of the body; their milt is long and not round, their reins are like the reins of a Sea-calf, and by reason of their dry bodies they grow very fat, and this fat will not eafily be dissolved, but their manner of feeding maintaineth their strength, for they which eat much are flow in the chewing, and speedy in

with more greediness.

are found bones.

It hath been already shewed, that some Oxen will eat flesh, and tear wilde beatts in pieces. The manner the people of Profise give to their yoaked or working Oxen fish, and also in the Province of Aden, and where their Horses, Sheep, and Oxen, eat dryed fish, by reason that the abundance of heat doth dry up their pasture: neither is any thing so plentiful among them as fish: the like is reported of the people Horota, and Gedrufti, and of Motham a City of Thracia, and in Frieland; in the Province of Narbon, there is an herb growing in waters, which is so much defired of their Cattel, that they will thrust their heads into the water above their ears, to bite that to the roots; and the Oxen of the Northern ocean Illands of Germany do grow so fat, that they are indangered to die thereby.

The most common food for Oxen, is the same that is already specified in the former discourse of Kie: namely, Three-leaved graffe, Claver graffe, all green herbs, Hay, Beans, Vetches, Chaffe, and in some places Barley and Straw. There is also a monethly diet or food given to Oxen, for in January and February, they give them Vetches, and Lupines, bruifed in water among Chaffe or Peafe, so bruifed and mingled, and where is want of such pulse, they may give them pressings of Grapes dryed and cleansed, which is not turned into wine, and mingle them with chaffe for the Cattel to eat, but the Grapes themselves are much better before the pressing, with their small twigs or leaves, because they are both meat and drink, and will fat an Ox very

The like may be added of boughs, of Laurel, Elme, and other leaves, and also Nuts and Acornes. but if they be not wearyed and fed with Acornes till they loath them, they will fall into scabs. In March and April, give them Hay, and from April unto June give them Graffe, and such green meat as may be found abroad ; Afterward all the Summer and Autumn, they may be fatisfied with the leaves of Elme, Bay, Holm, and especially that kind of Oake which is without prickles, and therefore they cannot abide Juniper. In November and December, while the feed time lafteth, they must have as much given them as they can defire, either of the forenamed food, or elfe of some better if need require; for it must be principally regarded, that the Cattel fall not into leanness in the Winter time, for leannels is the mother of many ficknesses in Cattel, and their utter overthrow, and therefore the benefits by their full feeding are many, as may appear by that common proverbe, Bos ad aceruum, that is, an Ox to a whole heap, to fignifie such men as live in all plenty and aboundance. The like care must be had of their drink, for the Neat-herd must diligently look unto their drink, that it may be alway clear, and it is reported of the rivers Craibu and Sibaris, that the Cattel which drink of their water do turn white, whatfoever colour they had in former times.

They will live in strength and persection twelve years, and their whole life is for the most part The time of but twenty. Kie live not fo long the means to know their age is by their teeth and their horn, for it is Oxtos age. observed that their teeth grow black in their age, and their horns, wax more circled as they grow in years, although I dare not affirm that every circle betokeneth a years growth, (as some have writen) yet I am affured the smooth horn sheweth a young beast. Moreover, although Kie will endure much cold and heat both in Winter and Summer, yet, must you have more regard to your Oxen, and therefore it is required that they in the Winter cold weather be kept dry and housed in stals, which must be of convenient quantity, so as every Ox may be lodged upon straw, the stoor made higher under their foreseet then their hinder, so as their urine may passe away and not stand to hurt their hoofs: and there be also allowed for the standing and lodging of every Ox eight foot in breadth, and a length answerable. The like regard must be had to their manger and rack, whereof the staves must not stand above one foot, or rather lesse from one another, that so they may not draw out their meat and stamp it underfoot.

But all the diet and food that the wit of man can ordain, will do them no manner of good if re- The medicines gard be not had to their bodily health, and prefervation of strength, for which cause they must to preferve an receive an ordinary medicine every quarter of the year; that is, in the end of the Spring, Summer, ex in flrengths Autumn, and Winter; which in some places is thus made and given in potion, they take of Cypres, and Lupine leaves an equall quantity, beat them small, then set them in water in the open air a day and a night, and afterward give unto every one for three daies together warmed as much as a wine pinte.

In other places they give them to prevent sickness, a raw Egge, a handful of salt in a pinte of Paxamut. wine: and other put into the meat of Oxen, the foam of new oil mingled with water, first a little at once until they be accustomed unto it, and afterward more, and this they do every fourth or fifth day. Cato reciteth a certain vow or prayer, which the old Idolatrous Romans were wont to make for the health of their Cattel, to Silvanus Mars; which was on this manner. First, they take three pound your and significant the health of their Cattel, to Silvanus Mars; which was on this manner. First, they take three pound your and significant the health of their Cattel, to Silvanus Mars; which was on this manner. of green wheat, and of Lard four pounds, and four pound and a half of fleshie sinews, and three perstitious mepints and a half of wine, then put them into earthen pots with hony, and put in the wine by it felf, dicines for the and this they did yearly, but no woman might know how it is made, or be present at the time of cure of Canel, the preparation, and it being made must be presently consumed by fire. Unto this ridiculous and superstitious idle invention, serving more to express the folly of man, then to benefit either man or beaft, I may add that kind of facrifice made for beafts, which Plin, calleth Daps, that was made in the Spring time when the Pear-tree did bloffom, the manner whereof was thus, They did offer to Jupiter Dapalis a bowl of wine, on the same day the herd-men and herds make their sacrifice, saying in this manner, O Jupiter Dapalin, I offer unto thee this cup of wine, in the behalf of my felf, family

Herodotus. Paul. Venet.

It

and Cattel, if thou wilt perform that unto them which belongeth to thee, be good to this wine beneath, be good to this my facrifice: Afterward the party washed his hands, and then drank the wine faying, O Jupiter Dapalis, be good to this my facrifice, be good to this inferiour wine, and if thou wilt, give part thereof to Vesta: the facrifice being ended he took Millet-seed, Lentils, Oxipanum, and Garlick: Thus far Cato; wherewith if any Reader be offended, let him remember to pity fuch poor remedies, and commend his Cattel to the true God, that faveth man and beaft. The Druides of the Gauls I called a certain herb growing in moyst places Samolum; which being gathered by the left hand of them that were fasting, they gave it for an Antidote to Oxen and Swine. And Gilen telleth of another superstitious cure for Oxen, when a man took the horn of a Hart, and laved it upon the Chappel of Pan, and fet upon it a burning Candle, which must not be forgotten, but alway thought upon in the day time, calling upon holy Demufaris, which foolish people have thought as it were by a witchcraft, to cure the evils of their Cattel.

The discovery of the tickness of Cattel, and the particular cure thereof.

But to let passe these and such like trisses, let us follow a more perfect description and rule to cure all manner of diseases in this Cattel, whose safegard and health next to a mans, is to be preserved above all other; and first of all the means whereby their fickness is discovered may be considered, as all Lassitude or wearisomeness through overmuch labour, which appeareth by forbearing their meat. or eating after another fashion then they are wont, or by their often lying down, or else by holding out their tongue, all which and many more signes of their diseases, are manifest to them that have observed them in the time of their health; and on the other side it is manifest, that the health of an Ox may be known by his agility, life and stirring, when they are lightly touched or pricked, starting, and holding their ears upright, fulness of their belly, and many other

There be also herbs which increase in Cattel divers diseases, as herbs bedewed with Hony bringeth the Murrain, the juyce of black Chameleon killeth young Kie like the Chine, black Hellebore, Aconitum, or Wolf-bane, which is that graffe in Cilicia, which inflameth Oxen, herb Henry. and others. It is also reported by Aristotle, that in a piece of Thracia, not far from that City which is called the City of Media, there is a place almost thirty furlongs in length, where naturally groweth a kind of Barley, which is good for men, but pernicious for beafts. The like may be faid of Aegolothros, Orobanche and Aeftur, but I will hasten to the particular description of their

The difeafes which infeft Oxen & Kie.

In the first place is the Malis or Glaunders already spoken of in the story of the Asse, which may be known by these signes, the Oxes hair will be rough and hard, his eyes and neck hang down matter running out of the noie, his pace heavy, chewing this cud little, his backbone sharp, and his meat loathsome unto him; for remedy hereof take Sea-onions or Garlick, Lupines or Cipres, or else the foam of oil. And if a beast eat Hogs dung, they presently fall sick of the Pestilence, which insecteth the herbs and grasse they breath on, the waters whereof they drink, and the stals and lodgings wherein they lie. The humors which annoy the body of Oxen are many, the first is a moist one called Malis, issuing at the nose, the second a dry one when nothing appeareth outwardly, only the beaft forfaketh his meat, the third an articular, when the fore or hinder legs of the beaft halt, and yet the hoofs appear found, the fourth is Farciminous, wherein the whole body breaketh forth into mattry bunches and biles, and appear healed till they break forth in other places, the fifth Subtercutaneus, when under the skin there runneth a humour that breaketh forth in many places of the body; the fixth a Subrenal, when the hinder legs halt by reason of some pain in the loins, the feventh a Maungie or Leprofic, and lastly a madness or Phrensie, all which are contagious, and if once they enter into a herd, they will infect every beaft if they be not separated from the fick, and speedy remedy obtained. The remedies against the last seven are thus described by Columella. First take Oxipanum and sea-

holy roots mingled with Fennel-feed and meal of beaten wheat rath-ripe; put them in fpring water warmed with hony nine spoonfuls at a time, and with that medicine anoint the breast of the beast, then take the bloud of a Sea-snail, and for want thereof a common Snail, and put it into wine, and give the beaft in at his nose, and it hath been approved to work effectually. It is not good at any time to flir up Oxen to running, for chafing will either move them to looseness of the belly, or drive them into a Feaver: now the fignes of a Feaver are these, an immoderate heat over the whole body, especially about the mouth, tongue and eares, tears falling out of the eyes, hollowness of their eyes, a heavy and stooping drowzie head, matter running out of his nose, a hot and difficult breath, and sometime fighing and violent beating of his veins and loathing of meat : for remedy whereof, let the beaft fast one whole day, then let him be let bloud under the tail fasting, and afterward make him a drink of bole-wort stalkes fod with oil and liquor of fish sauce, and so let him drink it for five daies together before he eat meat; afterward let him eat the tops of Lentils,

ther must the beast be turned out of doors, till he be recovered: When an Ox is fick of a cold, give him black wine, and it will prefently help him.

If an Ox in his meat taft of hens dung, his belly will prefently be tormented, and swell unto death if remedy be not given; for this malady, take three ounces of parfley feed, a pinte and a half of Cummin, two pounds of honey, beat these together and put it down his throat warme, then drive the beaft up and down, as long as he can stand, then let as many as can stand about him

rub

and young small Vine branches, then keep his nose and mouth clean with a spunge, and give him

cold water to drink three times a day, for the best means of recovery are cold meats and drinks, nei-

rub his belly, untill the medicine work to purgation: and Vegetius addeth, that the affies of Elme wood well fod in oil, and put down the beafts throat, cureth the inflamation of hen-dung. If at any time it happen, that an Ox get into his mouth and throat a horse-leech, which at the first will take falt hold, and fuck the place the holds (be it mouth or throat) til the have kild the beath if you cannot take hold on her with the hand, then put into the Oxes throat a Cane, or little hollow pipe evento the place where the Leech sucketh, and into that pipe put warm oil, which as soon as the Leech feeleth, the presently leaveth hold.

It fortuneth fometimes that an Ox is stung or bitten with a Screent, Adder, Viper, or other such venomous beaft; for that wound take sharp Trifoly, which groweth in rockie places, strain out the juice and beat it with falt, then scarifie the wound with that ointment, till it be wrought in. It a field-mouse bite an Ox, so as the dint of her teeth appear, then take a little Cumin or soft Pitch. and with that make a plaifter for the wound : or if you can get another field-moule, put her into oil, and there let it remain till the members of it be almost rotten, then bruise it and lay it to the fore; and the same body shall cure, whose nature gave the wound. Oxen are also much troubled with a disease called the Hide-bound; for remedy wereof, when the beatt is taken faom his work, and panteth, then let him be fprinkled over with wine, and put picces of fat into his mouth; if then you perceive no amendment, then feethe fome Laurel, and therewith heat his back, and afterward with oil and wine scarifie him all over plucking his skin up from the ribs, and this muit be done in the funshine, or else in a very warm place.

For the scabs, take the juice of Garlick, and rub the beast all over; and with this medicine may the biting of a Wolf or a mad Dog be cured: although other affirm, that the hoof of any beast with Brimstone, Oil, Water and Vinegar, is a more present remedy; but there is no better thing then Butter and stale Urine: When they are vexed with wormes, poure cold water upon them, afterward anoint them with the juice of onions mingled with

If an Ox be wrinched and strained in his sinews, intravel or labour, by stumping on any root or hard sharp thing, then let the contrary foot or leg be let bloud, if the sinews swell: If his neck fwell, let him bloud, or if his neck be winding or weak (as if it were broken) then let him bloud in that ear to which fide the head bendeth. When their necks be bald, grinde two tile together, a new one and an old, and when the yoak is taken off, cast the powder upon their necks, and afterward oil,

and fo with a little rest the hair will come again. When an Ox hangeth down his ears and eateth not his meat, he is troubled with a Cepbalalgie; that is, a pain in his head: for which, feethe Thyme in Wine, with Salt and Garlick, and therewith rub his tongue a good space: also raw Barly steeped in Wine, helpeth this disease. Sometime an Ox is troubled with madness, for which men burn them betweet the horns in the forehead till they bleed: fometime there is a Flie which biting them continually, driveth them into madness; for which they are wont to cash Brimstone and bay sprigs sod in water in the Pastures where they seed, but I know not what good can come thereby. When Oxen are troubled with sleam, put a sprig of black Hellebore through their ears wherein let it remain till the next day at the same hour. All the evils of the eyes are for the most part cured by insusion of Hony, and some mingle therewith Ammoniack, Salt, and Bortick. When the palat or roof of their mouth is fo swelled that the beast forfaketh meat, and bendeth on the one side let his mouth be paired with a sharpe instrument, or else burned or abited some other way, giving them green and soft meat till the tender fore be cured: but when the cheeks swell, for remedy whereof they sell them away to the Butcher for slaughter: it falleth out very often that there grow certain bunches on their tongues, which make them for fake their meat, and for this thing they cut the tongue, and afterward rub the wound with Garlick and Salt, till all the fleamy matter iffue forth.

When their veins in their cheeks and chaps swell out into ulcers, they soften and wash them with Vinegar and Lees, till they be cured. When they are liver-fick, they give them Rubarbe, Must and Gentian, mingled together. For the Cough and short breath, they give them twigs of

Vines, or Juniper mingled with Salt; and some use Betony.

There is a certain herb called Aplenon or Citteraeb, which confumeth the milts of Oxen, found by this occasion: in Gree there is a River called Protercus, running betwirt the two Cities confound and Gortina, on both fides thereof there were herds of Cattel, but those which fed neer to Gortina had no Spleen, and the other which feed neer to Gno on were full of Spleen: when the Physitians endevoured to find out the true cause hereof, they sound an herb growing on the coast of Gonna, which diminished their Spleen, and for that cause called it Applenon. But now to come to the diseases of their breast and stomach, and first of all to begin with the Cough, which if it be new may be cured by a pinte of Barley meal with a raw Egge, and half a pinte of fod wine : and if the Cough be old, take two pounds of beaten Hylop fod in three pints of water, beaten Lentils, or the roots of Onions washed and baked with Wheat meal given fasting, do drive away the oldest Cough. For shortness of breath, their Neat-herds hang about their neck Deaths-herb and Harts-wort: but if their Livers or Lungs be corrupted, (which appeareth by a long Cough and leaness) take the root of Hafell, and put it through the Oxes ear; then a like or equall quantity of the juyce of Onions, and oil mingled, and put into a pinte of Wine, let it be given to the beast many dayes together. If the Ox be troubled with crudity, or a raw evill stomach, you shall know by these . fignes; he will often belch, his belly will rumble, he will forbear his meat, hanging down his eyes,

Curfus bouin ant cict alvum,

aut febrim

and neither chew the cud or lick himself with his tongue: for remedy whereof, take two quarts of warm water, thirty stalkes of Boleworts, seethe them together till they be soft, and then give them to the beatl with Vinegar.

The History of Four-footed Beasts.

But if the crudity cause his belly to stand out and swell, then pull his tail downward with all the force that you can, and binde thereunto Mother-wort, mingled with falt, or elfe give them a Glyffer. or anoint a Womans hand with oil, and let her draw out the dung from the fundament; and afterward cut a vein in his tail with a sharp knife. When they be distempered with choler. burn their legs to the hoofs with a hot Iron, and afterward let them rest upon clean and fost straw: when their guts or intrails are pained, they are eased with the sight of a Duck or a

But when the small guts are insected, take sisteen Cypres Apples, and so many Gauls, mingle and beat them with their weight of old Cheese in four pints of the sharpest wine you can get, and so divide it into four parts, giving to the beaft every day one quantity. The excrements of the belly do deprive the body of all strength and power to labour; wherefore when they are troubled with it. they must rest, and drink nothing for three daies together, and the first day let them forbear meat, the fecond day give them the tops of wilde Olives, or in defect thereof Canes or Reeds: the stalks of Lentiske and Myrtill; and a third day a little water, and unto this some add dryed Grapes in fix pintes of sharp wine, given every day in like quantity. When their hinder parts are lame through congealed bloud in them, whereof there is no outward appearance, take a bunch of Nettles with their roots and put it into their mouths, by rubbing whereof the condensate bloud

When Oxen come first of all after Winter to graffe, they fall graffe-fick, and piffe bloud; for which they see the together in water Barly, Bread, and Lard, and so give them all together in a drink to the heast: some praise the kernels of Walnuts put into Eggeshels for this cure; and other take the bloudy water it felf, and blow it into the beafts Nostrils; and herd-men by experience have found that there is no better thing then Herb-Robert, to stay the pissing of bloud; they must also be kept in a stall within doors, and be fed with dry grasse and the best hay. If their horns be anointed with wax, oil, and pitch, they feel no pain in their hoofs, except in cases where any beast treadeth and presieth anothers hoof; in which case take oil and sod wine, and then use them in a hot Barly plaister or poulte's layed to the wounded place: but if the plough-share hurt the Oxes foot, then lay thereunto Stone pitch, Greafe and Brimstone, having first of all seared the wound with a hot Iron bound about with fhorn wool.

Now to return to the taming and instruction of Oxen. It is said that Businis King of Egypt was the first that ever tamed or yoaked Oxen, having his name given him for that purpose. Oxen are by nature nicek, gentle, flow, and not stubborne, because being deprived of his genitals he is more tractable, and for this cause it is requisite that they be alwayes used to hand, and to be familiar with man, that he may take bread at his hand, and be tyed up to the rack. for by gentleness they are best tamed, being thereby more willing and strong for labour, then if they were roughly yoaked or suffered to run wilde without the society and sight of men. Vario faith, that it is best to tame them betwixt five and three year old, for before three it is too foon, because they are too tender; and after five it is too late, by reason they are too unweildy and

How to tame or your wide

Rafis.

But if any be taken more wilde and unruly, take this direction for their taming:, First, if you have any old tamed Oxen, joyne them together, (a wilde and a tame) and if you please, you may make a yoak to hold the necks of three Oven; io that if the beast would rage and be disobedient, then will the old one both by example and ftrength draw him on, keeping him from ftarting afide, and falling down. They must also be accustomed to draw an empty Cart, Wain, or sled through fome Town or Village, where there is some concourse of people, or a plow in fallowed ground or fand, so as the beast may not be discouraged by the weight and strength of the business, their keeper must often with his own hand give them meat into their mouth, and stroke their Noses, that so they may be acquainted with the finell of a man; and likewise put his hands to their sides, and stroke them under their belly, whereby the beath may feel no displeasure by being touched. In some Countries, they wash them all over with wine for two or three daies together, and afterward in a horn give them wine to drink, which doth wonderfully tame them, although they have never been so wild. Other put their necks into engins, and tame them by substracting their meat. Other affirm, that if a wilde Ox be tyed with a halter made of wool, he will presently wax tame: but to this I leave every man to his particular inclination for this business; only let them change their Oxens sides, and fet them fometime on the right fide, and fometime on the left fide, and beware that he avoid the Oxes heel, for if once he get the habite of kicking, he will very hardly be reftrained from it again, He hath a good memory, and will not forget the man that pricked him, whereas he will not fir at at another, being like a man in fetters, who diffembleth vengeance untill he be released, and then payeth the person that hath grieved him. Wherefore it is not good to use a young Oxe to a goad : but rather to awaken his dulness with a whip.

These beatls do understand their own names, and distinguish betwixt the voice of their keepers ding of Oxen and thrangers. They are also faid to remember and understand numbers, for the King of Persia had certain Oxen, which every day drew water to Sufis to water his Gardens, their number was an hundred Veffels, which through cultom they grew to observe, and therefore not one of them

would halt or loiter in that business, till the whole was accomplished : but after the number ful- Guidue. filled, there was no goad, whip, or other means, could once make them ftir, to fetch another draught Alianus. or burthen. They are faid to love their fellows with whom they draw in yoak most tenderly, The love of whom they feek out with mourning if he be wanting. It is likewise observed in the licking of them. The love of selves against the hair, (but as Given faith) if he bend to the right side and lick that, it presages a yoak sellow. form; but if he bend to the left fide, he foretelleth a calmy fair day: In like manner, when he of the licting lougheth and smelleth to the earth, or when he feedeth fuller then ordinary, it betokeneth change of of Oxen, naweather: but in the Autumn, if Sheep or Oxen dig the earth with their feet, or lie down head to head, tural objetvait is held for an affured token of a tempest.

They feed by companies and flocks, and their nature is to follow any one which strayeth away; Their appears for if the Neat-herd be not present to restrain them, they will all follow to their own danger, to so after. Being angred and provoked they will fight with strangers very irefully, with unappealable contention: for it was feen in Rhetia, betwixt Curia and Velcuria, that when the herds of two Villages met Theanger of in a certain plain together, they fought fo long, that of threescore, four and twenty were flain and Oxen & Kie. all of them wounded, eight excepted, which the inhabitants took for an ill prefage or mischief of fome enfuing calamity, and therefore they would not fuffer their bodies to be covered with earth : to avoid this contention, skilful Neat-herds give their Cattel some strong herbs, as garlick and such like, that the favour may avert that strife. They which come about Oxen, Buls, and Bugils, must not Giring wear any red garments, because their nature rifeth and is provoked to rage, if they see fuch a Oxen provo-

ked by colour s. There is great enmity between Oxen and Wolves, for the Wolf (being a flesh-eating creature) lyeth in wait to destroy them; and it is faid, that there is so great a natural fear in them, that if a Wolves tail be hanged in the rack or manger where an Ox feedeth, he will abstain from eating. This beaft is but simple, though his aspect seem to be very grave; and thereof came the proverb of the Rasit, Oxen to the yoak, which was called Gerong: wherewithal Wrastlers and Prize-players were anointed, but when a foolish and heavie man was anointed they said ironically Bos ad ceroma.

Again the folly of this beaft appeareth by another Greek proverb, which faith, that An Ox raifelb dust which blindeth his own eyes; to fignifie, that foolish and indiscreet men sur up the occasion of their own harmes. The manifold Epithets given this beaft in Greek and Latin by fundry authors, do demonstratively shew the manifold conditions of this beast; as that it is called a Plower, Wilde, an earth-tiller, brazen-footed, by reason of his hard hoofs, Gerebrour, more brain then wit; horned, flubborn, horn-sliking, hard, rough, untamed, devourer of grasse, yoak-bearer, fearful, overtamed, drudges, wry-faced, slow, and ill favoured, with many other such notes of their nature, ordination,

There remain vet of this discourse of Oxen, two other necessary Tradates; the one natural, and The natural the other moral. That which is natural, contains the feveral uses of their particular parts, and first uses of the fefor their flesh, which is held fingular for nourishment, for which cause, after their labour which veral parts of bringeth leanness, they use to put them by for sagination, or (as it is said) in English for feeding, which Oxen. in all countries hath a feveral manner or cultom. Solion affirmeth, that if you give your Cattel when How to faiten they come fresh from their pasture, Cabbage leaves beaten small with some sharp Vinegar poured Cattel. among them, and afterward chaffe winowed in a fieve, and mingled with Bran for five daies together, it will much fatten and encrease their flesh, and the fixth day ground Barly, encreasing the quantity by little and little for fix daies together.

Now the best time to feed them in the Winter is about the Cock crowing, and afterward in the morning twilight, and foon after that let them drink: in the Summer let them have their first meat in the morning, and their second service at noon, and then drink after that second meat or eating, and their third meat before evening again, and so let them drink the second time; It is also to be observed, that their water in Winter time be warmed, and in the Summer time colder. And while they feed, you must often wash the roof and sides of her mouth, for therein will grow certain Wormes which will annoy the beaft, and hinder his eating, and after the washing, rub his tongue well with falt. If therefore they be carefully regarded they will grow very fat, especially if they be not over aged or very young at the time of their feeding; for by reason of age their teeth grow loose and fall out, and in youth they cannot exceed in fatness, because of their growth: above all Heifers and barren Kie will exceed in fatness, for Varro affirmeth, that he saw a field Mouse A strange iebring forth young ones in the fat of a Cow having eaten into her body the being alive: the port of a fat felf fame thing is reported of a Sow in Arcadia: Kiewill also grow fat when they are with Calf, Cow, if t. uc. especially in the middest of that time. The Turks use in their greatest feasts and Mariages, to roast or feethe an Ox whole, putting in the Oxes belly a whole Sow, and in the Sowes belly a Goofe, and in the Goofes belly an Egge, to note forth their plenty in great and small things: but the best slesh is of a young Ox, and the worst of an old one, for it begetteth an ill juyce or concoction, especially if they which eat it be troubled with a Cough or rheumy fleam, or if the party be in a Confumption, or for a woman that hath ulcers in her belly, the tongue of an Ox or Cow salted and slic afunder, is accounted a very delicate dish, which the Priests of Mercury said did belong to them, because they were the servants of speach, and howsoever in all sacrifices the beasts tongue was refused as a profane member, yet these Priests made choise thereof under colour of sacrifice to seed their dainty stomachs.

The horns of Oxen by art of man are made very flexible and straight, whereof are made Combes hafts for knives, and the ancients have used them for cups to drink in, and for this cause was Bacchus painted with horns, and Crater was taken for a cup, which is derived of Kera a horn. In like manner the first Trumpets were made of horns, as Virgil alludeth unto this sentence. Rouce frequerunt corrus caniu, and now adaies it is become familiar for the cariage of Gunpowder in war. It is reported by some husbandmen, that if seed be cast into the earth out of an Oxes horn (called in old time Cerasbola) by reason of a certain coldness, it will never spring up well out of the earth, at the least not so well as when it is sowed with the hand of man. Their skin is used for shooes, Garments, and Gum, because of a spongy matter therein contained, also to make Gunpowder, and it is used in navigation when a shot hath pierced the sides of the ship, presently they clapa raw Ox hide to the mouth of the breach, which instantly keepeth the Water from entring in : likewise they were wont to make bucklers or shieldes or hides of Oxen and Bugils, and the seven-folded or doubled shield of Ajax, was nothing else but a shield made of an Ox lude, so many times layed one piece upon another, which caused Homer to call it Sacos bentabieion.

The History of Four-footed Beasts.

Of the teeth of Oxen I know no other use but scraping and making paper smooth with them s their gall being sprinkled among seed which is to be sowen maketh it come up quickly, and killeth field-mise that tast of it, and it is the bane or poison of those creatures, so that they will not come neer to it, no not in bread if they discernit; and birds if they eat corn touched with an Oxes gall put into hot water first of all, and the lees of wine, they wax thereby astonished : likewife Emmets will not come upon those places where there remaineth any favour of this gall; and for this cause they anoint herewith the roots of trees. The dung of Oxen is beneficial to Bees if the hive be anointed therewith, for it killeth Spiders, Gnats, and drone-bees; and if good heed be not taken, it will work the like effect upon the Bees themselves: for this cause they use to smother or burn this kind of dung under the mouthes of the Hives in the spring time, which so displayeth and disperseth all the little enemy-bees in Bee-hives that they never breed again. There is a proverb of the stable of Augea, which Augea was so rich in Cattel, ahat he defiled the Countrey with their dung, whereupon that proverb grew: when Hercules came unto him he promised him a part of his Countrey to purge that stable, which was not cleansed by the yearly labour of 3000 Oxen, but Hercules undertaking the labour turned a River upon it, and so cleansed all. When Auged faw that his stable was purged by art, and not by labour, he denied the reward; and because Phyleus his eldest Son reproved him for not regarding a man so well deserving, he cast him out

The medicines parts of Oxen

Rafis.

Furnerine.

The manifolduse of the members of Oxen and Kie in medicine, now remaineth to be briefly touched. The horn beaten into powder, cureth the Cough, especially the tips or point of the horn, which is also received against the Prifick, or short breath made into pils with Honey. The powder of a Cowes horn mixed with Vinegar, helpeth the morphew, being washed or anointed therewith. The same insused into the Nostrils, stayeth the bleeding: likewise mingled with warm water and Vinegar, given to a Splenitick man for three daies together, it wonderfully worketh upon that puffion: powder of the hoof of an Ox with water put upon the Kings evill helpeth it, and with Water and Honey it helpeth the apostemes and swelling of the body: and the same burned and put into drink, and given to a Woman that lacketh Milk, it encreafeth milk and threngtheneth her very much. Other take the tongue of a Cow, which they dry fo long till it may be beaten into powder, and so give it to a woman in white wine or broath. The dust of the heel of an Ox or ancle bone, taken in wine and put to the gums or teeth do fasten them, and remove the ach away: The ribs of Oxen beaten to powder do stay the flux of bloud, and restrain the aboundance of monthly courses in women. The ancie of a white Cow laid forty daies and nights into wine, and rubbed on the face with white Linet, taketh spots and maketh the skin

Where a man biteth any other living creature, feethe the flesh of an Ox or a Calf, and after live daies lay it to the fore, and it shall work the ease thereof. The flesh being warm layed to the swellings of the body, easeth them: so also do the warm bloud and gall of the same

The broath of beef healeth the loofness of the belly, coming by reason of choler; and the broath of Cowes flesh, or the marrow of a Cow, healeth the ulcers and chinks of the mouth. The skin of a Ox (especially the leather thereof) warm in a shooe, burned and applyed to pimples in the body or face, cureth them. The skin of the feet and nose of an Ox or Sheep, sod over a soft and gentle fire, untill there arise a certain scum like to glew from it, and afterward dried in the cold, windie air, and drunk helpeth (or at least) easeth burftness very much.

The marrow of an Ox, or the fewet, helpeth the strains of sinews if they be anointed therewith. If one make a small candle of Paper and Cowes marrow, setting the same on fire, under his browes or eye-lids which are bald without hair, and often anointing the place, he shall have very decent and comely hair grow thereupon. Likewise the sewet of Oxen helpeth against all outward poison: so in all Leprosies, Botches, and Scurviness of the skin, the same mingled with Goose grease, and poured into the eares, helpeth the deafness of them. It is also good against the inflamation of the ears, the stupidity and dulness of the teeth, the running of the eyes, the ulcers and rimes of the mouth, and stifness of the neck. If ones bloud be liquid and apt to run forth of the body,

body, it may be well thickned and retained, by drinkin g Ox bloud mingled with Vinegar; and the bloud of a Cow poured into a wound that bleedeth, flayeth the bloud. Likewise the bloud of Oxen

bloud of a Cow pointed into a wound that bleedeth, nayeth the ploud. Likewite the bloud of Oxen cureth the frabs in Dogs.

Concerning their Milk, volumes may be written of the several and manifold virtues thereof, for the Areadian refused all medicine, only in the Spring time when their beasts did ear graffe, they Pliny. drain Cowes milk, being perlyaded that the virtue and vigour of all good herbs and fruits were A Hultory, received and digested into that liquor; for they gave it medicinally to them which were sick of the Princk of Consumption of an old Cough of the Consumption of the reins of the hardness of the bestly, and of all manner of possess, which burn inwardly; which is also the opinion of all the Greek physitians: and the shell of a Walnut sod in Cow-milk and laid to the place where a Scrpent hath bitten, it cureth it, and stayeth the posson.

The same being new and warm Gargarized into the throat, helpeth the foreness of the kernels, and all pain in the Arteries, and Welling in the throat and stomach: and if any man be in danger of a short breath, let him take dayly soft pitch with the hearb Munimie, and Harts suet clarified in a

a fhort breath, let him take dayly foft pitch with the hearb Munimie, and Hart's fuet clarified in a

Cup of new Milk, and ithath been proved very profitable.
Where the pains of the stomach come by fadness, Melancholy, or desperation, drink Cow-milk, Womans milk, or Asses milk, wherein a flint stone hath been sodden. When one is troubled with a defire of going often to the flool, and can egeft, nothing, let him drink Cow-milk and Aftes-milk dod together; the same also heated with gade of Iron or steel, and mingled with one fourth part of water, helperh the Bloudy flux; mingled with a little Hony and a Buls gall, with Cummin and gourds layed to the Navel: and some affirm, that Cow-milk doth help conception if a woman be troubled with the whitefux to that her womb be indangered, let her drink a purgation for her upper parts, and afterward Affes milk, last of all let her drink Cow-milk and new wine; (for forty daies together if need be) to mingled that the wine appear not in the milk, and it shall that the flux. But in the use of milk, the rule of Hipporages mult be continually observed, that it be not used with any tharp or tartd liquor for then it curdleth in the fromach, and turneth into corruption. The whay of Cow-milk mingled with Hony and Salt, as much as the talk will permit and drunk, looseneth the hardness of the belly.

The marrow of a Cow mingled with a little meal, and with new cheefe, wonderfully stayeth the Bloudyflux. It is affirmed, that there is in the head of an Ox, a certain little ftone, which only in the fear of death he calleth our at his mouth, if this ftone be taken from them fuddenly by gutting the head, it doth make children to breed teeth eafily, being foon tyed about them. If a man or woman, drink of the same water, whereof an Ox drunk a little before, it will ease the headach: and in the second venter of a Cow there is a round black Tophin found, being of no weight, which is accounted very profible to Women in hard travails of child-birth. The Liver of an Ox or Cow dryed, and drunk in powder cyreth, the flux of boud. The gall of a Cow is more forcible in operation then all other beaffs gals what loever. The gall of an Ox mixed with Hony, draweth out any thorn or point of a needle or other Iron thing out of the flesh where it sticketh Likewise it being mingled with Alome and Myrrhe as thick as hony, it cureth those evils which creep and annoy the privie parts; laying upon it afterward Beets fod in wine.

It will not fuffer the Kings evill to grow or spread it self if it be laid upon it at the beginning. The hands washed in an Oxes gall and water, are made white how black soever they were before time; and if purblind eyes be anointed with the gall of a black Cow, one may read any writing the more plainly: there is in the gall of an Ox a certain little stone, like a ring, which the Philosophers call Alchern Land some Guers and Neffarum) which being beaten and held to ones Nose, it cleareth the eyes, and maketh that no humour do distil to annoy them: and if one take thereof the quantity of a Lintel feed, with the juice of Beets, it is profitable against the Falling evill. It one be deaf or thick of hearing, take the gall of an Ox and the urine of a Goat,; or the gall of Goose: likewise, it easeth the headach in an Ague, and applyed to the temples provoketh sleep, and if the breasts of a woman be anointed therewith it keeps her milk from

The milt of an Ox is eaten in hony for easing the pains of the milt in a man, and with the skin that a Calf cast out of his dams belly, the ulcers in the face are taken away: and if twenty heads of Garlick be beaten in a Oxes bladder, with a pinte of Vinegar, and laid to the back, it will cure the milt. It is likewise given against the Spleen, and the Colick made like a plaister, and layed to the Navel till one fweat.

The urine of an Ox causeth a cold stomach to recover, and I have seen that the urine of a Cow taken in Gargarizing, did cure intolerable pleers in the mouth. When the Bee hath taited of the flower of the Corn-tree, the presently dyeth by looseness of the belly, except the tast the wrine of a Man or an Ox.

There are likewise many uses of the dung of Oxen made in Physick, whereof Authors are full, but especially against the Gowt, plaistering the fick member therewith hot and newly made: and against the Dropsie, making a plaister thereof with Barley meal and a little Brimstone aspersed, against the Dropsie, making a plaister thereof with Barley meal and a little Brimstone aspersed. The moral to cover the belly of a man. And thus much for the natural properties of this kind, now we will and external briefly proceed to the moral.

The moral uses of this beaft, both in labour and other things, do declare the dignity and high both for labour account our forefathers made hereof, both in Vintage, Harvelt, Plowing, Carriage, Drawing, and other in-

Vaire.

Sacrificing, and making Leagues of truce and prace; in fo much as that if this failed, all tillage and vintage must in many places of the world be utterly put down; and in truth, neither the fowls of the air, nor the Horse for the battle, nor the Swine and Dogs could have no sustenance but by the labor of Oxen : for although in some places they have Mules, or Camels, or Elephants, which help them in this labor, yet can there not be in any Nation a neglect of Oxen, and their reverence was so great that in ancient time when an offender was to be fined in his Cattel (as all amerciaments were in those daies) the Judge might not name an Ox, untill he had first named a Sheep; and they fined a fmal offence at two Sheep and not under, and the greatest offence criminal, at thirty Oxen and not above, which were redeemed, by giving for every Ox an hundred Asses, and ten for every Sheep.

It is some question among the ancients, who did first joyn Oxen together for plowing; some

Heraclides.

Augustinus.

affirming that Ariflem first learned it of the Nymbbi, in the Island Co: and Diodorus affirmeth, that Dionyfius Son of Jupiter and Ceres or Proferpina, did first of all invent the plow. Some attribute it to Briges the Athenian; other to Tripilemus, Ofiris, Habides a King of Spain; and Virgil affirmeth most constantly, that it was Ceres, as appeareth by this verie;

> Prima Ceres ferro mortales vertere terram Instituit &c.

Whereunto agreeth Servius : but Irather incline to Josephus, Laciantius and Eusebius, who affirm, that long before Ceres was born, or Ofirie, or Hercules, or any of the relidue, their was a practife of plowing, both among the Hebrews and Egyptians; and therefore as the God of plowing called by the Romans Jugatinus (because of yoaking Oxen) was a fond aberration from the truth, so are the residue of their inventions about the first man that tilled with Oxen: seeing it is said of Cain and Noab, that they were husbandmen and tilled the earth. The Athenian had three several plow-feasts which they observed yearly, one in Scirus, the other in Rharia, and the third under Pelinius: and they call their mariage-feasts, plow-seasons, because then they endevoured by the seed of man to multiply the world, in procreation of children, as they did by the plow to entrease food in the

The Greciaus had a kind of writing called Boustraphedon, which began, turned, and ended as the Oxen do in plowing a furrow, continuing from the left hand to the right, and from the right hand to the left again, which no man could read, but he that turned the Paper or Table at every lines end. It is also certain, that in ancient time, the leagues of truce and peace were written in an Oxes hide, as appeareth by that peace which was made by Tarquinius, betwixt the Romans and the Gabii, the which was hanged up in the Temple of Jupiter, as Dionysius and Pompeius Sextus affirm (in the likeness of a buckler or shield:) and the chief heads of that peace remained legible in that hide, unto their time, and therefore the ancients called the Oxes hide a shield, in regard that by that conclusion of peace, they were defended from the wars of

And there were certain people called Homolotti by Herodotus, who were wont to strike up their leagues of peace after war and contention, by cutting an Ox into small pieces, which were divided among the people that were to be united, in token of an inseparable union. There be that affirm, that a Team or yoak of Oxen, taking fix or eight to the Team, wil plow every year, or rather every feafon a hyde of ground; that is, as some account 20 Mansa, or in English and Germane account 30 Acres; which hath gotten the name Jugera from this occasion, as Eustainius and Varinus report. When Sychaus the husband of Dido, who was daughter of Agenor & fifter to Pygmalion, wandered to and fro in the world with great store of treasure, he was slain by Pygmalion secretly, in hope to get his wealth: After which time, it is faid, that he appeared to his wife Dido, bidding her to fave her life from her cruell brother; who more esteemed money then nature, she sled into Lybia, taking with her some Tyrians among whom she had dwelled, and a competent sum of money; who being come thither, craved of Isrbas King of Nomades, to give her but so much land as she could compass in with an Oxes hide, which with much ado the obtained, and then did cut an Oxes skin into smal and narrow thongs or lists, wherewithall the compassed in so much as builded the large City of Carthage, and first of all was called the New City, and the Castle thereof Byrfa, which signifieth a Hide.

Enstablus also reporteth another story to the building of this City, namely that it was called Carthage of one of the daughters of Hercules, and that when Elife and the other companions of Dide came thither for the foundation of the City, they found an Oxes head, whereupon they were difcouraged to build there any more, supposing that Omen betokened evill unto them, and a perpetual flavery in labour and mifery, such as Oxen live in, but afterward they tryed in another corner of that ground, wherein they found a Horses head, which they accepted as a good signification of riches, honour, magnanimity, and pleasure, because Horses have all food and maintenance provided for them. Among the Egyptians they paint a Lion for strength, an Ox for labor, and a Horse for magnanimity and courage, and the Image of Mithra which among the Persians signifieth the Sun, is pictured in the face of a Lyon holding the horns of a striving Ox in both hands, whereby they signifie that the Moon doth receive light from the Sun, when the beginneth to be separated from her beams.

There is in the Coasts of Babylon a Gem or precious stone like the heart of an Ox, and there is another called Sarciter, which representeth the flesh of an Ox. The ancients had like-

wife fo great regard of this beatt, that they would neither factifice nor eat of a labouring Oxe . wherefore Hereiles was condemned when he had defired meat of Toeodomania in Dyrpia, for his hungry companion the Son of Hyla, because by violence he took from him one of his Oxen and flew him. A crowned Oxe was also among the Romania fign of peace; for the Souldiers which Mireelling. kept the Caftle'of Anathon neer the river Euphrates against Julianus and his Army, when they yeelded themselves to mercy, they descended from the Castle, driving before them a crowned Oxe : from this manifold necessity and dignity of this beast came the Idolatrous cultom of the Heathens, and Idolaty comespecially the Egyptians, for they worshipped him instead of God calling him Aft and Epaphur: mitted with whose choyce was on this fort. He had on his right side an exceeding splendent white spot, and have of the his horns crooking together like the new Moon, having a great bunch on his tongue, which they choice of April. call Cantharus: neither do they fuffer him to exceed a certain number of years, or grow very big, for these causes they give him not of the water of Nilus to drink, but of another consecrated well, which hindereth his growth: and also when he is come to his full age, they kill him, by drowning him in another consecrated well of the Priests: which being done, they seek with mourning another (having shaved their heads) to substitute in his place, wherein they are never very long but they finde one, and then in a holy Ship, facred for that purpole, they transport and convey him to Memphis. And the Egyptians did account him a bleffed and happy man, out of whose fold the Priest had taken that Oxe-God. He hath two Temples erected for him, which they call his Chambers, where he giveth forth his Augurisms, answering none but children and youths playing before his Temples: and refusing aged persons, especially women; and if any not sacred, happen to enter into one of his Temples, he dyeth for it, and if into the other, it fore-sheweth some mon-

strous cursed event, as they fondly imagine.

The manner of his answers is privately to them that give him meat, taking it at their hands; and they observe with great religion, that when Germanicus the Emperour came to ask counsel of him, he turned from him and would not take meat at his hand; for presently after he was slain. Once A Bistory, in a year they shew him a Cow, with such marks as he hath, and alway they put him to death upon the same day of the week that he was found; and in Nolus neer Memphis, there was a place called Phiala, where were preserved a Golden and a Silver dish, which upon the birth or Calving days of Apis, they threw down into the river, and those days were seaven; wherein they affirm that never man was hurt by Crocodiles. The Egyptians do also consecrate an Oxeto the Moon, and a Cow to Vrania. It is reported that Mycerinai King of Egypt, fell in love with his own Daughter: Herodams. and by violence did ravish her; she not able to endure the conscience of such a fact, hanged her. A History, felf: whereupon the King her impure father, did bury her in a wooden Oxe, and so placed her in a secret place or chamber, to whom daily they offer many odours; but the mother of the maiden did cut off the hands of those Virgins or Women that attended on her Daughter, and would not rescue her from so vile a contempt. There were also many other pictures of Oxen, as in Corcyra Of the pictures and Eretria; and most famous was that of Perillus, which he made and presented to Phalaris the Tyrant of Agrigent, shewing him; that if he would torment a man, he should put him into that Oxe fet over a fire, and his voyce of crying should be like the loughing of a Heiser; which thing being heard of, the Tyrant to shew his detestation of more strange invented torments then he had formerly used, he caused Perillus, that presented it unto him, to be put into it alive, and so setting it over a fire; made experiment of the work upon the workman, who bellowed like a Cow, and was so tormented to death for that damnable and dangerous invention; which caused Ovid to write thus:

Et Phalaris taure violentus membra Perilli Torruit : infalix imbuit author opus.

When an Oxe or Cow in ancient time did dye of themselves, (Viz.) if it were an Oxe, they buried him under the walls of some City, leaving his horn sticking visibly out of the earth, to signifie the place of his burial, for when his flesh was consumed, they took it up again, and buryed the bones in the Temples of Venus in other places: but the body of a dead Cow they cast into some great River neer adjoyning. The Poets have faigned a certain Monster called Minotaurus, having in Of the monster part the form of a man, and in part the form of a Bull; and they say, that Pasiphae the Daughter Minotaurus. of the Sun and wife of Minos, King of Crete, fell in love with a Bull, and by the help of Dedalus, the was included in a wooden Heifer, covered with a Cows hide, and so had copulation with the Bull, and so came that monster Minos included in a labyrinth; and constrained the Athenians, who had flain his son Androgeus, to send every year seven young men, and seven maids to be given to that Monfters to feed upon, for he would eat mans fiesh. At last Thefeus son of Ageus King of Athens, came into that labyrinth, and flew that Minotaure, and by the help of Ariadne elcaped out of the labyrinth. Other relate the ftory in this manner ; that when the Cretensians would have expelled Minos from his Kingdom; he vowed that what soever likeness first appeared out of the Sea for sign of victory unto him, he would facrifice it to the Gods, if he did enjoy his Regiment : and thereupon a goodly Bull came unto him out of the Sea, wherewithall he was delighted: But after he had recovered his Kingdom in quiet, he kept that Bull in his own hands, and facrificed another; and that by this Bull was the Minotaure begotten on his wife Positione. But the truth is; that when Minor was in danger to lose his Kingdom; one Taurus, a valuant Prince and Captain, came with a Navy

Clemens.

Giraldus.

Pliny.

or good fouldiers, and established him in quiet. Afterward falling in love with Paiphae King Minot wife, he lay with her in the house of Daddiw : which Daddiw wrought with the Queen to give him his pleasure, and that the Minotaure was a Monster in Crete, that had the face of an Oxe, and the other members like a man, such an one was seen in Arisotles time. Although other take it for a fiction; because the Roman had it pictured in their Ensigns of war, until Caim Marine altered it to an Eagle, which remainesh to this day. Alciain yeeldeth this reason, why the Romans gave such an arms, to fignifie that secretie becometh a Captain, and that proud and crafty countels do hurt the authors of them.

> Limine quod caco obscura & caligine monstrum Gnoffiacis clausit Dedalus in latebris: Depicium Komana phalanx in pralia geftat, Semiviroque nitent signa superba bove : Nolque monent debere ducum secreta latere Confilia, authori cognita techna nocet.

It is reported also, that when Cadmus went from Delphos to Phocia, an Oxe did direct him in the way, and was his guide; which Oxe was brought out of the herds of Pelagen, having in both his sides a white spot: it must needs be understood of the Moon, for Cadinus slying by night, having the Moon to thine upon him (which is Hieroglyphically deciphered by the Oxe,) gave him light and direction to another City. It were endless to prolecute the feveral speeches, proverbs, allusions, emblemes, plays, prizes, and hieroglyphicks made upon Oxen; whereby, men and women, Cities, Regions, and People have taken denomination from Oxen; but also some of the stars in the tirmament: therefore I will not proceed to those devises, but only touch the sacrifices made with Oxen and so conclude this story.

It cannot be denyed, that the prime inflitution of facrifices, was from, by, and for the Ordinance of God, to teach the world to worship him in blood for fin: which could not be expiated but by the blood of the only immaculate Son and Lamb of God; and therefore I will but remember how corruption polluted that Ordinance, which was purely without idle Ceremonies initituted by the everlaiting God; and yet was by mans invention made wretched, horrible, and damnable, through abust of the fact, that otherwise by divine constitution (as appears in holy Scripture) was heavenly, honourable and bleffed.

To begin therefore with the original of that Heathenish and Paganish sacrifice, in sead of God the only true and divine Essence, to whom all sacrifice and divine worship was due, and whose creatures, both Men, Oxen, and all other living and vilible things are; they offered unto all the hoasts of Heaven, the Sun, and Stars, the Heathen gods, Jupiter, Mars, Minerva, Randrifus, and others: and if the Sacrifice were costly and sumptuous, it was called Hecatombe. Now before their Sacrifice they made Prayers, burned Incense for odours, presented Probjets (as they were tearmed) certain preparations and cakes made of Barley and Salt, (called Vlocbyta.) After which, the Priest turned him fometimes to the right hand, and fometimes to the left, and then began to take the grifle hairs growing on the Oxes fore-head betwirt his horns, making a tafte of them, and casting them in the ire to begin the Sacrifice. Then did he give into the hands of the people standing by, little pots of Wine likewife, to take for Sacrifice, and then he which killed the beaft drew his knife, or axe, or cleaver, from the head to the tayl of the beaft. Now in every Sacrifice they had burning torches. which were lawful for none to carry but for men, and not women; then the Priest commanded to kill the Sacrifice, which fometime they did by knocking him on the head, if the beaft were to be sacriticed to Hell, and those that were therein; for they acrificed a barren Cow, or a black Sheep to those gholls. But if the Sacrifice were for Heaven, and to the powers thereof, they lifted up his head and cut his throat: then put they under him their Sphagian veffels to receive his blood, and when the beait was fain down, they flayed off his skin.

Then did the Priest or Flamen divide the intrails, that so he might make his augurism (the bowels being proved at the Altar.) Having looked into the bowels, they took out of every gut, member and part, a first fruits, moulded them together in the meal of green wheat-corn, then was it given to the Priest, who put thereunto frankincense, herbmary, and fire, and so burned them all together, which was called a perfect Hoalt. But if they facrificed to the gods of the Sea, then did they first of all wave the bowels of the heaft in the Sea-floods before it was burned. The best Sacrifices were fatted and white Oxen or Kine, fuch as had never been under yoke; for the beaft used to labour was accounted unclean: they never offered in Sacrifice one under thirty days old, nor over five years by the laws of the Priests. When the Spartanes overcame their enemies by stratagem, they sacrificed to Mars an Oxe; but when by open force, they facrificed a Cock; for they esteemed more of an unbloody then a bloody victory. When a man facrificed a Cow to Minerva, he was bound to Sacrifice a Sheep and an Oxe to Pandryfus.

When the Levengians in a publick spectacle would make a Sacrifice, they wanted an Oxe; for which cause they gathered together so many sticks of small wood, as made the Image of an Oxe artificially conjoyned together, and so setting it on fire burned it for an offering: whereupon a Lacrensian Oxe, was an Ironical Proverb, for a Sacrifice of no weight or merit. It is also reported, that an Heifer being brought to the Altar of Minerva to be facrificed, did there Calve; wherefore the Priests would not meddle with her, but let her go away free; because Minerva was the goddess of procreation; holding it an impious thing to kill that in Sacrifice which had brought forth a young one at the Altar: to conclude, as Vertius faith, that on a time Justice was so oftended with men. because they imbrewed every Altar with the blood of Oxen and Cattel, that therefore she left the Earth, and retired back again to dwell among the Stars : fo will we in this discourse cease from any further pro secution of the Moral or Natural description of these Beasts, leaving their lawful use to the necessity of mankinde, and their abusive idolatrous facrifices to him that loveth all his creatures, and will require at mans hand an account of the life and blood of brute beafts.

Of the CALF.

Calf, is a young or late enixed Bull or Cow, which is called in Hebrew, Fgel; or Par: and some- The definition Atimes Ben-bakar, the fon of an Oxe. Yet Kabbi Solomon, and Abraham Ezra, expound Egel, for and name, a Calf of one year old. The Sarazens of that word call a Calf Hefel. The Gracians, Mofebos; whereof is derived Mojcharios : but at this day they call him Monskari, Or Mojchare. The Italians, Vitello; the French, Veau; the Spaniards, Ternera of Teneritudo, fignifying tendernes; and sometimes Bezeron and Vezerro; the Germans, Ein Kalb, the Flemmings, Kalf; and the Latines, Vitulue, of the old The ctymological word Vitulor, fignifying to be wanton, for Calves are exceedingly given to sport and wantonness; Ey of Findin. or as other suppose from the Greek word Italous, came Vitulus; and therefore the Latines do not alway take Vitulus for a young or new foaled beaft, but sometime for a Cow, as Virgil Eclog.

> Bis verit ad multram binos alit ubere (atus)

And this word (like the Greek, Moschor) fignifieth male and female: whereunto by divers Authors both Greek and Latine, are added divers Epithites by way of explication, both of the condition, inclination, and use of this young beast; calling it wilde, ripe for the temples, unarmed, weak, fucklings, tender, wandring, unhorned, and fuch like. And because the Poets faign that Io was turn- The Epiblic. ed into a Cow, and that the violet herb was affigured by Jupiter for her meat; they derive Viola, a Vi- of a Calf. olet, from Vitula a Calf, by a kinde of Gracian imitation.

It is also certain that the honor of this young beast have given denomination to some men, as Pom- Varro.

Ponius Vitulus, and Vitulus Niger Turamius, and Vitellius was derived from this stem or theam, al- Men named though he were an Emperour. The like may be said of Molobos in Greek, fignifying a Calf; for after Calves, there was one Moschus a Sophist that drank nothing but water, and there was another Moschus, a Grammarian of Spracuse, whom Athenaus doth record, was a familiar of Aristarchus, and also of another, a Poet of the Bucolicks; and this ferveth to shew us, that the love our Ancestors bare unto Cattel, appeared in taking upon them their names, and were not ashamed in those elder times, wherein wifdom and invention was most pregnable, to glory in theirherds from which they received maintenance. But to the purpose, that which is said of the several parts of an Oxe and a Cow, belongeth also to a Calf; for their Anatomy differeth not, because they are conceived and generated by them, and in them: and also their birth, and other such things concerning that, must be inquired in the discourse of a Cow.

It is reported by an obscure Author, that if the hoof of a Calf be not absolved or finished in the A secret by Dams belly before the time of Calving, it will dye.! And also it must be observed, that the same the hoof. diseases which do infest and harm an Oxe, do also befall Calves, to their extreme perill: but they are to be cured by the same fore-named remedies. And above the refidue, these young bealts are The diseases of troubled with worms, which are ingendered by crudity, but their cure is to keep them fasting till a Calf. they have well digefted their meat, and then take lupines half fod, and half raw, beaten together, The cure of and let the juyce thereof be poured down his throat; otherwise take dry figs and fitches beaten together with Santonica, called Lavender-cotten, and so put it down the calves throat as aforesaid, or else the fat of a Calfand Marrube with the juyce of Leeks, will certainly kill thefe Evils. It is the manner To choose to regard what Calves you will keep and what you will make of and kill either for facrifice, as in an Calves for ancient time, or private use, and to mark and name those that are to be reserved for breed and labour, Hore. according to these verses:

> Post partum curant, vitulus traducitur omnit, Et quos aut pecori malunt submittere babendo. Continuoque notas & nomina gentis inurunt, Ant aris servare facris, aut scindere terram, Et campum horrentem fracis invertere glebis.

And all these things are to be performed immediately after their weaning : and then in the next place you must regard to geld the males, which is to be performed in Lune, or as Magus faith, in May, or at the farthest let them not be above a year old; for elle they will grow very deformed and small: but if you lib them after two years old, they will prove stubborn and intractable, The libbling wherefore it is better to geld them while they be young ones, which is to be performed not with of Calver,

Of the Cacus.

Aristotle. Sotion. Vario.

any knife or iron instrument, because it will draw much blood, and indanger the beast through pain, but rather with a cloven reed or stick, pressing it together by little and little: but if it happen that one of a year or two years old be to be libbed, then you must use a sharp knife, after you have pressed the stones into the cods, and cut them out at one stroke, and for stanching of the blood, let the cod, and the ends of the veins be seared with an hot iron, and so the wound is cured as

And now the time for the effecting hereof, is best in the wane of the Moon, either in the Spring or Autumn; but it is good to leave as many of the veins and nerves of the virile member untouched and whole as may be, that so he may not lose any condition of a male, except the power of generation. And if the wound be overmuch given to bleed, lay upon it ashes with the spume of silver, which is apt to stanch blood in all green wounds; and that day let him not drink, and eat but a very little meat: for three days after give him green tops or grass, foft and easie to chew, and at the third days end, anoint the wound with liquid pitch; ashes, and a little Oyl; which will soon cure the scar and keep the flies from stinging or harming it. If at any time a Cow cast her Calf, you may put unto her another Calf, that hath not suckt enough from his own Dam; and they use in some Countries to give their Calves Wheat-bran, and Barly-meal, and tender meat; especially regarding that they drink morning and evening. Let them not lye together in the night with their Dam, but asunder, untill their sucking time, and then immediately separate them again, unless the Cow be well fed when the Calf sucketh; her ordinary food will yeeld no great tribute of Milk; and for this cause you must begin to give the Calf green meat betimes. Afterward being weaned, you may suffer those young ones to feed with their Dams in the Autumn, which were calved in the Spring. Then in the next place, you must regard the taming of the beast, being ready for labour, which is expressed in the former treatise of an Oxe.

Food for Calves.

Sacrifices of Calves.

Pliny. Cælius. Polephus. A wonder. Monfters of Calves.

Nic, Villagag.

The fielh of Calves.

The Ancients called Villoria by the name of the Goddels Vitula, because they sacrificed unto her Calves, which was tearmed a Vitulation: and this was usual for victory and plenty, as is to be seen at large in Giraldus, Macrobius, Monius, Ovid, and Virgil: but the Heathens had this knowledge, that their Gods would not accept at their hands a lame Calf for a Sacrifice, although it were brought to the Altar; and if the tail of the Calf did not touch the joynts of his hinder legs, they did not receive him for Sacrifice. And it is said of Æmilins Paulus, when he was to go against the Macedonians, he facrificed to the Moon in her declination eleven Calves. It is very strange, that a Calf being ready to be facrificed at the Temple of Ierusalem, brought forth a Lamb, which was one fore-shewing fign of Ierusalems destruction. But Aristole declareth, that in his time, there was a Calf that had the head of a childe; and in Luceria a Town of Helvetia, was there a Calf which in his hinder parts was a Hart.

When Charles the fifth, went with his Army into Africk, and arrived at Largherd, a Noble City of Sardinia, there happened an exceeding great wonder; for an Oxe brought forth a Calf with two heads; and the woman that did owe the Oxe, presented the Calf to the Emperor : and fince that time I have feen the picture of a more strange beast calved at Bonna, in the Bishoprick of Colen, which had two heads; one of them in the side not bigger then a Hares head, and two bodies joyned together; whereof the hinder parts were smooth and bald, but the tail black and hairy; it had also seven feet; whereof one had three hoofs : whis Monster lived a little while, and was brought forth in Anno 1552 the 16. day of May, to the wonder and admiration of all them, who either knew the truth, or had feen the picture.

Butchers are wont to buy Calves for to kill, and fell their flesh; for in all creatures, the flesh of the young ones are much better then the elder, because they are moist and soft, and therefore will digest and concoct more easily: and for this cause Kids, Lambs, and Calves, are not out of Season in any time of the year; and are good from fifteen days to two months old, being ornaments to the Tables of great Noble men; which caused Fiera to make this Distiction:

> Assidues habeant vitulum tua prandia in usus, Cui madida & sapida juncta tepore caro est.

And principally the Germans use the chawthern, the head, and the feet, for the beginning of their meals; and the other part either roasted, or baked, and sometime sod in broath, and then buttered,

Pliny.

Of the medi-

Marcellus. Pliny.

Marcellus.

spiced and sauced, and eaten with Onyons. The Medicines arising from this beaft, are the same that come from his Sires before spoken of, and especially the flesh of a Calf doth keep the flesh of a new wound, (if it be applyed thereunto) from swelling, and being sodden, it is precious against the bitings of a mans teeth: and when a mad Dog hath bitten a man or a beast, they use to pare the wound to the quick; and having sodden Veal mingled with the fewet and heel, they lay some to the wound, and make the patient drink of the broath: and the same broath is soveraign against all the bitings of Serpents. The horns of a Calf fod foft, are goodlagainst all intoxicate poyson, and especially Hemlock. The powder of a Calves thigh drunk in Womans Milk, cureth all filthy running Ulcers; and out of the brains of a Calf they make an Oyntment, to loosen the hardness of the belly. The marrow softneth all the joynts, driveth away the bunches arifing in the body; having an operation to foften, fill, dry and heat. Take Oyl, Wax, Rust, and the marrow of a Calf, against all bunches in the face: and Calves marrow with an equal quantity of Whay, Oyl, Rose-cake and an Egge, do soften the hardness of the cheeks and eye-lids, being laid to for a plaitler, and the same mixed with Cummin, and infused into the ears, healeth the pains of them: and also easeth the Ulcers in the mouth.

The marrow with the lewet composed together, cureth all Ulcers and corruptions in the Secrets Pline. of Men and Women. The Fat pounded with Salt, cureth the Louzy evill, and likewife the ulcerous fores in the head. The same mixed with the fat of a Goose, and the juyce of Basil or wilde Cum- Marcellus, min, and infused into the ears, helpeth deafness and pains thereof. The fat taken out of the thigh of a Calf, and fod in three porringers of water, and supped up, is good for them that have the Flux: and the dung of a Calf fryed in a pan, laid to the Buttocks and Secrets, doth wonderfally cure the Bloodyflix : alfo laid to the reins, provoketh Urine; and fod with Rue, cureth all the inflamations in the feat of a man or woman. The Sewet of a Calf with Nare, affwageth the swelling of the Phay. cods, being applyed to there like a plaister: and the Sewet alone, doth cure the peeling of the Nails. The Liver with Sage leaves cut together, and pressed to a liquor, being drunk, easeth the pain in the small of the Belly. The gall mingled with powder of a Harts-horn, and the Seed of Mar joram, cureth Leprofies and Sourfs; and the gall alone amounted upon the head, driveth away nits. The milt of a Calf is good for the milt of a man, and for Ulcers in the mouth; and glew made of his stones, as thick as Hony, and anointed upon the teprous place, cureth the same, if it be suftered to dry thereupon.

With the dung of Calves they perfume the places which are hurt with Scorpions; and the affice of this dung with Vinegar, stayeth bleeding: Marcellus magnifieth it above measure, for the cure of the Gout, to take the fime of a Calf which never eat grass, mixed with lees of Vinegar; and also for the deafness of the ears, (when there is pain withall) take the Urine of a Bull, Goat, or Calf, and one third part of Vinegar well fod together, with the herb Fullonia, then put it into a flagon with a

small mouth, and let the neck of the Patient be perfumed therewith.

Of the supposed Beast CACUS.

"Here be some of the late Writers, which take the Caous spoken of by Virgil in his eight Book of Aineids, to be a wilde beaft, which Virgil describeth in these words .

> Hic Spelanca fuit, vafte submotu recessu : Semibominis Oaci : facies quam dira regubat, Solis inaccensam radit, semperque recensi Cude tepebat bumus, foribusque affina luperbis Ora virumtrifti pendebant palltda tabo. Huic monstro Valounus erat pater : illius atros Ore vomens ignes magna fe mole ferebat. -Nequeunt expleri corda tuendo: Pellora semiferi atque entincios faucibus ignes ;

That is, Cacus was half a beast and half a man, who had a cave in the earth against the Sun, his Den replenished with the heads of men, and he himself breathing out fire, so that the earth was warmed with the flaughter of men flain by him, whose flaughter he fastened upon his own doores, being supposed to be the son of Vulcan. And there be some that affirm this Cacus, to have wasted and depopulated all Italy; and at length when Hercules had flain Geryon, as he came out of Spain through Italy with the Oxen which he had taken from Geryon, Cacus drew divers of them into his cave by their tails: but when Hercules missed daily some of Cattel, and knew not which way they strayed, at last he came to the den of Caeur : and seeing all the steps stand forward, by reason the cattel were drawn in backward, he departed; and going away, he heard the loughing of the Oxen for their fellows, whereby he discovered the fraud of Caem : whereupon he presently ran and took his club, the Monster being within his cave, closed up the mouth thereof with a wonderful great stone, and so hid himself for fear : but Heroules went to the top of the Mountain, and there digging down the same, until he opened the cave, then leaped in suddenly and slew the Moniter, and recovered his Oxen.

But the truth is, this forged Cavus was a wicked servant of Evender, which used great robbery in the Mountains, and by reason of his evill life was called Cacus; for Cakes in Greek fignifieth evill. He was faid to breath forth fire, because he burned up their corn growing in the fields, and at last was betrayed of his own Sister; for which cause she was deified, and the Virgins of Westa made Sacrifice to her: and therefore it shall be idle to prosecute this fable any farther (as Albertus Magnus doth) it being like the fable of Alcida, which the Poets faign was a Bird of the earth, and being invincible burned up all Phrygia, and at last was slain

by Minerva.

Of the CAMEL.

Artemidorus.

Lthough there be divers forts of Camels, according to their several Countries; yet is the name A not much varied, but taken in the general sense of the denomination of every particular. The Of the name. Hebrews call it Gamal; the Chaldeans, Gamela; and Gamele: the Arabians, Gemal: Gemel Ainegeb: Algiazar. The Persians, Schetor; the Saracens, Shymel; the Turks call a company of Camels traveling together, Caravana. The Italians and Spaniards call a Camel, Camello; the French, Chameau; the Germans, Ramelthier; all derived of the Latine, Camelus; and the Greek, Camelos. The Illyrians, call it Vuelblud: and the reason of the name Camelos, in Greek, is, because his burden or load is laid upon him kneeling or lying, derived (asit may feem) of Gamptein merous, the bending of his knees, and flowness of pace; wherefore a man of a flow pace, was among the Egyptians deciphered by a Camel. For that cause, there is Town in Syria called Gangamela; that is, the house of a Camel, erected by Darius the Son of Hystaspis, allowing a certain provision of food therein for wearied and tyred Camels. The Epithets given to this beaft are not many among Authors, for he is tearmed by them rough, deformed, and thirsting; as luvenal.

The Etymologie of the word. Horus.

Deformis poterunt immania membra Cameli.

And Persius in his fifth Satyre faith;

Tolle recens primus piper è sitiente Camelo.

Camels.

The kindes of There are of them divers kindes, according to the Countries wherein they breed: as in India, in Arabia, and in Battria: All those which are in India, are said by Didymus to be bred in the Mountains of the Ballians, and have two bunches on their back, and one other on their breast, whereupon they lean: they have sometimes a Bore for their Sire, which feedeth with the flock of she-Camele; for as Mules and Horses will couple together in copulation, so also will Bores and Camels: and that a Camel is so on of Battrian ingendered sometimes, the roughness of his hair like a Bores or Swines, and the Arength of his body, are sufficient evidences; and these are worthily called Bastrians, because they were first of all conceived among them, having two bunches on their backs; whereas the Arabian hath but one. The colour of this Camel is for the most part brown, or puke; yet there are herds of white ones in India.

Camels.

Camels.

Fiolement Lagi brought two strange things into Egypt, a black Camel; and a man which was the colour of their one half white, and the other half black in equal proportion; the which caused the Egyptians to wonder and marvail at the shape and proportion of the Camel, and to laugh at the man: whereupon it grew to a Proverb, a Camel among the Egyptians, for a matter fearful at the first, and ridiculous

The leveral mel. Pliny.

The head and neck of this beatt is different in proportion from all others; yet the Ethiopians have a beast called Nabim, which in his neck resembleth a Horse, and in his head a Camel. They have not teeth on both sides, although they want horns, (I mean both the Arabian and Badrian Camel:) whereof Ariffolle disputeth the reason, in the third Book of the parts of creatures, and fourteenth chapter. Their necks are long and nimble, whereby the whole body is much relieved; and in their week toward the neather part of the the throat, there is a place called Anhar, wherein a Camel doth by spear or sword, most easily receive his mortal or deadly wound.

Silvaticus.

Pliny.

Ariftotle.

His belly is variable, now great, now small like an Oxes; his gall is not distinguished within him like other beafts, but only carryed in great veins, and therefore some have thought he had none, and afigned that as a cause of his long life. Betwixt his thighes he hath two udders, which have four speans depending from them like a Cow. His genital part is confected, and standeth upon a sinew, infomuch as thereof may a string be made, for the bending of the strongest bow. The tail is like the tail of an Als, hanging down to their knees, they have knees in every leg, having in their former lege three bones, and in the hinder four. They have an ancle like an Oxes, and very small buttocks, for the proportion of their great body: their foot is cloven, but so, that in the under part it hath but two fissures or clefts, opening the breadth of a finger, and in the upper part four fissures or clefts, opening a little, and having a little thing growing in them, like as is in the foot of a Goofe: The foot it lelf is flefhy like a Bears, and therefore they are shod with leather when they travail, lest the gauling of their feet cause them to tire.

Avicenna affirmeth, that he had feen Camels with whole feet, like a Horses, but their feet (although fleshy) are so tyed together with little lungs that they never wear; and their manner of going or pace is like a Lyons, fo walking as the left foot never out-goeth the right, whereas all other beaths change the fetting forward of their feet, and lean upon their left feet while they remove their right; but thefe alter step after step, so as the left foot behinde, followeth the right before, and the hinder foot followeth the left before. Those Camels which are conceived by Bores are the strongeft, and fall not fo quickly into the myre as other, although his load be twice fo heavy.

The food of Camels.

Camels love grais (called Schannanthi) and especially Barley, which they eat up wonderful greedily untill all be in their stomach, and then will they chew thereupon all the night long : fo that the greatness of their belly to lodge their meat in before concoction is better then the

Silvaticus. Paul l'eret. Philostratus. Cælius. Their drink must not be clear.

Cæ'ius.

Avicen.

benefit of their upper teeth, because he can ruminate and chaw it so often as he pleaseth. There is a certain herb. which hath a feed like a myrtle feed, that is poyfon to worms, and this feed is food for Camels; wherewith they grow fat. It is therefore called Camel-thorn, and Aftergar in the Arabien tongue. In the Province of Aden, both Sheep, Oxen, Horses, and Camels, eat a kinde of fish, and thein better being dry and stale, then new and fresh, by reason the immoderate heat in that region burneth up all palture and fruits: neither is there any beaft which is so easily sed as a Camel. They will not drink of clear or clean water, but of muddy and flimy, and therefore they flamp in it with their feet. They will endure thirst for three or four days together; but when they come to drink. they fuck in above measure, recompensing their former thirst, and providing against that which is to come : and of all kindes the Ballians are least troubled with thirst.

They stale from one side to another, otherwise then any other beasts do : this beast is very hot by nature, and therefore wanton and full of sport and wrath; braying most fearfully when they are angred They engender like Elephants and Tygers; that is, the female lying or fitting on the ground, which the male imbraceth like other males; and continue in copulation a whole day together. Their proctea- When they are to ingender, they go unto the secretest places they can finde; herein excelling in modesty the ancient Massagetes, who were not ashamed to lie with their wives in the open field, and publick view of one another, where as brute beafts by inftinct of nature, make the procreation of their

kinde to be a most secret shameful honest action. At the time therefore of their luft, they are most unruly and fierce, yeelding to none, no not

to their own keepers : the best time of their copulation is in September, for in Arabia, they begin to ingender in the third year of their age, and so within ten or eleven moneths after she is delivered of young, being never above one at a time, for twins come not in her great belly; fo she goeth a year before she conceive again, although her young be separated or weaned, before which time they do not commonly. Unto their former modesty for their copulation, we may adde another divine instinct and most true observation about the same, for the male will never cover his mother, or his sister; wherefore it is sincerely reported, that when a certain Camel-keeper (defirous to try this fecret) having the male, fon to a female, which he also kept, he so covered the female-mother-Camel in all parts of her body, except her fecrets, that nothing could be feen of her, and so brought her luftful son to cover her; which according to his present rage he performed. As foon as he had done it, his master and owner pulled away the mask or disguife from the dam, in the prefence of the fon; whereby he instantly perceived his keepers traud, in making him unnaturally to have copulation with his own mother. In revenge whereof he ran upon him, and taking him in his mouth, lift him up into the air, presently letting him fall with noise and cry underneath his murdering and man-quelling feet; where, with unappeaseable wrath and blood-desiring livor, he pressed and trod to pieces the incest marriage-causer, twixt him and his dearest mother; and yet not herewith satisfied, like some reasonable creature, deprived of heavenly grace, and carryed with deadly revenge against such uncleanness, being perswaded that the guilt of such an offence could never receive sufficient expiation by the death of the first deviler, except the beguiled party suffered also some smart of penalty; adjudged himself to death, and no longer worthy to live by natures benefit, which had so violated the womb that first conceived him; and therefore running to and fro, as it were to finde out a hang-man for himself, at last found a steepy rock, from whence he leaped down to end his life; and although he could not prevent his offence, yet he thought it best to cleanse away his mothers

These Camels are kept in herds, and are as swift as Horses, according to the measure of their strength, not only because of their nimbleness, but also because their strides and reach doth gather in more ground: for which cause they are used by the Indians for race, when they go to fetch the gold which is said to be kept by the Formica Lyons, which are not much bigger then Foxes : yet many times do these Lyons overtake the Camels in course, and tear the riders in pieces. They have been also used for battel or war (by the Arabiant in the Persian war :) but their fear is so great of an Horse, that (as Xenophon saith in the institution of Cyrus) when the Armies came to joyn, neither the Camel would approach to the Horse, or the Horse to the Camel; whereupon it is accounted a base and unprofitable thing for a man to nourish Camels for fight; yet the Reritans for the fight of Cyrus in Lydia, ever nourished Camels and Horses together to take away their sear one from another. Therefore they are used for carriage, which they will perform with great facility, being taught by their keepers to kneel and lye down to take up their burthens, which by reason of their height a man cannot lay on them; always provided, that he will never go beyond his ordinary lodging and baiting place, or endure more then his usual burthen; and it hath been feen that one ot thele Baltrian Camels, hath carryed above ten Minars of corn, and above that a bed with five mentherein. They will travel in a day above forty ordinary miles; for as Pliny faith, that there was from Thomna to Gaza, fixty and two lodging places for Camels, which was in length one thou-

adultery with the facrifice of that blood which was first conceived in that wombe which he had

fand five hundred thirty and feven miles. They are also used for the plow in Numidia, and for this cause are yoaked sometimes with Horses, but Heliogabalus like as the Tartarians, yoaked them together not only for private spectacles and plays; but also for drawing of Waggons and Chariots. When they desire to have them free and strong for any labour in the field, or war, they use to geld both the male and the semale, the manner parts within the brim and laps thereof with a hot iron, which being so taken away, they can never more join in copulation; and these are mote patient in labour and thirst, and likewise better endure the extremity of fand in those parts, having this skill, that if the mists of rain or fand. do never so much obscure the way from the rider, yet doth she remember the same without all steg- Plim The urine of this beaft is excellent for the use of Fullers; of the hair called Buber, or Camels Wool. Of the use of

Of the Camel.

whereof is in this fort. The male by taking away his stones, and the semale by searing her privy

is cloth made for Apparel, (called Camelotte, or Camels hair,) and the hair of the Calpian Camels is their natural to foft, that it may be therein compared with the foftest Milesian Wool, whereof their Princes and Parts. Priests make their garments: and it is very probable, that the garments of Saint John Baptist was of Elianus. this kinde. In the City of Calacia, (under the great Cham) and in the province of Egrigaia, is cloth made of the hair of Camels, and white wool (called Zambilotti) shewing most gloriously; but the Baytime.

best of this kinde are in the land of Gog and Magog.

It is forbidden in holy Scripture to eat a Camel, for although it chew the cud, yet is not the hoof The tiefh of a altogether cloven : and besides, the slesh thereof is hard of digestion, and the juyce thereof very Camel not to naught, heating the body above measure; yet many times have men of base condition and mindes be caren. eaten thereof, as in Arabia, and in the Kingdom of Fezzen; and Atheneus affirmeth, that the King Disdorus. of Perfia was wont to have a whole Camel rofted for his own table at his royal feaftings; and Helioga- Lee Afric. balm likewise caused to be prepared for himself the heels of Camels, and the spurs of Cocks and Hens, pulled of alive, and whole Offriches and Camels; faying, (though falfly) that God com- Lampidius. manded the Jews to eat them. Camels milk is wholesome for meat, because it is thinnest of all other, and because thereof it breedeth sewer obstructions, and is good for softning of the belly. For the natural disposition of this beast: it is partly already related, whereby the singular use thereof may be collected: yet there are certain proverbs and stories thereof farther expressing their qualities.

It is diffainful, and a difcontented creature : whereupon it it is faigned of the Poets, that they be- A biffory of fought Iupiter to give them Horns, with which Petition he was fo offended, that he took from them their natural fought Inpiter to give them Horns, with which Petition he was to offended, that he took from them diffpolition, their ears, and therefore in that, those are reproved, which are so far in love with other things Calls to they want, that they deserve to lose the things they have. Likewise the wantonness thereof appeareth by the proverb of a dancing Camel, when one taketh upon him more then his skill will ferve to discharge: yet hath not this beast been free from ignominy; for when the Emperor Inst. nian had found the Treason of Arsace the Armentan, he caused him to ride through the City upon a Calius. Camel, to be shamed for his offence, although in former times it was a kinde of triumph and honor Solimur. to be carryed upon a Camel, led through a City.

In the lake of Asphalites, wherein all things fink that come in it, many Camels and Buls swim through without danger. The Arabian facrifice a Camel to the unknown God, because Camels go Sacrifices of into strange Countries, and likewise facrifice their Virgins before they be marryed, because of the Idolary. chastity of this beast, and the Sagarentes with great observance, keep the combat of Camels, in the Gyraldus. honour of Minerva.

These Beasts are hated of Horses and Lyons, for when Xerxes travailed over the river Chidorus, Elianus. through Paonia and Creftonia; in the night time the Lyons descended into the camp, and touched no creatures therein, except the Camels, whom they destroyed for the most part.

Of the fear and hatred of Camels, whom they destroyed for the most part.

A Camel will live in the foil wherein he is bred, fifty or an hundred years; and if he be translated Herodotus. into any other Nation, he falleth into madness or scabs, or the gowt, and then they live not above thirty years. There is a kinde of grass that groweth by the high ways in the Countrey of Babylon, Porphyrius. The length of the countrey of Babylon, Porphyrius.

There are also medicinal properties in Camels, for by reason he is of a hot and dry temperament : their life, if a man infected with poylon, be put into the warm belly of a Camel newly flain, it loofeneth the Pliny. power of the poylon, and giveth strength to the natural parts of the body. The fat taken out of The medicines the bunch and perfumed, cureth the Hemmorhoides; and the blood of a Camel fryed, is precious in the bodies, against the bloodyflix, or any other looseness of the belly; the brain dryed and drunk with Vine- Pongettue. gar, helpeth the Falling-evill; the gall drunk with Hony, helpeth the Quinzy: and if it be laid to Cardinalis. the eye-brows and forehead, fod in three cups of the best Hony, it cureth the dimness of the eyes, and Avicenna. avoideth the flesh that groweth in them: and if the hairs of a Camels tail be wound together like a string, and tyed to the left arm, (Pliny affirmeth) they will deliver one from a quartan Ague.

The milk of Camels newly delivered of young, helpeth obstructions, and all shortness of breath; and is also good against the Dropsic and hardness of the milt. Also when one hath drunk poyson, this is a good Antidote, and amendeth the temper of the body. The fime of Camels dryed to dust with Oyl, will crifpe and curl the hair, and flay bleeding at the nose; and the same hot, is good

agenit the Gowt.

The urine is most profitable for running fores, there have been which have preserved it five years together, and used against hardness of the belly; washing also therewith fore heads: and it helpeth one to the sense of smelling, if it be held to the nose; likewise against the Dropsie, the Spleen, and the Ring-worm.

Diodorus.

Of the Camel DROMEDARY.

The description of a Droof his name.

Dilymus. Ifidorus. A History.

Ælanus.

Diodorus.

A iCamel is called of the Greciens, Dromes, by reason of the swiftness of his race; and also an Mra-bian Camel, which hath all things common with the former Baltrian Camel, except, first in the shape, for the hath but one bunch on the back, land many Nations, as the Italians, French, Germans, the Etymology and Spaniards, ufe the word Dromedary, only without addition; the Gracians never name it without the addition of a Camel. Therefore this is a kinde of Camel of less stature, but much swifter; for which causeit is derived from running. It cheweth the cud like a Sheep, and the other Camel : the krench King had fent him from the great Turk two of these, white coloured; and I my self have seen one of them, being fifteen cubits high, wanting fome sine inches, and about fix cubits in length, having the upper lip cloven in the middle like a Hare, and two broad nails in his feet, which in the upper part appeared cloven, But underneath they were whole and fleshy without division, and gound in proportion like a pewter dish : It hath also a hard bunch on its brest, whereon it leaned, fitting down and rifing : and also upon either knee one : these are faid to live fifty years; but the Ballrian an hundred : they were used for drawing of Chariots, and great presents for Princes : and when they go to war, every one carryeth two Archers, which fit upon him, back to back, shooting forth their darts, one against the front of the enemy, and the other against the prosecutors and

They are able to go an hundred miles in a day, bearing a burthen of fifteen hundred weight; yea fometimes two thousand, bending upon his knee to take up his load and rider, which received, he rifeth up again with great patience, being obedient and ruleable; yet kicking when he is angry, which is very seldom: and therefore Terence did fignificantly describe a good servant by the name of Dromo, derived from Dromas, a runner : And for the conclusion of the History of these two sorts of Camels, will here adde the relation and memorable observations of Iobannes Leo Afer, in his ninth Book of

the description of Africk, in his own words following.

South n but .:

A relation of Job. Leo Afer, out of his ninth Book, of the description of Africk.

A Camel is a gentle and pleasant tame beast, whereof there are plenty in Africa, especially in the Deterts of Lybia, Numidia, and Barbary : by which African estimate their own wealth; for when they contend who is the richest Prince or Noble-man among them, they say he was worth, or hath to many shouland Camels, and not fo many thouland Crowns. And he that hath Camels, liveth among them like a Gentleman, because he can at his pleasure travel into the De-" ferts, and fetch Merchandize from far, which the greatest Prince or Noble-man cannot without them, by reason of the drought of those places. And of these kinds of creatuses, there are to be seen in all parts of the world, both in Asia, Africk, and Europe; for the Tart. rians. Cording of the Dalemians, and Turconians use them in Asia; and the Turkish Princes convey all their carriages " upon them in Europe : Likewise do all the Arabians in Africk. But it must be observed, that the " African Camels are much more worth then the Asian, for they can endure travel for forty and " filty days together, with very little or no meat, except fometimes in the evening, when they are " unloaded, they go to the hedges, thorns, and other green places, and there eat any small thing " they meet withall, as leaves and fuch like, wherewith they remain fatisfied, whereas the " Aftant can perform no fuch journey, except they be kept fat and well fed : and it hath been " proved by good experience, that one of the Africans hath travelled fifty days without " meat, first wearing away the fat in their bunchy back, then about their skin and breat, " and lastly, about their ribs, never giving over till it was not able to bear one hundred But the Asians must alway carry provender to sustain their beasts, never travelling but they " weight.

" have one Camel loaden with meat, for the other loaden with carriage, and fo indure a double 66 charge : and when the Africans go to any Marts or Fairs being to return empty and unloaded, they take no thought for their Camels food. Of these Camels there be three kindes, one of them cal-66 led Huginu, (being broad and tall) and therefore apt to bear packs and burthers, but not before " they be four year old, and after their ordinary load is one thousand weight of Italian measure, " being taught by the jerking of a small rod, on the brest or knees, to lie down for their burthens, 44 and alterward to rife up again. And the Africans do use to geld their Camels, reserving but one

Another kinde of their Camels they call Becbetos, such as have two bunches, one for burthen, male for the covening of ten females. " and the other for a man to ride upon: and the third fort are called Raguabil, which are of lower " stature and leaner bodies then the residue, unfit for burden and therefore are used for the saddle, by all the Noblemen of Numidia, Arabia, and Lybia: being able to run an hundred miles a day nd e performing long journeys with little or no provender : for the King of Tombuto being to fend to Lara, or Schneffa. (which is diftant from his Court nine hundred files) his meffenger performeth

" it upon one of these Ragnabils, within the space of eight days. "In the beginning of the Spring they are most frolick and unruly, because then they incline to ge-" neration: at which time, they rage and fall upon many that come unto them, and especially those from whom they have received blows, temembring at that time, and requiting their former injuer from whom they have received blows remembring at that time and to they lift them up into their, upon fuch as wronged them, whom if they can take in their mouth, they lift them up into the

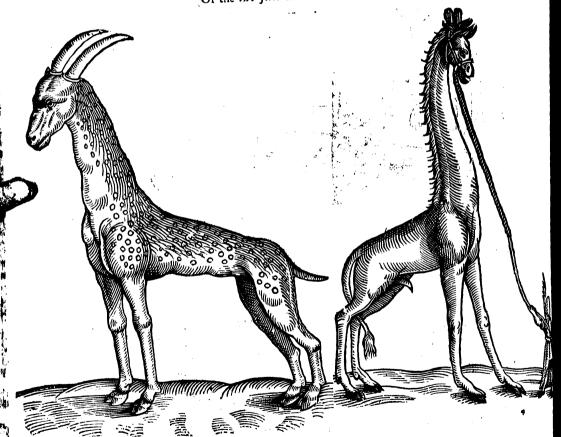

the air, and then cast them down again under their feet, and tread upon them, in which distem-" pered venereous fury, they remain forty days.

They can eafily endure thirst, five, nine, or fifteen days in necessity; neither will their keeper "give them drink at three days thirst, for fear to harm them. As these Camels are pleasant and profitable; so also they feem to participate with the nature of manifor they being wearyed, no spur or froke can make them haften to their journey end therefore in Ethiopia and Barbary, they fing " certain fongs behinde the Beaft, which so revive their decayed spirits, that they set forward so fait, forgetting their tyred limbs, to their journeys end, that their keepers can hardly follow.

Thave also seen in Aleair, a Camel, that could dance at the found of a Timbrel, being thereunto "taught when he was young by this means; first, he was brought into a room like a stable, the pavement whereof was made hot by a fire underneath it, and without doors food a Musician playpavement whereof was made not by a fire under heart under his feet, lifted up ing on his Timbrel; the Carnel, not for love of the musick, but for the heat under his feet, lifted up first one foot, and then another, as they do which dance, and so the heat increasing, he likewise "did lift up faster, whereunto he was accustomed for the space of ten months; at every time one hour " and a half, during which time the Timbrel still founded; so that at last, use framed Nature to such a "frain, that hearing a Timbrel, he instantly remembred the fire that was wont to punish his train, that hearing a limiter, he initially standard in publick spectacle; to the admiration seet; and so presently would leap to and fro like a dancer in publick spectacle; to the admiration " of all beholders.

Of the two forts of CAMELOPARDALS.

Of the name. This Beaft is called in Hebrew, Zamer ; Deut. 14. which the Arabians translate Saraphab , and sometime Gyrapha, Gyraffa, and Zirafa; the Chaldeans, Deba, and Ana; the Persians, Seraphab; and the Septuagint Grecians, Camelopardalis, which word is also retained by the Latins, whereunto

Albertus addeth Oraflus, and Oraflus. The Ethiopians call it Nabin, from whence cometh Anabula, and Juli. Capital-Paulanias translateth it an Indian Sheep, fo indeed Anabula may be English d a wilde Sheep.

There were ten of these seen at Rome, in the daies of Grdianus the Emperor, and before that time, A history, Cefar being Dictator. And fuch an one was fent by the Sultan of Babylon to the Emperor Frederick, Indorus. for that it is without question that there is such a beast, which is engendred of a Camel and a semale Libard, or Panther, as Horace faith ;

Diverlum confula genus Panthera Camelo.

But the same which the Latins call Panthers the Gracians call Pardalis. The head thereof is like to a The generati-Camels, the neck to a Horses, the body to a Harts; and his cloven hoof is the same with a Camels; on and exterithe colour of this Beaft is for the most part red and white, mixed together, therefore very beautifull to behold, by reason of the variable and interchangeable skin, being full of spots: but yet they are not alway of one colour. He hath two little horns growing on his head of the colour of Lea Alvic. iron, his eyes rowling and frowing, his mouth but small like a Harts, his tongue is neer three foot Ofpionus. long, and with that he will so speedily gather in his meat, that the eyes of a man will fail to behold Helicherus. his hast, and his neck diversly coloured, is fifteen foot long, which he holderh up higher then a Camels, and far above the proportion of his other parts. His forefeet are much longer then his hinder. Their manner and therefore his back declineth towards his buttocks, which are very like an Affes. The pace of this of going. beaft differeth from all other in the world, for he doth not move his right and left foot one after another, but both together, and so likewise the other, whereby his whole body is removed at every step or strain.

These beasts are plentiful in Ethiopia, India, and the Georgian region, which was once called Media. The Countries Likewise in the Province of Abasia in India, it is called Surnosa, and in Abasia, Surnappa, and the latter breeding these picture before fet down, was truly taken by Melchior Luorigus at Conftantinople, in the year of falvation beafts. 1559. by the fight of one of these, sent to the great Turke for a present: which picture and description, was afterward fent into Germany, and was imprinted at Norimberge. It is a folitary beaft, and Their natural keepeth altogether in woods, if it be not taken when it is young : they are very tractable and cafe disposition as to be handled, fo that a child may lead them with a small line or cord about their head, and when any come to fee them, they willingly and of their own accord turn themselves round as it were of purpose to shew their soft hairs, and beautiful colour, being as it were proud to ravish the eyes of the beholders.

The skin is of great price and estimation among Merchants and Princes, and it is said that under. The skin. neath his belly, the colourable spots are wrought in fashion of a fishers net, and the whole body so admirably intercoloured with variety, that it is in vain for the wit or art of man, once to go about to endevour the emulous imitation thereof. The tail of the beaft is like the tail of an Asie, and I cannot judge that it is either fwift for pace or strong for labour, and therefore well tearmed a wilde Sheep, because the flesh hereof is good for meat, and was allowed to the Jews by God himself for a clean

Of the ALLOCA MELUS.

Of the Cat.

Catiger affirmeth, that in the land of the Giants, chere is a beaft which hath the head, neck, and Dears of a Mule, but the body of a Camel; wherefore it is probable, that it is conceived by a Camel and a Mule : the picture whereof is before fet down, as it was taken from the fight of the beaft, and imprinted with a description at Middleborough in the year 1558, which was never before feen in Germany, nor yet spoken of by Pliny.

They said that it was an Indian Sheep, out of the region of Peru, and so was brought to Antwerp, fix thousand miles distant from that nation. It was about two yards high, and five foot in length, the neck was as white as any Swan: the colour of his other parts was yellowish, and his feet like an Offrige-Camels and although it were a male, yet it did render his urine backward : it was afterward given to the Emperor by Theodoric News, a Citizen of the neather Colen. It was a most gentle ward Bivel to the Camilopardal, not past four year old: wherefore I thought good to expresse it and meet beautiful of the similitude it hath with the manners of the former beast, although it in this place, becouse of the similitude it hath with the manners of the former beast, although it want horns and differ in some other members.

Of another Beaft called CAMPE.

Diedorus Siculus maketh relation, that when Dienysius with his Army travelled through the defert and dry places, annoyed with divers wilde heafts, he came to Zambirra's City of Lybia, where he slew a beast bred in those parts called Campe, which had before that time destroyed many men, which action did purchase him among the inhabitantes a never dying same, and that therefore there might remain a continual remembrance to all posterity of that fact; he raised up there a monument of the flain beaft to ftand for evermore.

Of the CAT.

Of the name.

and etymology

of a Cat.

Car is a familiar and well known beaft, called of the Hebrews, Catull, and Schanar, and Schunara; A Cat is a familiar and well known beau, Called of the Saracens, Kalt; the Italians, Gatta, and of the Grecians, Aeluros, and Katter, and Katter; of the Saracens, Kalt; the Italians, Gatta, and Gotto; the Spaniards, Gata, and Gato; the French, Chat; the Germans, Katz; the Illyrians, Kozka, and Furioz, (which is nied for a Cat by Albertus Magnus) and I conjecture, to be either the Persian or the Arabian word. The Latins call it Feles, and fometimes Murilegus, and Musio, because it catcheth Mile, but most commonly Catus, which is derived of Gautus, fignifying wary. Owid faith, that when the Giants warred with the Gods, the Gods put upon them the shapes of Beasts, and the sister of Apollo lay for a spy in the likeness of a Cat, for a Cat is a watchful and wary beatt feldom overtaken, and most attendant to her sport and prey: according to that observation of Mantuan;

Non secus ac muricatus, ille invadere pernam, Nititur, bic rimas oculis observat acutis.

Their use 2mong the Prypians.

A Hiftory.

Calius.

And for this cause did the Egyptians place them for hallowed beasts, and kept them in their Temples, although they alleadged the use of their skins for the cover of Shields, which was but an unreasonable shift, for the softness of a Cats skin is not the to defend or bear a blow: It is known also, that it was capital among them, to kill an Ibis, art Aspe, a Crocodile, a Dog, or a Cat; in so much as, that in the dayes of King Ptolemie, when a peace was lately made betwixt the Romans and the Egyptian; and the Roman Ambassadors remaining still in Egypt, it fortuned that a Roman unawares killed a Cat, which being by the multitude of the Egyptians espied, they presently sell upon the Ambassadors house, to rase down the same, except the offender might be delivered unto them to suffer death : so that neither the honour of the Roman name, hor the necessity of peace, could have restrained them from that fury, had not the King himself and his greatest Lords come in person, not so much to deliver the Roman Cat-murderer, asto safegard him from the peoples violence. And not only the Egyptims were fools in this kind, but the Arabims alfo, who worshipped a Cat for a God; and when the Cat dyed, they mourned as much for her, as for the father of the family, shaving the hair from their eye-lids, and carrying the beast to the Temple, where the Priests salted it and gave it a holy funeral in Bubassum, (which was a burying place for Cats neer the Altar) wherein may appear to all men, in what miserable blindness the wifest men of the world, (forfaking, or deprived of the true knowledge of God) are more then captivated, to that their wretched estate cannot better be expressed then by the words of St. Paul, When they thought to be wife, they

Once Cats were all wild, but afterward they retired to houses, wherefore there are plenty of them in all Countries : Martial in an Epigram, celebrated a Pannontan Cat with this diffichon ; of Cars and

their countries. I annonicas nobis nunquam dedit Umbria Cattas, Mavuli bac domina mittere dona pudens.

The Spanish black Cats are of most price among the Germans, because they are nimblest, and have The best Cass. the foftell hair fit for garment.

A Cat is in all parts like a Lioness, except in her sharp ears, wherefore the Poets seign, that when Venus had turned a Cat into a beautiful woman, (calling her Actures) who forgetting her good turn, contended with the Goddesse for beauty; in indignation whereof, she returned her to her first nature, only making her outward shape to resemble a Lion; which is not altogetheridle, but may admonish the wifest, that fair and foul, men and beatts, hold nothing by their own worth and benefit, but by the virtue of their Creator : Wherefore if at any time they rife against their maker, let them think to lose their honour and dignity in their best part, and to return to baseness and inglorious contempt; out of which they were first taken, and howsoever their outward shape and condition please them, yet at the best are but beasts that perish, for the Lions fuffer hur ger.

Cats are of divers colours, S. tomiut. but for the most part grifeld, Of the feveral like to congealed ife, which parts, cometh from the condition of her meat: her head is like unto the head of a Lion. except in her tharp ears: her flesh is soft and smooth: her eyes glifter above measure.efpecially when a man cometh to fee them on the suddain, and in the night they can hardly be endured, for their flaming aspect. Wherefore Democritus describing the Perfian Smaragde faith that it is not transparent, but filleth the eye with pleasant brightnels, fuch as is in the eves of Panthers and Cats, for they cast forth beams in the shadow and darkness, but in funthine they have no fuch clearnels, and thereof Alexander Aphrodise giveth this reafon, both for the fight of Cats and Bats, that they have by nature a most sharpe spiric

of feeing. Albertus compareth their eve-fight to Carbuncles in dark places, because in the night they can fee perfectly to kill Rats and Mice: the root of the herb Valerian (commonly called Phu) is very like to the eve of a Cat. and wherefoever it groweth, if Cats come thereunto, they instantly dig it up, for the love thereof, as I my felf have feen in mine own Garden and not once only, but often; even then when as I had

caused it to be hedged or compassed round about with thornes, for it smelleth marvellous like to a Car.

The Egyptians have observed in the eyes of a Cat, the encrease of the Moon light, for with the Moon they skin more fully at the full, and more dimly in the change and wane, and the male Cat dothalfo vary his eyes with the Sun; for when the Sun arifeth, the apple of his eye Gillius. is long; toward noon it is round, and at the evening it cannot be feen at all, but the whole eye

The tongue of a Cat is very attractive and forcible like a file, attenuating by licking the flesh of a man, for which cause, when the is come neer to the bloud, so that her own spittle be mingled therewith, she falleth mad. Her teeth are like a saw, and if the long hairs growing about Pliny. her mouth (which some call Granons) be cut away, she loseth her courage. Her nails sheathed like

food of Cars.

Of the Cat.

The game and

This beast is wonderful nimble, setting upon her prey like a Lion, by leaping, and therefore the hunteth both Rats, all kind of Mice, and Birds, eating not only them, but also fifth, wherewithall the is best pleased. Having taken a Mouse, the first playeth with it, and then devoureth it, but her watchful eye is most strange, to see with what pace and soft steps, she taketh birds and slies; and her nature is to hide her own dung or excrement, for the knoweth that the favour and prefence thereof, will drive away her sport, the little Mouse being able by that stool, to smell the presence

Pliny. A lectet.

Of their love

and hatred.

To keep Cats from hunting of Hens, they use to tie a little wilde Rew under their wings, and so likewise from Dove-coates, if they set it in the windowes, they dare not approach unto it for some fecret in nature. Some have faid that Cats will fight with Serpents, and Toads, and kill them and perceiving that the is hurt by them; the prefently drinketh water and is cured: but I cannot confent unto this opinion: it being true of the Weafell as shall be afterward declared. Pontzense sheweth by experience that Cats and Serpents love one another, for there was (faith he) in a certain Monastery, a Cat nourished by the Monkes, and suddenly the most parts of the Monks which used to play with the Cat fell fick: whereof the Physitians could find no cause, but some secret poison, and all of them were affured that they never tafted any : at the last a poor labouring man came unto them, affirming that he saw the Abbey-cat playing with a Serpent, which the Physicians understanding, presently conceived that the Serpent had emptied some of her poison upon the Cat, which brought the same to the Monks, and they by stroking and handling the Cat, were insected therewith, and whereas there remained one difficulty, namely, how it came to passe, the Cat her self was not poisoned thereby, it was resolved, that for as much as the Serpents poison came from him but in play and fport, and not in malice and wrath, that therefore the venom thereof being lost in play, neither harmed the Cat at all, nor much endangered the Monks: and the very like is observed of Mice that will play with Serpents.

Ælianus.

Cats will also hunt Apes, and follow them to the woods, for in Egypt certain Cats set upon an Ape, who presently took himself to his heels, and climed into a tree, after whom the Cats sollowed with the same celerity & agility: (for they can fasten their clawes to the barke and run up very speedily.) the Ape feeing himfelf overmatched with number of his adversaries, leaped from branch to branch, and at last took hold of the top of a bough, whereupon he did hang so ingeniously, that the Cats durst not approach unto him for fear of falling, and so departed.

The love of

Cats keep

A conjectural

Their copula-

Aristotle.

Ælianus.

The nature of this beaft is, to love the place of her breeding, neither will she tarry in any strange place, although carryed far, being never willing to forfake the house, for the love of any man, and most contrary to the nature of a Dog, who will travaile abroad with his master; and although their masters forsake their houses, yet will not these beasts bear them company, and being carryed forth in close baskets or facks, they will yet return again or lose themselves. A Cat is much delighted to play with her image in a glasse, and if at any time she behold it in water, presently she leapeth down into the water which naturally the doth abhor, but if the be not quickly pulled forth and dryed the dyeth thereof, because the is impatient of all wet. Those which will keep their Cats within doors, and from hunting birds abroad, must cut off their ears, for they cannot endure to A way to make have drops of rain diftill into them, and therefore keep themselves in harbour. Nothing is more contrary to the nature of a Cat, then is wet and water, and for this cause came the proverb that they love not to wet their feet. It is a neat and cleanly creature, oftentimes licking her own body to keep it neat and fair, having naturally a flexible back for this purpose, and washing her face with her forefeet : but some observe, that if she put her feet beyond the crown of her head, that it is a presage of rain, and if the back of a Cat be thin the beast is of no courage or valew. They love fire and warm places, whereby it often falleth out that they often burn their Coats. They defire to lie fost, and in the time of their lust (commonly called cat-wralling) they are wilde and fierce, especially the males, who at that time (except they be gelded) will not keep the house : at which time they have a peculiar direful voice. The manner of their copulation is this, the female lyeth down, and the male standeth, and their females are above measure desirous of procreation, for which cause they provoke the male, and if he yeeld not to their lust, they beat and claw him, but it is only for love of young, and not for luft: the male is most libidinous, and therefore feeing the female will never more engender with him during the time her young ones fuck, he killeth and eateth them if he meet with them, (to provoke the female to copulation with him again, for when the is deprived of her young, the feeketh out the male of her own accord) for which the female most warily keepeth them from his fight. During the time of copulation, the female continually cryeth, whereof the Writers give a double cause; one, because she is pinched with the talons or clawes of the male in the time of his luftful rage; and the other, because his feed is so fiery hot, that it almost burneth the semales place of conception. When they have littered, or as we commonly say kittened, they rage against Dogs, and will suffer none to come neer their young const. The hear to be a sea against Dogs, and will suffer none to come neer their young Choise of yong ones. The best to keep are such as are littered in March; they go with young fifty daies, and the females live not above fix or feven years, the males live longer, especially if they be gelt or libbed : the reason of their short life is their ravening of meat which corrupteth within

them.

They cannot abide the favour of ointments, but fall mad thereby; they are sometimes insected Gillius. with the falling evill, but are cured with Gobium. It is needless to spend any time about her loving Caling. nature to man, how the flattereth by rubbing her skin against ones Legs, how she whurleth with Alu. Mundel. her voice, having as many tunes as turnes, for she hath one voice to begand to complain another Their diseases. to testifie her delight and pleasure, another among her own kind by flattering, by hissing, by puffing, by spitting, in so much as some have thought that they have a peculiar intelligible language among themselves. Therefore how she beggeth, playeth, leapeth, looketh, catcheth, tosseth with her foot, rifeth up to strings held over her head, sometimes creeping, sometimes lying on the hack playing with one foot, sometime on the belly, snatching now with mouth, and anon with foot, apprehending greedily anything fave the hand of a man, with divers fuch gestical actions, it is needless to stand upon; in so much as Calius was wont to say, that being free from his Studies and more urgent weighty affaires, he was not ashamed to play and sport himself with his Cat, and verily it may well be called an idle mans pastime. As this beast hath been familiarly nourithed of many, fo have they payed dear for their love, being requited with the loffe of their health. and sometime of their life for their friendship; and worthily, because they which love any beast in a high measure, have so much the lesse charity unto man.

Therefore it must be considered what harmes and perils come unto men by this beast. It is Thehurt that most certain, that the breath and savour of Cats consume the radical humour and destoy the cometh by the lungs, and therefore they which keep their Cats with them in their beds have the air corrupted, and familiarity of fall into severall Hecticks and Consumptions. There was a certain company of Munks much given a Car. to nourish and play with Cats, whereby they were so insected, that within a short space none of them were able either to fay, read, pray, or fing, in all the Monastery; and therefore also they are dangerous in the time of Pestilence, for they are not only apt to bring home venemous insection, but to poison a man with very looking upon him; wherefore there is in some mena natural dislike and abhorring of Cats, their natures being fo composed, that not only when they see them, but being neer them and unseen, and hid of purpose, they fall into passions, freettings, sweating, pulling off their hats, and trembling fearfully, as I have known many in Germany; the reason whereof is, because the constellation which threatneth their bodies which is peculiar to every man, worketh by the presence and offence of these creatures: and therefore they have cryed out to take away

the Cats.

The like may be faid of the flesh of Cats, which can feldom be free from poilon, by reason of Ofa Causting their daily food, eating Rats and Mice, Wrens and other birds which feed on poison, and above all the brain of a Cat is most venomous, for it being above measure dry, stoppeth the animal spirits, that they cannot passe into the ventricle, by reason whereof memory faileth, and the infected per- Ponzettus. fon falleth into a Phrenzie. The cure whereof may be this, take of the water of fweet Marjoram Alexander, with Terra lemnia the weight of a groat mingled together, and drink it twice in a month, putting good ftore of spices into all your meat to recreate the spirits withall, let him drink pure Wine, wherein put the feed of Diamoschu. But a Cat doth as much harm with her venemous teeth, therefore to cure her biting, they prescribe a good diet, sometime taking Hony, Turpentine, and Oil of Roses melt together and laid to the wound with Century : fometime they wash the wound with the urine of a man, and lay to it the brains of some other beat and pure Wine mingled both

The hair also of a Cat being eaten unawares, stoppeth the Artery and canfeth Suffocation: and Malbaolus; I have heard that when a childe hath gotten the hair of a Cat into his mouth, it had for cloven and thuck to the place that it could not be gotten off again, and hath in that place bried either the wens or the Kings evill. To conclude this point, it appeareth that this is a dangerous beaft, and that therefore as for necessity we are constrained to nourish them for the suppressing of small vermine's fo with a wary and different eye we must avoid their harms making more account of their use then of their persons.

In Spain and Gallia Narbon, they eat Care, but first of all take away their head and tail, and hang the prepared flesh a night or two in the open cold sir, to exhale the lavour and poison of it, finding the flesh thereof to be almost as sweet as a Cony. It must needs be an unclean and timpute beast that liveth only upon vermin and by ravening, for it is commonly fail of a man when he neeferful that he hath eaten with Cats: likewife the familians of Witches do most ordinarily appear in the shape of Cats, which is an argument that this beaft is dangerous to foul and body. It it faid that if bread be Perottute made wherein the dung of Cats is mixed, it will drive away Rats and Mice. But ove conclude the Rocy of this beast with the medicinal observations, and tarry no longer in the breath of such a creature compounded of good and evill. It is reported that the flesh of Cats salted and fivectned bath power in it to draw wens from the body, and being warmed to cure the Hemorrhoids and pains in the reins and back, according to the Verse of Ursinus. "

take two leaves of an Oke wet in cold water and bind them to the eye, and fo shall all pain flie away, and blindness depart although it hath oppressed thee a whole year: and this medicine is approved by The liver of a Cat dryed and heat to powder is good against the stone : the dung of a female Cat with the claw of an Oul hanged about the neck of a man that hath had feven fits of a Quartain Ague, cureth the same: a neeling powder made of the gall of a black Cat; and the weight of a groat therecuretn the lame: a neering powder inade or the gall of a Diack Cat, and the weight of a groat there of taken and mingled with four crowns weight of Zambach, helpeth the convultion; and wrynes of the mouth: and if the gall of a Cat with the black dung of the same Cat, be burned in persume under a woman travelling with a dead childe, it will cause it presently to come forth: and Pliny saith that if a pin, or thorn, or fish bone, stick in ones mouth, let him rub the outside against it with a little Cats dung, and it will eafily come forth. Given to a woman suffering the flux, with a little Rozen and Oil of Roses, it stayeth the humour; and for a Web in the eye of an horse, evening and morningblow

Of the Wilde CAT.

A LI Cats at the beginning were wilde, and therefore fome do interpret Iim, Isa. 34. for wilde Cats; and the German call it Bonumuter, that is, a tree-rider, because she hunteth Birds and fowles from tree to tree. The Spaniard calleth it Gato montes, and in some places of France it is called Chalcarets. There are great ftore of them in Helvetia, especially in the Woods, and sometime neer the waters, also being in colour like tame Cats but blacker, such as in England is called a Poolcat. I faw one of them, which was taken in September, and observed, that it was in length from the forehead to the top of the tail, four full spans, and a black line or strake all along the back, and likewise some black upon the legs; betwixt the breast and the neck there was a large white spot, and the colour of her other parts was dusky, red, and yellow, especially about the buttocks; the heels of her feet were black, her tail longer then an ordinary house Cats, having two or three black circles about

it, but toward the top all black.

many Physicians both elder and later.

in the powder of Cats dung, and it shall be cured.

10 They abound in Scandivania, where the Linxes devour them; otherwise they are minted with Dogs, or thot with Guns, and many times the Countreymen feeing one in a tree, doth compasset about with multitude, and when she leapeth down kill her with their cubs; according to the verse of Neversanus:

Felemque minacem Arboris in arunco, longis perfigere tells.

Malabar, these Cats live upon trees, because they are not swift to run, but desp with fach ability; that some have thought they did flie: and verily they do flie, for they have a certain skin, which when they lie in quiet, cleaveth or shrinketh up to their bellies, but being stirred, the same spreadeth from their foreseet to their hinder, like the wing of a Bat; by vertue whereof they stay up the the leves in the air, passing from tree to tree like a fowl; as also doth the Pontique Moufe, as fhall be declared afterward.

The skins of wilde Cats are used for garments, for there is no skin warmer, as by experience appeareth in Scythia and Moscowia, where their women are clothed with the fur of Cats, but especially for buskins and fleeves with their hair turned inward not only against cold but for medicine, against contracted finews, or the Gowt. The fat of this beast is referred by some for heating, softening, and displaying tumours in the flesh: and whatsoever Rasis or any other said of the house Cat before in the medicinal parts, that also appertaineth to this, except as in all other, fo it falleth forth herein, that the virtues of the wilde kind is more effectual then the tames

There are some among the Reditans and Germans, which can the flesh hereof, accounting It delicate, having first cut off the head and tail; they cannot abide the sume of Rew, or of bitten Almonds or there is nothing memorable in the nature of this beaft that I can learn, except that which is related by Aeim, that when men are bitten by Crocodils, this beaft by a natural infinit hating a Crocodil, will come about the wounded persons; otherwise fearing the presence

We may hereunted add the beast which is bred in America, called Heyratt, spoken of by Theuetm: which name fignifieth a beaft of Hony, and the reason is, because it desireth Hony above measure, for it will climb the trees, and coming to the caves of Bees, it will with fuch dexterity take out the Hony with their nails, that it neither hurteth the Bees, or receiveth harm by them. It is about the bigness of a Car, and of a Chesse-nut colour.

Here is among the Scythians and Sarmatians a four-footed wilde beaft called Colus, and fome Sulac The name. in Latin ; of the Polonians, Soihac, of the Mojcovites, Seigek ; of the Tantarians, Akkitk, and Snak ; In Latin, of the Foloniant, Sointe, of the Mojesville, Stight, her thirst by that Cistern in her head.

They are most plentiful to be found in Tartaria; in Pombs, where are so many plains, that a Of the Countries of their man can see nothing but heaven and earth; likewise they are found in Mostavia, in Podocia, and a tries of their man can see nothing but heaven and earth; likewise they are found in Mostavia, in Podocia, and a breed, bout the River Nepius, and Borishmes: they can never be taken but by wearisomeness: wherefore Of their hunif men follow them with Pipes and Fimbrels, playing upon them, they so weary themselves with ting and ta-leaping and running to and fro, being compassed in by multitudes of men, that they fall down for king-weakness, and so are taken. They live in flocks together, sometimes five hundred; and after Faster in the Spring, two hundred in a troope: having a Snout like a Hugs, they endure much hunger, but no cold.

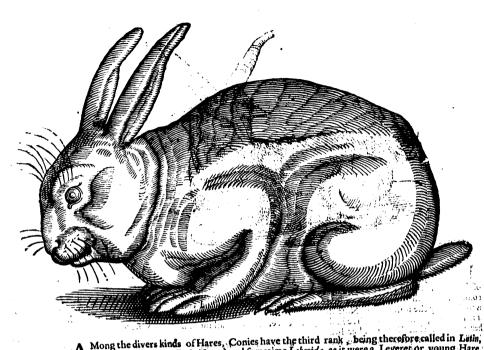

In March they dig up with their Horns a certain root, whereof they eat, and prefently, their luft of their profor generation encreaseth unto rage; in so much that for fatisfying thereof they continue in that escation, act both male and female, until they lose all strength of body, lying half dead on the earth by the space of 24 hours, not able to go or stand : during which time they are often taken alive, but when they come again to themsolves, they rather die then endure to be tamed.

The fiest of them is very sweet and wholesome; they conceive and bring forth for the most part twins, or two at a time; their greatest enemy is a Wolf (for in the Winter and snow they hunt and kill them.) Their horn are about four palms in length, growing upright or bending very little and very sharp, wherewithal they can pierce the belly of a Horse or other beast that standeth over them: at the root they are about fix inches compais, and fo growing leffe and leffe to the top; one of them weigheth about nine ounces; the blade toward the point is transparent, being held against the light or sun, because it is white and thin, but the neather part is duskie and thicker, and therefore it is not penetrable by the eye of man. There are about 14 circles like rings compasfing about the horn, one above another, but the uppermost is not perfect. This horn is of great price, being a present for any Noble man, for in Turket they are fold for fix Cracmian shillings; yet I know no other use of them, but either to make hafts for knives, or else horns for Spectacies.

This beaft liveth altogether in the plains except in frow, and then he runneth into the Woods ? where he may be taken more easily, and killed with the stroke of a Staffe. When the Tartarians know Mat. Michon in what plains they lie, their King cometh and with a multitude of men compasseth them and wearyeth them by musick as aforesaid. All this was related to me by one that had killed of them above two hundred with his own hand (faith that right honorable and most learned Gentleman Johannes Bonarus, Baoron of Balfzei a Palonian.

Pliny.

Varro.

A Lepujculi, (as it were little Hares) and sometime Leberide, as it were a Leveret or young Hare, as well as Cuniculus: whereof the reason is, that it maketh holes in the earth, for Cuniculus was a Latin word for a hole or cave in the earth, before it was taken for a Cony. Scapban in the fingular: and Schephanim, in the plural, Levit, 11. and Pfal. 104. is taken in Hebrem for a Cony or Conies. and not for a Hedge hog, as the Septuagint translate, or for a Parcufine, although they live also in Caves and fecret places of the earth; and therefore Choerogrillus, or Choerogrillium, or Choerogrillium, cannot fignifie a Cony: as the Septuagint translate Scaphan, but a Hedge-hog, as the word derived from the face of a Hog doth most evidently declare, which can by no means agree with a Cony. In the 14.of Deut.the word Scapban is joyned with a Hare, because it is a beast neer of kind unto it, for it The crymology is evident, that both of them chew the cud, howfoever a Cony hath not a simple cloven foot into two parts. A Convalfo is called Adapes, because of the roughness of his feet; The Chalde calleth it Thapfa; the Arabians, Vebar; the Persians, Beganzegab; and the Arabians, following sometime the Greek, call it Alraneb, that is, Hares. The Grecians call it vulgarly Skele and Dafipos, Counicles, Scunan, and Lagis, Georychios a Have digging, living in the earth. The Italians call it Coniglisthe French, Counin; the Spaniards, Coneio; the Germans, Kinnigle, or Kunel, and fometime Kunlein; the Illyrians, Kralik or Kroliik

There are few Countries wherein Conies do not breed, but the most plenty of all is in England, they are also in an Island where are but few men near unto Dicearcha, or as it is now called Puteoliin lialie. Likewise in all Spain, especially in those parts neer unto Lombardy, whereupon Applus in Varro did write to one of his acquaintance which had tarryed long in Spain, that he thought he was there following or hunting of Conies, because as their multitude is great, so it would aske long time to take them. Among the Baleares are also great store of Conies, and once they so abounded there, that the people were constrained to entreat at the hands of Augustus, a military company of Pioners to destroy them; and when Camillu was besieging the City Veii in Italy, he learned of the Conies, which had undermined a whole City in Spalm, likewife to take and overthrow that City by. their example of undermining, whereupon Martial faid:

Monftravit tacltas bostibus ille vias.

Vegetive faith, that the proverb Cunicules agere took his beginning, when one by fecret underminings, and not by open violence overthroweth a Town or Nation. There are also, faith Of the Conv.

Albertin, great store of wilde Conies in Bobemia, so like a Hare as one beast may be like another, fave only they feem stronger, and are shorter and lesser, which thing caused Baptifia Fiera to write thus:

> Credideram leporem , sic forma similisma fallit, Ambo Superfætant, dente vel aure pares.

Pet. Mart)r likewise affirmeth in his Ocean Decades, that in Curiana a region of the new found world. are Conies for colour, quantity, and hair like a Hares, which the inhabitants call Vitias, and there are two little Islands called Cunicularia, which feem to be denominated of Conics, standing betwixt Corsica and Sardinia. For their several parts, they are most like unto a Hare, except in their head Their parts and tail which is shorter, and their colour which is alway brighter, and lesse brown and sandy : or and members. else sometimes Conies are white, black, grifeld, tauny, blewish, yellow spotted, ash-coloured and fuch like. And Alyfius faith, that in some places, they are also green, and their skins are of great Apricola. use through the world, especially in all the North and East for garments, facings, and linings. The Alland. gray and yellowish are the worst, but the white and black are more pretious, especially of the Engthe stars, and in their use the Buck are most discussions. fig. if the black be afperfed with some white or filver hairs: and in their use the Bucks are most durable, yet heavier and harsher. The belly is most fost, gentle, and easie, and therefore more set by, although of leffe continuance. Their flesh is very white and sweet, especially of the young ones, The nic of being about fourteen or twenty dayes old, and some have devised a cruel delicate meat, which is their flesh. to cut the young ones out of the dams belly, and so to dresse and eat them, but I trust there is no Pliny. man among Christians so inhumanely gluttonous, as once to devise or approve the sweetness of so foul a dish: but the tame ones are not so good, for in Spain they will not eat of a tame Cony, because every creature doth partake in tast of the air wherein he liveth, and therefore tame Conies which are kept in a close and unsweet air, by reason of their own excrements, cannot tall so well, or be so wholesome as those which run wilde in the mountains and fields, free from all insection of evill air.

They love above all places the rocks, and make Dens in the earth, and whereas it is faid, Pfal. 104 The places of that the stony rocks are for the Cony, it is not to be understood as if the feet of the Cony could their abode. pierce into the rock, as into the earth, and that the diggeth her hole therein as in loofer ground; but that finding among the rocks holes already framed to her hand, or elfe fome light earth mingled therewith, the more willingly entreth thereinto, as being more free from rain and floods then in lower and fofter ground; for this cause they love also the hils and lower grounds and woods where are no rocks, as in England which is not a rocky Countrey, but wherefoever she is forced to live, there the diggeth her holes, wherein for the day time the abideth, but morning and evening cometh out from thence, and fitteth at the mouth thereof.

In their copulation they engender like Elephants, Tygres, and Linxes, that is, the male leapeth Their copula. on the back of the female, their privie pares being fo framed to meet one another behind, because tion and prothe females do render their urine backward: their fecrets and the feed of the male are very smal. They creation. begin to breed in some Countries. being but fix moneths old, but in England at a year old, and so con. Tho. Gypson. tinue bearing every moneth, at the least seven times in one year, if they litter in March, but in the Winter they do not engender at all; and therefore the Authors fay of thefe and Hares, that they abound in procreation, by reason whereof, a little store will serve to encrease a great borough. Their young being littered are blind and see not till they be nine dayes old, and their dam hath no suck for them, till she hath been fix or seven hours with the male, at the least for fix hours after the cannot suckle Tho. Gyplon. them, greatly desiring to go to the Buck, and if she be not permitted presently, she is so far displeased that the will not be fo inclined again for 14 daics after.

I have been also credibly informed by one that kept tame Conies, that he had Does which littered three at a time, and within fourteen daies after, they littered four more. Their ordinary number in one litter is five, and sometimes nine, but never above : and I have seen that when a Doe hath had nine in her belly, two or three of them have perished and been oppressed in the womb by suffocation. The males will kill the young ones, if they come at them like as the Bore cats, and therefore the The cruelty of female doth also avoid it carefully, covering the nest or litter with gravell or earth, that so they the males and may not be discovered: there are also some of their females very unnatural, not caring for their young of tome feones, but suffer them to perish, both because they never provide a warm litter or nest for them, as also because they forsake them being littered, or else devour them. For the remedy of this evill, he that loveth to keep them for his profit, must take them before they be delivered, and pull off the hair or flesh underneath their belly, and so put it upon their nest, that when the young one cometh forth, it may not perish for cold, and so the dam will be taught by experience of pain to do the like her self: Thus far Thomas Gypion an English Possiciau. For Conies you may give them Vine-leaves, Fruits, Herbs, Graffe, Bran, Oatmel, Mallows the parings of Their meat Apples; likewise Cabbages, Apples themselves, and Lettuce; and I my self gave to a Cony blew and sood. Wolfe-bane, which she did presently eat without hurt, but Gallingale and blind Nettle they will not eat. In the Winter they will eat Hay, Oats and Chaffe, being given to them thrice a The danger in day: when they eat Greenes they must not drink at all, for if they do, it is hazzard but they their meat and will incur the Dropsie: and at other times they must for the same cause drink but little, and that drink. little must be alway fresh. It is also dangerous to handle their young ones, in the absence of the dam,

Of the Buck and Doe.

A.bertus .

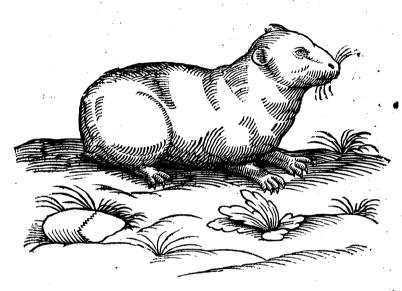

88

for her jealousie will easily perceive it, which causeth her so to disdain them, that either she biteth, forsaketh, or killeth them. Foxes will of their own accord hunt both Hares and Conies, to kill and eat them.

The medicins in a Cony.

Touching their medicinall properties, it is to be observed that the brain of Conies hath been caten for a good Antidote against poison: so also the Hart which is hard to be digested, hath the fame operation that is in treacle. There is also an approved medicine for the Squinancy or Quinsie: take a live Cony, and burn her in an earthen pot to powder, then take a spoonful of that powder in a draught of wine, and drink the most part thereof, and rub your throat with the residue, and it shall cure with speed and ease, as Marcellus saith. The fat is good against the stopping of the bladder and difficulty of urine being anointed at a fire upon the hairy place of the fecrets, as Alex. Beneditius affirins. Other things I omit concerning this beaft, because as it is vulgar, the benefits thereof are commonly known.

Of the Indian little PIG-CONY.

TReceived the picture of this bealt from a certain Noble-man my loving friend in Paris, whose parts Lit is not needfull to describe, seeing the image it self is perspicuous and easie to be observed. The quantity of this bealt doth not exceed the quantity of a vulgar Cony, but rather the body is shorter, yet fuller, as also I observed by those two, which that noble and learned Physician Job. Munzingerus sent me. It hath two little low ears, round and almost pild without hair, having also short legs, five claws upon one foot behind, and fix before; teeth like a mouse, but no tail, and the colour variable. I have seen of them all white, and all yellow, and also different from both those; their voice is much like the voice of a Pig, and they eat all kinds of Herbs, Fruits, Oats, and Bread; and fome give them water to drink, but I have nourished some divers moneths together, and never given them any water, but yet I gave them moist food, as Herbs, Apples, Rapes, and such like, or esset they would incur the Dropfie.

Their flesh is sweet for meat, of a yellowish colour, like the Larde of Swine, and therefore not so white as is our vulgar Cony: they do not dig like other Conies, and for the farther description of their nature, I will express it in the words of Munzingerus aforesaid, for thus he writeth.

"One of the males is sufficient in procreation for seven or nine of the females, and by that means "they are made more fruitful, but if you put them one male to one semale, then will the venereous "falacity of the male procure abortment. It is affirmed that they go threefcore daies with young "before they litter, and I saw of late one of them bear eight at one time in her womb, but "three of them were stifled. They bring forth in the winter, and their whelpes are not blinde as are the Conies. They are no way so harmful as other are, either to bite or dig, but more tractable "in hand; howbeit untamable. If two males be put to one female, they fight fiercely, but they will not

where the Rabbets. As the male is most libidinous, so doth he follow the semale with a little mur-"muring noise, bewraying his appetite for generation, without wrath, and these are also called a Span & Conies, by Peter Martyr, whose nature except in their abundant superfectation cometh " nearer to Hogs then Conies."

Of the Fallow Deer, commonly called a BVCK and a DOE.

Here are some beasts (saith Pliny) which nature hath framed, to have horns grow out of their The name; head like fingers out of the hand, and for that cause they are called Platicerote: such is this vulgar Fallow Deer, being therefore called Cervus Palmatur, that is a palmed Hart, by reason of the similitude the horn hath with the hand and fingers. The Germans call this beaft Dam, and Damlin, and Dambirtz. The Italians Daio and Danio; the French, Dain, and Daim. The Spaniards, Garno, and Gaza. Cortza; the Cretians vulgarly at this day Agrimi, and Platogna; and Ariffolle, Prox; the Litins, Dama, and Damula, because, de manu, that is, it quickly flyeth from the hand of man, having no other defence but her heels; and the female 1 roca, and the Polonians, Lanii. It is a common beaft in most Countries, being as corpulent as a Hart, but in quantity resembleth more a Roe, except in colour.

The males have horns which they lofe yearly, but the females none at all : their colour divers, but Oftheir horns; me ft commonly branded, or fandie on the back, like the furrow of a new plowed field, having a black colour and ostrake down all along the back a tail almost as long as a Calves, their bellies and sides spotted ther paris, with white, which spots they lose in their old age, and the semales do especially vary in colour,

betwist Capran and Capralmy, except in age and quantity. The reason of these two latter names Thereason of is. because of the likenessic hath with a Goat, for Goats, as we shall shew in their description, have the Latine many kindes distinguished from one another in resemblance; but in the horns a Roe doth rather refemble a Hart'; for the female have no horas at all.

Of the Roe-Buck.

91

What Hippela-1 hus is.

being sometimes all white, and therefore like unto Goats, except in their hair which is shorter. The horns of this beaft are carryed about every where to be feen, and therefore this is also likely to be the same beast which Aristotle calleth Hippelaphus as some would have it; yet I rather think that flippelaphus was like to that rare feen horse which Francis the first of that name King of France, had presented unto him for a gift; which was engendred of a Horse and a Hart, and therefore can have

Ariftotle. A feeret in the bloud.

no other name then Hippeluphus, fignifying a Horse-hart.
In the bloud of these kind of Deer are not strings or Fibres, wherefore it doth not congeal as other doth, and this is amigned to be one caufe of their fearful nature; they are also faid to have no gall : in their horns they differ not much from a Harts (except in quantity) and for their other parts they much resemble a Roe-buck: their fleth is good for nourishment, but their bloud doth increase above measure melancholy, which caused mirrato write thus of it, after his discourse of

> Damila udusta magis si matris ab ubere rapta est, Huis prior in noftro forte erit orbe locus;

For the preparation or dreffing of a Buck, we shall say more when we come to the description of a Hart. Albertus translateth the word Agezel a Fallow Deer , and fayeth that the flesh thereof is very hurtful, being cold and dry, and bringeth the Hemorhoides if it be not well feafoned with Pepper, Clinamon, Mustard feed, and Hony, or elfe Garlick, which caused Juvenal to cry out upon the excels of rich men for their feats and delicate fare, being compared with the Ancients which lived upon fruits, in these words following, as they are left in his eleventh Satyre.

> -Olim ex quavis arbore mensa fiebat. At nunc divitibus canandi nulla voluptas: Nil Rhombus, nil dama fapit, putere videntur Uneventum atque rofe .-

Of the medi-

The dung or fime of this beast mingled with oil of Myrtles, increaseth hair, and amendeth those which are corrupt. If the tongue hereof be perfumed under a leech or tick that sticketh in the throat of man or beaft, it causeth the leech to fall off presently; and the powder of fuch a tongue helpeth in a Fistula; some of the late writers do prescribe the fat of a Moul, of a Deer, and of a Bear mingled together to rub the head withall for increase of memory.

Of the second kind of Deer the ROE-BVCKE.

Here is fo great difference among writers about the name of this beaft, that it is a difficult and I hard matter to fet down certainly, in the prime and original tongues, the true and perfect denomination thereof, yet I will endevour to go as neer the mark as can be, by laying to gether all

The feveral names.

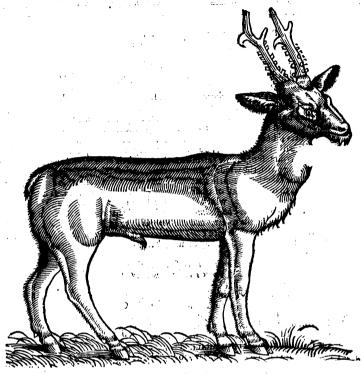

the probabilities that I find in other, or observe by my felf. To begin then with the Hebren as the fountain of all The representation both of male & female, the refidue, they call it Zebi, and the feminine hereof Zebiah, and therefore in Deut. 14. it is permitted to the Jewes to eat; and the plurall of the Masculine is Zebaim, and of the feminine Zebaoth. The Chaldee translation calleth it Thabia, which in the Acts of the Apostles cap. 9. is called Tabitha, and is interpreted Dorcas, a Roe: and sure it is probable that the Hebrews so call a Roe, because of the outward beauty thereof, being full of spots upon a ground or skin of another colour, Thewing with great delight pleasant to the beholder, which caused Martial to write this Distichon :

Delicium parvo donabis dorcada nato, Jagatis folet banc mittere turba togis.

The Persians call this beaft Abu. The Arabians, Thabin, which cometh neer to the Chalde word: the Germans Reeb or Rech, and the male Rech-bocke, and the female Rech-giefe; the Myrians, Serna or Sarna; the French, Chireau, and Chevreulfauuage. The Spaniard, Zorito, or Cabronzillo-montes; the Italians, Capriolo, and Cauriolo for the male, and Capriola, and Cauriola for

The Grecians, Dorcas, as the Septuagint do every where translate, which Strabo termeth corruptly, Zorces, also Dorx, Kemos, Nebrows, and vulgarly as at this day Zarkadi; and Dorcalis, Dorcadion, for a little Roe. The Latins do also use the word Dorcas in common with the Grecians, and beside Caprea and Capreelus for a little Goat, for I do not think that any learned man can find any difference

These beasts are most plentisul in Africk, beyond the Sea of Carthage; but they are of another Avicen. kinde then those which Aristotle denyed to be in Africa: there are also in Egypt, and in Germany, and The Countries in the Helvetian Alpes. Likewise in Catadupa beyond Nilus, in Arabia, in Spain, and in Lycia; and it is breeding Rocs. to be observed, that the Lycian Roes do never go over the Syrian Mountains. Elianus doth deliver these things of the Lybian Roes, which for the colour and parts of their body may seem to belong to all. They (faith he) are of an admirable velocity or fwiftness; but yet inferiour to the Pliny. Lybian Horses, their belly is parted with black strakes and drops, and the other parts of their body Their nature are of a red yellowish colour, they have long feet, but longer ears, their eyes black, and their and several horns are an ornament to their heads.

Their swiftness doth not only appear upon the earth, but also upon the waters; for with their feet they cut the waters when they swim as with Oares; and therefore they love the lakes and strong streams, breaking the floods to come by fresh pasture, as Sweet-rushes and Bull-tushes. Their horns Stumpfius. grow only upon the males, and are fet with fix of feven branches, but the felliates have none, and therefore also they differ in horn from the Fallow-deer : so as they cannot be called Playcerote, for their horns are not palmed like a hand, and although they be branchy, yet are they shorter: they differ not much from the common Deer, but in their horn : and whereas the horns of other beafts Albertus. are hollow toward the root, whereunto entereth a certain bony-substance; the horns of these (as Pliny. also of the yulgar Buck and the Elk) are folid, without any such emptifiels; only they are full of Paulanias. pores. It hath also been believed, that a Roe doth not change her horns, because they are never Bellonius. found; whereas in truth, they fall off yearly as doth a Harts, but they hide them, to the intent Edlebach. they should not be found.

It hath likewise been thought, a Roe was called in Greek, Dorcas; because of the quickness of her of their eyefight; and that the can fee as perfectly in the night as in the day; and not only for her felf, but the fight. learned Physicians have observed a certain viscous humor about her bowels, which being taken Origen suforth, and anointed upon a mans eyes, which are dark, heavy, and neer blinde, it liath, the same per Cant. effect to quicken his eye-fight. It is also faid of them, that they never wink, no not when they Textor.

sleep : Pliny .

Of the Deer-Goat.

Cardinus.

fleep, for which conceit, their blood is prescribed for them that are purblinde. The tail of this bealt is Morter and leffer then isthe fallow-Deera, insomuch as it is doubtful whether it be a tail

The place of sten abode.

or not.

They keep for the most part in the Mountains among the rocks, being very swift, and when they are pursued by Dogs, (Martial faith) they hang upon the rocks by their horns to deceive the Dogs. after a strange manner ready to fall and kill themselves, and yet have no harm, whither the Dogs dare not approach, as appeareth in this Epigram:

> Pendentem summa capream de rupe videbie, Casuram fperes, decipis illa Canes :

with other beafis. Columella.

Yet this doth better agree with the wilde Goat then with the Roe, as shall be manifested in due time. Allanm faith, that the Cynoprosopi, men with Dogs faces, live upon the flesh of Roes and Bugles. Their concord in the Wilderness of Egypt: and also it is usual to conclude them in Parks; for they will agree very naturally with Hares and Swine: wherefore in the Lordship which Varro bought of Pifo, it was seen how at the found of a Trumpet, both Roes and Boars, would come to their usual places for meat: and although they be naturally very wilde, yet will they quickly grow tame and familiar to the hand of man; for Blondus did nourish many at Rome. Being wilde, they are hunted with Dogs, shot with

Of their take-Bellifarius.

Oi man; for biomais and nourin many at Rome. Deing while, they are numed with Dogs, that with Guns, taken in nets; but this falleth out feldom, because they live most among the rocks.

They are most easily taken in the Woods. When they are chased, they desire to run against the wind, because the coldness of the air refresheth them in their course; and therefore they which hunt them place their Dogs with the winde; for fometimes against the hunters mindes, do what they can to the contrary, the taketh her course that way: but Harts when they hear the barkings of Dogs, run with the wind, that the favour of their feet may pass away with them. They are often taken by the counterfeiting of their voyce, which the hunter doth by taking a leaf and hissing upon it.

They are very good meat (as Philostratus affirmeth) and that the Indians dress at their feasts whole

Crefconius. The use of their fleft.

Lyons and Roes for their ghests to eat, and the Sophiss in their banquet, which is described by Atheneus, had Roes therein: and therefore Fiera preserreth it before the fallow-Deer, alleadging the agreement that is betwixt it and the body of man, being dressed according to Art.

Simion Sethi. Avicenna.

Hic optata feret nobis fomenta calore Uda levi, modicis moxque coquenda focis.

Trallianus.

And therefore also affirmeth, that it excelleth all wilde beafts what soever, being not only fit for nourishment, but for the sick; as for them that have the Colick, or the Falling Evill, or the Tympany: and therefore they are best at a year old, or under. Likewise their broth with Pepper, Lovage, feed of Rue, Parsley, Honey, Mustardsecd, and Oyl; and for sauce to the meat, they take Pepper, Rue, Hony melted, and an Onyon: sometime also they seethe the hanches or hips, and make Of the dispo- Pasties of the fides and ribs. It is a beast full of fear, and therefore the flesh thereof although it be fition and pafvery dry, yet will it engender some melancholy; of the fear Martial faith thus:

> Tam diffar aquile columba non est, Ac dercas rivido fugan leoni.

As the Dove from the Eagle, and the Roe from the Lyon, which afterward grew into a Proverb. It bath also some Epithets among Authors, which do confirm their disposition full of fear : as flying, weak, wanton, and fuch like; yet will they fight one with another fo fiercely, that fometime they

Their enemics in nature. Sacrifices of Rocs. Paujanist.

Ælianus.

They fear also the Woolfs, whereof came the proverb, that first of all the Roes will be joyned to the Woolfs, to express an incredible matter. They have also been used for Sacrifice to Diana, for the Saphria women in Patras, did lay upon her great Altar whole Harts, Bores, Roes, and other healts alive: and the Copine did eat the males; but religiously worthipped the females, not daring to eat them, because they believed that Isis loved them dearly.

Of these beasts came the Islands Caprea beyond Surrentum in Campania, where Tiberius had a fa-

mous Castle, and was ennobled by his presence; but since the decay thereof, it is now celebrated for the multitude of quails that are found therein.

The medicines The remedies or medicines coming from this beaft are these: first, the flesh of them eaten, is good aring from a against all pains in the small guts, for it dryeth and stayeth the belly. Pliny affirmeth, that the teeth Roc. Or a Dragon tyed to the sinews of a Hart in a Roes skin, and wore about ones neck maketh a man to be gracious to his Superiors, and them to be favourable and pitiful to him in all his supplications; and if the white flesh in the brest of the Hiena, & seven hairs thereof with the genital of a Hart, be tyed in a piece of Roes skin, and hanged about a Womans neck, it maketh that her womb shall suffer no abortments; but these things are trivial, and not to be believed but at pleasure. I know that the tail of a Dragon tyed to the Nerves of a Hart in a Roes skin, the fuet of a Roe with Goose-grease, the marrow of a Hart, and an Onyon, with Rozen, and running Lime, do wonderfully help the falling Evill, (if it be made into a plaister.)

Sexion faith, that if one give the brain of a Roe drawn or pressed through a ring to an Infant, it

will preserve him for ever from the Falling sickness and apparitions. The liver of a Roe sod in falt water, and the eyes of a purblinde man held over the fume or reek thereof, are cured of their blindenes. and some seethe it in a little cup, and anoint the eyes with the scum or froth coming from it. The same liver being burned to powder, and the dust cast on a man bleeding, stayeth the issue or slux. The gall of this beaft mixed with Wine, and the Meal of Lupines the weight of a groat, and Hony, take away the spots of the face : and the same gall mixed with water, helpeth a Sun-burned-sace, and freekles: The same with Hony Attick, taketh away the dimness from the eyes, and with the juyce of a gourd anointed upon the eye-brows, causeth that where the hair hath been pulled off, that it never shall grow again; and this gall is alway the better for the age thereof, and as Hippocrates did prescribe it must be kept in a silver pipe or box.

For the tingling of the ears, take with this gall the Oyl of Roses, with the juyce of an Onyon beaten together, and inftilled warm into the ears for a present remedy: so also, with the Oyl of Roses only. it helpeth the pain in the teeth; and with the Hony Attick, all swellings or pains in the jaws or chaps, putting thereto Myrrhe, Saffron, and Pepper. The same gall with a little Hogs-bread, and the Sexter. powder of burnt Allum with Anise-seed, made into a Suppository, procureth looseness, if the party have not the Hemerrhoides.

Also the gall taken with Hony, and the juyce of Eglantine, cureth the exulteration of the virile Acting. member by anointing it. The Spleen being drunk, helpeth windiness, and the milt is commended against the Colick and biting of Serpents.

Against the Jaundise they take the dung of a Roe dryed and sifted, and drink it in Wine; the same Calin. also so drunk cureth the Ague, and because the Roe-buck doth wonderfully love his semale, there be some that affirm, that if a woman eat the bladder of a Roe, it will likewise make her husband to love her exceedingly.

Of the first kinde of TRAGELAPHVS which may be called a DEER-GOAT.

trics of this bealt.

Aoricola.

Or their

Arength and colour.

A secret in their passion.

Calius.

Here is another kinde so like a Deer (although conceived of a Buck-Goat and a semale Hart) that I cannot but express the figure and brief narration thereof (as is in the foregoing page.) It is like a Deer (except the beard and briftles growing about the shoulders) and Pliny affirmeth, that they are found about the river Phasis, in Arabia and Arachote, which is a City of India so called of Aracho:us, a river iffuing from Caucasus which the Gracians call Tragelaphos, and the Germans, Ein Brandbirle, and some think this beast to be mentioned by the name of Ako, in Deut. 14. This doubtless is the same beast which Ariffolle calleth Hippelophus, because he attributeth the self same things to it that P. iny ascribeth to this, both for the beard, the briffles, and deep hair about the shoulders, which hangeth down like the mane of a Horse.

The fimilitude both in proportion and quantity holdeth with a Hart in the feet which are cloven and that the lemale thereof doth want horns. The horns of the male are like the horns of a Roe. Therefore howfoever fome have imagined that there is no fuch beaft to be found in the world. they are rather to be pitied then confuted, for it is not to be doubted, that neither the Ancients, nor other, ever have seen all the diversand marvailous shapes of Beasts, which are to be found in many remote and far distant places of the world, especially in Arabia and India, where are many Deserts: and therefore the reason why they affirm this, is, because they never saw any such, and so it is to be understood: for the rare pictures of these beasts called in ancient time Canathra, whereupon children were carried in Pageants and shews, gave them occasion to think, that these were but mens devices, and that God never ordained such creatures. Georgius Fabritius which fent me this picture, doth among other things write unto me very probably, that this kinde is only diffinguished from other in form, name, and strength, and not in kinde: and this being more strange and less known among men, was called by the Gracians, Tragelaphus; being greater then the vulgar Deer, deeper haired, and blacker in colour, and this (faith he) is taken in the Ridings or Forrests of Mifena, bordering upon Bohemia, and the common fort of hunters hold opinion, that by reason it loveth to lie where Coals are made, and in their dust, feeding upon such grass as groweth in those places, that therefore the Germans call it Brandbirze, and so the Foxes which resemble them in colour, are called Brandfusche.

It is for certain that these are greater and stronger then Harts, their upper part of the back being black, and the neather neer the belly nor white (as in a Hart) but rather blackish; but about his genitals very black. I have feen the horns to have feven spires or branches, growing out of one of them, being palmed at the top. These are like to those which are called Achaines in Greek, by reason of their pain and sorrow: and Kummerer in German, because they live in continual sorrow for their young ones, while they are not able to run out of their dens, belike fearing by fome inflind of nature, lest their tender and weak age, should betray them to the Hunters, before they be able

to run away.

The Figure of another TRAGELAPHUS, or DEER-GOAT. expressed by Bellonius.

The descripti. on of his leveral parts.

Here is another Tragelaphus (faith he) whereof I finde no name among the French : it wanteth abeard, and the hair thereof resembleth an Ibex Goat, (whose description followeth afterward among Goats:) the horns hereof are like a Goats, but more crooked and bending, compassing behinde, as a Rams do, which he never loseth. His face, nose, and ears, are like a Sheeps, the skin of his cods being very thick and hanging down. His legs are white like a Sheeps: his tail white; his hairs are fo long about his neck and fromach, that you would think it werebearded. His hair on

the shoulders and breast black, and it hath two great spots on its flancks on either side ; the nostrils

Of the Hart and Hinde.

are black, the beak or face white; fo also is the belly beneath, but the description hereof seemeth rather to agree with a Pygargus, or Musmon, of which I shall speak afterward.

I do rather approve the relation of another of this kinde, which was fent unto me by that most learned English Physician Iohn Cay, which as he writeth unto me, was brought in the year 1561. out of the Countrey of Mauritania, which was cloven-footed, and liveth for the most part in the Mountain parts of that Countrey, being in quantity betwirt a fallow Deer and a Hart, the body more like a Hart, and the fide branded and hanging down: a shorter and thick neck, the colour in the Winter black, and red, set one with another; the beard like a Goat, but more divided and turned backward; his hair very long, even to his knees, a mane full of briffles, firetched out in length through his whole neck, but especially about the top of his shoulder-blades, where it standeth like bunches, being in colour darker then in other parts of the body; and the hinder legs are covered with longer and harder hairs down to the pastern, (as I think) for no other cause but to defend them from harm in his leaving : and the hoof of this beaft was more strange (lot being cloven, as was faid before) the outward hoof in his fore-legs is longer and greater then the firward. and contrary in the hinder: and the inward clove thereof is longer and greater, and the optward A fection the smaller and shorter; so as on either side you would think one of them was the hoof of a Goat, hoof. and the other of a Hart, both of them hollow and without foals; whereof I can give no other reason, then the pleasure of nature, which hath so provided that whereas this bealt liveth autong the rocks, and flarp places of the Mountains, his foot-steps are by his hollow hoofs more firm and stable, because by that means, the stones and sharp-pointed rocks enterth into them to stay them up from fliding: but it is more ftrange in the females hoofs, for they have upon the top and upper face of them three or four pleafant impressions. (as it were of the yed or imbroydered flowers, if a man

mark themicarnestly) which I think are given unto them only for ornament and delight.

Either sex loose every year their hoofs, and Harts do their hours, that nature may shew that re-Either lexicore every year their hoots, and riarts do their hoots, that nature may shew their feet to a Hart, as he doth in their head to a Hoot. His east short like a crief, but his eye, genizal, stones, and tail, like a Harts, though somewhat shorter. The horns like a Rams, crooked and distinguished in the middle, by a black line all their length, which is two kings feet and one singer, and in compass at the root, one foot, one palm and a half, standing one from another, where they differ most not above one foot, three palms, one singer and a half. The run ged circles going about them, toward the top are bunchy, and soward the location or root in the low, with besten not ches or impressions.

They are not as the top distant are point translated above one store and a ratur. The labour

low, with besten notches or impressions.

They are not as the top distant one points in another, above one foot and a palm. The length Their quantities of their face, from the sugar the top of their note, one foot and three fungers: the breadth in the fore-head, white is the model, two palms and one singer.

The height of this beast not above three foot and a half, except where his plant frances, the whole length hereof from the trown of the head to the tail is four feet and a half and the sugar the whole length hereof from the trown of the head to the tail is four feet and a half and the sugar the

It hath only seeth beneath on the neather chap, and those in number my above fix a neather did I observe any defect in them. It cheweth the current clover floored beaft. The majorie are black, from whom the upper lip is divided by a long perpendicular line. It is a gentle, pleasant & wan. Of the ton beaft; in the disposition rather refembling a Goat then a Hart, destring the steepest and slipperyest places whereon it leapeth, and from whence (it is reported) that it doth cast down it self headlong upon the horns naturally, that by them it may break the violence of his fall or leap, and then flayeth his body upon the fore-knees.

It will run a pace, but it is most excellent in leaping, for by leaping it ascendeth the most highest Mountains and Rocks. The females are greater then the males, but not in horn or hair, it eateth Grais, Oats, Cheafil, Hay, and Bread, they bring forth twins every time: and this we call in England a Barbary Deer. Thus far Doctor Cap. Grais, Oats, Chean, Fray, and John, land a Barbary Deer. Thus far Doctor Cay.

Of the HART and HINDERS or a gridal of solutions.

THe male of this beaft is talled in Hebrew; Aidl, Deut: 14, and the Arablant do alfo retain that The names of word in their translations, the Perfant call him Genagen; the Septingent, Elaphor; the Gre a Hart. I Word in their transactions, the regions can time Genazen; the Septuaging Eugenors the Sievillans at this day Laphe Pelaple; and Saint Jeron for the Latiner, Cervus; the Challet, the Latines, Cervo; the Spaniaris, Ciervo; the Frenche Cerf; the Germans, Hitte, of Hirs, and Hiller; the Flemmings, Hert; the Polonians, Gelen; the Illyrians, Ielii, elii. Hinnuli; the Gracians, Nebros, the Hebrers, Ofer; the Germans, Hindealb.

Countries, as for example: when they begin to have horns, which appear in the second year of their countries, as for example: when they begin to have horns, which appear in the second year of their age like bodkins without branches, which are in Latin called Subula, they are also called Subulantifor Ariffolle. the similitude they have with Bodkins : and the Germans call such an one Spirzbirtz, which in English Pliny. is called a Spittard; and the Italians, Corbiati; but the French have no proper name for this beaft that I Of Spittards can learn, untill he be a three yearing, and then they call him (cin Gabler) which in Latine are called and Subulons,

And indeed I was once of this opinion, that these Subulones were only two-yearing Harts, untill I consulted with a Savoyan of Segusium, who did assure me from the mouths of men trained up in hunting wilde Beafts from their youth; that there are a kinde of Subulones, which they call also Brocardi, with straight and unforked horns except one branch, in the Mountain of Jura near the lake Lements, and that these also do live among other Harts; for there was seen neer a Monastery, called the Roman Monastery, by certain Hunters, in the year 1553. a vulgar Hart with branched horns, and his female; and likewise with a Subulon, or Brocarde, which when in pursuit he was constrained to leap from rock to rock, to get to the water, he brake his leg and so was taken. These Brosarde are as great in quantity as other vulgar Harts, but their bodies are leaner, and they swifter in coutle.

The quantity of Brocards.

Of their horns.

They have but one branch growing out of the stem of their horn, which is not bigger then a mans finger, and for this cause in the rutting time, when they joyn with their females, they easily overcome the vulgar Hart, with his branched and forked horns. The Hunters call this Brecard the shieldbearer to the refidue; for by him they are delivered being hunted : for whereas it is the nature of the vulgar Hart, to get into ditches, and hide himself in hollow places when he heareth the Hounds, this Beaft never coveteth any secret place to cover himself, but runneth still in the fight of Dogs, who leave the other that hide themselves, because they keep this on foot: and so when the Hunters are passed by the lurking Harts, they return back again, being safe both from Nets and Dogs, while the poor Brocard is chased unto death.

These being old, are also known by their teeth and horns, for they The figure of the face and borns. never change them; but it is questionable, whether they have any Hindes or ismales, although my Author informeth me, that he heareth there be also Hindes with horns like these, being not above one finger long; which if it be true, it is not improbable that these are the females of that kinde : whereunto I yeeld more eafily, because the vulgar Hindes will not admit copulation with the Brocard, except they be confirmined, and as it were ravished against their will, from whence it cometh that they are so rare and seldom bred: their flesh is much sweeter then the vulgar Harts.

I have therefore here expressed the figure of the head of this Beast with his horns, which is also called Anamynta, or a Burgundian Brocard whose horns are at the longest about eighteen inches long, and at the shortest about nine inches, whereof that part which cleaveth to the head is bunchy and indented; the longest as they grow in

length, do more and more stand out one from another, turning up at the top like a bow, but the leffer do not ftand our fo far, and bend very little at the point; and whereas in the vulgar Harts the root of the horn is but in a round circle, as it were fastened upon the skull of the Beatt, in this the bony roots lie within the skins much deeper, as may be eafily different by comparing both together.

Uf the Hart and Hinde.

The reason why I call this Burgundian Hart, or Subulon Anamynta, is, because it not only wanteth the manifold branches of yulgar Harts, but that also which is called Among

There are also another fort of Harts called Achaini, bred in Creet neer Achaa, whereas in all other Aristotle. parts of Greet there are no Harts, whereof it is affirmed by Gaza, that there was one of them which an Harts. had a bough of green Ivie growing in his horns, it was conjectured that when it was young, fome (1921). sprig of that Ivie was taken in a slifter of the horn, which by reason of some nourishment it found in A mindle in the horn natural to that tree, being like a rocky substance, it there grew to more perfection, the horn of These are also called Spathene, although that term be also given unto vulgar Harts, to signifie their this beaft. full age ; yet some are of opinion, that this Achaian Hart was but an invention or figment made in Otheraus. bread: for there was in antient time a kinde of loaf called Achaines in the likeness of a Hart.

The picture of another face and horns,

I received also of that learned man Lohn Cay, another head out of England, which he conjectureth to be the head of the palmed Buck, as it was called by Iulius Capitolinus, which I do not take to differ from the fallow-Deer : and ver because this seemeth to be of the most excellent kinde, I have thought good to express it in this place, being far different from all other horns of this kinde of Bealts, and more beautiful.

Harts are bred in most Countries, but the Of the regions Ancients do celebrate and prefer those of Britain Hairs. before other, where they are of divers colours Solunt. both white and black, as Paulanias affirmeth. In Oedor, a region of Asia, toward the Northern Ocean, they ride upon Harts; likewise there are Harts in Scytbia: and the people cald Medita. which are subject to the Kings of Tartaria, make their Harts so tame, that they also ride upon them: there are none in Creet, except in the region of the Cydenites. There are also in the Woods of Helvetia, but not so many as in time past, because Democraties do not nourish game and pleafures like unto Monarchies, and therefore they are daily killed by the vulgar fort, there being no law against it.

The Harts of Hellespont , and about Arginuffa; Ælianus. have one of their ears flit or cut afunder by nat Arifiotle. ture in their dams belly; and therefore they nel A fecret in the ver go over the Mountains into other regions: cars of Hairs. (as indeed it is the property of all Harts to love Ammianus. their native foils above all other places.) There A History. this a City called Dora, in Affyria, near the banks of

Euphrates, where are many flocks of Harts, of whom many times some are slain with Darts, and others as they swim away to their accustomed solitudes are oppressed in the water by the weight of Oares, and so taken. They are for the most part sand-coloured, and intermingled with some white spots, especially the Hindes and their Calves, and sometimes milk-white, which happeneth unto Pollux. them by some defect in their nourishment before they be calved; and for natural imbecillity: so Various.

have I seen white Bears, Hares, Quails, Partridges, and Swallows.

When Apollonius and his Colleagues travelled by Puraca, a City of India, they suddenly heard Arish the. a noise like the found of a pipe, and while they looked about to see what it signified, they per- Buellius. ceived that it was the pipe of a Keeper or Forrefter, which governed a whole flock of white Harts: Philostratus. such an one was the Hart of Sectorius that noble Captain , whereby he led his Army, as they A History were perswaded by it, who affirmed that it was Spanish Prophet or Wizard given to him by a Plutarch. certain Lustanian, whom he took in an Island of Portugal; saving moreover, that she was inspired Gellius. by Diana, and that she had authority from that Goddess to admonish him, and make the hearts of his Souldiers cleave fast unto him; and therefore if at any time ite miscarryed in his proceedings, he could easily pacifie them from mutinies, in faying, that his Hart fet him upon that enterprize, fo putting off the fault cunningly from himself to the beaft for fear of defection, wherefore also these were used in the Bacchanals of Gracovia, and their fielh being softer, is peculiarly tearmed by the Of their France, Venaifon. These do excell all other in the Beauty of horns, which are very high, yet grow being of they not to their hones or eleler, but so their birds, which are very high, yet grow being of they not to their bones or skelps, but to their skin, branching forch into many speers; being them.

Of the colour.

folid throughout, and as hard as stones, and fall off once every year, but if they remain abroad in the air, where some winde and rain fall upon them, so as now they are wet, and anon dry again. they grow as light as any vanishing or softer substance, as I have proved by experience, findeing some which have been lost by them in the Woods : wherefore I gather that they are of an earthly matter; concrete and hardned with a strong heat made like unto bones. It must be understood that the males only are horned, and yet have they small benefit by them, because (as I faid) they grow but within their skin, and these also they lose every year in the Spring time. At one year old they have nothing but small bunches, as it were fignifications of their horns to come growing on their head; at two years old they appear more perfectly, but straight and simple; at three years they grow forked into two speers, at four into three, and so increase every year in their branches till they be fix, and above that time you cannot certainly discern their age by their head. for their horns or speers grow not more in number, although their years make them greater in quantity : yet the old Harts do want these two branches, which the Gracians call Amynterai, and the Latines, Adminicula ; because they first come forth : and I have heard there were Harts horns in an Apothecaries shop of Antwerp, which had every one fifteen brunches upon one stem. which if it be true, it goeth beyond all experience. Every year in the month of April, they loose their horns, and so having lost them, they hide themselves in the day time, inhabiting the shadowy places, to avoid the annoyance of flyes, and feed only during that time in the night. Their new horns come forth like bunches at the first, and afterward by the increase of the Suns heat, they grow more hard, covered with a rough skin, which the Hunters for honours fake call a Velvet head, and as that skin dryeth, they daily try the strength of their new head upon trees, which not only scrapeth off the roughness, but by the pain they feel in rubbing them, they are taught how long to forbear the company of their fellows; for at last, when in their chafing or fretting of their new horn against the tree, they can no more feel any smart or grief in them, they take it for high time to forfake their folitary dwellings, and return again to their former condition, like one that is supplyed with new arms, after the losing of his old. The tender and new horns the Germans call Morchi, and Kolben: these being taken from the Beaft, are accounted among great Noble men a delicate dish of meat. Cyprius is said to have a Hart with four horns, which was called Nicocreos, and by him dedicated to Apollo, which I do therefore remember in this place', because it is feldom feen, that an Hart can bear naturally above two horns. Authors do generally affirm, that when a Hart hath loft his horns, he hideth them in some secret places, because he understandeth fome fecret vertues are contained in them, which mankinde feeketh for, and therefore he either en-

Bonarus!

Orus. The reasons why Harts and Deer lofe .. their horns yearly.

and Woods. The wilde Harts of Sarmatia neer Turkie, have the greatest horns of all other', for it hath been proved, that one pair of them have weighed forty pounds Troy weight and above : and there they lofe their horns in March, neither do they fall off together, but first one, and then the other, and after the first falling, it is manifest, that a certain worm getteth on them, and maketh upon them many circles and little furrows, whereby the root or basis being weakened, the horn groweth very white in that place, and yet not without fome appearance of blood remaining, which cleaveth to it, from the first falling off: for, when the head of this Beaft is disarmed, there iffueth blood from the skull, and in appearance the naked place is like a wound, and yet it is wonderful to mark, that within three days the same is heald and filled with the blood which congealeth in that place first to a sinew, and afterward to a hard bone, fo as in Angust at the farthest, the horns are perfect; and therefore the Egyptians to describe a long-lived man, picture a Hart losing his horns every year, and new coming in their place. If any man be defirous to know the reasons, why only Beasts of this kinds lose their horns in this manner; I will not spare my pains to set down the best, which Authors have rendred for this wonder of nature.

vying the good of other, or fearing left they bewray him hereafter to Hunters, taketh the best care and providence his discretion can afford, that they never come to the handling of men. When

the people asked Apollo, what they should do with Procles their Tyrant, the Oracle answered, that

he should go to that place where Harts cast their borns : whereby it was gathered, that he should be

flain and buryed in the earth, and this caufed the Proverb, Ubi cervi abjiciumt cornua, to fignific a de-

sperate business: yet could it not be agreed, whether the Hart make more account of his right horn

or his left, and therefore Ariffolle affirmeth, that the left horn is never found; and Pliny, that the right

This difference may be reconciled with ease, for right and left are so tearmed for three causes, or

First, because of the matter whereof they consist, for it is dry and earthy like the substance of green leaves, which fall off yearly, wanting glewing or holding moisture to continue them; and for this cause the horn of a Hart, cannot be bent. Secondly, from the place they grow upon, for they are not rooted upon the skull, but only within the skin. Thirdly, from their efficient cause, for they are hardned both with the heat of Summer, and cold of Winter, by means whereof the pores to receive their nourishment liquor, are utterly shut up and stopped, so as of necessity their native heat dyeth:

which falleth not out in other Beafts, whose horns are for the most part hollow, and fitted for longer continuance, but these are of lesser, and the new bunches swelling up toward the Spring, do thrust off the old horns, being holp either by the boughes of trees, by the weight of the horns, or by the willing excussion of the beatt that beareth them. Democritus and other (as Gillius and Aelianus) give A natural seother reasons, but because they seem to be far fetched, I will omit them. Yet by the way, it is to be cret of gelded noted, that if a Hart be libbed or gelded when he is young, he never beareth horns, or very small Deer. ones; and if his horns be upon him at the time of gelding, they never waxe less, or greater, or fall Ariffolic. off. The Hindes never bear horns at all, as some have affirmed, but I rather believe Casar, Maximi. Pliny. lien, and Zenodolus, who affirm upon their knowledge, that Hindes in some Countries have horns like Solinut. the males: as likewise it is observed in the Elephants of India, and for this cause the Poets expressed the Hinde which nourished Telephus with horns, and that which Hercules took with golden horns. and it is for certain, that in Ethiopia and Libia, both fexes have horns.

The face of this beaft is fleshy, his nostrils flat, and his neck very long; his ears, some greater, and The several fome smaller; but in the Mount Elaphus and Hellespont, they are slit. It is observed, that when a pairs, Hart pricketh up his ears, he windeth sharp, very far and sure, and discovereth all treachery against Ariffolie. him, but if they hang down and wag, he perceiveth no danger. By their teeth is their age discerned, and they have four on both fides, wherewith they grinde their meat, and befides two other much greater in the male then in the female, and they bend downward to bite withall. All these beasts have Aristotle. worms in their heads bred underneath their tongue in a hollow place, where the neck-bone is joyned to the head, which are not bigger then fuch as flyes blow in rotten flesh. They are ingendered together one with another, and they are in number twenty, as some would have it; but I was given to understand by one that saw a head of this Beast diffected, wherein were many more Worms, and

not contained in one place, but spread all over the head.

The breatt is by the French-men called peculiarly Hampan, his blood is not like other Beafts, for it hath no Fibres or small veins in it, and therefore it is hardly congealed. His heart is very great, as it so falleth out in all fearful Beatts, having in it a bone like a Cross, as shall be afterward manifested.

His belly is not of one fashion, as it falleth out in all other which chew the cud.

He hath no gall, which is one cause of the length of his life, and therefore also are his bowels so bitter, that the Dogs will not touch them, except they be very fat. The Achaian Harts are faid to Ariffolle. have their gall in their sails; and others fay, that Harts have a gall in their ears. The Harts of Bri. Pliny. letum and Ibarne, have their reins quadrupled or four-fold. The genital part is all nervy, the tail small; and the Hinde hath udders betwixt her thighs with four speans like a Cow : Both male and Of their dispo fmall; and the Hinde hath udders betwist her thighs with four speans like a Cow? Both male and fittion, female are wonderfully fwift, and fubtile, as shall be shewed in the discourse of their hunting. They shall be a pt and cunning to swim, although in their swimming they see no land, yet do they wind it A secret to by their noses. They chew the cud like other Beasts. It is reported, that when a Hart is stung by a cure poylon. Serpent, that by eating Elaphoscum; (that is, as some call it, Harts-eye; other Hart-thorn, or grace of God; others Wilde Ditany) it presently cureth the wound, and expelleth the poyson: the same vertue they attribute to Polypodie, against the wound of a Dart.

Having thus entred into mention of their food, it is to be farther observed, that the males of Of their food. this kinde will eat Dwall or Night-shade, which is also called Deaths herb, and they also love above Tracus. all other food wilde Elder, fo as in the Summer time they keep for the most part in those places where these plants grow, eating the leaves only, and not the boughes or sprigs: but the Hinde will A screet in the eat neither of both, except when the beareth a male in her belly, and then also by fecret inftinct of Hinde. nature, the feedeth like a male. They will also eat Serpents, but whether for hatred to them, or for draw Scipents medicine they receive by them, it is questionable. A Hart by his nose draweth a Serpent out of her out of their hole, and therefore the Grammarians derived Elaphos, a Hart, from Elaunein tous ophen, that is, of driving holes, and away Serpents.

I cannot affent to the opinion of Aclianus, that affirmeth the Serpents follow the breath of a Hart they can and like some Philtre or amorous cup, for seeing that all Authors hold an hostility in natures betwixt them, it is not probable, that the Serpent loveth the breath of a Beast, unto whose whole body he is an enemy, with a perpetual antipathy. And if any reply, that the warm breath of a Hart, is acceptable to the cold Serpent, and that therefore the followeth it, as a Dog creepeth to the fire, or as other beafts to the beams of the Sun; I will not greatly gain-fay it, feeing by that means it is most clear, that the breath doth not by any fecret force, or vertue, extract, and draw her out of the den, but rather the concomitant quality of heat, which is not from the secret fire in the bones of the Harts throat, (as Pliny hath taught) but rather from her ordinary expiration, inspiration, and respiration. For it cannot be, that feeing all the parts of a Serpent are opposite to a Hart, that there should be any love to that which killeth her.

For my opinion, I think that the manner of the Harts drawing the Serpent out of her Den, is not as Aelianus and Pliny affirmeth, by fending into the Cave a warm breath, which burneth and scorcheth the Beast out of her Den; but rather when the Hart hath found the Serpents nest, she draweth the air by secret and violent attraction out from the Serpent, who to save her life followeth the air out of her den; as when a Veffel is broached or vented, the Wine followeth the flying air; and as a Cupping-glass draweth blood out of a scarified place of the body: so the Serpent is drawn unwillingly to follow her destroyer, and not willingly, as Aelianus affirmeth.

Unto this opinion both Oribasius in his Commentaries upon the Aphorisms of Hippocrates, and Guniterius his restorer do joyntly agree: but the Serpent being thus drawn forth, addeth greater K 2

H.lianus.

greater force to her poyson, whereupon the proverbial admonition did arise. Cave ne incideria in lespentem, cum extracta a latebris anhelitu cervi effugerit, tum enim propter iracundiam vehementius ei venenum eff, that is, Beware thou meet not with a Serpent drawn out of her hole by the breath of a Hart, for at that time by reason of her wrath, her poyson is more vehement. After this self same manner do the Sea-Rams, draw the Sea-Calfs hid in the Subterranean Rocks; for by smelling they prevent the Air that should come unto them for refrigeration.

Oppianus. Cillius. The fight betwixt Harts and Serpenis.

There is many times strange conflicts betwirt the Hart and the Serpent, thus drawn forth; for the Serpent feeing her advertary, lifteth her neck above the ground, and gnasheth at the Hart with her teeth, breathing out very bitter histings: on the contrary, the Hart deriding the vain endevour of his weak adversary, readier to fight then powerful to harm him, suffereth him to embrace both his neck and legs with his long and thin body, but at an instant teareth it into an hundred pieces. But the most strange combates are betwixt the Harts and Serpents of Libia, where the hatred is deeper; and the Serpents watch the Hart when he lyeth a fleep on the ground, and being a multitude of them, fet upon him together, fastening their poysonful teeth in every part of his skin; some on his neck and brealt; some on his sides and back, some on his legs, and some hang upon his privy parts, biting him with mortal rage, to overthrow their foe.

The poor Hart being thus oppressed with a multitude, and pricked with venemous pains, assay. eth to run away, but all in vain, their cold earthy bodies and winding tails, both over-charge his thrength, and hinder his pace : he then in a rage with his teeth, feet, and horns affaileth his enemies, whose spears are already entred into his body, tearing some of them in pieces, and beating other alunder: they never the less (like men) knowing that now they must dye rather then give over, and yeeld to their pitiless enemy, cleave fast, and keep the hold of their teeth upon his body, although their other parts be mortally wounded, and nothing left but their heads, and therefore will dye together with their foe, seeing if they were asunder, no compassion can delay or mitigate their

natural unappeaseable hatred.

The Hart thus having eased himself by the slaughter of some, (like an Elephant) at the sight of their blood, bestirrech himself more busily in the eager battail, and therefore treadeth some under foot in the blood of their fellows, other he persueth with tooth and horn, untill he see them all destroyed: and whereas the heads hang fast in his skin, for avoiding and pulling them forth, (by a divine natural inflinct) he flyeth or runneth to the waters, where he findeth Sea-Crabs, and of them he maketh a medicine, whereby he shaketh off the Serpents heads, cureth their wounds, and avoideth all their poylon; this valiant courage is in Harts against Serpents, whereas they are naturally

atraid of Hares and Conies, and will not fight with them. It is no less strange that Harts will eat Serpents, but the reason is, for medicine and cure; for fometimes the pores of his body are dulled and thut up: fometimes the worms of his belly do ascend into the roof of his mouth, while he cheweth his cud, and there cleave fast: for remedy whereof the Hart thus affected, runneth about to feek for Serpents; for his devouring of a Serpent, is a cure

Pling faith, that when the Hart is old, and perceiveth that his strength decayeth, his hair change, and his hornsdry above custom, that then for the renewing of his strength, he first devouretha Serpent, and afterward runneth to some Fountain of water and there drinketh, which causeth an alteration in the whole body; both changing the hair and horn: and the Writer of the Gloss upon the 42. Plalm, which beginneth, Like as the Hart desireth the water springs, so longeth my soul after

God; confirmeth this opinion.

Vincentius Belluacensis affirmeth, that Harts eat Serpents for to cure the dimness of their eye fight. But for the ending of this question, we must corfider that there are two kindes of Harts; one which by the drawing forth of a Serpent out of her hole, doth presently kill her by stamping her under feet, this eateth that Serpent, and runneth to springing water, after that he feeleth the poyson to make his body swell, and then by drinking doth vomit forth the poyson, and in the mean time loseth both hair and horn; yet the Monks of Mesaen affirm, that the Harts thus poyloned doth only cover her body in the cold water, and not drink thereof, for that were exitial unto her; but the fendeth forth certain tears, which are turned into a stone, (called Bezahar) of which shall be more said hereafter. The other kinde of Harts, when he findeth a Serpent, killeth it, and doth not eat it, and immediately after the victory returneth to feed in the Mountains.

Eismologus.

l'armus.

Hidorus.

Harts are opposed by Wolves, for many Wolves together doth overcome a Hart; and therefore it is but a fable of Strabo, that the Wolves and Harts live tame together in the Woods of the Veneti. These kinde of Wolves are called Thoes, and they especially sear these Wolves when they have lost their horns, and feedeth only in the night feason, which caused Ovid to write thus;

> Visa fugit nymphe, veluti perterrita fulvum Cirva Inpum, &c.-

Albertus.

They are afraid also of the first and second kinde of Eagles, for with their wings they raise much dust about the Harts, and then they being half blinde, the Eagles pull out their eyes, or else fo beat their feathers about their faces, that they hinder their fight, and cause them to fall down headlong from the Mountains: they fear also the ganning of Foxes, and the Lynxes do likewise lye

in wait to hurt them. These are above all other sour-footed Beatls both ingenuous and fearful, Aristele. who although they have large horns, yet their defence against other four-footed Beasts is to run Of the sear of away. For this cause, in ancient time a sugitive Boy or Servant was called a Hart and if he ran Hatts. away twice, Cantharian, which Cantharian was a Spartan fugitive, that first ran to the enemy, and Crinitus. afterward from them came back again to Sparta. And Martial thus describeth Alebaut, who being Nebridius. overcome by Philip King of Macedon ran away like a Hart.

Trux Spiritus ille Philippi, Cervorum curlu prapete laplus abit.

The Epithets expressing the qualities of this Beast are many : as nimble, or agile, winged, or The Epithets fwift-paced, full of years, quick-footed, horned, wandering, fearful, flying, fugitive, light, wood- of a Hart. hunter, wilde and lively. There are of them very audacious, for they will let upon men as they tra- A kinde of auvel through the Woods: and it is observed, that the wrathful Hart hath sew bunches on his horn, datious Haits, neither is it so long as others, but bunched at the root, yet all of them being pressed with Dogs or Schneberg. neither is it folong as others, but bunched at the root; yet all of them being preffed with Dogs or P.ing. other wilde Beatls, will fly unto a man for fuccour.

It is reported by Philip Melanahon, that in Locha (a town of Saxony) there was a Hart, which before The Substity of rutting time would every year leap over the walls, and run over Rocks and Mountains, and yet re- a Hort, and turn home again, untili the time that Duke Frederick dyed, and then the Hart went forth, but ne- their influediver returned again. The male when he feeleth himfelf fat, liveth folitary and feeret: because he on and use. knoweth the weight of his body will eafily betray him to the Hunters, if he be hunted and purfued. The female commonly calveth neer the high ways, of purpose, to avoid noisome Beasts to her young one, who do more avoid the fight of man then her felf. Also it is reported. that Mitbredates had a Ariffolle. Bull, a Horse, and a Hart, for his guard, besidemen, who would not be bribed to suffer Traytors to kill him, being a fleep. Moreover it is faid of Ptolomeus Philadelphe, that having a Hinde-Calf Indones. given unto him, he brought it fo familiarly tame, and accustomed it to words, that at length it The feveral ieemed to understand the Greek language : And Elianus affirmets as much of the Harts of India, for kindes of that language.

When they are wounded with a Dart, and having gotten it out of their body by eating Dittany, A feerer athey most carefully avoid the Sun-beams, left they shine upon the green wound, for then it gainst poylon, will hardly be cured: but above all other arguments of their understanding, none is more firm Solinus. and evident, then their swiming; for the Harts of Amanus, Libanus, and Carmell, (Mountains Elianus. of Siria) when they are to swim over the Sea, to the fruitful green trees of Cyprus, they come down to the Sea-shore, and there they tarry till they perceive a prosperous wind, and a calm water; which happening, the Captain or leader of them doth first of all enter into the water, and Of the swimso the next followeth, laying his head upon the Captains buttocks, and so confequently all the residue resting their head upon the precedent. In the hindmost are the youngest and weakest, that Tzetzet. so the violence of the floods being broken by the stronger which go before, the more infirm Gellius. which follow may pass with less difficulty. Thus fail they along without star or compass to direct Cpps and them, except their own sense of smelling, using their legs for Oares, and their broad horns for fails. And if the formost be weary, then slippeth he back to rest his head upon the hindmost, and so likewise the second and third, as they feel themselves enseebled, untill they arrive at the happy port of good pasture; where growing stronger, like Beasts, fall to fighting for rule and government, but when the combate doth thew the victor and strongest, the refidue do eyer after yeeld obedience to him. In like fort do the Harts of Epirus swim to Coregras, and of Ciliciato the Island of Curia- Pliny, dattes.

They are deceived with musick, for they so love that harmony, that they forbear their food to Solinus. follow it. Also it is amazed at any strange fight, for if a Hunter come behinde a Horse or Bullock, Their love of laying over his back his Bow and Arrows, they stand staring upon the new formed Beast, untill the musick. Dart do end their lives.

At the time of their lust or rutting, they are above measure fierce, fighting naturally for the fe- Their rage in male, and fometimes wounding one another to death; and this falleth out most commonly in the rutting time. latter end of August, at which time Arthurus riseth with the Sun, and then it is most natural for the Solinus. Hindes to conceive. In some places in October their lust ariseth, and also in May; and then whereas Oppianus, at other times the males live a part from the females, they go about like lascivious woers, seeking the company of their females, as it were at the Market of Venus.

The males in their raging defired luft, have a peculiar voyce, which the French call by a feigned Budeus. word Reere; and the Germans, Brulen; and the Latines tearm Rancere; and the Beafts fo affected Ololygones. When they finde the females, they are received with fear, then in short space one male will cover many females, continuing in this carnal appetite a month or two: their females do fel- Their copulatidom admit copulation, being herein like unto Cows, by reason of the rigour of the males geni- on, tal: and therefore they fink down on their Buttocks when they feel the genital feed, as it hath Ariffule. been often observed in tame Harts, and if they can, the females run away, the males striving to hold them back within their fore-feet : but furely herein they differ from all other : it cannot well be faid that they are covered standing, lying, or going, (but rather running) for so are they Ariffolls. filled with greatest celerity.

When one Month or fix Weeks of their rutting is past, they grow tame again, laying aside all fierceness, and return to their solitary places, digging every one of them by himself a several hole or Ditch, wherein they lie, to affwage the strong favour of their lust, for they stink like Goats and their face beginneth to wax blacker then at other times; and in those places they live, until some showers distill from the clouds; after which, they return to their pasture again, and live in

educateth her

The time of

The temale being thus filled, never keepeth company with the male again untill her burthen be delivered, which is eight months; for fo long doth she bear her young: before her Calving, she the time they purgeth her felf by eating Sefelin, or Siler of the Mountain; and whereas the never purgeth untill that time, then the emptieth her felf of pituitous and flegmatique humors.

Then go they to the places neer the high ways, and there they cast forth their Calf, (for the causes aforesaid) being more afraid of wilde Bealts then Men, whom she can avoid by flying: which when they have feen, they go and eat the Sefelia aforesaid, and the skin which cometh forth of her own wombe covering the young one, finding in it some notable medicine, which the Gracians call Chrim. and not the herb Arum, and this the doth before the lye down to give her young one fuck, (as Pliny

They bring forth but one, or very feldom twain, which they lodge in a stable fit for them of their own making, either in some rock, or other bushy inaccessible place; covering them, and if they be Hubborn and wilde, beating them with their feet untill they lie close and contented. Oftentimes the leadeth forth her young, teaching it to run and leap over bushes, stones, and small shrubs; against the time of danger; and to continued all the Summer time, while their own frength is most abundant : but in the Winter time, they leave and forsake them , because all Harts are feeble in the how the Hande Winter leason.

They live very long, as by experience hath been often mentioned; not only because they have no gall (as the Dolphin hath none) but for other causes: also some affirm, that a Raven will live nine ages of a Man, and a Hart four ages of a Raven: whereunto Virgil agreeth in these verses;

> Ter binis deci- sque super exit in annos. Iusta senescentum quos implet vita virorum ; Hos novies superat vivendo garrula cornix, Et quater egreditur cornicie facula cervu. Alipedem cervum ter vincit corvus ! at illum Multiplicat novies Phanix reparabilis ales :

That is, as the life of a man is threefcore and fix, fo a Raven doth live nine times fo many years, (viz.) 528 years. The Hart liveth four times the age of the Raven, (viz.) 2112 years. The Crow exceedeth the Hart three times, (viz.) 6336. But the Phenix which is repaired by her own aftes, furmounteth the Crow nine times, and fo liveth \$7524 years. The which I have fee down (not for truth) but for report, leaving every reader to the chiefest matter of credit, as in his own discretion he conceiveth most probable.

But it is confessed of all, that Harts live a very long life: for Pliny affirmeth, that an hundred years after the death of Alexander Magnus, there were certain taken alive which had about their necks golden Collars, with an infcription that they were put on by Alexander,

In Calabria (once called Iapygia and Pencetta) there was Collar taken off from the neck of a Hart by Agathocles King of Sicily, which was covered with the flesh and fat of the Hart; and there was written upon it Diomedes Diane: whereby it was conjectured, that it was put on by him before the fiege of Trey: for which cause, the King brought the same and did offer it up in the Temple of Jupiter.

The like was in Accadia, when Accessiam dwelt in Lycofura; for he confidently affirmed, that he faw an old facred Hinde, which was dedicated to Diand; having this infeription in her Collar: Nebrot econ ealoon ota et Ilion en Agapenor. When Agapenor was in Troy, then was I a young Calftaken. By which it appeareth, that a Hart liveth longer then an Elephant, for indeed as they live long before they grow to any perfection, their youth and weakness cleaving fast unto them, so is it given to them to have a longer life, for continuance in ripenels and ftrength of years.

These Bealts are never annoyed with Feavers, because their flesh allayeth all adventions and extraordinary heat. If he eat Spiders he instantly dyeth thereof, except he eat also Wilde Ivie, or Sea-crabs. Likewise Navew-gentil and Oleander, kill the Hart. When a Hart is in his chase, he is greatly pained in his bowels, by reason that the skin-wherein they lie is very thin and weak, and apt to be broken with any small stroke; and for this cause he often stayeth to ease himself.

There is a kinde of thorn called Cadas, wherewithall if a young one be pricked in his legs, his bones will never make Pipes. Besides these Beasts are annoved with Scabs and Itehes in their head and skin, tearmed by the French by a peculiar name (Freyer:) I will not fland upon the idle conceit of Albertus, that Walpes and Emmets breed in the heads of Harts, for he miltaketh them for the worm, before mentioned.

The skins of this Beaffare used for garments in some Countries, and in most places for the bottom of Cushions, and therefore they chuse such as are killed in the Summer time, when they The ule of the are fat and most spotted; and the same having their hair pulled from them, are used for Breeches, Buskins, and Gloves. Likewise Pliny and Sextus affirmed, that if a man sleep on the ground having upon him a Harts skin, Serpents never anoy him: whereof Serenus made Hesichiks. this Verse: Varianus.

Aut tu cervina per noclem in pelle quicleis.

And the bons of young ones are applyed for making of Pipes. It is reported, that the bloud of Harts burned together with herb-dragon, orchanes, orgament, and mastick have the same power to draw Serpents out of their holes, which the Harts have being alive : and if there be put unto it wilde Pellitory, it will also diftract and distipate them again.

Of the Hart and Hinde.

The marrow of a Hart hath the same power against Serpents, by ointment, or persumed upon coles; and Nicander prescribeth a certain ointment to be made of the flesh of Serpents, of the Dioscorideti marrow of a Hart, and Oils of Roses, against the bitings of Serpents. The fat of a Hart hath the like effects that the marrow hath. Achilles that Noble Souldier, was faid never to have tafted of milk. but to be nourished with the marrow of Harts, by Chiro, as is affirmed by Various and Enmalgus. The like operation hath the tooth (as Serenus faith)

Aut genere ex iffo dentem portabis amicum.

If the feed of a young Hinde Calf be drunk with Vinegar, it suffereth no poison of Serpents to enter into the body that day.

The perfume of the horn driveth away Serpents and noisome flies, especially from the young Alianus. Calves, or from Horses if womens hair be added thereto, with the hoof of the Hart. And if men Vario. drink in pots wherein are wrought Harts horns, it will weaken all force of venom. The Magiciant Palladius. have also devised, that if the fat of a Dragons heart be bound up in the skin of a Roe, with the nerves Rafis. of a Hart, it promifeth victory to him that beareth it on his Shoulder, and that if the teeth be fo Gilling bound in a Roes skin, it maketh ones Mafter, Lord, or all superior powers, exorable and appealed Pinn. toward their fervants and fuicors. Orphene in his book of stones, commandeth a husband to carry a- Solinus. bout him a Harts horn, if he will live in amity and concord with his wife; to conclude, they also Alkeins. add another figment to make men invincible,"

The head and tail of a Dragon, with the hairs of a Lion taken from between the browes, and his marrow, the froath or white-mouth of a victorious, Horle, the pails of a Dog, and the nerves, of a Hart and a Roe, bound up all together in a Harts skin; and this is as true as the wanging of a Dogs tail doth fignifie a tempest. To leave these trifles scarge worthy to be rehearsed, but only to show the vanity of men, given over to lying deviles, let us come to the other natural and medicinal properties not as ver touched.

The flesh of these Beasts in their running time smelleth strongly like a Goats, the which thing is The we and by Blonden attributed also to the flesh of the females with young, I know not how truly; but I am benefit of the fure that I have known certain Noble women, which every morning did eat this flesh, and during them, the time they did so, they never were troubled with Ague : and this virtue they hold the stronger, if

the beaft in dying, have received but one wound.

The flesh is tender, especially if the beast were libbed before his horns grew: yet is not the juice pliny. of that flesh very wholesome, and therefore Galen adviseth men to abstain as much from Harts flesh, Solinus, os from Asses, for it engendereth melancholy, yet is it better in Summer then in Winter. Simeon Sethi lib. 3. de alim. speaking of the hot Countries, forbiddeth to eat them in Summer, because then they eat Serpents and so are venemous; which falleth not out in colder Nations, and therefore assigneth them rather to be eaten in Winter time, because the concoctive powers are more stronger through plenty of inward heat, but withal admonisheth, that no man use to eat much of them, for it will breed Palsies and trembling in mans body, begetting groffe humors, which stop the Milt and Liver : and Aujeen proyeth, that by eating thereof meningur the quartage Ague ; wherefore it is good to powder them with falt before the dreffing, and then festoned with Reper, and other things, known to every ordinary Cook and woman they make of them Palities in most Nations.

The heart and brain of a Hare or Cony have the power of Triacle for expelling of evill humors, but the Liver is intolerable in food the horns being young are meat for Princes, especially because they avoid poison. It was a cruell thing of King, Ferdinand, that caused the young ones to be cut out of the Dams belly and baked in Pafties, for his liquorous Epicureal appetite,

The whole nature and disposition of every part of this beast is against poilon and venemous things The medicines (as before recited). His bloud stayeth the looseness of the belly and all fluxes, especially fryed of a Hait and with Oil, and the inferior parts anointed therewith, and being drupk in Wine, it is good against poi- his several foned wounds and all intoxications.

The marrow of this beaft is most approveable above other, and is need for sweet odour, against Pliny. the Gowt, and heat of men in Consupptions, and all outward pains and weakness, as Serenus comprised Solinus. in one sentence saying: Seaffer to the first of the seaffer the se

Galenus.

Sextus.

Likewise the fat and marrow, mollifieth or disperseth all bunches in the flesh and old swellings; all Ulcers except in the shins and legs, and with Venus-navil, the Fistula, mattery Ulcers in the ears; with Rozen, Pitch, Goose-greace, and Goat-sewet, the cleaving of the lips: and with Calves sewet the heat and pain in the mouth and jawes. It hath also vertue being drunk in warm water, to aswage the pain in the bowels and small guts, or Bloudy flux.

The gall of a Bull, Oil of bayes, Butter, and this marrow, by anointing, cureth pain in the knees and loins and other evils in the feat of man, in the hips, and in the belly when it is costive: It procureth flowers of Women, cureth the Gowt, Pimples in ones face, and Ringwormes. Abstrus prescribeth it to be given in sweet wine with wax, unto a Horse for an old Cough proceeding of cold, after purging and heating, by holding the Horses tongue in ones hand while the medicine is

The same in Sheeps milk with Rubrick and soft Pirch, drunk every day or eaten to your meat, helpeth the Prifick and Obstructions. Anarolius approved Bean meal sisted and sod with Harts marrow to be given to a Horse which stalleth bloud for three daies together. Also mingled with the powder of Oyster shels, it cureth Kibes and Chilblanes. A woman perfumed with the hairs of this beaft, is preserved from abortements; and the same persume helpeth the difficulty of urine, and little picces cut off from the hide with a Pummise put in wine, and rubbing the body, helpeth the holy-fire. The powder of the bones burned, is an antidote against the falling evill, and the dispersing of the milt; and the bones beaten to powder, stayeth the Flux of the belly.

It were endless to describe all the virtues ascribed to the horn, and therefore I will content my felf with the recital of few. Pliny and Solinu prefer the right horn, Ariftotle the left, and the spires or tops are more medicinable then the hard and folide stem, but the horns found in the Woods lost by the beafts and grown light, are good for nothing. The other have their uses both raw and burned,

which may be these which follow.

Take the horn and cut it into small pieces, then put it into an earthen pot anointed within with durt, and so set it in a furnace untill it become white, then wash it like a mineral and it will help the runnings and ulcers in the eyes; and the same also keepeth the teeth white, and the gums sound. The young horns while they be fost being eaten, are an antidote against Henbane and other poifonful herbs. The right horn hid by the Hart in the earth is good against the poison of Toades. The Harts horn hath power to dry up all humors, and therefore it is used in eye salves: and Orpheus promifeth to a bald man hair on his head again, if he anoint it with oil and powder of this horn: likewise the same with the seed of black mirtle, Butter and Oil, restraineth the falling away of the hair being anointed upon the head after it is newly shaven : with Vinegar it killeth Ringwormes. The fame burned in the Sun, and afterward the face being rubbed and washed therewith thrice together, taketh away pimple-spots out of the face: the powder drunk in wine or anointed on the head killeth lice and nits; the same with Vinegar, Wine, or Oil of Roses, anointed upon the forehead, easeth the head-ach if it proceed of cold.

A perfume made of this horn with Caftereum, and Lime or Brimftone, causeth a dead childe ftrangled in his mothers womb to come forth; if the horn be taken raw and rubbed upon the gums, keepeth the cheeks from all annoyance of the tooth-ach, and fasteneth the loose teeth, as

Serenus said :

Quod vero assumpsit nomen de dente fricando Cervino ex cornu cinú est.

Galen prescribeth the powder of this horn for the Jaundise, and for him that spitteth bloudy matter, and to stay vomit being taken in a reere Egge. It comforteth alfo a rheumatick stomach, and it is tryed to cure the Kings evill, it pacifieth the milt, dryeth the Spleen, driveth all kind of Wormes out of the belly, being drunk with hony, and easeth the Colick, expelleth away mothers, helpeth the Strangury, and the pain in the bladder, stayeth Fluxes in women both white and red : being mingled with Barly meal, water, and twigs of Cedar, beside many other fuch properties.

The tears of this beaft after the hath been hunted with a Serpent, are turned into a stone (called Belzahard, or Bezabar) of which we have spoken before: and being thus translubstantiated do cure all manner of venom (as Avenzoar, and Cardinal Ponzetti affirme) after many trials, and Serens

also expressess in this Distiction:

Seminecis cervi lachrymam miscere liquori Convenit, atque artus illine mi scere calentes.

The liver of this beast helpeth all sores in the seet, being worn in the shooes, the same dryed to powder with the throat or wind-pipe of the beaft, and mingled with Hony, and so eaten helpeth the Cough, Ptifick, fighing and short breathing. Pliny and Sextus affirme, that when a Hinde percelveth herself to be with young, she devoureth or eateth up a certain stone, which is afterward found either in her excrements or ventricle, and is profitable for all Women with childe and in travell, for by that only fact, the Hinde is most speedily delivered without great pain, and seldome or never suffering abortment; and there is also a little bone found in the heart of every one of

these beasts, which performeth the same qualities, in stead whereof they have such a thing to sell at Actius. Venice, holding it at great price: but Brafavola affirmeth, that he opened the hearts of two Harts, and found in them a little griftle not much unlike to a crosse, whereof the one being of a Beast new killed, was very soft, but the other was much harder, because the beast was slain about fix dayes before.

Of the Hart and Hinde.

This bone is in the left fide of the heart, upon which the Spleen moveth and fendeth forth her excrements by vapors, which by reason of their driness are there turned into a bone, and being first of all of the substance of the Harts bloud: and it is good against the trembling of the heart, and the Hemorrhoides, but this bone cannot be found in any, except he be killed betwirt the middle of

August and the twelfth of September.

The skinny feed of the Hind-Calf, is above all other commended against poison, and the Platerias. bitings of Serpents and of mad Dogs; likewise it stayeth all Fluxes of bloud, and spitting of bloud, and egestion of bloud : and it being eaten with Beets and Lentils, is profitable against the pain of the belly. The genital part and stones are wholesome (being taken in wine) against all bitings of Vipers, Adders, and Snakes, and the same virtue hath the natural seed supped up in a rere Egge.

The genital hath also a virtue to encrease lust in every creature, it being either dryed and drunkor else bound fast to their privie parts. Likewise being warmed in water, and afterward dryed to powder and so drunk, helpeth the Colick, and the difficulty of making water, if you put it

The dung of Harts cureth the Dropfie, especially of a Subulon or young Hart: the urine easeth the pain in the Spleen, the wind in the ventricles and bowels, and infused into the ears, healeth their ulcers. In the tip of the tail lyeth poison, which being drunk, causeth extaste and death, if it be not helpt by a vomit made of Butter, Annise, and oil of sefamine, or as Cardinal Ponzetius faith, that the Harts eye is an Antidote to this evill : It may be known by a yellowish-green colour, and therefore it is called the gall, for nature hath appointed that place to receive all the venom of the whole Body.

I should here end the discourse of this beast, after the method already observed in the precedents: Of the hunbut feeing the manner of the taking hereof (being a sport for Princes) hath yet been touched but ting and taking very little, it shall not be tedious unto me, to abstain from the necessary relation of the subsequent these beasts. flories, for the delightful narration of the hunting of the Hart : to the end that as the former treatife hath but taught how to know a Bird in a bush, that which insueth may declare the several wayes

of catching and bringing the same to hand.

This is a beast standing amazed at every strange fight, even at the hunters bow and arrow, coming behind a stalking Horse (as is already declared :) and moreover, like as the Roes are deceived by the hissing of a leafin the mouth of the hunter, so also is this beaft, for while she hearkeneth to a strange noise, imitating the cry of a Hind-Calf, and proceeding from one man, she receiveth a deadly stroke by the other: so also if they hear any musical pipings, they stand still to their own destruction: for which cause the Egyptians decipher a man overthrown by flattery, by painting a Hart taken by musick : and Varro relateth upon his own knowledge, that when he supped in his Horus. Lordship bought of M. Pife, the Pastour or Forrester after supper, took but a Harp in his hand, An hicroglyand at the found hereof, an innumerable flock of Harts, Boars, and other four-footed beafts came Phical emblems about their Cabanet, being drawn thither only by the musick; in so much as he though he had been in the Roman Circus or Theater, beholding the playing spectacles of all the African beafts, when the Adilian Officers have their huntings: the like is also reported by Alianus, faving that he addeth, that no toil or engine is so assured or unavoidable to draw these beasts within a labyrinth as is mulick, whereby the Hunter getteth as it were the Hart by the ear, for if through attention he hold down his ears as he doth in musick, he distrusteth no harm, but if once he prick up his ears as he commonly doth, being chased by men and dogs, an infinite labour will not be sufficient to over- Elianut, take and compais him. It is reported that they are much terrified with the fight of red feathers, which thing is affirmed by Ausonius in these Verses :

An cum fratre vagos dumeta per avia cervos Circundas maculis, & multa indagine penna.

And Ovid also saying,

Nec formidatis cervos includite permis.

And Lucan alfo;

-Sia dum pavidos formidine cervos Claudat odorata metuentes aera penna.

Of which thing the Hunters make an advantage, for when they have found the beaft, they fet their nets where they imagine the beaft will flie, and then one of them freweth to the beaft on the other side, the red seathers hanging on a rope, which search them in haste into the Hunters nets, Xinphon, bens penna.

as S. Jerom tellifieth in one of his Dialogues, faying, Et pavidorum more cervorum, dum vanos pennarum evitatu volatus fortiffimu retibus implicamini. And you, faith he, (speaking to the Luciferian hereticks) run away from the vain shaking of feathers, like the fearfull Harts, while in the mean time you are um'na metui- inclapsed in unavoidable and inextricable nets. And this caused Seneca to write, that the babe search tur ab infanti- a shadow, and wilde beasts a red feather.

Many times the young Calfis the cause of the taking of his Dam: for the Hunter early in the morning before day light, watcheth the Hinde where the layeth her young one, untill the go and refresh her self with pasture; when he hath seen this, then doth he let loose his Dogs, and maketh to the place where the Hind-Calf was left by his mother.

The filly Calf lyeth immoveable as if he were fastened to the earth, and so never stirring, but bleats ing and braying suffereth himself to be taken, except there be rainy weather, for the impatience of cold and wet will cause him to shift for himself: which if it fall out, the Dogs are at hand to overtake him, and so being taken is committed to the keeper of the nets.

The Hinde both hearing and feeing the thraidom of her poor fon, cometh to relieve him, with out dread of Hound or Hunter, but all in vain, for with his dart he also possesses the himself of her; but if the Cali be greater, and so be able to run with the Dam among the herds, they are most hard to be taken, for in that age they run very fast, and the fear of Dogs increaseth their agility, in so much as to take them among the herds is impossible, every one fighting

But the only way is to fingle one out of them from the flock, and so follow him until he be weary, for although he be very nimble, yet by reason of his tender age, his limbes are not able to continue long. The elder Harts are taken in snares and gins laid in ditches and covered with leaves, whereby the feet of this beaft is snared in wood; this kind is described by Xenophon and Pollux, and is called in Greek, Podestrabe; in Latin, Pedica, of which also the Poets make mention, as Virgil:

Tunc gruibus pedicas & retia ponere cervis.

And this kind is better described by Gratius, with whose words I will passe it over as a thing ont of use.

> Nam fuit & laqueis aliquis curracibus usus. Cervino iffere magis conterere nervo. Quidque dentatas iligno robere claufit : Sape habet imprudens alient lucra laboris. Fraus tegit infidias habitu mentita ferino Venator pedtous, cum dissimulantibus armie.

Their manner is when they are chased with Dogs to run away with speed, yet oftentimes stand still and look back, not only to hearken to the hunter, but also to rest themselves, for in their chase they are ever troubled in their belly (as is before declared) and sometime they grow so weary, that they fland still, and are pierced with arrows, fometime they run till they fall down dead, fometime they take themselves to the water and so are refreshed, or else to avoid the teeth of Dogs, they for sake the dry land, and perish in the floods, or else by that means escape scotfree: wherefore it must be regarded by every good hunter to keep him from the waters, either among the woods or other rough places.

But herein the subtilty of this beast appeareth, that when he is hunted, he runneth for the most part to the high wayes, that fo the favour of his steps may be put out by the treadings of men, and he avoid the profecution of the Hound. Their swiftnesse is so great, that in the Champaine and plain fields they regard not Dogs, for which cause in France they poison Arrows with an herb called Zenicum or Toca, and it is a kinde of Acouste or Wolfe-bane, which hath power to corrupt and destroy agility of body, and to stay celerity, and for their hunting in France by Dogs, it is most excellently described by Budaw and Robertw Stephanus in his France

This wilde, deceitful and subtil beast, (say they) by windings and turnings do often deceive their hunter, as the Harts of Meandres flying from the terrible cry of Dianaes hounds, wherefore the prudent hunter must frame his Dogs, as Pythagoras did his Scholars, (Luuers qui ne parlent point) with words of Art, to fet them on, and take them off again at his pleasure; wherefore he must first of all compais in the beast, (Enfongiste) in her own lodging, and so raise her up in the sight of the Dogs,

that fo they may never lofe her footing. Neither must they set upon every one, either of the herd, or that wandereth solitary alone, nor yet a little one, but partly by aspect or sight, and partly by their footings in the soft earth, and also by their dung (Les funnes) they judge of their game, for a good Woodman must not slick to gather up the Deers excrement or foil, and keep them (La trempe) in his hunting horn : fuch things must the Kings huntimen and forresters observe, as also the quantity of his bed or lodging when they finde it; being thus informed of their game, then (Discoppler les chiens) they take off their Dog couplings, and some on horseback, other on foot follow the cry with greatest art, observaOf the Hart and Hinde.

tion, and speed, remembring and preventing (Cer fruze) the subtile turnings, and headings of the Hart, straining with all dexterity to leap hedge, pale, ditch, and rocks; neither fearing thornes. woods, down-hils, but providing a fresh horse in case the first tire, (Chevaux de relatis) and leaping on him with speed, untill he see (un grand cerf! escuyer du grand cerf) the great Hart having ten speers on his horns, and his little squire-hart to attend him, which the Dogs once perceiving, only follow the great Hart, taking for a prohibition to follow any other.

The Dogs are animated by the winding of horns, and voices of the hunters, like Souldiers to a battel by the voice of a trumpet and other instruments: but sometimes the crasty great beast sendeth forth his little squire to be sacrificed to the Dogs and Hunters in stead of himself, lying close in the mean time, then must the retreat be sounded, and (Rompre lections) the Dogs he broken off and taken in (Le limier) that is, leame again untill they be brought to the fairer game, who arifeth in fear and rage, betaking himself to his surest legs, being pursued with all the cries of Hunters, ringing and ecchoing betwixt heaven and earth, dismaying him with the continual noise in his cares, no lesse dreadful and fearful then the voice of a passing bell to a sick man, or the sight of the executioner to a condemned caitife, yet still he striveth untill wearied and breathless, he be forced to offer up his bloud and flesh to the rage of all the observant pedissequants of the hunting

The vulgar fort call an old Hart a fubtil and cunning beaft, but the Nobles call him (cerf fage) u wise Hart, who to avoid all his enemies runneth into the greatest herds, and so bringeth a cloud of error upon the Dogs, to keep them from any further profecution: fometime also beating of some of the herd into his own footsteps, that so he may more easily escape and procure a labyrinth to the Dogs, and then after a little while he betaketh himself to his heels again, running still with the wind, not only for refrigeration, but because he may the more easily hear the voice of his purfuers, whether they be far or neer.

At last, being (for all this) found out again by the observance of the hunters, and skill of the Dogs, he flyeth into the herds of Cattel, as Kie, Oxen, or Sheep, leaping upon an Ox, and laying his body or the fore-part thereof upon him, as a rider upon a Horse, that so touching the earth only with his hinder hoofs, to leave a very small or no sent at all behind for the Hounds

The chief huntiman or fergeant of the hounds unto Lewis the twelfth, called (Legrand venieur) affirmeth that on a time they having a Hart in chase, suddenly the Hounds fell at a fault, so as the beast was out of fight, and not a Dog would once stir his foot; whereat all the Hunters were amazed, like as in some jugling Apollonian trick, as though the hart had clean forsaken the earth, and with the wings of some fowl had been flown away; or as if the earth had opened her mouth to receive him into her protection, and had closed again over her head, or else some Witchcrast had cast a mist before the Dogs and Hunters eyes: At last by casting about (as it is usuall in such cases) they found the fraud of the horned beast, which is worth the

There was a great white thorne which grew in a shadowie steep place as high as a tree, and was invironed with other small shrubs about it, into the which the faid Hart leapt, and there stood aloft the boughs fpreading from one another, and there remained, whether because he could not get off again, or else for that he was stifled in that place, but surely he was there thrust through and so died, and so had they all rather perish any other way then by the teeth and tearing in pieces of angry and greedy Hounds.

Yet their maner is, that when they see themselves every where intercepted, to make force at him with their horns that cometh first unto him, except he be prevented by some sword or spear; which being done, the Hunter with his horn foundeth the fall of the beaft, and then every one approacheth, luring with triumph for such a conquest, of whom the skilfullest openeth the beast, giving unto the Hounds such parts as belongeth to them, for their incouragement against another time; and for that purpose the Hunters dip bread in the skin and bloud of the beaft, to give unto the Hounds their full latisfaction : and many fuch other things may the reader defirous of this knowledge find in the Authors aforesaid, to whom I will commend him rather, then spend more time in this business, better manifested by experience, then by any written document, yet I would wish men to be sparing in this exercise, seeing it hath been seldom found that a man given to hunting, but he perished in his pleasure, as Atlann did by his own Dogs: and therefore Alciatus doth fitly compare together hunters and receivers of Theeves and Robbers, calling them new Alleons; who after they had received horns, must be destroyed by their own Dogs which they have nourished. The best use of these beasts is to keep them tame, as in Helvetta, where they hunt feldom, and to make good use of them for nourishment rather then for sport, as it is reported of a holy-man, who kept a Hinde so samiliar with him, that in the Wilderness be lived upon her milk.

Concluding this discourse with the words of the Poet, for the instruction of Dogs to this pastime and practife of the beatts.

> Veloces Sparte catalos, acremque molossum, Pasce fero pingui, &c.

Of Dogs.

109

. And again;

-Monte que per altos Ingentem clamore premes ad retia cervum: - Confertoque agmine cervi Torpent mole nova. & Jummis vin cornibus extant. Hes non immiffis canibus , non caffibus ullis, Puniceeve agitent pavidos formidine penna : Sed fruftra oppositum trudentes pettore montem Gomminus obtruncant ferro, graviterque rudentes Cadunt, & magno lati clamore reportant.

Of the DYCTYES.

TErodotus in his fourth book affirmeth, that among the African Shepherds toward the East, there Hare bred in Bassaria Hystriches wilde Rams, Thoes and Dyttyes, of which last there is not any mention among all other writers, except in Various and Helychius, who affirm that among the Lacedemonians a Glead or Kite was called Dydie, but this spoken of Herodosm I conjecture to be some four-footed beaft, being led with no other reason then that the other with whom he placeth it, are generally known to be creatures of that kind and nature: wherefore I thought good to express the name of it in this place, desiring the Reader to accept so much thereof as is already known, and to fearch farther for the description of it, at the hands of them who are eye-witnesses of the wonders of Africa.

Of the DOG in general.

The name and derivation thereof.

Dog is called in Hebrew, Releb, and Lamas according to Munfter; in Chalde, Ralba; in A Acablek, Kalbe; in Perfia, Sag; the Saracens, Krp, or Kalph; the Grecians Kuon because of his love to man, and vulgarly at this day Skilos and Skule; the Medians, Space; the Commen, Hund; the Italians, Cane; the French, Chien; the Spaniards, Perro or Cavendo, because his barking is as loud as an Artificial long, alfo Catellus wohe lbyright, Per or Par; and the Latins, Canis.

There is no region or Countrey in the world, where these are not bred in some store, as The countries shall be declared afterward in the particular discourse of every kinde of Dogs. For as shall and diversities be manifelted more at large, there are Dogs very great, some for hunting, some for War and of Dogs. defence fome for the Boar, Bull, or Bear, some for the Hare, Cony, or Hedge-hog: again some are smaller which are called Hounds, Braches, Beagles, Shepherds Dogs, House-curs, Spagnels both for the Water and Land; and some foilting Dogs for the pleasure of the

In the first place there are to be handled the nature of Dogs in general, wherein they agree, and The general their common properties of nature, fuch as are not destroyed in the distinction of kinds, but re- nature of Dogs main like infallible and invariable truths in every kind and Countrey of the world. To begin with that which is outward, it is to be observed that Dogs are generally rough, and their hair indifferently long (which in Winter they lofe every year) is a figne of a good conflitution; but if it Their outward grow over long, the mangie scab will follow: the outward proportion of the head altereth as the parts, kind altereth, being sometime like a Lion, sometime like a Hedge-hog, some long with a broad driftel. kind altereth, being sometime like a Lion, sometime like a Hedge-nog, some long with a proad fnowt, and sometime with a piked snowt, but the brain decreaseth and increaseth with the Moon, A secret in the there is no commissione or seam in his scull (like as is in a Mans) but it is a continued bone without brain. feparation inward or outward.

The best Dogs have flat nostrils, yet round, solid and blunt, the mouth is long and slit, their Pling. teeth like saws, as it is in Fishes and Serpents: those which are called Canine before, are only changed, as it also falleth out in a Lion, and these they lose or change, both males and semales, in the fourth moneth of their age: about which time they have new ones come forth to thrust off their old. By their teeth is their age discerned, for while they are white and sharpe, it assured the youth of a Dog, but when they grow blackish, or duskie, they betoken the elder age.

The break of a Dog is narrow and piked, his ventricle small and narrow, for which cause he Ariffolle. never easeth his bodily excrements without pain, his bowels are like a Lions : he hath a long spleen Pline. like a Man, and a Hog: his yard and stones hang outward between his hinder-legs; a base natured cur friketh his tail betwixt his legs ; his forelegs bend like the armes of a man, and he useth them in Ariffolle. stead of Armes, having five distinct fingers, commonly called claws upon each foot before, and four Blonding. upon each foot behind, which also have straight nails upon them, and that which hangeth higher Pling. upon the leg is crooked.

The females, because they bring forth many whelps at a time, have underneath their bellies great. The parts of a paps, with many speans to suck at, in a double rank or row on both sides, and the generous Bitches semale Dog. have 12. other but 10. They bear their young within their belly next to the midriffe; their fime is dry like a Wolves, and thereby his temperament is known to be hot and dry, confidered in it felf, but compared with others it varyeth, for to a Mans it is dry; to an Emmets, it is moift : again, in Galen. respect of a Man, it is hot; in respect of a Lion, it is cold.

The lowder and shriller voice of a Dog, is called barking, the lower and stiller, is called whining, The voice of 1 or fawning. It was a monstrous thing, that a Dog should speak, and a Serpent bark, as it is believed Dogs. in antiquity both came to passe, when Tarquium was driven out of his kingdom. It is not cause- Puny. less that the barking of Dogs, hath attributed unto it divers qualities, as for a man to dream of the same, presageth some treasonable harm by enemies, so likewise if they sawn and claw

Among the precedent tokens of Cafars death, they fee down in certain Verses, the how- Astemidoriti. ling voices of Owls, the weeping drops of the Ivie tree, and the continual barkings of Dogs, as followeth.

> Inque foro circumque domos & templa deorum Notiurnos ululaffe canes, Ce.

The Egyptians signific these things by a Dog, a Scribe, a Prophet, a Spleen, smelling, laughing, and neezing. A Scribe, because as the Dog is silene more then he barketh, so must a persect Scribe meditate more then he speaketh: for to bark at every one were to pleasure none, and to speak conEmblematical tinually, were a figne of madness. Again, a Prophet, because a Dog doth most eagerly behold, and description. admire constantly at holy actions, and so ought the eyes and eares of a Propher be attendant upon heavenly things. The Splem because a Dog hath little or no spleen, and thereof cometh his madness and death; whereof also it cometh that the servants which have the charge of Dogs; being with them in their sickness and latter end, for the most part prove Splenetick. Smelling, Neefing, and Laughing, because the Splenetick can do none of all these; but of this more afterward.

The voice of a Dog, is by the learned interpreted a railing and angry speech; whereof cometh Canina facundia among Authors for railing eloquence. It is the nature of a Dog when he maketh The making of water, to hold up his leg, if he be above fix moneths old, or have been at procreation; the females, urine, do it for the most part fitting yet fome of the generous spirits do also hold up the legs. They Aritlole. ever smell to the hinder parts of ohe another, peradventure thereby they discern their Pliny kind and disposition of each other in their own natures. After they have run a course, they Albertin.

Dog.

The factions of relieve themselves by tumbling and rowling to and fro: when they lie down, they turn round in a Dogs for their circle two or three times together, which they do for no other cause, but that they may the more commodioully lie round, and from the winde.

The History of Four-footed Beasts.

The fleep of

Their copula-

tion and ly-

Columella.

ming.

They sleep as doth a man, and therein dream very often, as may appear by their often barking in their fleep : but it must be diligently regarded of them that love to keep Dogs, that they permit them not to fleep much, especially after their meat when they are young, for as they are very hot. fo in their fleep doth their heat draw much pain into their stomach and ventricle. The time of their copulation is for the most part at a year old, yet the females will lust after it at eight moneths old, howbeit they are not to be suffered, because it weakeneth their bodies, and dulleth in them all generosity; therefore after one year they may safely be suffered to come together, and not before. Neither is it material, whether in Summer or Winter, but it is best in the beginning of the Spring, but with this caution, that Whelpes of a litter or of one and the same Bitch, be never suffered to couple; for nature rejoyceth more in variety.

Ariftotle.

Tardinus.

For then they grow salt and begin to be proud; yet in ancient time, for the more ennobling of their race of Dogs, they did not suffer them to engender till the Male were four year old, and the female three; for then would the Whelpes prove more strong and lively. By hunting, labour and travel, the males are made more fit for generation, and they prove best which have their fires of equal age. They are not suffered to engender all their life long, but until ten and twelve year old, or rather eight in the male, and fix in the female. Yet there have been found which in one and other sex, have continued in procreation till they were twenty year old, but this exceeded all natural reason. When they begin to be proud, if you give them leaven mingled with milk and salt, they will not stray and range abroad. At the time of their copulation, they cleave together for a certain space, as if their hinder parts were glewed, and so they are filled at one time. They bear their Ditches whelp- young the fifth part of the year, that is, about two moneths and odd dayes; but this reckoning is not general, for some kinds bear their young three moneths, and some more. They bring forth many at a time, fometime five, seven, nine, or twelve, for fo many cels hath the female in

ing and bearing her young. Arifiotle.

Albertus relateth that he faw a Bitch of the Maltive kind, which brought forth at three litters fifty Whelpes, that is nineteen at the first, eighteen at the second, and thirteen at the third; but some time the bringeth forth but one, which is a good argument to prove that the is filled at the fint liming. They are purged of their menstruous fluxes leven or fourteen daies before they grow proud, and again, at their time of littering; at other timesthey fuffer none.

The blindness of Whelpes.

Ælianus. A fecret in their food.

The first they cast forth of their wombe is commonly a male, which resembleth the father, The first whelp the other males and semales as it happeneth, (but it is accounted a prodigious thing to litter all males or all females) wherein nature yeeldeth an excellent argument of divine providence, for the firth born of all kinds hath more refemblance of the father then of the mother. They are also whelped blind, and so remain for nine or ten dayes, because through their multitude they cannot be persected in the dams belly, which doth not happen to beasts which bear single; as Sheep and Goats. They use to carry them up and down in their mouths till they be seven dayes old, but not afterward, they have milk about five dayes before their littering. It is not good to preserve the first or second litter, but the third; and after they have littered it is good to give the Bitch Whay and Barly bread, for that will comfort her and encrease her milk; and in some places they take Goats milk and seethe in it broken bones of meat, whereby they conceive that the Dam and Whelpes are much bettered for that nutriment: there is not any great regard of the nourishment of Dogs, for they will eat much and that often and divers things, except Dogs flesh, for that cannot be so dressed and prepared by the art of man, but they finde it out by their nofe and avoid it. It is good to let the Whelpes fuck two moneths before they be weaned, and that of their own dam, for it is not so good for them to fuck another, and in the mean time exercise them to meat, as Milk, Whay, Bread, and fiefh ; alfo from the Spring untill the Sun entreth Cancer, at which time it is good to let them grow lean according to the Verses of Nemefian. أحددها والانا

Prosuerit, tenuesque magis retinere cibatus, it aliane and and and the Negravis articulos depraves pondere molles. Nam tum membrorum nexas, nodosque relanant. 1 about to all a ort Committee of A white A.

Tardinus.

They will not eat, Buck-malt wherewithal Hogs grow fat, for that breedeth in them the pain of the head. By eating the excrements of men they incur many difeates a they are mad drunk by the herb Cenutta, as Crowes bee; they cannot endure Wine, but bread fopped in wine they devourt Athenaus. dryed flesh and bread in Milk is their lafest food ; if Cummin be now and then mixed in their breed, they are not much troubled with winde in their bellies. If you put a little Oil in their Water to drink or lap, they will prove more able and fwift to run. If he refuse and loath his meat, take a little A remedy for hot bread and give it him before meat, or dip brown bread in Vinegar, and so presse and squeese the loathing meat. liquor thereof into his nose, and it will ease him.

There is much ado to chuse a Whelpe under the Dam that will prove the best in the lit- Of the choise ter. Some observe that which seeth last, and take that for the best; other remove the otagenerous Whelpes from the kennel and lay them feveral and apart one from the other, then watch they whelp. which of them the Bitch first taketh and carryeth into her kennel again, and that they take for the best, or else that which vomiteth last of all. Some again give for a certain rule to know the best, that the same which weigheth least while it sucketh will prove best according to the Verses of Nemesian.

> Pondere nam catuli poteris perpendere vires. Corporibusque leves gravibus perno cere curfu.

But this is certain that the lighter whelp will prove the swifter, and the heavier will be the stronger. Other make this experiment, first they compais in the Puppies in the absence of the Dam with a little circle of small slicks apt to burn, and slinking rags, then set they them on fire about the Tardinis. whelpes and that Puppy which leapeth over first they take for the best, and that which cometh out last they condemn for the worst. As soon as the Bitch hath littered, it is good to chuse them vou mean to preserve, and to cast away the refuse; keep them black, or brown, or of one colour; for the spotted are not to be accounted of. And thus much of the outward parts and the choise of Dogs. The manifold attributes of Dogs among all Writers, do decipher unto us their par- Of the nature of Dogs. In emantion actificates of Dogs among an viviles, dounding, bold, eared for at- and inward tention, affable, swift, speedy, clamorous, wilde, faithful, horrible, rough, fasting, cruell, ungen qualities of tention, affable, swift, speedy, clamorous, wilde, faithful, horrible, rough, fasting, cruell, ungen qualities of tentions. tle, unclean, hurtful, biting, filthy, smelling, sent-follower, watchful, mad, hoarse, and quicknofed; beside many such other both among the Greek and Latini And likewise you shall read of many particular Dogs, and their names appellative, both in Greek and Latine, which may be remembred also in this place, to shew what reckoning all ages have made of this beast, for it is necessfary, that as foon as he beginneth to feed he presently receive a name, such are these, of two syllables or more, as Scylax, Spende, Alke, Rome, Lucon, Acalambis, Agre, Labros, Hylattor, Allem, Argus (one of Visses Dogs) Asbelm, Augens, Aura, Bria, Rolin, Bremon, Kainon, Canache, Happarm, Charon, Choran, Harpia, Lycitas, Chiron, Lycifca, Arcas, Dromm, Gnome, Eba, Hybru, Hylem, Maira, Mclampm, Orne, Lethargus, Nape; besides infinite other among the antients; but among the latter writers, Turom, Niphm, Falco, Ragonia, Serpent, Ichia, Pilaster, Leo, Lupus, Steffe, Fulgur, Bellina, Rubinum, Satinus, and Furia: so that every Nation, and almost every man hath a proper and peculiar name for his Dog, as well as for his Oxe.

There is not any creature without reason, more loving to his Master, nor more serviceable (as Of the love of that appear afterward) then is a Dog, induring many stripes patiently at the hands of his Master, a Dog, and using no other means to pacifie his displeature, then humiliation, prostration, aftentation, and and using no other means to pacifie his displeasure, then humination, protration, allentation, and after beating, turneth a revenge into a more fervent and hot love. In their rage they will set upon Pliny, all strangers, yet herein appeareth their noble spirit for if any sall or sit down on the ground and cast Plutarch, away his weapon, they bite him not; taking that declining for submilitive pacification. They meet, their Master with reverence and joy, crouching or bending a little, (like shamefall and models. A secret to papersons:) and although they know none but their Master and samiliars, yet, will they help any cife an angry man against another Wilde beast. They remember voices, and obey their leaders hissing or Elianus.

There was a Dog in Venice which had been three years from his Matter, yet knew him an Abistory of a gain in the Market place; difcerning him from thousands of people present. He concerns any Dogs memory, man which giveth him meat: when he fauneth upon a man he wringeth his skin in the forehead. The Dog which is broad faced like a Lion, is most full of stomach and courage; yet the tongue Gillins, or skin of an Hyana (by natural inftinct) maketh him run away: sometimes they will Kiramides, agree with Wolves, for they have engendered together, and as the Luce strings made of a fear of a Dogs and alambe

Allams thinketh that Dogs have reason, and use Logick in their hunting, for they will call and The reason of bout for the game, as a disputant doth for the truth, as if they should say either the Hare is Dogs, gone on the left hand, or on the right hand, or thraight forward, but not on the left hand, and therefore straight forward. Whereupon he runneth forth right after the true and infallible footh steps of the Hare. There was a Dog in Africa in a ship, which in the absence of the Mariners same, to a nicebon of sile was a dog in Agrica and the mount of the cast hairs too navery for his head to to a pitcher of oil to eat some of it, and the mouth of the pot being too narrow for his head, to enter in (because the pot was not full) he devised to cast flint stones into the vellel, whereby the Oil rose to the top of the Pitcher, and so he eat thereof his fill, giving evident testimony thereby, that he discerned by nature, that heavy things will fink down, and light things will rise up and

There is a Nation of people in Ethiopia (called Nube) which have a Dog in hich admirable citie. Solinar. mation, that they give unto him the honor of their King, for they have no other King but he. It he, Elianut, faun, they take him for well pleased; if he bark or slie upon them, they take him for engry and by his geltures

The History of Four-footed Beasts.

Pliny. Giraldus.

gestures and movings they conjecture his meaning, for the government of their state : giving as ready obedience to his fignifications, as they can to any lively speaking Prince of the world: for which cause the Expitant also picture a Dog with a Kings robe, to signific a Magistrate. Those people done to Dogs, of Egypt alfo, observe in their religious processions, and gesticulations, dumb-idle-gods, to carry about with them two Dogs, one Hawk, and one 16th, and these they call four letters: by the two Dogs, they fignifie the two Hemispheres which continually watch and go over our heads: by the Hawk, the Sun; for the Hawk is a hot creature, and liveth upon destruction: by the lbis, the face of the Moon; for they compare the black feathers in this bird to her dark part, and the white to her light. Other by the Dogs, do understand the two Tropicks, which are (as it were) the two porters of the Sun for the South and North: by the Hawk, they understand the Equinoctial or burning line, because she styethhigh : by the Ibis, the Zodiack : and indeed those Painters which could most artificially decipher a Dog (as Nicias) were greatly reverenced among the Egyptians.

Calius.

The like folly (or impious beaftliness) was that of Galba, who for fook the precedents of his predecessors in stamping their coin with their own image, and imprinted thereupon his fealing ring left him by his foresathers, wherein was engraven, a Dog bending upon his semale. I know not for what cause, the Star in the midst of Heaven whereunto the Sun cometh about the Calends of July, was termed Ganis (a Dog) and the whole time of the appearance of that Star, which is about thirty dayes, should be called Dog dayer; but only because then the heat of the Sun doth torment the bodies of men twice fo much as at other times : whereupon they attribute that to the Star (which they call Sirius) which rather is to be attributed to the Sun during that time

Varinus.

Others fable, that there is another Star close to him (called Orion) who was an excellent hunter, and after his death was placed among the Stars, and the Star Canis beside him was his hunting Pog t' but by this Star called of the Egyptians, Solachim; and of the Grecians, Aftrocymon, cometh that Egyptian Cynick year which is accomplished but once in 1460 years. Unto this Star were offered many facrifices of Dogs in ancient time, whereof there can be no cause in the world, as Ovid well noteth in these Verses.

Helychiw. Arnobius.

> Pro Cane Sidereo Canis hic imponitur ara: Et quare figt till nift nomen habet.

Pliny.

Plutarch.

As among the Carians, whereupon came the proverb of Caricum Sacrificium, for they facrificed Dogin flead of a Goat, and the young puppies or whelpes were also accounted amongst the most

availeable facrifices, for the pacifying of their Idoll gods.

The Komans and Grecians had a fo a custom to facrifice a Dog in their Lycean and Lupereal fealts, which were kept for the honour of Pan, who defended their flocks from the Wolf, and this was performed in February yearly, either because that the Dogs were enemies to Wolves, or elle for that by their barking, they draw them away in the night time from their City: or elle, because they reckoned that a Dog was a pleasing beast to Pan, who was the keeper of Goats: so also the Gredian did offer a Dog to Heddie who hath three heads, one of a Horse, another of a Dog, and the third head in the midst of a wilde man: and the Romans to Genetha, for the safe custody and welfare of all their houshold affairs.

Their houshold Gods (called Lares) were pictured and declared to the people fitting in Dogs skins, and Dogs fitting belides them, either because they thereby fignified their duty to defend the house and houshold : or else as Dogs are terrors to Theeves and evill beafts, so these by their affiftance were the punishers of wicked and evill persons : or rather that these Lares were wicked spirits prying into the affaires of every private houshold, whom God used as executioners of his

wrathful displeasure upon godless men.

Festus. Calius.

Arnobius. Gyraldus.

There were Dogs facred in the Temple of Affulapite, because he was nourished by their milk and Jupiter himfelf was called Congetes; that is, a Dog-leader; because he taught the Arcadians first of all to hunt away noisome bealts by the help of Dogs: so also they facrificed a Dog to Mat, because of the boldness of that creature. To conclude, such was the unmemorable vanity of the Heathens in their gods and facrifices, as it rather deserveth perpetuall oblivion then remembrance, for they joyned the shapes of men and heast together (saith Arnobius) to make gods, Omnigenumque deum monster & larguy Anubis, slich were their Cynacophali, Ophiocophali, Anubis, Histories, that is a much to say, as half Men, half Dogs, half Serpents, but generally all Monsters; and for the many imaginary virtues the ancients have decamed to be in Dogs, they also in many places have given unto them folemn funerals in their hallowed Cemiteries, and after they were dead they cealed not to magnifie them, as Alexander, which built a City for the honour

Of dishonour All this notwithif and ing, many learned and wife men in all ages have reckoned a Dog but and ignobility a balls and an impudent creature: for the Flamen Dialis of Jupiter in Rome, was commanded to abstain from touching of Dogs, for the same reason that they were prohibited and not permitted to enter into the Castle of Athem, and Isle of Delor, because of their publick and shameles consistent and allo that no man might be terrified by their presence from supplication in the Tempses. The sooissness of a Dog appeareth in this, that when a stone or other thing is cast at him, he followeth the stone, and negledeth the hand that threw it, according to the faving of the Poet:

> Arripit ut lapidem catulus, morsuque fatigat, Nec percuffori mutua damna facit; Sic plerique finunt venes elabier hoftes, Et ques nulla gravant noxia, dente petunt.

Marcellit.

Likewise men of impudent wits, shameless behaviors in taking and eating meat, were called Conickie for which cause Ath nam speaketh unto Cynicks in this fort, You do not O Cynici lead abstinent and frugal lives, but refemble Dogs: and whereas this four-footed beaft differeth from other creatures in four things, you only follow him in his viler and baser qualities, that is, in barking and license of Popphyrim: railing, in voracity and nudity, without all commendation of men.

The impudency of a Dog is eminent in all cases to be understood, for which cause that audacious Homer. Ariflogiton fon of Cidimach w was called a Dog, and the Furies of ancient time were pictured by black Horace. Dogs, and a Dog called Erinnys & Cerberns himself with his three heads signified the multiplicity of Devils; that is, a Lions, a Wolfs, and a fawning Dogs; one for the Earth, another for the Water, and the third for the Air: for which cause Hercules in flaying Cerberus, is said to overcome all temptation, vice and wickedness, for so did his three heads signifie. Other by the three heads understand the three times; by the Lion the time present; by the Wolf, the time past; and by the fawning Dog, the time to come.

It is delivered by Authors, that the root of Oliander, or else a Dogs tooth bound about the arme, do restrain the sury and rage of a Dog: also there is a certain little bone in the lest side of a Toade (called Apocynon) for the virtue it hath in it against the violence of a Dog. It is reported by Pliny, that if a live Rat be put into the pottage of Dogs, after they have eaten thereof, they will never bark any more; and Alianu affirmeth fo much of the Weafils tail cut off from him alive, and carryed about a man; also if one carry about him a Dogs heart or liver, or the skin wherein Constanting, Puppies lie in their dams belly (called the Secundine) the like effect or operation is attributed to them against the violence of Dogs!

There is a little black stone in Nilm about the bigness of a Bean, at first fight whereof a Dog will run away. Such as thefe I faw at Lyons in France, which they called Sea-beans, and they prescribed them to be hanged about a Nurses neck to encrease her milk. But to conclude the discourse of the Stobaus. baseness of a Dog, those two proverbs of holy Scripture, one of our Saviour Mat. 7. Give not that which is holy to Dogs; and the other of Sc. Peter, 2 Epistle Chap. 2. The Dog is returned to the vomit; do sufficiently convince, that they are emblems of vile, curfed, rayling, and filthy men;

which esteem not holy things, but eat up again their own vomits.

The skins of Dogs are dressed for Gloves, and close Boots, the which are used by such as have The use of Ulcerous and swelling Legs or Limbs, for by them the afflicted place receiveth a double relief; their parts, first, it resisteth the influent humors; and secondly, it is not exasperated with Woollen. The Turkes Bloudus. colour their Dogs tails with red, and it is a custom of Hunters to take Dogs and tie them in the Oppianus. Woods unto trees by their stones, for by crying they provoke the Panther to come unto Dogs earn,

It is not to be doubted but that the fiesh of Dogs is used for meat in many places, although the opinion of Rafis be true and confonant to reason, that all devouring creatures, as Dogs, Foxes, and Wolves, have no good flesh for meat, because they engender melancholy; and yet Galen thinketh, that it is like to the flesh of a Hare, especially young Whelpes were held among the Romans a delicate meat, and were used by their Priests; and among Whelpes they attributed most virtueto their flesh which were eaten before they did see, for by them came no evill humor at all, Inflaurione, as is often fet down in Plantw.

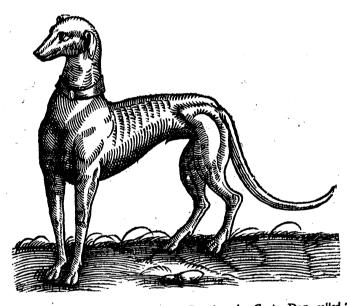

Peter Martyr and Scaliger do affirm of Cozumella and Lucatana, and other Islands of the new World, that the people there do eat a kind of Dog which cannot bark: These Dogs are vile to look upon like young Kids. The inhabitants of Corfica, which are fierce, angry, wilde, cruell, audacious, dissemblers, active and strong, do also feed upon Dogs, both wilde and tame: and it is thought that their meat is a little furtherance to their inclination, for such is the natural dispofition of Dogs. And Scilibergerm in the Book of Peregrinations affirmeth alfo, that the Tartariaus in Ibiffibur do after the same manner feed upon the flesh of Dogs: from hence it cometh, that men refembling a Dogina plain forehead and narrow, are faid to be foolish; in a smooth and stretched out flatterers; those which have great voices like a Ban-dog, are strong; they which rail much (like often barking Dogs) are of a doggish, angry disposition. He that hath a great head like a Dog, is witty; he which hath a little head like an Asses, is blockish; they which have fiery eyes like Dogs, are impudent and shameless: thin lips with narrow folding corners; in Dogs Admantius. is a token of generosity, and in men of magnanimity: they whose teeth hang over their canine teeth, are also adjudged railers, and virulent speakers: and as Carnarius observeth, vain glorious braggarts. A wide mouth, betokeneth a cruell, mad, and wicked disposition; a sharpe nose, an angry minde; as a round, blunt, and folid Nose, signifieth a Lions stomach and worthiness. A sharpe chin, vain babling and wantonness, they which are finall in their girting stead about their loins, do much love hunting.

Munfter us.

Stobes in his wicked discourse or dispraise of Women affirmeth, that the curst, sharp, smart . curious, dainty, clamorous, implacable and wanton-rowling-eyed Women, were derived from Dogs: and Hefiode to amend the matter faith, when Jupiter had fashioned Man out of the earth, he commanded Mercury to infuse into him a Genine minde, and a clamorous inclination: but the Provers of Solomon Chap. 30. concludeth the excellency of a Dog faying, There be three things which go pleasantly, and the fourth ordereth bis pace aright : The Lion which is the ftrongest among beats, and fearth not the fight of any body: a bunting Dog ftrong in bis lains, a Goat, and a King against whom there is no rifing up: by all which is deciphered a good King; for the Lion rifeth not against beasts, except he be provoked; the Dog rifeth not against his friends, but wilde beasts; and the He-goat goeth before his flock like a guide and keeper.

The History of Four-footed Beasts.

Of the GRAY-HOUND, with a narration of all frong and great hunting DOGS.

The name of a

Oppianss.

Plutarch.

Their descri-

Their defire of fit game.

Mong the divers kinds of hunting Dogs, the Gray-hound or Grecian Dog, called Thereulices A mong the divers kinds of hunting bogs, the bray and fagacity to follow and devour wilde beat or Elatica (by reason of his swiftness, strength and fagacity to follow and devour wilde beat hath of great stature) deserveth the first place; for such are the conditions of this Dog, as Plate hath observed, that he is reasonably sented to finde out, speedy and quick of foot to follow, and sierce and throng to take and overcome: and yet filent, coming upon his prey at unawares, according to the observation of Gratius;

Sic Canis illa suos taciturna supervenit bostes.

Like the Dogs of Acamania, which fet upon their game by stealth. Of these are the greatest Dogs of

the world, which in this place are briefly to be remembred.

These have large bodies, little heads, beaked noses, but flat, broad faces above their eyes, long necks, but great next to their bodies, fiery eyes, broad backs, and most generous stomachs, both against all wilde beasts and men also. Their rage is so great against their prey, that sometimes for wrath they lose their eye-fight. They will not only set upon Buls, Boars, and such like beasts, but alfo upon Lions, which Mantuan noteth in this verse :

Et truculentus Helor certare loonibus audens.

The greatest dogs of this kind are in India, Soythia, and Hirtania, and among the Soythians they Gray-hounds. joyn them with Affes in yoak for ordinary labour. The Dogs of India are conceived by Tygres, Countries of Generation by for the Indians will take divers females or Bitches, and fasten them to trees in woods where Tygres

abide: whereunto the greedy ravening Tyger cometh, and inflantly devoureth some one or two Arifiells. of them, if his luft do not restrain him, and then being so filled with meat (which thing Tygers feldom meet withall) presently he burneth in lust, and so limeth the living Bitches, who are ant to conceive by him: which being performed, he retireth to some secret place, and in the mean time the Indians take away the Bitches, of whom come these valorous Dogs, which retain the stomach and courage of their father, but the shape and proportion of their mother, yet do they not keep any of the first or second litter, for sear of their Tygrian stomachs, but make them away and re- Pling. ferve the third litter.

Of this kinde were the Dogs given to Alexander by the King of Albania, when howas going into A history of India, and presented by an Indian, whom Alexander admired, and being destrous to try what vertue Description of great a body. caused a Bara and a Mart as he have a better the Description of the state was contained in fo great a body, caused a Bore and a Hart to be turned out to him, and when he Gilliut. was contained in 10 great about, sauta a bote and a state would not fo much as fir at them, he turned Bears unto him, which likewife he diffained, and rofe not Alianut. from his kennel; wherewithal the King being moved, commanded the heavy and dull Beaft (for fe he Pliny, termed him) to be hanged up: his keeper the Indian informed the King, that the Dog respected Strabo. not such Beasts, but if he would turn out unto him a Lyon, he should see what he would do.

Immediately a Lyon was put unto him, at the first fight whereof he rose with speed (as if never before he faw his match or adversary worthy his strength), and briftling at him, made force upon him, and the Lyon likewise at the Dog; but at the last, the Dog took the chaps or showt of the Lyon into his mouth, where he held him by main strength, untill be strangled him, do the Lyon what he could to the contrary; the King desirous to save the Lyons life, willed the Dog should be pulled off, but the labour of men and all their strength was too little, to loosen those ireful and deep biting teeth which he had faltned. Then the Indian informed the King, that except some violence were done unto the Dog to put him to extream pain, he would sooner dye then let go his hold; whereupon it was commanded to cut off a piece of the Dogs tail, but the Dog would not remove his teeth for that hurt: then one of his legs were likewise severed from his body, whereat the Dog seemed not apalled; after that another leg, and so consequently all four, whereby the trunck of his body fell to the ground, still holding the Lyons frowt within his mouth; and like the spirit of of some malicious man, chusing rather to dye then spare his enemy. At the last, it was commanded to cut his head from the body, all which the angry Beaft endured, and so left his bodiless head hanging fast to the Lyons jaws: whereat the King was wonderfully moved, and forrowfully repensed his rathness in destroying a Beast of so noble a spirit, which could not be daunted with the presence of the King of Beafts: chusing rather to leave his life, then depart from the true strength and magnanimity of minde. Which thing the Indian perceiving to the King, to mitigate the Kings forrow, presented unto him four other Dogs of the same quantity and nature, by the gift whereof he put away his passion, and received reward with such a recompence, as well beseemed the dignity of such a King, and also the quality of such a present,

Pliny reporteth alfo, that one of these did fight with singular courage and policy with an Elephant : and having got hold on his fide, never left till he overthrew the Beaft, and perished underneath him. These Dogs grow to an exceeding great stature; and the next unto them are the Alba- Pollus. nian Dogs. The Arcadism Dogs are faid to be generated of Lyons. In Canaria, one of the Fortunate The albanian Islands, their Dogs are of an exceeding stature,

The Dogs of Greet are called Diaponi, and fight with wilde Boars: the Dogs of Epirus called Cha. Solinus. onides, of a City Chaon, are wonderfully great and fierce; they are likewife called Moloff, of the Sences, people of Epirus fo tearmed, these are fained to be derived of the Dog of Cephain, the first Gray. The Dogs Mo hound whom stories mention : and the Poets say, that this Gray-hound of deplatis, was first of all loffe, or of fashioned by Vulcen in Monesten brass, and when he liked his proportion, he also quickned him with Aristotle, a foul, and gave him to Inpiter for a gift, who gave him away again to Europa, the alfo to Minot Albertus. Minos to Procrie, and Procrie gave it to Copbant is his nature was fo refistable, that he overtook all Various. that he hunted, like the Teumefian Fox. Therefore Jupiter to avoid confusion, turned both the incomprehensible Beate into frones, This Molashus, or Molassio Dog, is also framed to attend the foils of Sheep, and doth defend them from Wolves and Theeves, whereof Virgil written thus i

> Veloces Sparta catulas acremque Molossum Pasce sero pingui, nunquam oustodibus illis Notinenum stabulis surem incursusque luperum Aut imparatos a tergo borrebie Iberos.

These having taken hold, will hardly be taken off again, like the Indian and Persian Dogs, for which cause they are called incommodefici, that is, mod nescit, such as know no mean, which caused Horace to give counsel to keep them tyed up, faying :

Teneant acres lora molossos.

The people of Epirus do use to buy these Dogs, when they dye, and of this kinde were the Dogs Pollus. of Soylla, Nicomedes, and Eupolides. The Hircanian Dogs are the same with the Indain. The Panian, Persian, and Median, are called Synthetois, that is companions, both of hunting; and fighting, as Greatur

-Indociliis dat prælia Medus.

Max.

Dogs devour-

The Dogs of Locus, and Lacene, are also very great, and fight with Bores. There are also a kinde of people called Cynamolgi, neer India, so called, because for one half of the year they live upon the Of people that milk of great Dogs, which they keep to defend their Countrey from the great oppression of wilde Cattel, which descend from the Woods and Mountains of India unto them yearly, from the Summer folftice to the middle of Winter, in great numbers or swarms, liee Bees returning home to their Hives and Hony-combes : These Cattel set upon the people, and destroy them with their horns, except their Dogs be present with them, which are of great stomach and strength, that they eafily tear the wilde Cattel in pieces, and then the people take such as be good for meat to themselves, and leave the other to their Dogs to seed upon: the residue of the year they not only hunt with these Dogs, but also milk the semales, drinking it up like the milk of Sheep or Goats. These great Dogs have also devoured men, for when the servant of Diogenes the Cynick, ran away from his master, being taken again and brought to Delphos, for his punishment he was torn in pieces by Dogs. Eurspides also is said to be slain by Dogs; whereupon came the proverb Curos dike, a Dogs revenge : for King Archelau had a certain Dog which ran away from him into Thracia, and the Thracians (as their manner was) offered the same Dog in sacrifice, the King hearing thereof, laid a punishment upon them for that offence, that by a certain day they should pay a talent; the people breaking day, suborned Euripides the Poet (who was a great favourite of the Kings) to mediate for them, for the release of that fine: whereunto the King yeelded: afterward as the said King returned from hunting, his Dogs stragling abroad, met with Euripides, and tore him in pieces, as if they fought revenge on him, for being bribed against their fellow which was slain by the Thracians. But concerning the death of this man, it is more probable, that the Dogs which killed him, were fet on by Aridam and Cratenas, two Theffalian Poets, his emulators and corrivals in Poetry, which for the advancement of their own credit, cared not in most favage and barbarous manner, to make away a better man then themselves. There were also other famous men which perished by Dogs, as Aliaon, Thrafus, and Linus; of Thrafus, Ovid writeth thus;

The History of Four-footed Beasts.

Pradaque sis illis quibus est Laconia Delos Anie diem rapio non adeunda Ibrafo.

And of Linus and Allaon in this manner;

Quique veregunda (peculantem membra Diana, Quique Crotopiaden diripuere Linum.

Ranifius.

Lucian that scoffing Apostate, who was first a Christian, and afterward endevoured all his wit to rail at Christian Religion, even as he lacerated and rent his first profession, so was he rent in pieces by Dogs; and Heracitus the Philosopher of Athens, having been long fick, and under the hands of Physicians, he oftentimes anointed his body with Bugils sewet, and on a day having so anointed himself, lying abroad sleeping in the Sun, the Dogs came, and for the desire of the fat tore his body in pieces. I cannot here forget that memorable story of two Christian Martyrs, Gorgonius and Dototheus, which were put to death under Disclettan in the ninth persecution, and when they were dead, their carkaies were cast unto hungry Dogs of this kinde, kept for such purposes, yet would not the Dogs once so much as stir at them, or come neer to touch them; and because we may judge that the ravening nature of these creatures was restrained by divine power : We also read that when Benigmus the Martyr, by the commandment of Aurelian, was also thrown alive to be devoured of these Dogs, he escaped as free from their teeth, as once Daniel did from the Lyons den. I may also adde unto these the Dogs of Alania and Illyria, called Mastini, who have their upper lips hang over their neather, and look fierce like Lyons, whom they refemble in neck, eyes, face, colour, and nails; falling upon Bears, and Boars, like that which Ambologius speaketh of, that leaped into the Sea airer a Dolphin, and so perished; or that called Lydia, flain by a Boar; whose Epitaph Maruel made as followeth:

> Amphitheatrales inter nutrita magistres Venattix silvis aspera, blanda domi. L) dia dicebar, domine fidiffima destro, Qui non Erigones mallet babere Canem, Nec qui Didea Cephalum de gente fecutus, Lucifera pariter venit ad aftra dea. Non me longa dies, nec inutilis abstulit atas, Qualia Dulychio fata fuere cani. Fulmineo spumantis apri sum dente perempta, Quantus erat Calydon, aut Erymanthe tuns. Nec queror, infernas quamvis cito rapta per umbras : Non potui fato nobiliore more.

There be in France certain great Dogs (called Auger) which are brought out of Great Britain, to The French ` kill their Bears, Wolves, and wilde Boars; these are singularly swift and strong, and their leaders, Dogs,

the better to arm them against the teeth of other Beasts, cover some of their parts with thick clouts. and their necks with broad collars, or else made of Badgers skins. In Gallia Nathen, they call them Limier, and the Polonians call all made Dogs for the Wolf, and such like Beasts, Vislu: and peculiarly for the Bear and Bore, Charzii, for Hares and Fowl, Pobiednizeii, and Dogs of a middle feantling betwirt the first and the second Psit.

Gray-hounds are the least of these kindes, and yet as swift and sierce as any of the residue, refuling no kinde of Beaft, if he be turned up thereunto, except the Porcupine, who casteth her sharp pens into the mouth of all Dogs. The best Gray-hound hath a long body, strong and reasonable The qualities great, a neat sharp head, and iplendent eyes, a long mouth, and sharp teeth, little ears and thin and priss of a griffles in them, a straight neck, and a broad and strong breast; his fore-legs straight and thort, his shound. hinder-legs long and fraight, broad shoulders, round ribs, fleshy buttocks, but not fat, a long tail, Pliny. frong and full of finews, which Nemefian describeth elegantly in these verses;

Xenophori.

-Sit cruribus altic Coftarum fub fine decenter prona parinam : Renibus ampla satis validis diductaque coras Sit rigidis, multamque gerat sub pettore lato. Que sensim rursus sicca se colligat alvo: Chique nimis holles fluitent in durfibus aures. Elige tune curfu facilem, facilemque recurfu, Dum Superant vires, dum late flore juventus.

Of this kinde, that is a way the best to be chosen among the whelps, which weigheth lightest: for it will be soonest the game, and so hang upon the greater beasts hindering their swiftness, untill the stronger and seaving Dogs come to help: and therefore besides the marks, or necessary good Bellisarius. parts in a Gray hound aready spoken of, it is requisite that he have large stides, and a broad mid-riste or film about his heart, that so he may take his breath in and our more easily, a small belly, Pollum, for if it be great, it will hinder his speedy course, likewise that he have long less; this and soft hairs; and these must the Hunter lead on the less hand if he be a foot, and on the right hand if he be on Horfebick.

The best time to evil them, and train them to their game, is at twell money fold, now beit some The time of hunt them at ten with the best time of hunt them at ten with the best time of the time of hunt them at ten them to run any long course till they be twenty months old, ac- Gray-bound, cording to the old tent.

Esbera turo primum con suescant colla ligari, Jam cum bis denos Phabe reparaverit orius, Sed parvos vallis spatio septove novelli Nec cursus virinte parein, &c.

Keep them also in the learn or slip while they are abroad, untill they see their course, I mean', the Aistole. Hare or Deer, and loosen not a young Dog, till the game have been on foot a good season, lest if Xenophon. he be greedy of the prey he strain his limbs till they break. When the Hare is taken, divide some part thereof among your Dogs, that so they may be provoked to speed by the sweetness of the

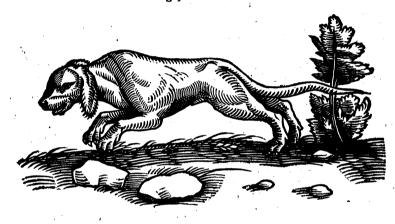

The Lacedemon Gray-hound was the best breed, they were first bred of a Fox and a Dog, and The time of therefore they were called Alopecides, these admit copulation in the eight moneth of their age, and engendring, fometime in the fixt, and so continue bearing as long as they live, bearing their burthen the fixth part of a year, that is, about fixty days, one or two, more or less, and they better conceive, and are more apt to procreation while they are kept in labour, then when they lie idle without hunting. And these Lacedemon Dogs differ in one thing from all other Dogs what theyer, for whereas the male Pliny, out-liveth in vulgar Dogs of all Countries the remale, in these the remails dog-liveth the male, yet Aristotle. -; the male performeth his about with more alactive, although the semale have the sharper sense of

The noblest kinde of Douglar the time teen which cause they are the best which they are the gray-hounds meat, who being hungry, thrustest down his head to take it, buy stilling it to be past his reach, stretchest his neck above him they are they were past his reach, stretchest by the control of the transfer o nourished with the same that the smaller hunting Dogs are; and it is better to feed them with milk good Gray-then whay. There are of this kinde called Veltri, and in Italian, Veltro; which have been procreated bound. by a Dog and Leopard, and they are accounted the swiftest of all other. The Gray-hounds which are most in request among the Germans, are called Windspill, alluding to compare their swiftness

with the winde, the same are also called Turkischwind and Heizhund, and Falco a Falcon, is a common name whereby they call these Dogs. The French make most account of such as are bred in the Mountains of Dalmatia, or in any other Mountains, especially of Turky; for such have

hard feet, long ears, and briftle tails. There are in England and Scotland, two kindes of hunting Dogs, and no where else in all the world; the first kinde they call in Scotland, Ane Rache, and this is a foot-smelling creature, both of wilde Beafts, Birds, and Fishes also, which lie hid among the Rocks; the semale hereof in England, is called a Brache. The second kinde is called in Scotland, a Sluth-bound, being a little greater then the hunting Hound; and in colour for the most part brown, or sandy-spotted. The fense of smelling is so quick in these, that they can follow the foot-steps of theeves, and persue them with violence untill they overtake them; and if the theef take the water, they cast in themselves also, and swim to the other side, where they finde out again afresh their former labour, untill they finde the thing they feek for: for this is common in the Borders of England and Scotland, where the people were wont to live much upon thest; and if the Dog brought his leader unto any house, where they may not be suffered to come in, they take it for granted, that there is both the stollen goods, and the theef also hidden.

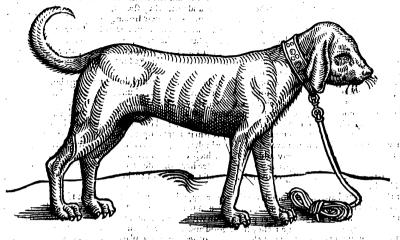

> The Hunting Hound of Scotland called RACHE, and in English a HOUN D.

The SLVTH-HOVN D of Scotland, called in Germany a SCHLATTHYND.

The English B LOOD. HOVND.

TE are to discourse of lesser hunting Dogs in particular, as we finde them remembred in any Histories & descriptions, Poets or other Authors, according to the several Countries of their breed and education; and first for the Bruish Dogs, their nature and qualities hereaster you shall have in a feveral discourse by it self. . The Blood-hound differeth nothing in quality from the Scouist Sluth-hound, faving they are greater in quantity, and not alway of one and the fame colour; for among them they are sometime red, sanded, black, white, spotted, and of such colour as are other The vertue of smelling called in Latine, Sagacitas, is attributed to these as to the former hunt-

ing Hound, of whom we will first of all discourse, and for the qualities of this sense, which maketh the Bealt admirable, Plantus feemeth to be of opinion, that it received this title from some Magicians or fage Wifards (called Sage) for this he faith, fpeaking of this Beaft : Ganem banc effe quidem In Curcul. Magis par fuit : nasum edepol sagax babet : It is also attributed to Mice, not fire smelling, but for the What smelling fenie of their palace or taite; and also to Greie: In a Dog it is that fenie which thereheth out and or lagacity in descripeth the roults, fourms, and lodgings of wilde Bealts, as appeareth in this verile of Alin, Dogs is. Andronicus.

and soils

-- Cum primis fida Canum uiso: Dirige odorifequos advento subtlia canes.

Admin's And for this canfe it hath his proper Epithets;; as Olora canum vis, promiffa canum vil & naribus necel. " utilis: Pincianns called this kinde Pland; for fo did Feflus before him, and the Germans, Sparband; and Leidthund, laghund, because their ears are long thin, and hanging down, and they differ not from vulgar Dogs in any other outward proportion, except only in their cry or barking voyce. Jungs

The nature of thele is, biompilet on by the voyee and words of their leader, to cast about for the fitting of the Beat, and following found it, with continual cry to follow after it till it be wearingd, without changing for any other alifo that fometimes the Hunterschemicives take up the Bedfell at least wife the Hounds seldom fail no killie; They seldom back, except in their hanting thate and then they follow their game through woods, thickets, thorns, and other difficult places, being asway obedient and attentive northeir leaders voyet, fo as they may not go forward when he forbiddeth, nor set Femain neer to the Hunters, whereunto they are framed by Arc and difeipline, tather then by any natural infinitioqui uo,

The White Hounds are faid to be the quickest sented and furest mosed, and therefore best forware Hare: the black ones for the Boan, and the dechanes for the Hart and Roe: but hereunto I cannot agree, because their colour, (especially of the two later) are too like the game they hunt; although there can be nothing pertain collected of their collour, yet is should ak Hound hardor and beerefluble to endure cold, then the other winch is white. In Italy they make account of the freeted one lefted cially white and yellowish, for they are quicker noted : they must be kept eyed up the they man , yet fo as they be let loofe now and then a little to ease their bellies, for it is never any lenat their welfines be kept sweet and dry. thing each? Menejmin to wave came

It is questionable how to discern a Hound of excellent sense; yet as Blondus saith) the square a Hound of the and flat nose is the best sign and index thereof: likewise a small head, having all his legs of best nose.

Plante.

equal length, his breast not deeper then his belly, and his back is plain to his tail, his eyes quick, his ears long hanging, but sometimes stand up: his tail nimble, and the beak of his nose alway to the earth, and especially such as are most filent or bark least.

Xenophon. Omni Bonus. Oppianus.

There are some of that nature, who when they have found the Beast they will stand still untill their Hunter come, to whom in silence by their face, eye, and tail, they shew their game. Now you are to observe the diversand variable disposition of Hounds in their finding out of the Beast: some, when they have found the footsteps go forward without any voyce or other shew of ear or tail. Again, another fort, when they have found the footings of the Beaft, prick up their ear a little, but either bark, or wag their tails; other will wag their tail, but not move their ears, other again wring their faces, and draw their skins through over much intention, (like forrowful perfons) and fo follow the fent, holding the tail immoveable.

There be some again, which do none of these, but wander up and down, barking about the surest marks, and confounding their own soot-steps with the Beasts they hunt, or else torsake the way, and forun back again to the first head; but when they fee the Hare, they tremble and are afraid, not daring to come near her, except the run away first; these with the other, which hinder the cunning labours of their colleagues, trusting to their feet, and running before their betters, deface the best mark, or elfo hunt counter (as they tearmit) take up any falle fent for the truth, or which is more representable, never for fake the high ways, and yet have not learned to hold their peace: unto these also you may adde those which cannot discern the footings of pricking of the Hare, yet will they run speedily when they see her, or essential the beginning see forth very hot, and afterward tyre, and give over lazily; all these are not to be admitted into the kennel of good Hunds.

But the good and approved Hounds on the contrary, when they have found the Hare, make shew thereof to the Hunter, by running more speedily, and with gesture of head, eyes, ears, and tail, winding to the Hares muse, never give over prosecution with a gallant noise, no not returning to their leaders, lest they lose advantage: they have good and hard feet, and are of stately stomacks, not giving over for any hate, and fear not the rocks or other mountain places, as the Poet expresset :

Qua lam prima canum? quibus est audacia praceps : Que nunc elatis rimantur naribus auras : Et perduns clamore feram, dominumque vocando Infequitur tumulo que canis campo que per omnes. Venandi fagaz virtus virefque fequendi, Es nunc demifo quarunt vestigia roftro. Increpitant quem fi collatis effugit armis. Nofter in arte labor positus, spes omnis in illa, &c.

And therefore also it is good oftentimes to lead the Hounds to the Mountains for exercise of their

feet, when you have no Hare or other Beaft.

And whereas the nature of this Hare is, sometimes to leap and make headings, sometimes to tread foftly, without any great impression in the earth, or sometimes to lye down and ever to leap or jump out & in to her own fourm or fitting, the poor Hound is so much the more busied and troubled The best time to retain the small savour of her footings which she leaveth behinde her : for this cause also it is to be noted, that the Hound must be holp not only with the voyce, eye, and hand of the Hunter, but also with a seasonable time, for in frosty weather the sayour congealeth and freezeth with the earth,

of hunting.

The firft

Hounds.

training of

so as you cannot hunt with any certainty untill the thaw thereof, or till the Sun arise. Likewise if rain fall betweet the going of the Hare and the hunting time, you cannot hunt till the water bedryed up, for the drops disperse the sent of the Hare, and the dry weather recollectethic again. The Summer time also is not for hunting, by reason the heat of the earth consumeth the favour, and the night being then but short, the Hare travelleth but little, feeding only in the evening and morning. Likewise the fragrancy of every green herb yeeldeth such a savour, as doth not a little obliterate and oversway the savour of the Beaft : and therefore Aristotle in his Wonders, sheweth that in Eins in the Summer time, there are such plenty of sweet smelling flowers, especially of Violets, which overcome the nostrils of the Hounds, fo as in vain they follow the Hare. The best time therefore for hunting with these Hounds is the Autumn or fall of the leaf; because that then the odours of herbs are weakned, and the earth barer then at other times. The best manner to teach these Hounds, is to take a live Hare and trail her after you upon the earth, now one way, now another; and so having drawn it a convenient space, hide it in the earth; afterward set forth your Hound neer the trail, who taking winde, runneth to and fro neer the woods, fields, pastures, path-ways, and hedges, untill he finde which way the Hare is gone, but with a foft and gentle pace, untill at length coming neer the lodged Hare, he mendeth his pace, and bestirreth himself more speedily, leaping upon his prey like some Serpent, or as an arrow shot out of a Bow, and so tearing it in pieces or killing it with joy, loadeth himself with his conquest, and bringeth it to his Malter with triumph, who must receive both Dog and it, with all tokens of love into his own bosome, which thing caused Nemesian to write thus :

Que freia si Morinum dubio refluentia ponto, O quanta eft merces, & quantum impendia supra

Protinus,

Si non ad Speciem menturofque decores .. Olly Protinus, bec una est catulie jadura Britamia. Diverfa Britannia mittit Veloces moftrique orbis ventibus apros.

There are divers Countrey Doge like unto thefe, as the Geloni and Gnofii, which caused Ovid to Of the Hounds reckon and call lebnobates one of Atleans Dogs Gnofins : whom Oppianus compareth to the Polypus fith, of lundry which smelling in the waters the leaves of Olives, by the sent is drawn to the land to eat them. The Spanish Dogs whom the French call Espagneula, have long ears, but not like a Braches, and by their noses hunt both Hares and Conies, they are not rough, but smooth haired. The Tuscan Dogs are commended by Nemesian; notwithstanding, theware not beautiful to look upon, having a deep fhaggy hair, yet is their game not unpleasant.

> Quin & Tuscorum uon est extrema voluptas. Sape Canum: forma est illis licet obsita villo, &c. Quin & Tufcorum uon est extrema voluptas. Sape Canum: forma est illis licet obsita villo, &c. Hand tamen injucunda dabunt tibi munera prada,&c. Atque etiam leporum secreta cubilia monstrant.

The Umbrian Dog is sharp nosed, but fearfull of his sport, as Gratius expressethi

-Aut exigit Umber care z obc. c Nare sagax e calle feras, At fugit adversus idem ques efferent hoftes Tanta foret virtus : & tantum vellet in armis.

The Ætolian Dogs have also excellent smelling noses, and are not flow or fearful, whom Gratini expresseth as followeth:

> At clangere citat, ques nondum conspicit apres, Ætola queounque Canis de stirpe (malignum Officium)&c.____ Seu frustra nimius properat furor, Mirum quam celeres & quantum nage metentur: met

The French Dogs are derived or propagated of the Dogs of Great Britain, and are swift and quick fented, but not all, for they have of divers kindes, as Gratius expresseth in these words ; Magnaque diversos extollit gloria Celtas.

They are very swift, and not sharp nosed, wherefore they are mingled in generation with the Umbrian Dogs, and therefore he celebrateth in many verses, the praise of the first Hunter (as he taketh him.) Hagno Baonius and his Dog Metagon, and afterward the Dog Petronius : but it may be, that by Metagon, he meaneth the Dogs of Lybia, because there is a City of that name; and by Petronius the

Dogs of Italy, for Petronia is a river that falleth into Tiber.

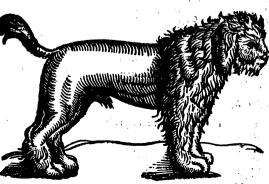

The Grammerians call a Dog engendered of a Hound, and an ordinary Reench Dog, Vertegus, a Tumbler: because he setteth himself to hunting, and bringeth his prey to his Master, whereupon

Martial made this Diftichon :

Lat , ill.

Non fibi, fed Domino venatur vertagus, acer, Illasum leporem qui tibi dente feret.

The WATER SPAGNEL.

Such be also other finelling Dogs, called in the German tongue (Lochundle) that is, Terriars or Beagles: these will set upon Foxes and Badgers in the earth, and by biting expel them out of their dens; whereof Artsotle reporteth a wonder, that one of them followed a Fox under the ground in Bastis, and there made so great a noise by barking, that the Hunters went also into the Cave, where they faw many strange things which they related to the chief Magistrate.

Unto all these smelling Dogs, I may also adde the water Spagnel, called in French, Barbeit ;

M.

and in Germany (Wasserbund:) who is taught by his Master to seek for things that are lost, (by words and tokens) and if he meet any person that hath taken them up, he ceaseth not to bay at him, and solve the seek that he may be considered the seek that the seek that he seek tha figure W in the bottom of the former page described.

I may here also adde the Land-Spagnel, at-English, except from the fowl he hunteth; for which cause the French call them Dogs of the Quails; and the Germans, Vegel-hund, a fowl-Hound; although all Birds little fear Dogs, except the Bustard, who hath a heavy body, and is not able to fly far : yet are these taught by Falconers to retrive and raise Partridges, for they first take them into the fields, and shew them Partridges, whom after they have sayoured twice or thrice, by custom they remember, and being uncoupled, will bestir themselves into all corners to finde them, be-

ing after a while very proud of employment, and very uncerstanding in their game: they are for the most part white or spotted, with red or black: the Polonians call them (Pobionitzii) and a Poet describeth them thus:

Stroza.

Commixtion

of kindes in

procreation.

Pliny.

Nare sagan alim, campisque undisque volucres Quarit, & aduncue buc indefessus & illinc.

Of the mixt kinde of Dogs calleed in English MANGRELS or MONGRELS.

Those we call Mangrels, which though they be on both sides propagated by Dogs, yet are they not of one kinde: for as once Dogs coupled with Asses, Leopards, Lyons, Tygers, Apes, or any fuch Beafts, according to the old Verse;

Cani congeneres Luput, Vulpes, Hyana, Tygris.

So now it is ordinary for the Gray-hound to couple with the Mastive, the Hound with the Gray-Hound, the Mastive with the Shepheards Dog, and the Shepheards Dog with any other Cur or Beagle: of these kindes we will now speak in order. And it is not to be omitted, that this commixted on of kindes have been invented by Hunters for the amendment of some natural fault, or defect they found in the Monophyli, that is, one fingle kinde, and so hereby they added some qualities to their kinde which they wanted before either in strength of body, or craft of wit: for they derive both of these from their Sires, wherefore Oppianus declareth, that in the commixtion of Dogs, the Andents coupled together thtie kindes, the Arcadians with the Eleians, the Cretenfians with the Paonians, the Garians with the Ibracians, the Lacedemonians with the Tyrrbenian, the Sarmatian with the Ibenian, and the Gallican Dogs with the Umbrian, because they want the quick sense of smelling: according to these verses:

Quondam inconsultis mater dabit Umbrica Gallis Sensum agilem, traxere animot de parte Gelona Hyrcano & vana tamum Galydonia lingua Exibit vitium patre emendata Moloffo.

These Dogs so generated are peculiarly tearmed in Greek, Hybrid, and Hybrida, as Porphyrius, writeld. The French Wolves were wont to have a Dog for their Captain or Leader, and it is ordinary for Wolves and Dogs to couple together, as by experience it hath been observed: And it is certain, that Mastive Dogs had their first beginning from this copulation, wherefore Virgil calleth one of these Dogs Lycifca. Referenfque lupum torvo ore Lycifca.

The Dogs which are bred of Thoes, are commended for their rare qualities and understanding parts in the time of Wars, by Hagnon Baotius in thefe veries;

Hic & semiferam thoumde fanguine prolem Seu norit voces, feu nudt ad pipiora martis Et subiere afin, & parvis domuere lacersis Vulpina Specle.

The Dogs of Hircania do of themselves run into the Woods, (like adulterers) and seek out the Tygers to engender with them, which thing Gratine remembreth elegantly in many verses:

> -Ultroque gravis succedere Tigti Ausa canis, majore tulit de sanguine faium, Excutiet silva magnus pugnator adepta,

In the rank of these Mangrels, I may adde in the next place those Dogs, called by the Graciant, Of Dogs de-Symmafchi, and Somatophylakes, because they attended upon men in their travels and labors to desend fenders and arthem, and are taught to fight for them, both against men and other beasts; wherein they are as tenders on ready to take knowledge of violence offered to their Master, and also to revenge or hinder it, as men. a reasonable creature can be. These are called of the Latines, Canes socii defensores, sociable Dogs; of which there be two forts, the first, is leffer, being of rough and long curled hair, his head covered with long hair, of a pleasant and tractable disposition, never going far from his Master, such was the Dog of Tobit, and the Dog of Godrus the Poet, called Chiron, whereof luvenall maketh mention s whose benevolence and ready minde toward their keepers and nourishers may appear by this story of Colopbonius.

Upon a season, he with a Servant; and a Dog, went to a certain Mart to buy Merchandise, and A history of as they travelled, his Servant which carryed the purse, diverted a little out of the way, to perform the rare trust the work of nature, and the Dog followed him: which being done, he forgat to take up the Purse of a Dog, and of mony that had fallen from him toothe ground in that places and followed him to the places and the places are to the places and the places are to the places and the places are to the places are t purse, lay down beside it, and stirred not a foot; afterward the Master and man went forward; mis- goods. fing their Dog, and not their money, untill they/came to their Mart or Fair, and then for want of Tratzet. mony were constrained to return back again without doing any fatther thing: wherefore they refolved to go back again the fame way they came, to fee if they could hear of their mony, and at last when they came to the place where the fervant had left the purse, there they found both Dog and mony together; the poor Cur scarse able to see or stand for hunger: when he saw his Master and the servant come unto him, he removed from the earth, but life not able to tarry any longer in his body, at one and the same time in the presence of his friends and nourishers he also dyed, and took of them both his last farewel, through the faithful custody of their forgotten goods; for which it is apparent, that one part of their faithful disposition is, to keep their nourishers goods committed unto them, as shall be afterward more at large manifested.

Their watchful eare over their Malters may appear also by these stories following, for the Dogs Elianus. of Xamippus followed their Master to the Ship, at what time he was forewarned by the Oracle to Tzetzes. depart out of Athens, by reason of the Persians war in Greece, and so they failed with him to Salamine and as they failed, by the way he commanded one of them to be cast into the Sea, who continued fwimming after the Ship untill he dyed, for which cause his Master buryed him.

When Gelon the Syracufan, in his sleep had a fearful dream, that he was strucken with fire from Heaven, and with impression of fear, cryed out very lamentably: his Dog lying beside him, and Asleptades. thinking that some peril or theef was doing violence to his Master, he presently leaped up to the bed, Elianut. and with scratching and barking awaked him, and so was he delivered from a horrible fear, by the Pollux. barking of his Dog.

The Tyrians which have the best and the first purple in the world, are said in History to have it by the lyriant which have the best and the first purple in the world, are said in Mistory to have it by the first occasion of Hercules Dog. Hercules falling in love with a Nymph called Tyre, and traveling toward her with his Dog, he saw the purple fish creeping upon a stone, the hungry Dog caught the fish to eat it land having devoured it, his lips were all dyed or coloured with the same: when the Virgin Nymph saw that colour upon the Dogs lips, she denyed the love of Hercules, except he could bring her a garment of that colour, whereupon the valiant man thought by what occasion the Dogs lips, she would fishe and whom the could find a said that we have the could find a said that we have the could find a said the said that the said the said who was the could find a said that we have the could find a said that we have the said the said that we have the could find a said that we have the said th lips received such a tincture, went and gathered all the purple fishes and worms he could finde, and pressing their blood out of them, therewithal coloured a garment, and gave it to the Nymph; for reward whereof, he possessed the Virgin, being by this means the first inventor of the Phanician tin-

Among these are to be remembred those loving Dogs, who either have fought for their Masters Of fighting and so defended them, or else declared them that murdered their keepers, or that which is more ad- Dogs, defendmirable, leaped into the burning fires which confumed the dead bodies of their nourishers. Such an ing Men. one was the Dog of Calous, who being flain in a certain civil War at Rome, and his enemies coming Testant. about him to cut off his head, his poor Dog interposed his body betwixt the blows, and would not suffer any foe once to touch his Masters careass, untill by more then six hundred souldiers the Dog was

cut in pieces, fo living and dying a most faithful companion and thankful friend to him that fed him.

The like was in a Dog of Darlus the last King of the Persians, after he was slain by Besus and Narbazanes in the battel against Alexander, & so did the Dog of Silanisn fight for his Master against theeves, Pliny. and when he was flain, he departed not from the body, but kept it warily from Dogs, Birds. or wilde

Bealts, fitting upon his privy parts, and covering them untill the Roman Captains came and buryed it.

But molt admirable was the love of a certain Dog to his Mafter punished with death, for the fact Ta izui against Germanicus. Among other, this Dog would never go from the prison, and afterward when his Masters dead body was brought in the presence of many Romans, the Cur uttered most lamentable and forrowful cryes; for which cause one of the company threw unto him some meat, to

The

fee if that would ftop his mouth, and procure filence : but the poor Dog took up the meat, and carryed to his masters snouth, not without the fingular passion of the beholders : at last the body was taken up and cast into the river Tiber, the poor Dog leaped in after it, and endeavoured by all the means his weakness could afford, to keep it from finking, in the presence of an innumerable multitude, which without tears could not look upon the loving care of this brute beaft.

The Dogs of Gelon, Hieron, Lysimachus, Pyrrhus King of Epirus, Polus the Tragadian, and Theodorus, leaped into the burning fires which confumed their masters dead bodies. Nicis a certain Hunter going abroad in the Woods, chanced to fall into a heap of burning coals, having no help about him but his Dogs, there he perished, yet they ran to the high ways, and ceased not with barking and apprehending the garments of passengers, to shew unto them some directal event: and at land apprendiction of the travellers followed the Dogs, and came to the place where they faw the man confumed, and by that conjectured the whole story. The like did the Dogs of Marius Cefarinus, for by howling they procured company to draw him out of a deep Cave, whereinto he was fallenon Dogs detectors Horfe-hack, and had there perished (being alone) except his Hounds had released him. But that Dogs will also bewray the murtherers of their friends and masters, these stories following, may evi-

Plutarch.

Blandus.

As King Pyrthus by chance travelled in his Countrey, he found a Dog keeping a dead corps, and dently manifolt. he perceived that the Dog was almost pined, by tarrying about the body without all food, wherefore taking pity on the beaft, he caused the body to be interred, and by giving the Dog his belly fore taking pity on the bean, the taking the body to be interred, and by giving the Dog his belly full of meat, he drew him to love him, and so led him away that forward as Pyribus mustered his soldiers, and every one appeared in his presence, the Dog also being beside him, he saw the must therers of his master, and so not containing himself, with voyce, tooth, and rail, he set upon them the King suspecting that which followed, examined them if ever they had seen or known that Dog they denyed it, but the King not satisfied, charged them that surely they were the murtherers of the Dog all the best likely to the Dog all this while remained seen assists them. the Dogs Matter, (for the Dog all this while remained fierce against them) and never barked be fore their appearance, at the last their guilty consciences brake forth at their mouths and tongues end, and so confessed the whole matter.

The like was of two French Merchants which travelled together, and when they came into a certain Wood, one of them role against the other for desire of his money, and so slew him and buryed him. His Dog would not depart from the place, but filled the Wood with howlings and cries; the murtherer went forward in his journey, the people and Inhabitants neer the said Wood, came and found both the murdered corps, and also the Dog, which they took up and nourished till the Fair was done, and the Merchants returned, at which time they watched the high wayes, having the Dog with them, who feeing the murtherer, instantly made force at him without all provocation, as a man would do at his mortal enemy, which thing caused the people to apprehend him, who being

examined, confessed the fact, and received condign punishment for so soul a deed.

To conclude this discourse with one memorable story more out of Blendus, who relateth that there was a certain woman neer Paris, who was beloved of two young men; one of them on a day took his staffe and his Dog, and went abroad (as it was thought, of purpose to go to his love) but it happened that by the way he was murthered and buryed, and the Dog would not depart from the grave of his Matter: at the last, he being missed by his father and brethren, one of them went also to feek him, and fee what was become of him, and fo feeking, found the Dog lying upon his grave, who howled pitifully when he faw his Matters brother: the young man caused the ground to be opened, and fo found the wounded corps of his brother, which he brought away, and caused to be buryed till the murtherer could be described : afterward in process of time, the Dog in the presence of the dead mans brethren espied the murtherer, and presently made force upon him very eagerly; which the brethren suspecting, apprehended him, and brought him before the Governours of the City, who examining him with all the policies they could invent, what should be the occasion, why the Dog should so eagerly fly upon him at all times, when soever he was brought into his presence, could not get any confession of the fact from him: then the Magistrate adjudged, that the young Man and the Dog should combate together.

The Dog was covered with a dry fod skin in stead of armour, and the murtherer with a spear, and on his body a little thin linnen cloath, both came forth to light, and fo the man prefently made force at the Dog, who leaping up to the face of the murcherer, took him fast by the throat, and overthree him, whereat the wretch amazed, cryed out, saying take pity on me you reverend Fathers, and pull off the Dog from my throat, and I will confess all; the which they performed, and he likewise declared the cause and manner of the whole murther, for which thing he was deservedly put to death And thus far of the leffer fociable Dogs, now followeth the fecond kinde of the greater.

Blandus. The greater

A combate.

The greater fociable Dogs of defence are such as fouldiers use in wars, or else are accustomed to keep houses or cattel. This kinde ought to be horrible, sierce, strange and unacquainted with allercept his Master, so that he be always at daggers drawing, and ready to fight with all which shall but lay their hands upon him, for which cause he ought to be instructed from his littering or infancy by art or continual discipline, to supply in him the defects of nature: let him be often provoked to wrath by boyes, and afterward as he groweth, let some stranger set upon him with weapon, as staffe or fword, with whom let him combate till he be wearied, and then let him tear some peece of the provokers garment, that so he may depart with a conceit of victory; after the fight tye him up fait, and suffer him not to straggle loose abroad, but feed him thus tyed up, fo shall he is thort time prove a strong defender, and eager combatant against all men and beasts which come to deal with him. Of this fore they nourish many in Spain, and in other places.

Such an one was the Dog of Pheram the Tyrant of Thessaly, being a very great and sierce Beast. Blondut. and hurtful to all, except them who fed him daily. He used to set this Dog at his chamber dore to Or uselending watch and guard him when he slept, that who so ere was asraid of the Dog, might not approach Dogs. near without exquisite torments. Augens gave one of these to the Poet Eupolis, who taught him by many signes and gestures for the love of his meat, to observe his servant Ephialter, if at any time he fole mony from him. And at the last, the wily Dog observed the servant so narrowly, that he found him robbing his Matters coffers: wherefore he instantly fell upon him and tore him in pieces. The which Dog afterward died for forrow of his Masters death; whereupon Ælianus saith, that the place of his death in Ægina was called the place of mourning, to the day of his writing.

Nicomedes King of Bythinia, had one of these Molossian great Dogs, which he nourished very tenderly, and made it very familiar with himself: it fell out on a time, that this King being in dalliance duling. with his wife Ditizele, in the presence of the Dog, and she again hanging about the Kings neck, kilfing and provoking him to love with amorous gestures, the Dog thinking she had been offering A cruc' mutfome violence to his master the King, presently sew upon her, and with his teeth pulled her right there of a shoulder from her body, and so lest the amorous Queen to dye in the arms of her loving Husband : Queen by a which thing caused the King to banish the Dog for ever out of his fight, for forrow whereof he soon Dig. after dyed; but the Queen was most nobly buryed at Nicomedia in a golden Sepulcher: the which was opened in the raign of the Emperour Michael, fon of Theophilus, and there the womans body was found whole and not putrefied, being wrapped in a golden vefture, which taken off, and tryed in a furnace, yeelded above an hundred and thirteen pounds of pure gold.

When a Dragon was fetting upon Orpheus, as he was occupied in hawking by his Dogs his life was faved, and the Dragon devoured. And when Calius one of the Senators of Placentia being fick, was

fet upon by certain lewd fellows, he received no wound till his Dog was slain.

There was never any thing more strange in the nature of Dogs, then that which happened at A most menus Rhodes besieged by the Turk, for the Dogs did there discern betwixt Christians and Jurks; for to- rable story or wards the Turke they were most eager, furious, and unappeaseable, but towards Christians, although the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily and in the Dogs of unknown most easily necessarily necessaril unknown, most easie, peaceable and placidious, which thing caused a certain Poet to write thus:

His auxere fidem quos noftro fulva (ub are Arva & Carpathii defendit littora ponti. Pedora thoracum tunica facrumque profano Miratur, nutrit que Rhodes, custodibus illis It nocles animofa Phalanx innexa trilici Seligit, & blande exceptum deducit ad Urbema

There were two hundred of these Dogs which brought the King of Garamants from banishment, rescuing him from all that resisted. The Colophonian and Castabalensian, or Caspian Dogs fought in all Elianus. their battels : fo likewise the Cimbrian, Hircanian, and Magnesian Dogs : these also the Sp. mards used Textor. in India, to hunt out the naked people, falling upon them as fiercely as ever they would upon Botes, Plany. or other wilde Beafts, being pointed unto by their leaders finger. And for this cause was it, that Vaf Per. Maryr. chus the Spaniard caused Paera an Indian Lord, and three other his wicked companions to be cast unto Deserved pu-Dogs for their unnatural lust: but the Inhabitunts of Caramair and Carib, do drive astay the Dogs, nithment of for through their admirable activity in cashing darts, they pierce the Dogs ere ever they come neer pulation, and the pulation of the pulation them with poyloned arrows. And thus much for the great warlike defensive Dogs.

In the next place followeth the Shepheards Dog, called by Virgil, Pecuarius Canis: and this cannot The Shepproperly be tearmed a dumb keeper; for there is no creature that will more fir, bark, and move heards Dog. noise, then one of these against thief or wilde beast. They are also used by Heards-men, Swine-heards, and Goat-Heards, to drive away all annoyances from their Cattel, and also to guide & govern them, in executing their mafters pleasure upon figns given them, to which of the stragling Bealts they ought to make force. Neither is it requifite that this Dog be so large or nimble as is the Grey-hound, which is appointed for Deer and Hares.

But yet that he be strong, quick, ready, and understanding both for brauling and fighting, so as he may fear away and also follow (if need be) the ravening Wolf, and take away the prey out of his mouth; wherefore a square proportion of body is requisite in these Beasts, and a tolerable lightness of foot, fuch as is the Village Dog, used only to keep houses, and hereof also they are the best, who Columella. have the greatest or loudest barking voyces, and are not apt to leap upon every stranger or beast they see, but reserve their strength till the just time of imployment.

They approve also in this kinde above all other, the white colour; because in the night time they Elondus. are the more easily discerned from the Wolf, or other noisome beast; for many times it falleth out, that the Shepheard in the twy-light, striketh his Dog instead of the Wolf: these ought to be well Fronto. faced, black or dusky eyes, and correspondent nostrils of the same colour with their eyes, black ruddy lips, a crooked camoyfe nofe, a flat chap with two great broches, or long straight sharp teeth growing out thereof, covered with their lips, a great head, great ears, a broad brest, a thick neck broad and folid shoulders, straight legs, yet rather bending inward then standing outward; great and thick feet, hard crooked nails, a thick tail which groweth leffer to the end thereof, then at

Strabo.

the first joint next the body, and the body all rugged with hair, for that maketh the Dog more terrible, and then also it is requisite that he be provided of the best breed, neither buy him of a Hunter (for fuch an one will be gone at the fight of a Deer or Hare) nor yet of a Butcher, for it will be fluggish; therefore take him young, and bring him up continually to attend Sheep, for fo will he be most ready that is trained up among Shepherds.

l'airo. Fronto. The love of Dogs to the Cattel they attend.

They we also to cover their throat and neck with large broad collars, pricked through with nails, for else if the wilde heaft bite them in those places, the Dog is easily killed: but being bitten at any other place he quickly avoideth the wound. The love of such to the Cattel they keep is very great, especially to Sheep; for when Publius Ausidius Pontianus, bought certain flocks of Sheep in the farthest part of Umbria, and brought Shepherds with him to drive them home; with whom the dogs went along unto Heraclea, and the Metapontine coasts, where the drovers lest the Cattel : the Dogs for love of the Sheep yet continued and attended them, without regard of any man, and forraged in the fields for Rats and Mice to eat, untill at length they grew weary and lean, and for eturned back again unto *Umbria* alone, without the conduct of men, to their first Masters, being many

It is good to keep many of these together, at the least two for every flock, that so when one of daies journey from them. them is hurt or fick, the herd be not destitute; and it is also good to have these male and semale, yet some use to geld thee, thinking that for this cause they will the more vigilantly attend the flock; howbeit I cannot affent hereunto, because they are too gentle and lesse eager when they want their fromes. They are to be taken from their Dam at two moneths old, and not before : and it is not good to give them hot meat, for that wil encrease in them madness, neither must they taste any of the dead carkasses of the Cattel, lest that cause them to fall upon the living; for when once they have taken a fmatch of their bloud or flesh, you shall feldom reclaime them from that devouring appetite. The

understanding of these Shepherds Dogs is very great, (especially in England) for the Shepherds will there leave their Dogs alone with the flocks, and they are taught by custom, to keep the Sheep with in the compass of their pasture, and discern betwist grasse and Corn, for when they see the Sheep fall upon the Corn, they run and drive them away from that forbidgen fruit of their own accord;

and they likewise keep very safely their Masters garments and victuals from all annoyance until their return. There is in Xenophan a complaint of the Sheep to the Shepherds concerning these Dogs We marvel (said the Sheep) at thee, that seeing we yeeld thee milk, Lambs, and Cheese, whereupon thou feedelt; nevertheless thou givest unto us nothing but that which groweth out of the earth, which we gather by our own industry sand whereas the Dog doth none of all these, him thou seedest with thine own hand, and bread from thine own trencher. The Dog hearing this complaint of the

Sheep, replyed, That his reward at the Shepherds hand was just, and no more then he deferved, for (faid he) I look unto you, and watch you from the ravening Wolf, and pilfering Theef, so as if once I forfake you, then it will not be fafe for you to walke in your Pastures, for perill of death, whereunto the Sheep yeelded, and not replyed to the reasonable answer of so unreasonable a beast; and this complaint you muit remember was uttered when Sheep could speak, as well as men, or else it noteth

the foolish murmuring of some vulgar persons, against the chief Ministers of state, that are liberally rewarded by the Princes own hands, for their watchful custody of the Common-wealth. And thus

much for the Shepherds Dog.

Of the VILLAGE-DOG, or HOVSE-KEEPER.

The colour of

A prety fable

and the Dog.

His Village Dog ought to be fatter and bigger then the Shepherds Dog, of an elegant, square and strong body, being black coloured, and great mouthed, or barking bigly, that so he may the more terrifie the Theef, both by day and night, for in the night the beaft may feize upon the robber before he difern his black skin, and therefore a spotted, branded, party coloured Dog is not approved. His head ought to be the greatest part of his body, having great ears hanging down, and black eyes in his head, a broad breaft, thick neck, large shoulders, strong legs, a rough hair, short tail, and great nails: his disposition must not be too sterce, nor yet too samiliar, for so he will faun upon the Theef as well as his Masters friend. Yet is it good that sometime he rise against the household servants, and alway against strangers, and such they must be as can wind a stranger asar off, and descry him to his Master by barking as by a watch-word, and setting upon him, when he approcheth neer if he be provoked. Blandun commendeth in this kinde, fuch as sleep with one eye open and the other shut, so as any small noise or stir wake and raise him. It is not good to keep many of these curst Dogs together, and them few which be kept must be tyed up in the day time, that so they may be more vigilant in the night when they are let loofe. There are of this kind which Mariners Dogs on ship- take with them to Sea, to preserve their goods on Ship board, they chuse them of the greatest bodies and lowdest voice, like the Croatian Dog, refembling in hair and bigness, and such as are very watchful, according to the faying of the Poet;

Exagitant & lar, & turba Diania fures, Pervigilantque lares, pervigilantque Canes.

And fuch also they nourish in Towers and Temples; in Towers, that so they may descry the ap- Vecetim. proaching enemy when the Souldiers are afleep; for which cause, Dogs seem fleep, signifie the careful and watchful wife, servants, or Souldiers, which foresee dangers and preserve publick and Actemidars

Of Dogs.

There was in Italy a Temple of Pallas, wherein were referved the axes, instruments, and armour Ar Jotle. of Diomeder and his Colleagues, the which Temple was kept by Dogs whose nature was (as the Au-Gyraldur. thor faith) that when Greeiaus came to that Temple, they would faun upon them as if they knew D. gs keepers them; but if any other Countreymen came, they shewed themselves wilde, sierce, and angry against of Temples, them. The like thing is reported of a Temple of Vulcan in Ælna, wherein was preserved a perpetu- Pion Chryle, all and unquenchable fire, for the watching whereof, were Dogs designed; who would faun and gently flatter upon all those which came chaftly and religiously to worship there, leading them into the Temple like the familiars of their God; but upon wicked and evill disposed leud persons, they barked and raged, if once they endevoured to much as to enter either the Wood or Temple; but the true cause hereof was, the imposture of some impure and deceitful, unclean, diabolical spirits. And by the like instinct, Soipio Africanus was wont to enter into the Capitol, and command the Chappel of Jupiter to be opened to him, at whom no one of the Keepers Dogs would ever flir, Graddus. which caused the Men keepers of the Temple much to marvel, whereas they would rage fiercely a- Calini. gainst all other: whereupon Strong made these Verses, faisly imputing this demonical illusion to divine revelation.

Quid tacitos linguam ques veri baud nescia Crete Nec semper mendan, ait aurea templa tuentes. Parcereque band ulli felitos, (mirabile diciu) Dolla Tyanai Aratos fenioris ad ora Non magioo cantu, fed quod fivinitus illia Infita vis animo, virtutia gnara latentis.

The like strange thing is reported of a Temple or Church in Cracovia, dedicated to the Virgin Mary, wherein every night are an affembly of Dogs, which unto this day (faith the Author) meet Schneberg. voluntarily at an appointed hour, for the cultody of the Temple, and those ornaments which are preserved therein against Theeves and Robbers: and if it fortune any of the Dogs be negligent and flack at the hour aforesaid, then will he bark about the Church until he be let in, but his fellowes take punishment of him, and fall on him, biting and rending his skin, yea sometime killing him; and these Dogs have a set diet or allowance of dinner, from the Canons and Preachers of the Church, which they duely observe without breach of order; for to day two of them will goe to one Canons house, and two to anothers, and so likewise all the residue in turnes successively visit the several houses within the Cloister yard, never going twice together to one house, nor preventing the refection of their fellowes; and the story is reported by Autonius Schnebergerus for certain truth, upon his own knowledge.

Of the MIMICK, or GETULIAN - DOG, and the little MELITE AN-DOGS of Gentlewomen.

Here is also in England two John Cay. other forts of Dogs, the figure of the first is here expres- Thelfirst genes fed, being apt to imitate all ration of Mithings it feeth, for which cause mick Dogs, fome have thought that it was conceived by an Ape; for in wit and disposition it resembleth an Ape, but in face sharpe and black like a Hedge-hog, having a short recurved body, very long legs, shaggie hair, and a short tail: this is called of some (Canis Lucernariw) these being brought up with Apes in their youth, learn very admirable and strange feats. The feats of whereof there were great Dogs. plenty in Egypt in the time of King Ptolemy, which were taught to leap and play, and dance, at

Albertus.

the hearing of musick, and in many poor mens houses they served in stead of servants for divers

The History of Four-footed Beasts.

These are also used by Players and Puppet-Mimicks to work strange tricks, for the sight whereof they get much money : fuch an one was the Mimicks dog, of which Plutarch writeth that he faw in a publick spectacle at Rome besore the Emperor Velpasian. The Dog was taught to act a play, wherein were contained many persons parts, I mean the affections of many other Dogs: at laft there was given him a piece of bread, wherein, as was faid, was poison, having virtue to procure a dead sleep, which he received and swallowed: and presently after the eating thereof he began, to reel and stagger to and fro like a drunken man, and fell down to the ground, as if he had been dead, and so lay a good space not stirring foot nor limb, being drawn up and down by divers persons, according as the gelture of the Play heacted did require, but when he perceived by the time and other fignes that it was requifite to arife, he first opened his eyes, and lift up his head a little, then stretched forth himself like as one doth when he rifeth from sleep; at the last up he getteth and runneth to him to whom that part belonged, not without the joy and good content of Cafar and all other the beholders.

To this may be added another story of a certain Italian about the year 1403. called Andrew, who had a red Dog with him of strange feats, and yet he was blind. For standing in the Market place, compassed about with a circle of many people, there were brought by the standers by many Rings, Jewels, Bracelets and pieces of gold and filver, and there within the circle were covered with earth, then the Dog was bid to feek them out, who with his nose and feet did presently find and discover them, then was he also commanded to give to every one his own Ring, Jewel, Bracelet, or money, which the blind Dog did perform directly without stay or doubt. Afterward the standers by, gave unto him divers pieces of coin, stamped with the images of sundry Princes, and then one called for a piece of English money, and the Dog delivered him a piece, another for the Emperors coin, and the Dog delivered him a piece thereof; and fo confequently every Princes coin by name, till all was reftored: and this ftory is recorded by Abbus Urspergensis, whereupon the common people said, the Dog was a Devill or else possessed with some Pythonical spirit: and so much for this Dog.

Strabo. Of the Melitaan Dogs.

Ælianus.

king of little

There is a Town in Pachynus, a Promontory of Sicily (called Melita) from whence are transported many fine little Dogs called, Melitei Canes, they were accounted the Jewels of Women, but now the faid Town is possessed by Fisher-men, and there is no such reckoning made of those tender little Dogs, for these are not bigger then common Ferrets, or Weasils, yet are they not small in understanding, nor mutable in their love to men: for which cause they are also nourished tenderly for pleasure; whereupon came the proverb, Militea Catella, for one nourished for pleasure, and Canis digna throno, because Princes hold them in their hands sitting upon

Theodorus the tumbler and dancer had one of these, which loved him so well, that at his death he leaped into the fire after his body. Now a dayes, they have found another breed of little Dogs in all Nations, beside the Melitzan Dogs, either made so by art, as inclosing their bodies in the The art of ma earth when they are Whelps, fo as they cannot grow great, by reason of the place, or elfe, lessening and impayring their growth, by some kind of meat or nourishment. These are called in Germany, Bracken Schotsbundle and Gutschenbundle; the Italians, Bottolo; other Nations have no common name for this kind that I know. Martial made this Distichon of a little French Dog; for about Lions in France there are store of this kinde, and are sold very dear; sometimes for ten Crowns, and fometimes for more.

Delicias parva si vis audire catella, Narranti brevis est pagina tota mibi.

They are not above a foot, or half a foot long, and alway the leffer the more delicate and precious. Their head like the head of a Mouse but greater, their snowt sharp, their ears like the ears of a Cony, short legs, little feet, long tail, and white colour, and the hairs about the shoulders longer then ordinary, is most commended. They are of pleasant disposition, and will leap and bite without pinching, and bark prettily, and some of them are taught to stand upright holding up their fore legs like hands; other to fetch and carry in their mouths, that which is call

There be fome wanton women which admit them to their beds, and bring up their young ones in their own bosomes, for they are so tender, that they seldom bring above one at a time, but they lose their life. It was reported that when Grego in Syracuse was to go from home among other Gostips, the gave her maid charge of two things, one that the should look to her childe when it cryed, the

other that the should keep the little Dog within doors.

Publius had a little Dog (called Iffa) having about the neck two filver bels, upon a filken Collar, which for the neatness thereof, seemed rather to be a picture then a creature; whereof Martial made this elegant Epigram, comprehending the rare voice and other gettures in it.

Issa est puriot of culo columbie. Iffa eft blandior omnibus but lis. March carior Indicis lapillis. Iffa eft delivia outella Public. Hant m. fe queretur, leque putabis, Sebtit triftiteamque Landiumque. Collo nexa cubat capitque formos, Ut fuspiria nulla sentianter. Et deliderio contla veneris. Gutta pallia, non fefellit ulla.

Sed Hando pede fufcitat toroque Deponi monet, & rogat leveri. Cafte tantus inest pudor catelle. Hanc ne lun rapiut fuprema totam: Pillam Publim exprimit tabella. In qua tam fmilem vibebis Iffam. Ut fit tam fimilis fibi nec ipfa. Isam denique pone cum tabella, Aut utramque putabis effe veram; Aut neramque putabis effe pictam.

Marcellas Empition reciteth a vertain charm, made of the rinde of a wilde Figtree, held to the Spleen or Liver of a little Dog, and afterward hanged up in the smoak to dry, and pray that as the rind or bark dryeth, fo the Liver or Spicen of the Dog may never grow; and thereupon the Dog (faith that foolish Emperick) shall never grow greater, then it was at the time that the bark was hanged up to drying. To let this trifle go, I will end the discourse of these little Dogs with one story of their love and understanding.

There was a certain noble Woman in Sioily, which understanding her husband was gone a long Elianus. iourney from home, fent to a lover (I should say an Adulterer) she had, who came, and by bribery A lamentable and money given to her fervants, she admitted him to her bed, but yet privately, more for fear of stery of the punishment, then care of modelty; and yet for all her craft, the mistrusted not her little Dog, discovery of an who did see event, day where the locked are this Adulterer by a who did fee every day where the locked up this Adulterer : at last, her husband came home, before little Dog, her lover was avoided, and in the night the little Dog seeing his true Master returned home, ran barking to the door and leaped up thereupon (within which the Whoremonger was hidden) and this he did oftentimes together, fauning and scraping his Lord and Master also, in so much as he mistrusted (and that justly) some strange events at last, he brake open the door, and sound the Adulterer ready armed with his fword, wherewithal he flew the good man of the house unawares; and so enjoyed the Adulterate woman for his wife: for Murther followeth if it go not before Adultery. This flory is related by Milanus to fet forth a virtue of these little Dogs; how they observe the actions of them that nourish them, and also some descretion betwixt good and evill.

The Dogs of Egot are most fearful of all other, and their custome is to run and drink, or drink of the River Nilut running, for fear of the Crocodiles : whereupon came the Proverb, of a man Ælianus. that did any thing flightly or haftily, Ut Cantere Nilo bibit. Alcibiades had a Dog which he would Solinus. not fell under 28 thousand Sesterces, that is, seven hundred French Crowns; it was a goodly and beautiful Dog, yet he cut off his tail, whereof he gave no other reason, being demanded why he so blemished his beast, but only that by that fact the might give occasion to the Athenians to talke Pollux.

The Dogs of Garamania can mover be tamed, for their men also are wilde and live without all Law and Civility: and thus much of Dogs in special. In the next place I thought good to insert into this story the Treatise of English Dogs, first of all written in Laun by that famous Doctor in Physick Elianut. John Cay, and fince translated by A. F. and directed to that noble Gefner, which is this that follows eth, that so the Reader may chuse whether of both to affect best.

The Preamble or Entrance into the Treatise following.

Wrote unto you (well beloved friend Geffier) not many years past, a manifold history containing I the divers forms and figures of Bealts, Birds, and fifthes, the fundry shapes of Plants, and the fashions

I wrote moreover unto you severally, a certain abridgement of Dogs, which in your discourse upon the formes of Beatle in the second order of milde and tamable beatle, where you make mention of Scottish Dogs, and in the winding up of your Letter written and directed to Doctor Turner, comprehending a Catalogue or rehearfal of your Books not yet extant, you promifed to fet forth in print; and openly to publish in the face of the world among such your works as are not yet come abroad to light and fight. But because certain circumstances were wanting in my breviary of English Dogs (as seemed unto me) I stayed the publication of the same, making promise to fend another abroad, which might be committed to the hands, the eyes, the ears, the minds, and the judge-

Wherefore chat I might perform that precifely, which I promifed folemnly, accomplish my determination, and satisfie your expectation : which are a man defirous and capable of all kind of knowledge, and very earnest to be acquainted with all experiments: I will expresse and declare in due order, the grand and general kind of English Dogs, the difference of them, the use, the properties, and the divers natures of the same, making a tripartite division in this fort and manner. All English Dogs be either of a gentle kinde ferving the game, a homely kinde apt for fundry necessary uses, or a currish kind, meet for many toice.

Or these three forts or kinds so mean I to entreat, that the first in the first place, the last in the last room, and the middle fort in the middle feat be handled. I call them univerfally all by the name of English Dogs, as well because England only, as it hath in it English Dogs, so it is not with the Scotish, as also for that we are inclined and delighted with the noble game of hunting, for we Englishmen are add ched and given to that exercise and painful passime of pleasure, as well for the plenty of sich which our Parks and Forrests do foster, as also for the opportunity and convenient leisure which we obtain; both which the Scots want. Wherefore feeing that the whole effate of kindly hunting confifteth principally in these two points, in chasing the beaft that is in hunting, or in taking the bird that is in fowling; It is necessary and requisite to understand that there are two forts of Dogs by whose means the seats within specified are wrought, and these practises of activity cunningly and curioufly compassed, by two kindes of Dogs, one which rouzeth the beast and continueth the chase, another which springeth the bird, and bewrayeth the flight by pursue. Both which kinds are termed of the Latins by one common name, that is, Canes Venation, hunting Dogs. But because we Englishmen make a difference between hunting and fowling, for they are called by these several words, Venatio, & Aucupium, so they term the Dogs whom they use in these sundry games by dives names, as those which serve for the beast, are called Venatici, the other which are used for the fowl are called Aucura orii.

The first kinde called Venatici I divide into five forts, the first in perfect smelling, the second in quick fpying, the third in swiftness and quickness, the fourth in smelling and nimbleness, the fifth in

subtilty and deceitfulness, herein these five forts excell.

Of the DOG called a HARIER, in Latin, Leverarius.

Hat kinde of Dog whom nature hath endued with the virtue of smelling, whose property it is to use a lustiness, a readiness, and a couragiousness in hunting, and draweth into his nostrils the air or sent of the beast pursued and followed, we call by this word Sagar, the Greelans by this word Ichneuten of tracing or chasing by the foot, or Rinelaten, of the nostrils, which be the instruments of smelling. We may know these kinde of Dogs by their long, large and bagging lips, by their hanging ears, reaching down both fides of their chaps, and by the indifferent and measurable proportion of their making. This fort of Dogs we call Leverarios, Hariers, that I may comprise the whole number of them in certain specialities, and apply to them their proper and peculiar names, for fo much as they cannot all be reduced and brought under one fort, confidering both the fundry uses of them, and the difference of their service whereto they be appointed. Some for the Hare, the Fox, the Wolf, the Hart, the Buck, the Badger, the Otter, the Polcat, the Lobster, the Weafell, the Cony, &c. Some for one thing and some for another.

As for the Cony, whom we have lastly set down, we use not to hunt, but rather to take it, some

time with the net, sometime with a Ferret, and thus every several sort is notable and excellent in his natural quality and appointed practife. Among these fundry forts, there be some which are apt to hunt two divers beafts, as the Fox other whiles, and other whiles the Hare, but they hunt not with fuch towardness and good luck after them, as they do that whereunto nature hath formed and framed them, not only in external composition and making, but also in inward faculties and conditions,

for they swarve oftentimes, and do otherwise then they should.

Of the DOG called a TERRAR; in Latin, Terrarius.

Nother fort there is which hunteth the Fox, and the Badger, or Gray only, whom we cal Terran, A because they (after the manner and custom of Ferrets in searching for Conies) creep into the ground, and by that means make afraid, nip, and bite the Fox and the Badger in fuch fort, that either they tear them in pieces with their teeth, being in the bosom of the earth, or else hale and pull them perforce out of their lurking Angles, darke dungeons, and close caves, or at the least through conceived fear, drive them out of their hollow harbors, in fo much that they are compelled to prepare speedy flight, and being desirous of the next (albeit not the safest) refuge, are otherwise taken and intrapped with snares and nets laid over holes to the same purpose. But these be the least in that kinde called Sagaces.

Of the DOG called a BLOOD-HOVND; in Latin, Sanguinariue.

The greater fort which serve to hunt, having lips of a large size, and eares of no small length, do not only chase the beast whiles it liveth (as the other do of whom mention above is made) but being dead also by any manner of casualty, make recourse to the place where it lyeth, having in this point an affured and infallible guide; namely, the fent and favour of the bloud fprinkled here and there upon the ground. For whether the beaft being wounded, doth notwithitanding enjoy life, and escapeth the hands of the huntsman, or whether the faid beaft being flain is conveyed cleanly out of the Park (fo that there be some signification of bloud shed) these Dogs with no

leffe facility and eafinels, then avidity and greediness can disclose and bewray the same by smelling, applying to their pursuite, agility and nimbleness, without tedicusness; for which consideration, of a fingular specialty they deserved to be called Sanguinarii Blood-hounds. And albeit peradventure it may chance, (as whether it chanceth feldom or fometime I am ignorant) that a piece of flesh be subtilly stolne, and cunningly conveyed away with such provisoes and precavears, as thereby all appearance of bloud is either prevented, excluded, or concealed, yet these kinde of Dogs by certain direction of an inward affured notice and privie mark, pursue the deeddooers, through long lanes, crooked reaches, and weary wayes, without wandering awry out of the limits of the land whereon these desperate purloiners prepared their speedy passage. Yea, the natures of these Dogs is such, and so effectual is their foresight, that they can bewray, separate. and pick them out from among an infinite multitude and an innumerable company, creep they never to far into the thickest throng, they will finde him out notwithstanding he lie hidden in wilde Woods, in close and overgrowen Groves, and lurk in hollow holes apt to harbour such un-

word of Dags.

Moreover, although they should passe over the water, thinking thereby to avoid the pursuite of the Hounds, yet will not these Dogs give over their attempt, but presuming to swim through the fream, persevere in their pursuite, and when they be arrived and gotten the further banck, they hunt up and down, to and fro run they, from place to place thift they, until they have attained to that plot of ground where they passed over. And this is their practife, if perdy they cannot at the first time smelling, finde out the way which the deed-doers took to escape. So at length get they that by art, cunning, and diligent endevour, which by fortune and luck they cannot otherwise overcome. In fo much as it feemeth worthily and wifely written by Ælianse in his 6. Book and 39. Chapter, To enthumaticon kai dialecticon, to be as it were naturally instilled into these kind of Dogs. For they will not paufe or breathe forth from their pursuite untill such time as they be apprehended

and taken which committed the fact.

The owners of such Hounds use to keep them in close and dark kennels in the day, and let them loofe at liberty in the night feafon, to the intent that they might with more courage and boldness practise to follow the fellon in the evening and solitary hours of darkness, when such ill disposed variets are principally purposed to play their impudent pranks. These Hounds (upon whom this present portion of our treatise runneth) when they are to follow such fellowes as we have before rehearled, use not that liberty to range at will, which they have otherwise when they are in game, (except upon necessary occasion whereon dependeth an urgent and effectual perswasion) when fuch purloyners make speedy way in flight, but being restrained and drawn back from running at random with the leame, the end whereof the owner holding in his hand is led, guided and directed with fuch swiftness and flowness (whether he go on foot, or whether he ride on horseback) as he himself in heart would wish for the more easie apprehension of these ventu-

In the borders of England and Scotland, (the often and accustomed stealing of Cattel so procuring) these kind of Dogs are very much used, and they are taught and trained up first of all to hunt Cartel, as well of the smaller as of the greater grouth, and afterwards (that quality relinquished and left) they are learned to pursue such pestilent persons as plant their pleasure in such practises of purloining as we have already declared. Of this kind there is none that taketh the Water naturally, except it please you so to suppose of them which follow the Otter, which sometimes haunt the land, and sometime useth the water. And yet nevertheless all the kinde of them boyling and broyling with greedy defire of the prey which by swimming passeth through river and slood, plunge amids

the water and passet he stream with their pawes.

But this property proceedeth from an earnest desire wherewith they be instamed, rather then from any inclination, iffuing from the ordinance and appointment of nature. And albeit some of this fort in English be called Brache, in Scotist, Rache, the cause thereof resteth in the she-sex, and not in the general kinde. For we Englishmen call Bitches belonging to the hunting kind of Dogs, by the tearm above mentioned. To be short, it is proper to the nature of Hounds, some to keep silence in hunting untill such cime as there is game offered. Other some so soon as they fmell out the place where the beaft lurketh, to bewray it immediately by their importunate barking, notwithstanding it be far and many furlongs off, cowching close in his cabbin. And these Dogs the younger they be, the more wantonly bark they, and the more liberally; yet oftentimes without necessity, so that in them, by reason of their young years and want of practise, small certainty is to be reposed. For continuance of time, and experience in game, ministreth to these Hounds, not only cunning in running, but also (as in the rest) an assured foresight what is to be done principle. Pally, being acquainted with their Masters watchwords, either in revoking or imboldening them to ferve the game.

Of the DOG called the GASE-HOUND; in Latin, Agasaus.

His kinde of Dog which pursueth by the eye, prevaileth little, or never a whit, by any benefit of the note, that is by smelling, but excelleth in perspicuity and sharpeness of sight altogether. by the virtue whereof, being fingular and notable, it hunteth the Fox and the Hare. This Dog will chuse and separate any beast from among a great flock or herd, and such a one will it take by election as is not lanck, lean and hollow, but well spred, smooth, full, fat, and round, it followes by dion as is not lanck, lean and nonlow, but went press, intooth, ran, tac, and round, it follows by direction of the eyefight, which indeed is clear, conflant, and not uncertain; if a beaft be wounded and go aftray, the Dog feeketh after it by the stedfastness of the eye, if it chance peradventure to and go array, the Dog leexettrance it by the Rediatities of the eye, in thanke peradventure to return and be mingled with the refidue of the flock, this Dog spyeth it out by virtue of his eye, leaving the rest of the Cattell untouched, and after he hath set sure fight upon it, he separatesh it from among the company, and having so done, never ceaseth until he have wearyed the Beast

Our Countreymen call this Dog Agaseum, a Gase-hound, because the beams of his sight are so street of the field and unmoveably fathred. These Dogs are much and usually occupied in the Northediastly settled and unmoveably fathred. thern parts of England more then in the Southern parts, and in fieldy lands rather then in bushie and woody places, horsemen use them more then footmen, to the intent that they might provoke their horses to a swift gallop (wherewith they are more delighted then with the prey it self) and that they might accustome their Horse to leap over hedges and ditches, without stop or fumble, without harme or hazard, without doubt or danger, and to escape with safegard fumble, without harme or hazard, without doubt or danger, and to escape with safegard for life. And to the end that the riders themselves, when necessity so constrained, and the of life. And to the end that the riders themselves, when necessity so constrained, and the fear of surther mischief inforced, might save themselves undamnified, and prevent each perilous tempest by preparing speedy slight, or else by swift pursuite made upon their enemies, might both overtake them, encounter with them, and make a slaughter of them accordingly. But if it fortune so at any time that this Dog take a wrong way, the Master making some usual signe and familiar token, he returneth forthwith, and taketh the right and ready race, beginning his chase afresh, and with a clear voice, and a swife soot followeth the game with as much courage and simble mass as he did at the field. nimbleness as he did at the first.

Of the DOG called the GRAT-HOUND, in Latin, Leporarius.

E have another kinde of Dog, which for his incredible swiftness is called Leporarius, a Gray-hound, because the principal service of them dependent and conflitten in starting and hunting the Hare, which Dogs likewise are indued with no lesse strength then lightness in maintenance of the game, in serving the chase, in taking the Buck, the Hart, the Doe, the Fox, and other beasts of semblable kinde ordained for the game of hunting. But more or lesse, each one according to the measure and proportion of their desire, and as might and hability of their bodies will permit and fuffer.

For it is a spare and bare kind of Dog, (of flesh but not of bone) some are of a greater fort, and fome of a leffer, fome are smooth skinned, and some are curled, the bigger therefore are appointed to hunt the bigger beafts, and the smaller serve to hunt the smaller accordingly. The nature of the Dogs I finde to be wonderful by the testimony of all Histories. For, as John Froifart the Historiographer in his 4 lib. reporteth, A Gray-hound of King Richard the second that wore the Crown, and bare the Scepter of the Realm of England, never knowing any man, besides the Kings person, when Henry Duke of Lancaster came to the Caftle of Flint to take King Rithard, the Dog forfaking his former Lord and Mafter came to Duke Hemy fauned upon him with fuch refemblances of good will and conceived affection, as he favoured King Richard before: he followed the Duke, and utterly lest the King. So that by these manifold circumstances a man might judge his Dog to have been lightened with the lamp of foreknowledge and understanding, touching his old Matters miseries to come, and unhappiness nigh at hand, which King Richard himself evidently perceived, accounting this deed of his Dog a Prophecy of his overthrow.

Of the DOG called the LEVINER, or LYEMMER; in Latin, Lorarius.

Nother fort of Dogs be there, in smelling singular, and in swiftness incomparable. This is (as it were) a middle kinde betwirt the Harier and the Gray-hound, as well for his kind, as for the frame of his body. And it is called in Latin, Levinarius, a Levitate, of lightness, and therefore may well be called a Light-hound; it is also called by this word Lorariu, a Loro, wherewith it is led. This Dog for the excellency of his conditions, namely smelling and swift running, doth follow the game with more eagerness, and taketh the prey with a jolly quickness.

Of the DOG called a TUMBLERs in Latin, Vertague.

His fort of Dogs, which compaffeth all by crafts, fraudes, and subtilties and deceits, we Enclish. men call Tumblers, because in hunting they turn and tumble, winding their bodies about in circle wife, and then fiercely and violently venturing upon the beaft, doth suddenly gripe it, at the very entrance and mouth of their receptacles, or closets before they can recover means, to save and fuccour themselves. This Dog useth another craft and subtilty, namely, when he runneth into a Warren, or fercheth a course about a Conyburrough, he hunts not after them, he fraves them not by barking, he makes no countenance or shadow of hatred against them, but dissembling friendhip, and pretending favour, passeth by with silence and quietness marking and noting their holes diligently, wherein (I warrant you) he will not be overshot nor deceived. When he cometh to the place where Conies be of a certainty, he cowcheth down close with his belly to the ground, provided alwayes by his skill and policy, that the winde be never with him but against him in such an enterprise; and that the Conies spy him not where he lurketh. By which means he obtaineth the frent and favour of the Conies, carryed towards him with the winde and the air, either going to their holes or coming out, either passing this way, or running that way, and so provideth by his circumspection, that the filly simple Cony is debarred quite from his hole (which is the haven of their hope, and the harbour of their health) and fraudulently circumvented and taken, before they can get the advantage of their hole. Thus having caught his prey, he carryeth it speedily to his Matter, waiting his Dogs return in some convenient lurking corner.

These Dogs are somewhat lesser then the Hounds, and they be lancker and leaner, beside that they be somewhat prick eared. A man that shall marke the form and fashion of their bodies, may well call them mungrel Gray-hounds if they were somewhat bigger. But notwithstanding they countervail not the Grey-hound in greatness, yet will he take in one dayes space as many Conies as shall arise to as big a burthen, and as heavie a load as a horse can carry, for deceit and guile is the instrument whereby he makesh this spoil, which pernicious properties supply the places of more commendable qualities.

Of the DOG called the THEEVISH DOG, in Latin, Canis furax.

The like to that whom we have rehearled, is the Theevilh Dog, which at the mandate and bidding of his Master steereth and leereth abroad in the night, hunting Conies by the air, which is sevened with the savour and conveied to the sense of the winde blowing towards him. During all which space of his hunting, he will not bark, left he should be prejudicial to his own advantage. And thus watcheth and fnatcheth up in yourfe as many Conies as his Mafter will fuffer him, and beareth them to his Masters standing. The Farmers of the Countrey and uplandish dwellers, call this kind of Dog a Night Cur, because he hungethin the dark. But let thus much seem sufficient for Dogs which serve the game and disport of hunting.

Of Gentle DOGS serving the Hawk, and first of the SPANIEL, called in Latin, Hispaniolus.

Uch Dogs as serve for fowling, I think convenient and requisite to place in the second Section of this treatife. There are also to be reckoned and accounted in the number of the Dogs which come of a gentle kind: and of those which serve for fowling, there be two forts, the first indeth game on the land, the other findeth game on the water. Such as delight on the land, play their parts, either by swiftness of foot, or by often questing, to search out and to spting the bird for further hope of advantage, or elfe by some secret figurand privy token bewray the place where they fall-The first kind of such serve the Hawk, the second the net or train. The first kind have no peculiar names affigned unto them, fave only that they be denominated after the bird which by natural appointment he is alotted to take; for the which confideration, some be called Dogs for the Falcon, the Phesant, the Partridge, and such like. The common fort of people call them by one general word, namely Spaniels; as though these bind of Dogs came originally and first of all out of Spain. The most part of their skins are white, and if they be marked with any spots they are commonly red, and somewhat great therewithall, the hairs not growing in such thickness but that the mixture of them may easily be perceived. Othersome of them be reddish and blackish, but of that fort there be but a very few. There is also at this day among us a new kind of Dog brought out of France (for we Englishmen are marvellous greedy gaping gluttons after novelties, and covetous cormorants of things that be feldom, rare, strange, and hard to get) and they be speckled all ower with white and black, which mingled colours incline to a marble blew, which beautifieth their skins, and affordeth a scemly show of comeliness. These are called French Dogs, as is above declared already.

N

The DOG called the SETTER, in Latin, Index.

Nother fort of Dogs be there, serviceable for fowling, making no noise either with foot or A with tongue, whiles they follow the game These attend diligently upon their Master and frame I with tongue, whiles they rollow the game. There actend differently upon their whater and frame their conditions to fuch becks, motions, and gestures, as it shall please him to exhibite and make, either going forward, drawing backward, inclining to the right hand, or yeelding toward the lest, (in making mention of fowles, my meaning is of the Patridge and the Quail:) when he hath sound the bird, he keepeth sure and fast silence, he stayeth his steps and will proceed no surcher, and with close, covert, watching eye, layeth his belly to the ground and so creepeth forward like a worm. When he approacheth neer to the place where the bird is, he lies him down, and with a mark of his pawes betrayeth the place of the birds last abode, whereby it is supposed that this kind of Dog is called Index, Setter, being indeed a name most consonant and agreeable to his quality. The place being known by the means of the Dog, the fowler, immediately openeth and spreadeth his net, intending to take them; which being done, the Dog at the customed beck or usuall sign of his Master rifeth up by and by, and draweth neerer to the fowle, that by his prefence they might be the authors of up by ama by, and be ready intangled in the prepared net, which cunning and artificial indevour in a Dog (being a creature domestical or houshold servant, brought up at home with offals of the trencher, and fragments of victuals) is not so much to be marvelled at, seeing that a Hare (being a wilde and shippish beast) was feen in England to the astonishment of the beholders, in the year of our Lord God 1564. not only dancing in measure, but playing with his former feet upon a tabberet, and observing just number of strokes (as a practitioner in that art) besides that nipping and pinching a Dog with his teeth and clawes, and cruelly thumping him with the force of his feet. This is no trumpery tale, nor trifle toy (as I imagine) and therefore not unworthy to be reported, for I reckon it a requital of my travell, not to drown in the leas of filence any special thing, wherein the providence and effectual working of nature is to be pondered.

Of the DOG called the WATER SPANIEL, or FINDER; in Latin, Aquaticus seu Inquisitor.

Hat kinde of Dog whose service is required in sowling upon the water, partly through a natural towardness, and partly by diligent reaching, is indued with that property. This sort is fomewhat big, and of a measurable greatness, having long, rough, and curled hair, not obtained by extraordinary trades, but given by natures appointment; yet nevertheles (friend Gefin) Thave described and set him out in this manner, namely powled and notted from the shoulders to the hindermost legs, and to the end of his tail, which I did for use and customs cause, that being asit were made somewhat bare and naked, by shearing off such superfluity of hair, they might atcheve the more lightness, and swiftness, and be lesse hindered in swimming, so troublesome and needless a burden being shaken off. This kinde of Dog is properly called Aquaticus, a Water Spaniel, because he frequenteth and hath usual recourse to the water where all his game lyeth, namely water sowls, which are taken by the help and service of them, in their kind. And principally Ducks and Drakes, whereupon he is likewife named a Dog for the Duck, because in that quality he is excellent. With these Dogs also we fetch out of the water such fowl as be stung to death by any venemous Worm; we use them also to bring us our bolts and arrows out of the water (missing our mark) whereat we directed our levell, which otherwise we should hardly recover, and oftentimes they restore to us our shafts which we thought never to fee, touch, or handle again, after they were lost : for which circumstances they are called Inquisiores, fearchers and finders. Although the Duck otherwhiles notably deceiveth both the Dog and the Master, by diving under the water, and also by natural subtilty, for if any man shall approach to the place where they build, breed and sit, the Hens go out of their nests, offering themselves voluntarily to the hands, as it were, of such as draw neer their nests. And a certain weakness of their wings pretended, and infirmity of their feet dissembled, they go flowly and so leasurely, that to a mans thinking it were no masterie to take them. By which deceitful trick they do as it were entife and allure men to follow them, till they be drawn a long distance from their nests, which being compassed by their provident cunning, or cunning providence, they cut off all inconveniences which might grow of their return, by using many careful and curious caveats, lest their often hunting bewray the place where the young ducklings be hatched. Great therefore is their defire, and earnest is their study to take heed, not only to their brood, but also to themselves. For when they have an inkling that they are espied, they hide themselves under turses or fedges, wherewith they cover and shroud themselves so closely and so crastily, that (notwithstanding the place where they lurk be found and perfectly perceived) there they will harbour without harm, except the Water Spaniel by quick smelling discover their deceits.

Of the DOG called the FISHER; in Latin Canis Piscator.

THE Dog called the Fisher, whereof Hellor Boetim writeth, which seeketh for Fish by smelling among rocks and stones, assuredly I know none of that kind in England, neither have I received by report that there is any fuch, albeit I have been diligent and busie in demanding the question as well of Fishermen as also huntimen in that behalf, being careful and earnest to learn and understand of them if any such were, except you hold opinion that the Beaver or Otter is a Fish (as many have believed) and according to their belief affirmed, as the bird Pubine is thought to be a fish, and so accounted. But that kind of Dog which followeth the fish to apprehend and take it (if there be any of that disposition and property) whether they do this thing for the game of hunting, or for the heat of hunger, as other Dogs do which rather then they will be fami-fied for want of food, covet the carcafes of carrion and putrified flesh. When I am fully resolved and disburthened of this doubt, I will fend you certificate in writing In the mean feafon I am not ignorant of that both Alianu and Aetius, call the Beaver Kunapotamion a water Dog, or a Dog-fish, I know likewise thus much more, that the Beaver doth participate this property with the Dog, namely, that when fishes be scarce they leave the water and range up and down the land, making an insatiable slaughter of young Lambs untill their paunches be replenished, and when they have sed themselves full of Flesh, then return they to the water from whence they came. But albeit so much be granted that this Bever is a Dog, yet it is to be noted that we reckon it not in the beadrow of Engl h Dogs as we have done the rest. The sea Calse, in like manner, which our Countrey men for brevity sake call a Seel, other more largely name a Sea Veale, maketh a spoil of fishes between rocks and banks, but it is not accounted in the Catalogue or number of our English Dogs, notwithstanding we call it by the name of a Sea-Dog, or a Sea-Calf And thus much for our Dogs of the second fort, called in Latin, Aucupatorii, serving to take fowl either by land or water.

Of the delicate, neat, and prety kind of DOGS called the SPANIELGENTLE, or the COMFORTER, in Latin, Melitam, or Fotor.

Here is besides those which we have already delivered, another fort of Gentle Dogs in this our English soil, but exempted from the order of the residue, the Dogs of this kind doth Callimachus call Melitess of the Island Melite, in the sea of Sicily (which at this day is named Malta) an Island indeed, samous and renowned with couragious and puissant Souldiers, valiantly fighting under the banner of Christ their unconquerable Captain) where this kind of Dogs had their principal beginning.

These Dogs are little, prety, proper, and fine, and sought for to satisfie the delicatencis of dainty dames and wanton womens wils, instruments of folly for them to play sand dally withal, to triffe away the treasure of time, to withdraw their mindes from more commendable exercises, and to content their corrupted concupiscences with vain disport (a filty shift to shun irksome idleness.) These puppies the smaller they be, the more pleasure they provoke, as more meet playsellowed for minsing mistresses to bear in their bosonies, to keep company withal in their Chambers, to succour with sleep in bed, and nourish with meat at bord, to lay in their laps, and lick their lips as they ride in their Waggons: and good reason it should be so, for courseness with sineness hath no sellowship, but seatness with neatness hath neighbourhood enough. That plausible proverb verified upon a Tyrant, namely, that he loved his Sow better then his Son, may well be applyed to these kind of people, who delight more in Dogs that are deprived of all possibility of reason, then they do in children that be capeable of wildom and judgement. But this abuse peradventure reigneth where there hath been long lack of issue, or else where barrenness is the best blossom of beauty.

The virtue which remaineth in the SPANIEL GENTLE, otherwise called the COMFORTER.

Otwithstanding many make much of those prety puppies called Spaniels Gentle, yet if the question were demanded what property in them they spie, which should make them so acceptable and precious in their sight, I doubt their answer would be long a coining. But seeing it was our intent to travail in this treatise, so, that the Reader might reap some benefit by his reading, we will communicate unto such conjectures as are grounded upon reason. And though some suppose that such Dogs are sit for no service, I dare say, by their seaves, they be in a wrong box. Among all other qualities therefore of nature, which be known (for some conditions are covered with continual and thick clouds, that the eye of our capacities cannot piere through them) we finde that these little Dogs are good to asswage the sickness of the stomach, being oftentimes thereunto applyed as a plaister preservative, or born in the bosom of the diseased and weak person.

N₂

which effect is performed by their moderate heat. Moreover the disease and sickness changeth his place and entreth (though it be not precisely marked) into the Dog, which to be truth, experience can testifie, for these kinde of Dogs sometimes sall sick, and sometimes die, without any harme outwardly inforced, which is an argument that the disease of the Gentleman, or Gentlewoman or owner whatsoever, entreth into the Dog by the operation of heat intermingled and insected. And thus have I hitherto handled Dogs of a gentle kind whom I have comprehended in a triple division. Now it remaineth that I annex in due order, such Dogs as be of a more homely kinde.

Dogs of a course kinde serving many necessary uses, called in Latin Canes rustici, and first of the Shepherds Dog, called in Latin, Canis Pastoralis.

THe first kinde, namely the Shepherds hound, is very necessary and profitable for the avoiding of harmes, and inconveniences which may come to men by the means of beafts. The second fort serve for succour against the snares and attempts of mischievous men. Our Shepherds Dog is not huge, vast and big, but of an indifferent stature and growth, because it hath not to deal with the bloudthirsty Wolfe, sithence there be none in England, which happy and fortunate benefit is to be ascribed to the puissant Prince Edgar, who to the intent that the whole Countrey might be evacuated and quite cleared from Wolves, charged and commanded the Welftmen (who were pestered with these butcherly beasts above measure) to pay him yearly tribute (note the wisdom of the King) three hundred Wolves. Some there be which write that Ludwal Prince of Wales paid yearly to King Edgar three hundred Wolves in the name of an exaction (as we have faid before.) And that by the means hereof, within the compass and term of four years, none of those notion and pestilent beasts were left in the coasts of England and Wales. This Edgar wore the Crown royal, and bare the Scepter imperial of this Kingdom, about the year of our Lord Nine hundred fifty nine. Since which time we read that no Wolf hath been feen in England, bred within the bounds and borders of this Countrey, marry there have been divers brought over from beyond the Seas, for greediness of gain and to make money, for gazing and gaping, staring and standing to fee them, being a strange beast, rare, and feldom seen in England. But to return to our Shepherds Dog: This Dog either at the hearing of his Masters voice, or at the wagging and whistling in his fift, or at his shrill and hoarse hissing bringeth the wandering weathers and straying Sheep into the felf fame place where his Mafters will and wifh is to have them, whereby the Shepherd reapeth this benefit, namely that with little labour and no toil or moving of his feet he may rule and guide his flock, according to his own delire, either to have them go forward, or to stand still, or to draw backward, or to turn this way, or take that way. For it is not in England, as it is in France, as it is in Flanders, as it is in Syria, as it is in Tartaria, where the Sheep follow the Shepherd, for here in our Countrey the Shepherd followeth the Sheep. And sometimes the straying Sheep when no Dog runneth before them, nor goeth about and beside them, gather themselves together in a slock, when they hear the Shepherd whistle in his sist, for fear of the Dog (as I imagine) remembring this (if unreasonable creatures may be reported to have memory) that the Dog commonly runneth out at his Masters wantant, which is his whistle. This have we oftentimes diligently marked in taking our journey from Town to Town, when we have heard a Shepherd whiltle we have rained in our horse and stood still a space, to see the proof and tryall of this matter. Furthermore, with this Dog doth the Shepherd take Sheep for the flaughter, and to be healed if they be fick, no hurt or harm in the world done to the simple creature.

Of the MASTIVE, or BANDOG; called in Latin, Villaticus, or Catemanius.

This lkind of Dog called a Mastive or Bandog is vast, huge, stubborn, ugly, and eager, of a heavie and bourthenous body, and therefore but of little swiftness, terrible, and frightful to behold, and more fierce and sell then any arcadian cur (notwithstanding they are said to have their generation of the violent Lion.) They are called Villaties, because they are appointed to watch and keep farm-places and Countrey Cotages sequestred from common recourse, and not abutting upon other shoules by reason of distance, when there is any fear conceived of Theeves, Robbers, Spoilers, and Night, wanderers. They are serviceable against the Fow and Badger, to drive wide and tame Swine out of Medowes, Pastures, Glebelands, and places planted with fruit, to bait and take the Bull by the ear, when occasion so requireth. One Dog or two at the utmost is sufficient for that purpose, be the Bull never so monstrous, never so sierce, never so furious, never so stern, never so untamable. For it is a kind of Dog capeable of courage, violent and valiant, striking cold sear into the hearts, of men, but standing in fear of no man, in so much that no weapons will make him shrink, nor abridge his boldness. Our Englishmen (to the intent that their Dogs might be more fell and sierce) assist he Bull and other such like cruell and bloudy Beasts (appointing an overseer of the game) without any Collar to defend their throats, and ostentimes they train

them up in fighting and wrellling with any man having for the fategard of his life, either a Pikellaffe. a Club, or a tword, and by using them to such exercises as these, their Dogs become more sturdy and throng. The force which is in them furmounteth all belief, the fait hold which they take with their teeth exceedeth all credit, three of them against a Bear, four against a Lion are sufficient. both to trie mafteries with them, and utterly to overmatch them. Which thing Henry the seventh of that name, King of England (a Prince both politick and warlike) perceiving on a certain time (as the report runneth) commanded all fuch Dogs (how many so ever were in number) should be hanged, being deeply displeased, and conceiving great dissain, that an ill favoured rascal Cur should with such violent villany, assault the valiant Lion King of all beasts. An example for all fubices worthy remembrance, to admonish them, that it is no advantage to them to rebell against the regiment of their Ruler, but to keep them within the limits of loyalty. I read an Hiltory answerable to this of the selfsame Henry, who having a notable and an excellent fair Falcon, it fortuned that the Kings Falconers, in the presence and hearing of his grace, higgly commended his Mijesties Faulcon, saying, that it seared not to intermeddle with an Eagle, it was so venturous a Bird and so mighty; which when the King heard, he charged that the Falcon should be killed without delay, for the felf same reason (as it may seem) which was rehearsed in the conclusion of the former history concerning the same king. This Dog is called in like manner, Catenarius, a Catena, of the chain wherewith he is tyed at the gates in the day time, left being loofe he should do much mischief, and yet might give occasion of fear and terror by his big barking. And albeit Citero in his Oration had pro S. Rojs. be of this opinion, that such Dogs as bark in the broad day light should have their legs broken, yet our Countrymen on this fide the Seas, for their carelefness of life setting all at cinque and sice are of a contrary judgement. For Theeves rogue up and down in every corner, no place is free from them, no not the Princes palace, nor the Countrymans cotage. In the day time they practife pilfering, picking, open robbing, and privie stealing, and what legerde-main lack they? not fearing the shameful and horrible death of hanging.

The cause of which inconvenience doth not only issue from nipping need and wringing want, for all that seal are not pinched with poverty, some seal to maintain their excessive and prodigal expences in apparel, their lewdness of life, their haughtiness of heart, their wantonness of manners, their wilful idleness, their ambitious bravery, and the pride of the sawcy Salacones me galorrounton, vain glorious and arrogant in behaviour, whose delight dependeth whosly to mount nimbly on horse-back, to make them leap lustily, suring and prance, gallop and amble, to run a race, to winde in compass, and so forth, living altogether upon the fatness of the spoil. Other some there be which steal, being thereto provoked by penury and need, like masterless men applying themselves to no honest trade, but ranging up and down, impudently begging and complaining of bodily weakness where is no want of ability. But valiant Valentine the Emperor, by wholesome lawes provided that such as having no corporal tickness, sold themselves to begging, pleaded poverty with pretended infirmity, and cloaked their idle and stothful life with colourable shifts and cloudy cozening, should be a perpetual slave and drudge to him, by whom their impudent idleness was bewrayed, and laid against them in publick place, lest the insufferable slothfulness of such vagabonds should be burthenous to the people, or being so hateful and odious, should grow into an expense.

Alfredw likewise in the Government of his Common-wealth, procured such encrease of credit to justice and upright dealing by his prudent Acts & Statutes, that if a man travelling by the high way of the Countrey under his dominion, chanced to lose a budget full of Gold, or his capease farsed with things of great value, late in the evening, he should finde it where he lost it, safe, sound, and untouched the next morning, yet (which is a wonder) at any time for a whole moneths space if he sought for it, as Ingulphus Creyladensis in history recordeth. But in this our unhappy age, in these (I say) our devilish days, nothing can escape the clawes of the spoiter, though it be kept never so sure within the house, albeit the doors be lockt and boulted round about. This Dog in like manner of the Grecians is called Oikouros.

Of the Latinists, Cana Collos ; in English, the Dog-keeper.

Borrowing his name of his service, for he doth not, only keep Farmers houses, but also Merchants mansions, wherein great wealth, riches, substance and costly stuffe is geposed. And therefore were certain Dogs found and maintained at the common costs and charges of the Citizens of Rome in the place called Copitolium, to give warning of Theeves coming. This kind of Dog is called,

In Latin Canis Laniarine, in English, the Butchers Dog.

So called for the necessity of his use, for his service affordeth great benefit to the Butcher as well in following as in taking his Cattel, when need constraineth, urgeth, and requireth. This kinde of Dog is likewise called.

In Latin, Molossicus, or Molossicus, after the name of a Countrey in Epirus called Molossia, which harboureth many stout, strong, and sturdy Dogs of this fort, for the Dogs of that Countrey are good indeed, or else there is no trust to be had in the testimony of writers. This Dog is also called,

In Latin, Canis Mandatarius, a Dog messenger, or Carrier, upon substancial consideration, because at his Masters voice and commandement, he carry-

eth letters from place to place, wrapped up cunningly in his leather collar, fastned thereto, or sowed close therein, who lest he should be hindred in his passage, useth these helpes very skilfully, namely resistance in fighting if he be not overmatched, or else swiftness and readinesse in running away, if he be unable to buckle with the Dog that would fain have a fnatch at his skin. This kinde of Dog is likewise called,

In Latin, Canis Lunarius; in English, the Mooner.

Because he doth nothing else but watch and ward at an inch, wasting the wearisome night season without flumbring or fleeping, bawing and wawing at the Moon (that I may use the word of Nonim) a quality in mine own opinion ftrange to confider. This kind of Dog is also called, In Latin, Aquarim; in Englift, a Water-drawer.

And these be of the geater and the weightier fort, drawing water out of wels and deep pits, by a wheel which they turn round about by the moving of their burthenous bodies. This Dog is called in like manner,

Canis Carcinarius in Latin, and may aptly be Englished, a Tinkers Cur.

Because with marvellous patience they bear big budgets fraught with Tinkers tools, and metal meet to mend kettels, porrage-pots, skillets, and chafers, and other such like trumpery requisite for their occupation and loytering trade, eafing him of a great burthen, which otherwise he himself thould carry upon his fhoulders; which condition hath challenged unto them the forefaid name. Besides the qualities which we have already recounted, this kind of Dogs hath this principal property ingraffed in them, that they love their Masters liberally, and hate strangers despightfully; where-upon it solloweth that they are to their Masters in travelling a singular safegard, defending them forcibly from the invalion of villains and Theeves, preferving their lives from losse, and their health from hazzard, their flesh from hazking and hewing, with such like desperate dangers. For which

confideration they are meritoriously termed,
In Latin, Canes defensores; Defending Dogs in our mother tongue. If it chance that the Master be oppressed, either by a multitude, or by the greater violence, and so be beaten down that he lie groveling on the ground, (it is proved true by experience) that this Dog forsaketh not his Master, no not when he is stark dead: But induring the force of samishment and the outragious tempests of the weather, most vigilantly watcheth and carefully keepeth the dead carkaffe many dayes, indevouring furthermore, to kill the murtherer of his Master, if he may get any advantage. Or else by barking, by howling, by furious jarring, fnarring, and such like means betrayeth the malefactor as desirous to have the death of his aforesaid Master rigorously revenged. An example hereof fortuned within the compasse of my memory. The Dog of a certain wayfaring man travelling from the City of London directly to the Town of Kingftone (most famous and renowned by reason of the triumphant coronation of eight several Kings) pasfing over a good portion of his journey, was assaulted and set upon by certain consederate Theeves lying in wait for the spoil in Come-packe, a perillous bottom, compassed about with Woods too well known for the manifold murders and mischievous robberies there committed. Into whose hands this passenger chanced to fall, so that his ill luck cost him the price of his life.

And that Dog whose fire was English, (which Blondus registreth to have been within the banks of his remembrance) manifestly perceiving that his Master was murthered (this chanced not far from Paris) by the hands of one which was a fuiter to the same woman, whom he was a wooer unto, did both bewray the bloudy Butcher, and attempted to tear out the villains throat, if he had not fought means to avoid the revenging rage of the Dog. In fires also which fortune in the filence and dead time of the night, or in stormy weather of the said season, the older Dogs bark, baul, howl, and yell, (yea notwithflanding they be roughly rated) neither will they flay their tongues till the houshold servants awake, rise, search, and see the burning of the fire, which being perceived they use voluntary silence, and cease from yolping. This hath been, and is found true by triall, in sundry

There was no fainting faith in that Dog, which when his Master by a mischance in hunting stumbled and fell, toppling down a deep ditch being unable to recover of himself, the Dog fignifying his Masters missap, rescue came, and he was haled up by a rope, whom the Dog seeing almost drawn up to the edge of the ditch, cheerfully saluted, leaping and skipping upon his Mafter as though he would have imbraced him, being glad of his presence, whose longer absence he was loath to lack. Some Dogs there be, which will not fuffer fiery coles to lie scattered about the hearth, but with their pawes will rake up the burning coles, musing and studying first with themselves how it might conveniently be done. And if so be that the coles cast too great a heat, then will they bury them in aftes and so remove them forward to a fit place with their noses. Other Dogs be there which execute the office of a Farmer in the night time. For when his Mafter goeth to bed to take his natural fleep; And when,

> A bundred bars of braffe and iron bolts. Make all things fale from flarts and from revolts, When Janus keeps the gate with Argus eye, That dangers none approach, no mischief nie,

rangeth over all his lands thereabout, more diligently, I wys, then any Farmer himself. And if he finde any thing there that is strange and pertaining to other persons besides his Master, whether it be man, woman, or beaft, he driveth them out of the ground, not medling with any thing that do belong to the possession and use of his Master. But how much faithfulness, so much diversity there is in their natures. For there be some, which bark only with free and open throat, but will not bite, some which do both bark and bite, and some which bite bitterly before they bark.

The first are not greatly to be feared, because they themselves are searful, and searful Dogs (as

the Proverb importeth) bark most vehemently.

The second are dangerous, it is wisdom to take heed of them, because they sound as it were, an Alarum of an afterclap, and these Dogs must not be over much moved or provoked, for then they take on outragiously, as if they were mad, watching to fet the print of their teeth in the flesh. And these kinde of Dogs are fierce and eager by nature.

The third are deadly, for they fly upon a man without utterance of voyce, snatch at him, and catch him by the throat, and most cruelly bite out collops of flesh. Fear these kinde of Curs, (if thou be wife and circumspect about thine one safety) for they be fout and flubborn Dogs, and set upon a man at a suddain unawares. By these signes and tokens, by these notes and arguments our men difcern the towardly Cur from the couragious Dog, the bold from the fearful, the butcherly from the gentle and tractable. Moreover they conjecture, that a Whelp of an ill kinde is not worth keeping and that no Dog can ferve the fundry uses of men so aprly and conveniently as this fort, of whom we have fo largely written already. For if any be disposed to draw the above named services into a Table, what man more clearly, and with more vehemency of voyee giveth warning either of a walful Beaft, or of a spoyling theef then this? who by his barking (as good as a burning Beacon) foresheweth hazards at hand. What manner of Beaft fronger? What fervant to his Mafter more loving? What companion more trufty? What Watchman more vigilent? What revenger more constant ? What Mellenger more speedy? What Water-bearer more painful? Finally, what Pack-horsemore patient? And thus much concerning English Dogs, first of the gentle kinde, secondly of the courfer kinde. Now it remaineth that we deliver unto you the Dogs of a Mungrel or Currish kinde, and then will we perform our task.

Containing CVRS of the Mungrel and Rafial fort, and first of all the DOG called in Latine, Admonitor, and of us in English, Wappe, or Warner.

Fluch Dogs as keep not their kinde, of such as are mingled out of fundry forts, not imitating The conditions of fome one certain fpice, because they resemble no notable shape, nor exerclicany worthy property of the true, perfect and gentable kinde, it is not necessary, that I write any more of them, but to banish them as unprofitable implements, out of the bounds of my Book; unprofitable I fay, for any use that is commendable, except to entertain strangers with barking in the day time, giving warning to them of the House, that such and such be newly come, whereupon we call them admonishing Dogs, because in that point they perform their Office.

Of the DOG called TERNESPIT, in Batine, Vernversmer.

Here is comprehended, under the Curs of the coursest kinde, a certain Dog in Kitchin-service excellent. For when any meat is to be roated, they go into a wheel, which they tunning round about with the weight of their bodies, fo diligently look to their bufiness, that no dradge nor fcullion can do the feat more cunningly. Whom the popular fort hereupon call Purn-frits, being the last of all those which we have first mentioned.

Of the DOG called the DANCER, in Latine, Saltator or Tympanifta.

There be also Dogs among us of a Mungrol kinde, which are taught and exercised to dance in measure at the Musical found of an instrument, as at the just stroke of the Drum; at the fweet accent of the Cittern, and tuned firings of the harmonious Harp, thewing many pretty tricks by the gesture of their bodies; as to stand bole upright, to lye slat upon the ground, to turn round as a ring, holding their tails in their teeth, to beg for their meat, and fundry fuch properties, which they learn of their Vagabundical Masters, whose instrument they are to gather gain withall in the City, Countrey, Town, and Village. As some which cary old Apes on their houlders in coloured Jackets to move men to laughter for a little lucre.

F these there be three sorts; the first bred of a Bitch and a Wolf, called in Latine, Lyciscus; the second of a Bitch and a Fox, in Latine, Lacena; the third of a Bear and a Bandog, Vroanus. Of the first we have none naturally bred within the borders of England. The reason is for the want of Wolves, without whom no such Dog can be ingendred. Again, it is delivered unto thee in want of Wolves, without whom no such Dog can be enent, and within what circuit of time, this this discourse: how and by what means, by whose benefit, and within what circuit of time, this Countrey was clearly discharged of ravening Wolves, and none at all left, no, not the least number, or to the beginning of a number, which is an Unarie.

Of the second fort we are not utterly void of some, because this our English soil is not free from Foxes, (for indeed we are not without a multitude of them, insomuch as divers keep, softer and feed them in their houses among their Hounds and Dogs, either for some malady of minde, or for them in their houses among their Hounds and Dogs, either for some malady of minde, or for some sickness of body) which peradventure the savour of that subtill Beast would either mitigate

or expell.

The third which is bred of a Bear and a Bandog, we want not here in England, (A strange and wonderful effect, that cruel enemies should enter into the work of copulation, and bring forth so save a Cur.) Undoubtedly it is even so as we have reported, for the stery heat of their stefh, or rather the pricking thorn; or most of all, the tickling lust of lechery, beareth such swing and sway in them, that there is no contrariety for the time, but of constraint they must joya to engender. And why should not this be consonant to truth? why should not these Beasts breed in this land, as well as in other forein Nations? For we read that Tygers and Dogs in Hircania, that Lyons and Dogs in Arcadia, and that Wolves and Dogs in Francia couple and procreate. In men and women also lightned with the Lantern of reason (but utterly void of vertue) that soolish, stantick, and slessly action (yet naturally seated in us) worketh so effectually, that many times it doth reconcile enemies, set foes at friendship, unanimity, and atonement, as Moria mentioneth. The Urcane which is bred of a Bear and a Dog.

Is fierce, is fell, is flout and firongs And biteth fore to flesh and bones: His furious force indureth long, In rage he will be ruld of none.

That I may use the words of the Poet Gratius. This Dog exceedeth all other in cruel conditions, his leering and fleering looks, his stern and savage visage, maketh him in sight searful and terrible. He is violent in sighting, and wheresoever he set his tenterhook teeth, he taketh such sure and sast hold, is violent an man may sooner tear and rend him assunder, then loose him and separate his chaps. He pateth not for the Wolf, the Bear, the Lyon, nor the Bull, and may worthily (as I think) be companion with Alexanders Dog which came out of India. But of these, thus much, and thus far may seem sufficient.

A start to Out-landish D Q.G.S in this conclusion, not impertinent to the Authors purpose.

Use and custome hath entertained others Dogs of an Out-landish kinde, but a few and the same being of a pretty bigness, I mean Island Dogs, curled and rough all over, which by reason of the length of their hair make shew neither of face nor of body: And yet these Curs, for sooth, because they are so strange, are greatly set by, esteemed, taken up, and many times in the room of the Spaniel gentle or comforter. The nature of men is so moved, nay, rather maryed to novelties without all reason, wit, judgement or perseverance, Eromen allostias, paroromen suggeness.

Out-landish toys we take with delight, Things of our own Nation we have in despisht.

Which fault remaineth not in us concerning Dogs only, but for Artificers also. And why? it is manifest that we disdain and contemn our own Work-men, be they never so skilful, be they never so cunning, be they never so excellent. A beggerly Beast brought out of barbarous borders, from the uttermost Countreys Northward, &c. we stare at, we gaze at, we muse, we marvail at, like an Ass of Cumanum, like T bales with the brazen shanks, like the man in the Moon.

The which default Hippocrates marked when he was alive, as evidently appeareth in the beginning

of his Book Peri Agmon, so entituled and named:

And we in our work entituled De Ephemera Britannica, to the people of Entland have more plentifully expressed. In this kinde look which is most blockish, and yet most waspish, the same is most esteemed, and not among Citizens only and jolly Gentlemen, but among lusty Lords also, and Noble-

Noblemen. Further I am not to wade in the foord of this difcourse, because it was my purpose to satisfie your expectation with a short treatise (most learned Conrade) not wearisome for me to write, nor tedious for you to peruse. Among other things which you have received at my hands heretofore, I remember that I wrote a several description of the Getulian Dog, because there are but a few of them, and therefore very seldom seen. As touching Dogs of other kindes you your self have taken earnest pain in writing of them both lively, learnedly, and largely. But because we have drawn this libel more at length then the former which I sent you (and yet briefer then the nature of the thing might well bear) regarding your most earnest and necessary studies; I will conclude, making a rehearfal notwichstanding (for memory sake) of certain specialities contained in the whole body of this my breviary. And because you participate principal pleasure in the knowledge of the common and usual names of Dogs (as I gather by the course of your letters) I suppose it not samis to deliver unto you a short table containing as well the Latine as the English names, and to render a rea-

Of Dogs.

A Supplement or Addition, containing a demonstration of D o G S Names how they had their Original.

fon of every particular appellation, to the intent that no scruple may remain in this point, but that

every thing may be fifted to the bare bottom.

The names contained in the general Table, for somuch as they significe nothing to you being a stranger, and ignorant of the English tongue, except they be interpreted: as we have given a reason before of the Latine words, so mean we to do no less of the English, that every thing may be manifest unto your understanding. Wherein I intend to observe the same order which I have sololowed before.

Sagax, in English, Hund, is derived of our English word hunt. One letter changed in another, mamely T into D, as Hunt, Hund, whom if you conjecture to be so named of your Countrey word Hund, which signifieth the general hame (Dog) because of the similitude and likeness of the words, I will not stand in contradiction (friend Gester) for somuch as we retain among us at this day many Dusch words, which the Sanons less at such time as they enjoyed this Countrey of Britain. Thus much also understand, that as in your language Hand is the common word, so in our natural tongue (Dog) is the universal, but Hund is particular and a special, for it signifieth such a Dog only as serveth to hunt, and therefore it is called a Hund.

Of the Gase-hound called in Latine, Agasem, hath his name of the sharpness and stedsastness of his eye-sight. By which vertue he compassed that which otherwise he cannot by smelling attain. As we have made former relation, for to gase is earnestly to view and behold, from whence sloweth the derivation of this Dogs name.

Of the Gray-bound.

The Gray-bound called Leporarius, hath his name of this word Gre, which word foundeth, Gradus in Latine, in Englife, Degree. Because among all Dogs these are the most principal, having the chiefest place, and being simply and absolutely the best of the gentle kinde of Hounds.

Of the Lewmer or the Lyemmer.

This Dog is called a Lewmer, for his lightness, which in Latine soundeth Lewings. Or a Lyemmer, which word is borrowed of Lyemme, which the Latinss same Lorum: and wherefore we call him a Levyner of this word Levings: (as we do many things besides) why we derive and draw a thousand of our terms out of the Greek, the Latine, the Italian, the Dusch, the French, and the Spanish tongue; (Out of which Fountains indeed, they had their Original issue) How many words are buryed in the grave of forgetfulness; grown out of use; wrested awry; and perversly corrupted by divers defaults; we will declare at large in our Book entituled, Symphonia vocum Britannicarum.

Among Hounds the Tumbler called in Latine, Vertragus; which cometh of this word Tumbler, flowing his from the French Fountain. For as we fay Tumble, so they Tumbier, reserving our sense and signification, which the Latinists comprehend under this word Vertre. So that we see thus much, that Tumbler cometh of Tumbier, the Vowel I, changed into the Liquid L, after the manner of our speech. Contrary to the French and the Italian tongue: In which two Languages, a Liquid before a Vowel for the most part is turned into another Vowel; as may be perceived in the example of these two words, Impure & plano, for Impiere & piano, L, before B, changed into I, and L, before A, turned into I also. This I thought convenient for a tast.

After fuch as serve for hunting, orderly do follow such as serve for hawking and sowling, among which the principal and chiefest is the Spaniel, called in Letine, Hispanielus, borrowing his name of Hispanie, wherein we English men not pronouncing the Aspiration H, nor the Vowel I, for quickness and readiness of speech say roundly a Spagnel.

Of the Setter. He second fort is called a Setter, in Latine, Index. Of the word (Set) which signifieth in Em. lift that which the Latinists mean by this word Lecumdesignare, the reason is rehearsed before more largely, it shall not therefore need to make a new repetition.

Of the Water Spaniel or Finder.

He Water Spaniel consequently followeth, called in Latine, Aquaticus; in English a Water Spaniel, which name is compound of two fimple words, namely Water, which in Latine foundeth Aqua, wherein he swimmeth, and Spain, Hispania, the Countrey from whence they came; not that England wanteth such kinde of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and ingendered in this Countries of Dogs, (for they are naturally bred and Dogs, (for they a trey) but because they bear the general and common name of these Dogs since the time they were first brought over out of Spain. And we make a certain difference in this fort of Dogs, either for something which in their qualities is to be considered, as for an example in this kinde called the Spaniel, by the apposition and putting to of this word Water, which two coupled together found Water Spaniel. He is called a Finder, in Latine, Inquifitor; because that by serious and secure seeking, he findeth fuch things as be loft, which word Finde in English is that which the Latines mean by this Verb Invenire. This Dog hath this name of his property, because the principal point of his service consisteth in the premises.

Now leaving the surview of hunting and hawking Dogs, it remaineth that we run over the residue, whereof some be called fine Dogs, some course, othersome Mungrels or Rascals. The first is Spaniel gentle called Canis Melitans, because it is a kinde of Dog accepted among Gentils, Nobles, Lords, Ladies, &c. who make much of them, vouchfafing to admit them fo far into their company, that they will not only lull them in their laps, but kis them with their lips, and make them their pretty play-fellows. Such a one was Gorgons little puppy mentioned by Theceritus in Syracufis, who taking his journey, straightly charged and commanded his Maid to see to his Dog as charily and warily as to his childe: To call him in always that he wandred not abroad, as well as to rock the babe

a fleep, crying in the Cradle.

This Puppetly and pleasant Cur, (which some frumpingly tearm Fysting Hound) serves in a manner to no good use, except (as we have made former relation) to succour and strengthen qualing and qualming stomachs, to bewray bawdery, and filthy abhominable lewdness (which a little Dog of this kinde did in Sicilia) as Ælianus in his 7. Book of Beafts, and 27. chapter recordeth.

Of Dogs under the courser kinde, we will deal first with the Shepheards Dog, whom we call the Bandog, the Tydog, or the Mastive, the first name is imputed to him for service, Quaniam pastori famulatur, because he is at the Shepheards his Masters commandment. The second a Ligamento of the

band or chain wherewith he is tyed. The third a Sagina, of the fatness of his body.

For this kinde of Dog which is usually tyed, is mighty, gross, and fat fed. I know this that Augustinus Niphus calleth this Massimus, (which we call Massimus) and that Albertus writeth how the Lycifcus is ingendred by a Bear and a Wolf. Notwithstanding the felf same Author taketh it for the most

part pro Moloffo, a Dog of such a Countrey.

Of Mungrels and Rascals somewhat is to be spoken : and among these, of the Wappe of Turnspit, which name is made of two simple words, that is, of Turn, which in Latine soundeth Vertere, and of Spit which is Veru, or speede, for the English word inclineth closer to the Italian imitation, Veruvas sour, Turnspit. He is called also Waupe, of the natural noise of his voyce Wau, which he maketh in barking. But for the better and readier found, the vowel U, is changed into the confonant P, fo that for Waupe we say Wappe. And yet I wot well that Nonius borroweth his Baubari of the natural voyce Bau, as as the Gracians do their Bautein of Wau.

Now when you understand this, that Saltare in Latine fignifieth Dansare in English. And that our Dog is thereupon called a Dancer, and in the Latine, Saliator; you are so far taught as you were desirous to learn: and now I suppose, there remaineth nothing, but that your request is fully ac-

complished.

Thus (Friend Gefner) you have, not only the kindes of our Countrey Dogs, but their names also, as well in Latine as in English, their Offices, Services, Diversities, Natures, and Properties, that you can demand no more of me in this matter. And albeit I have not satisfied your minde peradventure (who suspectest all speed in the performance of your request imployed, to be meer delays) because I staid the setting forth of that unperfect pamphlet, which five years ago I sent to you as a private friend for your own reading, and not to be printed and fo made common, yet I hope (having like the Bear lickt over my young) I have waded over in this work to your contentation, which delay hath made somewhat better, and Deuterai phrontides, after wit more meet to be perused.

Now it is convenient to shut up this treatise of Dogs, with a recital of their several diseases and cures thereof; for as all other creatures, fo this beaft is annoyed with many infirmities. First, therefore if you give unto a Dog every seventh day, or twice in seven days broath or pottage, wherein Ivy is fod, it will preserve him found without any other medicine, for this herb hath the same operation in Dogs to make wholesome their meat, that it hath in Sheep to clense their pasture. The small fruits of Ellebor which are like to Onions, have power in them to purge the belly of Dogs: Other give them Goats-milk, or Salt beaten small, or Sea crabs beaten small and put into water, or

Of the discases of Dogs and their cures. Biondus.

Pliny. Tardinus.

Staves-acre, and immediately after his purgation, sweet Milk. If your Dog be obstructed and stop- Aibertus ped in the belly, which may be discerned by his trembling, sighing, and removing from place to place, give unto him Oaten meal and water to eat, mingled together and made as thick as a Pulces. or leavened Oaten bread, and sometime a little Whay to drink.

The Ancients have observed that Dogs are most annoyed with three diseases, the swelling of the throat, the Gowt, and madness; but the later Writers have observed many noysome infirmities in them. First, they are oftentimes wounded by the teeth of each other, and also of wilde Beasts: for cure whereof, Biondus out of Maximus writeth these remedies following: First, let the finews hbres, or griftles of the wound be laid together, then fow up the lips or upper skin of the wound with a needle and thred, and take of the hairs of the Dog which made the wound, and lay thereupon, untill the bleeding be stanched, and so leave it to the Dog to be licked; for nature hath so framed

the Dogs tongue, that thereby in short space he cureth deep wounds.

And if he cannot touch the fore with his congue, then doth he wet his foot in his mouth, and fo Albertus. oftentimes put it upon the maim: or it neither of these can be performed by the Beast himself, then cure it by calling upon it the ashes of a Dogs head, or burned salt, mingled with liquid pitch poured thereupon. When a Dog returning from hunting is hurt about the fnowt, by the venemous teeth Elondus. of some wilde Beast, I have seen it cured by making incision about the wound, whereby the poyloned bloud is evacuated, and afterward the fore was anounted with Oyl of Saint Johns-wort. Wood- Pilniut. worms cure a Dog bitten by Serpents. When he is troubled with Ulcers or rindes in his skin, pieces of Pot-sheards beaten to powder and mingled with Vinegar and Turpentine, with the fat of a Goole; or elle Water-wort with new Lard, applyed to the fore, easeth the same: and if it swell, anoynt it with Butter.

For the drawing forth of a thorn or splinter out of a Dogs foot, take Colts-soot and Lard, or the powder thereof burned in a new earthen pot; and either of these applyed to the foot, draweth forth the Thorn, and cureth the fore: for by Dioscorides it is faid, to have force to extract any point of a Spear out of the body of a man. For the Worms which breed in the Ulcers of their heels, take Unquentum Eg)priacum, and the juyce of peach-leaves: There are some very skilful Hunters which affirm, that it you hang about the Dogsneck sticks of Citrine, as the wood dryeth, so will the Worms come forth and dy. Again, for this evill they wash the wounds with water, then rub it with Tardinut. Pitch, Thyme, and the dung of an Oxe in Vinegar; afterward they apply unto it the powder of Ellebor. When a Dog is troubled with the Mangie, Itch, or Ring-worms, first let him blood in his forelegs in the greatest vein: afterward make an Ointment of Quick-silver, Brimitone, Nettle-seed, and twice fo much old Sewet or Butter, and therewithall anoint him, putting thereunto if you please Albertus. decoction of Hops and Salt water.

Some do wash Mangy Dogs in the Sea-water; and there is a Cave in Sicily (faith Gratim) that hath this force against the scabs of Dogs, if they be brought thither, and set in the running water which seemeth to be as thick as Oyl. Flegm or melancholy doth often engender these evils, and so after one Dog is infected, all the refidue that accompany or lodge with him, are likewise poysoned: for the avoiding thereof, you must give them Fumitory, Sorrel, and Whay lod together; it is good allo to wash them in the Sea, or in Smiths water, or in the decoction aforesaid.

For the taking away of Warts from the feet of Dogs, or other members, first rub and friccase the Wart violently, and afterward anoint it with Salt, Oyl, Vinegar, and the powder of the rinde of a Gourd; or elle lay unto it Aloes beaten with Multard-feed, to eat it off, and afterward lay unto it the little scories or iron chips, which fly off from the Smiths hot iron while he beatethat, mingled with Vinegar, and it shall perfectly remove them.

Against Tikes, Lyce, and Fleas, anoint the Dogs with bitter Almonds, Staves-acre, or roots of Maple, or Cipers, or froth of Oyl, if it be old; and anoint also their ears with Salt-water, and bitter Almonds, then shall nor the flies in the Summer time enter into them. If Bees or Wasps, or such Beasts fling a Dog, lay to the fore burned Rue, with Water; and if a greater Fly, as the Horner, let the Water be warmed. A Dog shall be never infected with the Plague, if you put into his mouth in the Elondus. time of any common Pestilence, the powder of a Storks craw, or Ventricle, or any part thereof with Water: which thing ought to be regarded, (for no creature is fo foon infected with the Plague as is a Dog and a Mule) and therefore they must either at the beginning receive medicine, or else be removed out of the air, according to the advice of Gratius:

> Sed variitius, nec in omnibus una potestas; Difce vices, & que tutela est proxima, tenta:

Wolf-wort, and Apocynon, whose leaves are like the leaves of Ivie, and smell strongly, will kill all Bealts which are littered blinde; as Wolves, Foxes, Bears, and Dogs, if they eat thereof: So likewise will the root of Chameleon and Mezereon, in Water and Oyl, it killeth Mice, Swine, and Dieferidet. Dogs. Ellebor, and Squilla, and Faba Lupina, have the same operation. There is a Gourd (called Zinziber of the Water) because the taste thereof is like to Ginger, the Flower, Fruit, and Leaf thereof killeth Asses, Mules, Dogs, and many other four-footed Beasts. The Nuts Vomice, are poylon to Dogs, except their ear be cut presently and made to bleed. It will cause them to leap strangely up and down, and kill him within two hours after the tasting, if it be not prevented by the former remedy. Theophrasius Chrysippus affirmeth, that the water wherein Sperage hath

Pliny.

been fod given to Dogs, killeth them: the fume of Silver or Lead hath the same opera-

on.
If a Dog grow lean, and not through want of meat, it is good to fill him twice or thrice with Butter, and if that do not recover him, then it is a fign that the worm under his tongue annoyeth him, (which must be presently pulled out by some Naul or Needle) and if that satisfie not; he cannot live, but will in short time perish. And it is to be noted, that Oaten bread leavened, will make a fluggift Dog to become lufty, agile, and full of spirit. Dogs are also many times bewitched, by the only light of Inchanters, even as Infants, Lambs, and other creatures, according to Virgili verse;

Albert W.

Nescio qui teneros oculus mibi fascinat agnos.

For the bewitching spirit entereth by the eye into the heart of the party bewitched : for remedy whereof, they hang about the neck a chain of Corral, as for holy Herbs I hold them unprofi-

To cure the watry eyes of Dogs, take warm water, and first wash them therewith, and then make a plaister of meal and the white of an Egge, and so lay it thereunto. By reason of that saying, Eccles. 20. cap. Bribes and gifts blinde the eyes of Indges, even as a dumb Dog turneth away Correction. Some have delivered, that green Crow-foot forced into the mouth of a Dog, maketh him dumb, and not able to bark : When a Dog becometh deaf, the Oyl of Roses with new pressed Wine insused into his cars, cureth him: and for the Worms in the ears, make a plaifter of a beaten Spunge and the

white of an Egge, and that shall cure it.

Pollux. Niphus. Blondus.

Vincentius.

Tardinus.

The third kinde of Quinancy (called Synanche) killeth Dogs, because it bloweth up their chaps, and includeth their breath. The Cough is very noy fome to Dogs, wherefore their keepers mult infuse into their Noitrils two cups of Wine, with bruifed sweet Almonds: but Tardinus for this disease, prescribed great Parsley sod with Oyl, Honey, and Wine, and so given to the Dog. For the shortness of the breath, bore him through the ear, and if there be any help, that will prevail.

If a bone flick in the mouth of a Dog, hold up his head backward, and pour Ale into his mouth until he cough, and so shall he be eased. When a Dog hath surfeited, and salleth to loath his meat; he cateth the herb Canaria, and is relieved (both against his furfeit, and also the bitings of Serpents.) For the Worms in the belly, he cateth Wheat in the stalk. The Gowt maketh the Dogs legs grow crooked, and it is never fo cured, but that after a course or two they grow lame again. When his skin flyeth from his nails, take meal and water, and binde them thereunto for a remedy; and these are for the most part, those diseases wherewithall Dogs are infected, and the other are either cured by heat, or by eating of grass: and so for this part, I conclude both the sickness and cure of Dogs, with the faying of Gratius :

Mille tenent peftes, curaque potentia major.

Of the bitings of mad Dogs and their

Concerning the madness of Dogs, and their venemous bitings, we are now to speak : and first of all, no reasonable man ought to doubt, why the teeth of a mad Dog should do more harm then of a found and healthy one: because in rage and anger, the teeth of every Beast and creature, receive venome and poyson from the head (as it is well observed by Ægineta) and so at that time faitning their teeth, they do more harm then at other times. Against the simple biting of a Dog, it is suificient but to use the urine of a Dog, for there is not much venome in those wounds; and the urine alfo will draw out the prickles of a Hedge-hog, because such wounds have in them but little poyson. Alfo (as Actum prescribeth) it is very loveraign in such wounds, first of all to cover and rubthe fore with the palm of ones hand, and then pour into it Vinegar and Nitre, fo as it may descend to the bottom of the wound, and afterward lay unto it a new spunge wetted in the same Vinegar and Nitre, and let it be so continued for the space of three days, and by the working thereof it shall be whole.

Also it is generally to be observed in all the bitings of men by Dogs, that first of all it is requisite, that the wound be well rubbed over by the palm of the hand with Vinegar, then pour into the wounds Vinegar mixed with water or with Nire, laying also a spunge thereupon, and so binde it upon the place, having first wetted the cloaths wherewithall you binde it with the faid. Vinegar mixed, fo let it remain bound up three days together, and afterward follow the common course of curing, as in every vulgar wounds, or elfe, lay thereunto Pellitory of the Wall, mingled and beaten with Salt, changing it every day, untill the crust or upper skin fall away.

It is also good sometimes, the holes being small, to wet Lint in Vinegar, and to purge the wound with powder of Anife-feed, or Cumin; laying the Lint upon the Anife for two or three days. The same being thus purged, take a medicine of the equall parts of Hony, Turpentine, Butter, Goole-grease, Marrow of a Hart, or Cali, melted betwirt the teeth of a man, and lay it thereunto, for it also cureth the bitings of men: but if the fore be inflamed, then lay unto it Lentils fod with the parings of Apples, and dryed, or the crums of bread with the juyce of Beets, and a little Oyl of

Divers Authors have also prescribed these outward medicines against the bitings of Dogs in general, namely Vinegar spunged, the Lees of Vinegar, with Nigella Romana, Venus Hair, Alabafter, Brine with Lint, Garlick mixed with Honey, and taken into the body, Lees of Wine,

Almonds both sweet and bitter mingled with Honey, dryed Anise-seeds burned, the leaves of black Hore-hound, or Archangel beaten with Salt, Scallions with Honey and Pepper of the case, the juyce of Onyons with Rue and Honey, or raw Onyons with Hony and Vinegar, but fod ones with Honey and Wine, (if they be green) let them ly to the wound three days: the aftes of Vine-trees with Ovl. ashes of a Fig-tree with a Sear-cloth, beside infinite other elaborate medicines, drawn from Trees, Fruits, Fields, Gardens, and all other creatures; as if Nature had only stroven to provide fundry ready cures for this evill above all other.

Leaving therefore the simple bitings of Dogs, let us proceed to the madness of Dogs and their bitings, wherein the greater danger must be considered, with greater circumspection of remedies. First therefore, the Ancients have derived Reviem, of Raviem, madness, of the hoarsness of voyce. because a Dog at that time hath no perfect voyce.) But it is more probable, that Rabies cometh of Reviendo, because when a Dog beginneth to be oppressed herewith, he biteth, snatcheth, runneth to and fro, and is carryed from home and Master, to his own perdition: this by the Gracians is called

Lytta, and Cynoleffos.

By this evill, not only Dogs perish, but all other creatures (except a Goose) bitten by them : and a man doth not escape without great perill. For Albertus relateth a story, of a man whose arm was bitten by a mad Dog, and after twelve years the fore brake forth again, and he dyed within two days; and the reason hereof was (as in all likelihood that of Calius) that when one and the same nature insecteth each other, as Dogs do Dogs, and men do men, then by reason of their similitude and natural sympathy, they receive the consuming poyson with all speed: but if another nature infect that, betwixt whom in inclination and passion, there is a dissimilitude and antipathy, (as is betwixt a Dog and a Man) then will the poyson receive greater opposition, and be so much the longer before it receive predominant operation, because the first overcometh Nature by treason, against which there is no resistance; and the second by open force and proclamation of War, against which all the strength and force of nature is combined and opposed.

Hereofalso it came to pass, that the Noble Lawyer Baldus, playing with his Dog at Trent, was Matheolus. bitten by him in his lip, and neglecting the matter (because he never suspected the Dogs madnes) A History of after four moneths the poyfon wrought upon him, and he periffed miferably. Those Beasts which have teeth like saws, (as Dogs, Wolves, and Foxes) go mad by nature, without the bitings of others, Michal Epheten by other.

Michal Epheten by other.

Also it hath been observed, that sometimes a mad Dog hath bitten, and there hath sollowed no Aug. Niphus. harm at all, whereof this was the reason, because poyson is not equally in all his teeth; and therefore biting with the purer and wholesomer, the wound became not perillous.

A man bitten with a mad Dog, falleth mad presently when he cometh under the shadow of a Ponzettus. Corn-tree; as it is affirmed by most Physitians, for that shadow setteth the poyson on fire: but a man falling mad, of all creatures avoideth a Dog, and a Dog most of all falleth upon men. There are many things which ingender madnels in Dogs, as hot wheaten bread dipped in Bean-water, melancholy bred within them, and not purged by Canaria, or other herbs, the menstruous pollutions of Women, and the pain of his teeth. Their madness is most dangerous in the Dog-days, for then they Iling. both kill and perish mortally; for at that time their spittle or some, falling upon mans body, breed- Dog-days eth great danger; and that if a man tread upon the Urine of a mad Dog, he shall feel pain by it if he most perillous have a fore about him: from whence it came to pass, that a stone bitten by such a Dog. was a com- for mad Dogs. mon proverb of discord. Also it is observed, that if a wound be dressed in the presence of man or woman, which hath been bitten by a mad Dog, that the pain thereof wil be encreased: and which is more, that abortment will follow upon Beasts with young, or Egges covered by the Hen, by their pre-sence: But for remedy, they wash their hands and sprinckle themselves, or the Beasts with that wa- Pliny. ter, whereby the evill is to be cured.

If the gall of a mad Dog, about the bigness of a Lentill feed be eaten, it killeth within feven days, or Bertrujus. esse doth no harm at all, if it pass seven days without operation. When a mad Dog had suddenly tore in pieces a garment about ones body, the Taylor or Botcher took the fame to mend, and forgetting himself, put one side of the breach into his mouth to firetch it out to the other, and fell mad immediately. Men thus affected, fear all waters, their virile member continually standeth, they suffer many

Convulsions, and oftentimes bark like Dogs.

There was a certain Mason at Zurick, who had his finger grievously bitten with a mad Dog about Inly, whereunto he laid Garlick, Rue, and Oyl of Scorpions, and so it seemed to be healed, where-fore he took no counsel of any Physitian. About August following, he was taken with a Feaver, being first very cold, then very hot, and so continued sweating for a day or two, and could not endure the cold air. He thirsted much, yet when water or drink was brought him, he was so asraid thereof that he could not drink: his fweat was cold, and when he felt any cold air, he cryed out for fear it had been water: thus he remained trembling, and offering to vomit at the fight of water, many times howling, and so perished after two days ended.

When a Dog is mad it may be known by these signes, for he will neither eat nor drink, he look. Signes to know eth awry and more fadly then ordinary; his body is lean, he cafteth forth thick fleam out of his a mad Dog. nostrils or mouth: He breatheth gaping, and his tongue hangeth out of his mouth. His ears is limber and weak, his tail hangeth downward: his pace is heavy and fluggish until he run, and then it is more rash, intemperate and uncertain. Sometimes running, and presently after standing still

Of Dogs.

Keetrutius. P. nzettus.

Ætiut.

again : lie is very thirfty, but yet abstaineth from drink, he barketh not, and knoweth no man, biteagain : he is very timity, our yet autaineth from arms, he carful, and runneth into fecret ing both frangers and friends. His head hangeth downward; he is fearful, and runneth into fecret places from his whelps or fellows, who often bark at him, and will not eat of bread upon which his bloud hath fallen. His eyes grow very red; he many times dyeth for fear of water: fome differente by laying Nuts or grains of Corn to the bitten place, and afterward take them away and cast them by laying Nuts or grains of Corn to the bitten place, and after the eating the fowl live, the Dog will to Hens or Pullen, who for hunger will eat them, and if after the eating the fowl live, the Dog will not be mad; but if it dye, then for certainty the Dog will fall mad. The which passions do also not be man; but it tage, then for certainty the 20g minutes of the female agree with them that are bitten by him; and it is not to be forgotten, that the bitings of the female bring more danger then the males.

ing more uanger then the mates. The bodies of them that are thus wounded grow very dry, and are pressed with inward burning Feavers, if by Musick and delightful sports they be not kept waking; many times they dye suddenly, or elle recover for a small time, and then fall into a relapsed malady.

Some give this to be the cause of their fear of water, because their body growing dry, feemeth to forget all participation with humidity: but Rufus affirmeth, this cometh from melancholy, wherewithall these persons are most commonly affected: which agreeth with an imagination they have, that they see Dogs in the water, and indeed it cannot be but their own countenance, which in these passions is very red, doth wonderfully afflict them, both in thewater, and in all looking

When a certain Philosopher (being bitten by a mad Dog) entred into a Bath, and a strong appaglaffes. rition of a Dog presented it self unto him therein, he strove against this imagination with a singular contident courage to the contrary, saying within himself; Quid Cani commune est cum Balno? what hath a Dog to do in a Bath? and so went in and overcame his disease: which thing had seldom chanced, that a man hath recovered this malady after he fell into fear and trembling, except Endemus and Themis, who obeying the request of a friend of his, entred likewise into the water, and

after many torments was recovered.

To conclude, some men in this extremity suffer most fearful dreams, profusion of seed, hoarsness of voyce, thortness of breath, retention of urine, which also changeth colour, being sometimes black, sometimes like milk, sometime thick, sometime thin as water, rumbling in the belly, by reafon of crudity, redness of the whole body, distention of nerves, heaviness of minde, love of darkness, and fuch like. Yet doth not this operation appear presently upon the hurt, but sometimes at nine days, sometimes at forty days, sometimes at half a year, or a year, or seven, or twelve year, as hath been already faid.

For the cure of these Dogs, and first of all for the preventing of madness, there are fundry invented observations. First, it is good to shut them up, and make them to fast for one day, then purge them with Helleber, and being purged, nourish them with bread of Barley-meal. Other take them mad Dogs ciwhen they be young whelps, and take out of their tongue a certain little worm, which the Gracians call Lytta; after which time they never grow mad, or fall to vomiting, as Graitus noted in these

Namque subit nodis qua lingua tenacibus bæret Vermiculum dixere, mala atque incondita pestis, &c. Iam teneris elementa mali, caufafque recidunt.

But immediately it being taken forth, they rub the tongue with Salt and Oyl. Columella teacheth that Shepheards of his time, took their Dogs tails, and pulled out a certain nerve or finew, which cometh from the Articles of the Back-bone into their tails, whereby they not only kept the tail from growing deformed and over-long, but also constantly believed, that their Dogs could never afterward fall mad: whereunto Pliny agreeth, calling it a castration or gelding of the tail, adding, that it must be done before the Dog be forty days old. Some again say, that if a Dog taste of a Womans milk which the giveth by the birth of a Boy, he will never fall mad. Nemefian afcribeth the cure hereof to Castoreum dryed and put into milk, but this is to be understood of them that are already mad, whose elegant verses of the cause, beginning, and cure of a mad Dog, I have thought good here to express:

> Exhalat feu terra finus, feu noxius der Causa malt ; seu cum gelidus non sufficit humor, Torrida per venas concrescunt semina flamme.

Whatfoever it be he thus warranteth the cure.

Tunc virosa tibi sumes, multumque domabis Caftorea, adtritu filicis lentescere coges. Ex ebore buc trito pulvis lectove feratur Admiscensq; diu facies concrescere utrumque. Mox lattis liquidos fenfim superadde fluoret, Ut non cundantes banftus infundere cornu Inferto poffis , furiafque repellere triftet.

Armetia a King of Valentia, prescribeth this form for the cure of this evill : let the Dog be put in- Albertus. to the water, fo as the hinder-legs do only touch the ground, and his fore-legs be tyed up like hands over his head, and then being taken again out of the water, let his hair be shaved off, that he may be pieled untill he bleed: then anoint him with Oyl of Beets, and if this do not cure him within seven days, then let him be knocked on the head, or hanged out of the way.

when a young male Dog suffereth madness, shut him up with a Bitch; or if a young Bitch be also Blondus. oppressed, that her up with a Dog, and the one of them will cure the madness of the other.

But the better part of this labor, is more needful to be employed about the curing of men, or other foreit is to be remembred, that all other poysoned wounds are cured by incision and circumcising man or beast of the flesh, and by drawing plaisters, which extract the venom out of the flesh, and comfort nature; bitten by a and by Cupping-glaffes, or burning Irons, (as Calim affirmeth) upon occasion of the miraculous fiction mad Dog. of the Temple door Key of S. Belli us, neer Rhodigium; for it was believed, that if a mad man could hold that Key in his hand red hot, he should be delivered from his fits for ever.

There was such another charm or incantation among the Apuleians, made in form of a prayer against all bitings of mad Dogs, and other poylons, unto an obscure Saint (called Vithus) which was to be faid three Saterdays in the evening, nine times together, which I have here fet down for no

other cause but to shew their extream folly.

Aime Vithe pellicane Oram qui tenes Appulam, Littufque Polygnanicum, Qui morsus rabidos levas.

Irafque canum mitigas, Tu sancie rabiem asperam Richusque canis luridos, In favom probibe luem.

A feelifh charm and praver td Vithus

I procul hine rabies, procul hine furor omnis abesto.

But to come to the cure of such as have been bitten by mad Dogs: First I will set down some compound medicines to be outwardly applyed to the body: Secondly, some simple or uncompounded medicines: In the third place such compounded and uncompounded potions, as are co be taken inwardly against this poyson.

For the outward compound remedies, a plaister made of Opponen and Pitch, is much commended, Dioscorides. which Menippus used, taking a pound of Pitch of Brutias, and four ounces of Opponax (as Alius and Alluarius do prescribe) adding withall, that the Opponax must be dissolved in Vinegar, and afterward the Pitch and that Vinegar must be boyled together, and when the Vinegar is consumed, then put in the Opponax, and of both together make like taynters or splints, and thruit them into the wound, so let them remain many days together, and in the mean time drink an Antidote of Sea-crabs and Vinegar, (for Vinegar is alway pretious in this confection.) Other use Basilica, Onyons, Rue, Salt, rust of Iron, White bread, feeds of Horehound, and Triacle: but the other plaister is most forcible to be applyed outwardly, above all medicines in the world.

For the simple and uncompounded medicines to be taken ag inst this fore, are many: As Goosegrease, Garlike, the root of wilde Roses drunk; bitter Almonds, leaves of Chickweed, or Pimpernel, the old skin of a Snake pounded with a male-Sea-crab, Betony, Cabbage leaves, or stalks, with Par-ineps and Vinegar, Lime and Sewet, powder of Sea-crabs with Hony; powder of the shels of Seacrabs, the hairs of a Dog laid upon the wound, the head of the Dog which did bite, mixed with a little Eurhorbium; the hair of a Man with Vinegar, dung of Goats with Wine, Walnuts with Hony and Salt, powder of Fig. tree in a Sear-cloth, Fitches in Wine, Exphorbium; warm Horse-dung, raw Bears chewed in the mouth, Fig-tree-leaves, green Figs with Vinegar, fennel stalks, Gentiana, dung of Pullen, the liver of a Buck-Goat, young Swallows burned to powder, also their dung; the urine of a Man, an Hyanai skin, Flower-deluce with Honey, a Sea-hearb called Kakille, Silphum with Salt, the flesh and shels of Snayls, Leek-seeds with Salt, Mints, the tail of a Field-mouse cut off from her alive, and the fuffered to live, roots of Burs, with Salt of the Sea-Plantain, the tongue of a Ram with Salt, the flesh of all Sea-fishes, the sat of a Sea-calf and Vervine; beside many other superstitious Amulets which are used to be bound to the arms necks, and breafts, as the Canine-tooth bound up in a leaf and tyed to the arm; a Worm bred in the dung of Dogs hanged about the neck; the root of Gintian in an Hyanaer skin, or young Wolfs skin, and fuch like; whereof I know no reason beside the opinion of men.

The inward compound potions or remedies against the bitings of Dogs may be such as these. Take Sea-crabs, and burn them with twigs of white Vines, and fave their ashes, then put to them the postder of Gentian root well cleanled, and small beaten, and as oft as need requireth take two spoonfuls of the first, and one of the second, and put them into a cup of pure and unmixed Wine, and so drink it for four days together, being well beaten and stirred, so as the Wine be as thick as a Cawdle; and there is nothing more forcible then Sea-crabs, Hiera, Diascincum, powder of Walnuts in warn: rain Water, Triacle, Castoreum, Pills, Spurge-seed, and a decoction of Indian thorn with Vervine given in water. These may serve for several compound inward remedies against these poysons, and now sollow the

First enting of Garlike in our meat, drinking of Wormwood, Rams stell burned and put into Wine fo drunk. There is an Herb called Aysson, by reason of the power it hath against this evill, which being bruifed and drunk, cureth it. The liver of a Boar dryed and drunk in Wine, hath the same operation Jews lime drunk in water Leeks and Onyons in meat, Dogs bloud, the head, the ve n

ther for pre-

covering.

Pliny.

venting or re

verfes:

Armetic

under the tongue (commonly supposed to be a worm) and the liver of the Dog which hath done the hurt, are also prescribed for a remedy of this evill: but especially the liver or rennet of a young Puppey, the rinde of a wilde Fig. tree, a dram of Gafforeum, with Oyl of Roses, Centaury, or Chame-Puppey, the root of a wilde Rose; (called Cynorrhodon and Cynosbaton) Ellebor; the brain of a Hen drunk in some liquor, Sorrel, Honey, Minte, and Plantaine : but Pimpinella Germanica is given to all Cattel which are bitten by a mad Dog. Besides many other such like, which for brevity sake I omit, concluding against all superstitious curing by Inchantments or supposed Miracles, such as is in a certain Church of S. Lambert, in a City of Picardy, where the Mass Priests, when a man is brought unto them having this evill, they cut a crofs in his forehead, and lay upon the wound a piece of S. Lambert fole burning, (which they say (though fally) is referred to this day withour diminution) then do they fow up the wound again, and lay another plaister upon it, prescribing him a dyet; which is to drink water, and to eat hard Egs, but if the party amend not within forty days, they binde him hand and foot in his bed, and laying another bed upon him, there strangle him, as they think without all fin) and for preventing of much harm that may come by his life, if he should bite another. This flory is related by Abfiut, and it is worth the noting, how murther accompanieth superstitious humane inventions, and the vain prefumptuous confidence of Cross-worshippers : and thus much of the madness of Dogs, and the cure thereof in men and beasts. In the next place, the conclusion of this tedious discourse followeth, which is, the natural medicines

arifing out of the bodies of Dogs, and so we will tye them up for this time. Whereas the inward parts of men are troubled with many evils, it is delivered for truth, that if little Melitean Dogs, or young sucking Puppies, be laid to the breast of a childe or man that hath infectious passions or pains in his entrails, the pain will depart from the man into the beast; for which cause they burned them when they were dead. Serenus doth express this very elegantly, saying;

Quin ettam catulum lattentem apponere membris Convenit, omne malum transcurrere fertur in illum. Cui tamen extintto munus debetur bumandi, Humanos quia contactus mala tanta fequuntur, Et jundum vitium ducit de conjuge conjux.

Amatus. Hippocrates.

The natural

medicines.

Furnerius.

Pliny.

If a Whelp be cut afunder alive, and laid upon the head of a mad melancholike woman, it shall cure her, and it hath the same power against the Spleen. If a woman grow barren after she hath born children, let her eat young Whelp-flesh, and Polypus fish fod in Wine and drink the broath, and she shall have ease of all infirmities in her stomach and womb. Water distilled out of Whelps, causeth that pieled or Maven places shall never have more hair grow upon them.

With the fat of whelps, bowelled and fod till the flesh come from the bones, and then taken and put into another Vessel, and the weak, resolute, or paralytike members being therewith anointed, they are much eased if not recovered. Absus faith, he made experience of Puppies sod alive in Oyl, whereby he cured his Gowty legd Horfes, and therefore it cannot chuse but be much more profita-

The skin of a Dog held with the five fingers, stayeth Distillations; it hath the same operation in gloves and stockins, and it will also case both Ach in the belly, head, and feet, and therefore it is used

to be worn in the shoes against the Gowt.

The slesh of mad Dogs is salted, and given in meat to them which are bitten by mad Dogs for a fingular remedy. The bloud is commended against all intoxicating poyfons and pains in the small guts, and it cureth scabs. The fat is used against deafness of the ears, the Gowt, Nits in the head, and incontinency of urine, given with Alum. A plaister made of the Marrow of a Dog and old Wine, is good against the falling of the fundament. The hair of a black Dog easeth the Falling sickness, the Brains of a Dog in Lint and Wool laid to a mans broken bones for fourteen days together, doth confolidate and joyn them together again, which thing caused Serenus to make these excellent verses;

> Infandum dittu cunttis procul absit amicis, Sed fortuna potens omen convertat in boftes, Vis indigna novo si parferit offa fragore, Conveniet cerebrum blandi Canin addere fratiu, Lintea deinde superque inductu nectere lanas Sapius & fuccos conspergere pinguis olivi, Bis feptem credunt revale foere cuncta diebut.

The brain-pan or skull of a Dog clove afunder, is applyed to heal the pain in the eyes that is, if the right eye be grieved, thereunto apply the right fide of the skull, if the left eye, the left fide.

The vertues of a Dogs head made into powder are both many and unspeakable, by it is the biting of mad Dogs cured; it cureth spots and bunches in the head; and a plaister thereof made with Oil of Roses, healeth the running in the head: it cureth also all tumors in privy parts, and in the seat, the chippings in the fingers, and many other diseases.

Of the Elephant.

The powder of the teeth of Dogs, maketh Childrens teeth to come forth with speed and case.

and if their gums be rubd with a Dogs tooth, it maketh them to have the sharper teeth : and the

nowder of these Dogs teeth rubbed upon the gums of young or old, easeth Tooth-ach, and abateth

ivelling in the gums. The tongue of a Dog is most wholesome both for the curing of his own wounds by licking, as also of any other creatures. The Rennet of a Puppey drunk with Wine, Rafis.

diffolveth the Colick in the same hour wherein it is drunk it and the Vomit of a Dog laid upon the belly of a Hydropick man, caufeth water to come forth at his stool. The gall healeth all wheals Sexual.

A cularius.

and blifters after they be pricked with a Needle, and mingled with Honey it cureth pain in the eyes. and taketh away white spots from them: likewise insused into the ears, openeth all stoppings, and Pliny. cureth all inward pains in them. The Spleen drunk in Urine, cureth the Spleenetick; the milt being taken from the Dog alive, harh the same vertue to help the milt of man. The skin of Bitches wherein they conceive their Pupnies (which never touched the earth) is pretious against difficulty in Childe-birth, and it draweth the Infant out of the womb. The milk of a Bitches first whelping, is an antidote against poyson, and Dissorides. the same causeth hair never to come again, if it be rubbed upon the place where hairs are newly nulled off: Also infused into the eyes, driveth away the whiteness of them. Likewise there is no her. ter thing to anoint the gums of young children withall, before they have teeth, for it maketh them to come forth with ease: it easeth likewise the pain of the ears, and with all speed healeth burnt

mouths by any hot meat : Ora ambufta cibo faraba latte Canino. The urine of a Dog taketh away spots and warts, and being mingled with Salt of Nitre, wonderfully easeth the Kings Evill. The dung of Dogs (called by the Apothecaries Album (Frayum) because the white is best, being ingendred by eating of bones, and therefore hath no ill savour. Galen affirmeth, that his Masters in Physick, used it against old fores, Bloody flixes, and the Quinsie; and it is very profitable to stanch the bloud of Dogs; and also against the inflamations in the breast of Women mingled with Turpentine. It was well prescribed by Avicen, to expell congealed bloud out. of the Romach and bladder, being taken thereof fo much in powder as will lye upon a Goldeni

Of the Ethiopian EAL.

Here is bred in Ethiopia a certain strange Beast about the bigness of a Sea-horse, being of co. Pliny. lour black or brownish: it hath the cheeks of a Boar, the tail of an Elephant, and horns Solimes. above a cubit long, which are moveable upon his head at his own pleafure like ears; now flanding one way, and anon moving another way, as he needeth in fighting with other Beafts, for they fland not stiffe, but bend flexibly; and when he fighteth, he alway stretcheth out the one, and holdeth in the other, of purpose as it may feem, that if one of the m be blunted and broken then he may defend himself with the other. It may well be compared to a Sea-horse, for above all other places it loveth belt the waters.

Of the ELEPHANT.

Here is no creature among all the Beasts of the world, which hath so great and ample demon- The great wife A firation of the power and wisdom of Almighty God as the Elephant: both for proportion of of the confidebody and disposition of spirit; and it is admirable to behold the industry of our ancient fore-fathers, and noble defire to benefit us their posterity, by searching into the qualities of every Beatt, to discover what benefits or harms may come by them to mankinde : having never been atraid either of the wildest, but they tamed them; the fiercest, but they ruled them; and the greatest, but they also set upon them. Witness for this part the Elephant, being like a living Mountain in quantity and outward appearance, yet by them so handled, as no little Dog became more serviceable and

Among all the Europeans the first possessor of Elephants; was Alexander Magnut, and after him The fast man Antigonus, and before the Macedonians came into Afia, no people of the world except the Africans in En op poland the Indiant, had ever feen Elephants. When Fabritius was fent by the Romans to King Pyrthus in filler of Ele-Ambassage, Pyribus offered to him a great sum of money, to prevent the War, but he refused private gain; and preferred the service of his Countrey: the next day he brought him into his pre-fence, and thinking to terrifie him, placed behinde him a great Elephant, shadowed with cloth of Arras; the cloth was drawn, and the huge Beaft instantly laid his trunk upon the head of Fabricius, fending forth a terrible and direful voyce: whereat Fabritius laughing, perceiving the policy of the King, gently made this speech ;

Neque beri aurum, neque bodie b flia me fermovit.

I was neither tempted with thy Gold yesterday, nor terrified with the sight of this Beast to day: and so as- Entropins. terward Pyrrbus was overcome in War by the Romans, and Manlius Curius Dentatus did first of all bring Elephants in Triumph to Rom;, calling them Lucane Boves, Oxen of the Wood, about O 3

the 472 year of the City; and afterward in the year of Romes building 502. when Metellus was high Priest, and overthrew the Cartbaginians in Sicily, there were 142 Elephants brought in Ships to home and led in triumph, which Lucius Pifo afterward, to take away from the people opinions of the fear of them, caused them to be brought to the stage to open view and handling, and so slain; which thing Pompey did also by the slaughter of five hundred Lions and Ele-Julius Cspit. phants together; so that in the time of Gordianus, it was no wonder to see thirty and two of them

Of the feveral ges.

An Elephant is by the Hebrews called Behemah, by way of excellency, as the Latins for the same cause call him Bellua, the Chaldeans for the same word, Deut. 14. translate Beira; the Arabians, names in Cause Carring Behau, the Persians, Behad; and the Septuagist, Ktene; but the Grecians vulgarly Elephas, not Quasi Bebut; the response your copulation in the water, but rather from the Hebrer word Dephil; fignifying the Inory tooth of an Elephant (as MunHer well observeth.) The Hebrens also use the word Schin for an Elephants tooth. Moreover Hefschim called an Elephant in the Greek tongue Periffer; the Latins do indifferently use Elephas and Elephanius; and it is said that Elephanius in the Punick tongue, signifieth Casar: whereupon when the Grandsather of Julius Casar had slain an Elephant, he had the name of Cafar put upon him.

The original of the Cafars.

nau the name of case, par beaft Leofante, or Lionfante; the French, Elephante; the Germans, Helfant; the Illyrians, Slon. We read but of three appellative names of Elephants; that is of one, called by Alexander the great Ajax, because he had read that the buckler of great Ajax was covered with an Elephants skin, about whose neck he put a Golden collar, and so sent him away with liberty. Aniochus one of Alexanders successors had two Elephants, one of them he likewise called Ajax, in imitation of Alexander, and the other Patroclus, of which two this flory is reported by Antipater. That when Antiochus came to a certain ford or deep water, Ajax which was alway the Captain of the refidue, having founded the depth thereof, refused to passe over, and turned back again, then the King spake to the Elephants and pronounced, that he which would passe over should have principality over the refidue: whereupon Patroclus gave the adventure, and passed over safely, and received from the King the filver trappings and all other prerogatives of principality; the other feeing it (which had alway been chief till that time) preferred death before ignominy and difgrace, and fo would never after eat meat but famished for forrow.

They are bred in the hot Eastern Countries, for by reason they can endure no cold, they keep only in the East and South. Among all, the Indian Elephants are greatest, strongest, and tallest, and there are among them of two forts, one greater (which are called Profii) the other smaller (called Taxile) They be also bred in Africa, in Lybia, much greater then a Nysean Horse, and yet every way inferiour to the Indian; for which cause, if an African Elephant do but see an Indian, he trembleth, and laboureth by all means to get out of his fight, as being guilty of their own

There are Elephants also in the Isle Taprobane, and in Sumatra in Africa. They are bred in Lybia, in Athiopia, among the Troglodyte, and in the Mountain Atlas, Syrtes, Zames, and Sala, the feven Vertomannus. Mountains of Tingitania, and in the Countrey of Basman, subject to the great Cham. Some Authors affirm, that the African Elephants are much greater then the Indian, but with no greater reason Paul Venetus. then Columella writeth, that there be as great beafts found in Italy as Elephants are : whereunto no found Author ever veelded.

The height Elephants.

Of all earthly creatures an Elephant is the greatest: for in India they are nine cubits high, and five cubits broad; in Africa fourteen or fifteen full spans, which is about eleven foot high and proportionable in breadth, which caused Ælianus to write, that one Elephant is as big as three Bugils; and among these the Males are ever greater then the Females. In the Kingdom of Melinda in Africk, there were two young ones not above fix monthes old, whereof the least was as great as the greatest Ox, but his flesh was as much as you shall finde in two Oxen; the other was

Vertomannus. The colour and feveral of the use of his skin. Pliny.

Their colour is for the most part mouse-colour, or black; and there was one all white in Ethiopias The skin looketh pieled and scabby; it is most hard on the back, but softer underneath the belly, having no covering of hair or griftles, nor yet help by his tail to drive away the flies, for that evill doth this beaft feel in his great body, but alway hath crevifes in his skin, which by their favour do invite the little flies to a continual feast, but when by stretching forth they have received the fwarmes, by shrinking together again, they inclose the flies, and so kill them: so that these crevifes in his skin, are unto him in flead of a main, tail, and hair : yet there are some few hairs which grow scattering upon his hide, whereof some have been brought out of America into Germany, which were two palms long, but not fo stiffe as Swines.

Gillius.

Their skin is so hard and stiffe, that a sharpe sword or iron cannot pierce it. Their head is very great, and the head of a man may easily enter into their mouth, as a finger into the mouth of a Dog; but yet their ears and eyes are not equivalent to the residue of their proportion: for they are small like the wings of a Bat or a Dragon, those of the Ethiopian Sambri want cars altogether. Varioumning. Their eyes are like the eyes of Swine, but very red; they have teeth of either fide four, wherewith Of their teeth, they grind their meat like meal, and they have also two other which hang forth beyond the relidue, in the males downward, and these are the greater and crooked; but in the semales upward, and they are the smaller and straight : the one of them they keep alwayes sharp, to revenge injuries, and with the other they root up plants and trees, for their meat; to that nature hath armed both lexes

Gillius. 1 liny.

with these for their chiefest desence; and with these the semales are calved at the first, and indued with these for their chiefe defence; and white the come forth; the males not fo quickly, but rather from the mothers belly, and appear so soon as they come forth; the males not so quickly, but rather after the manner of Bores and Sea-horses, they hang out of their mouthes, and grow to be ten foot long, whereof they make posts of houses in some Countreys, and call them Ebora, that is, young Ivory; which caused Martial to write thus;

Grandia taurerum portant qui Zorpora, quaris An Indicas possint sustinuise trabes.

There is a certain Book extant, without the name of the Author, written of Judea or the Holy land, wherein the Author affirmeth that he saw an Elephants tooth sold to a Venetian Merchant for six wherein the Ducats, it being fourteen spans long, and four spans broad, and it weighed so heavy, that he could not move it from the ground.

variomanus also saith, that he saw in the Isle of Sumaira, two Elephants teeth, which weighed three hundred fix and thirty pounds. This is certain, that the teeth of those Elephants which live in the Marishes and watry places, are so smooth and hard, as they seem intractable, and in some places they have holes in them, and again certain bunches as big as hail-stones, which are so hard, as no art

or instrument can work upon them.

Philostratus.

The Elephants of the Mountains have leffer and whiter teeth, fit to be applyed to any work, but the best of all, are the teeth of the Campestrial and field Elephants, which are whitest and softest, and may well be handled without all pain. The teeth of the female are more pretious then of the male, and these they lose every tenth year; which falling off, they bury and cover in the earth, pressing them down by sitting upon them, and then heal them over with earth by their feet, and so in short time the graffe groweth upon them: for, as when they are hunted they know it is for no other cause then their teeth; so also when they lose their teeth, they desire to keep them from men, lest the virtues of them being discovered, they which bear them should enjoy the lesse peace

Ælianus.

A wonderful

The finding of . It is admirable what devises the people of India and Africa have invented by natural observation, to finde out these buried teeth, which unto us living in the remote parts of the world, we would judge impossible by any ordinary or lawful course, except we should turn up the earth of a whole Countrey, or go to work by diabolical conjuration; yet have they found out this facile and ready courfe. In the woods or fields where they suspect these teeth to be buried, they bring forth pots or bottles of water, and difperse them, here one, there another, and so let them stand, and tarry to watch them, fo one fleepeth, another fingeth, or bestoweth his time as he pleaseth; after a little time, they go and look in their pots, and if the teeth lie near their bottles, by an unipeakable and fecret attractive power in nature, they draw all the water out of them that are neer them, which the watchman taketh for a fure fign, and so diggeth about his bottle, till he finde the tooth : but if their bottles be not emptied, they remove to feek in another place.

These Ivory teeth have been gliway of great estimation among all the Nations that ever knew them, the Ethiopidus payed for a tribute unto the King of Persia every third year twenty of these teeth hung about with gold and Jet-wood. These are sold by weight, and there be many which deceive the world with the bones of Fishes in stead hereof, but the true Ivory is paler and heavier, and falling upon the ground will easily break, whereas the bones of Fishes are more tenacious, light and firong. It is like to the Chernites wherein Darius was entombed, and the Marble called Laps Coraliticus, Coral ftone : like unto this is the Alagi stone, and the Pederos Jewel. With this Ivory they made images and statues for their Idol gods, as one for Pallas in Athens, for Ejculopins in Epidaurus, for Venus under the name of Urania by Phidias, whereupon the was called Elephantina, for Apollo at Reme: and therefore Paulanias wondereth at the Grecians that spared no coffor the vain worship of their gods, for they brought of the Indians and Elbiopians Typry to make their Images with more pomp and oftentation : besides of Ivory they make the hatts of knives, and also the best combs, and Solomon as appeareth 3 Reg. 10. had a throne of Ivory covered all over with gold, for the costs and charge whereof he could not expend lesse then thirty thousand talents.

The greatness of these appeareth by their use, for Polybius reporteth by the region of Galussa Noble man and a great traveller in Africa, that with them they made posts for hopitally and tacks to lay their Cattels meat upon, and likewise folds to enclose them. Apellesimia dean the organical states of the stat was called Elephants inke, and he painted therewith. It hath been affirmed by Elemus and some writers following Pliny, that these teeth are horns, and that Elephants are horned beasts, which errour rose upon the occasion of these words of Pliny; Elephantes & grietes candere tantum cornibut Whether Ele- assimilatio, in Santonum littore reciprocatos destituit Oceanus: where Ælianus finding a resemblance betwixt Rams and Elephants in their white horns, was contented to apply that name to them both, which appertaineth only to one; for Pliny himself ib. 18. sheweth his meaning by another like speech, of their whetting their horns upon trees, and Rhinocerotes upon stones: for except he bad named horns in the first place it might have been questioned whether Rhinocerotes had any horns, but

But what foever were the words or opinion of Pliny, it is most certain, that after Herodotus and rather teeth in the second place. other ancient writers, it is fafer to call these teeth then horns, and I will briefly set down the

reasons of Thilostrains, that will have them to be teeth; and afterward of Grafaldus, Elianus, and Paulanias, that would make them horns, and so leave the Reader to consider whether opinion he thinketh most agreeable to truth. First, that they are not horns, it is alleadged that horns fall off and grow every year again, especially of Harts, and grow forth of their heads; but teeth which are called Fanne or Gang-teeth, standing out of the mouth, fall off together, and are given for weapon and defence to beafts, and such are an Elephants. Again, a horn hath a certain line or circle neer the root, which is covered every year, but this cometh up like a stony substance, without all circle or cover, and therefore it cannot be a horn. Moreover, those creatures are faid to have horns that have cloven hoofs, this hath no cloven hoof, but only five distinct fingers upon a foot. Lastly, all horned beafts have an empty hollowness in their horns (except Harts) but this is found and full thoroughout, except a little passage in the middle like a hole into a tooth: and thus say they which will have them called teeth.

Now on the contrary, those which will have them horns, maake these arguments. First, as the Elks have their horns grow out of their eye-lids, the Rhinocerotes or Ethiopian Buls out of their nose, so as it is not unnatural for the Elephant to have his horns grow out of his mouth. Again, horns fall off and come again in old beafts, but teeth do not fo, and therefore these are horns and not teeth: the power of fire cannot alter teeth, but these teeth break if you go about to change their porportion or figure, but horns of Oxen and Elephants may be stretched, bended, altered, straightned, and applyed to what fashion soever you will. Again, teeth grow out of the gums and cheek-bone, as it is apparent, but horns grow out of the fcull and temples, and fo do the Elephants. as by observation every man may discern. Lastly, as nature hath given another shape and greater proportion of body to Elephants then to any other beafts, so also it is not unreasonable that it vary in the placing of his horns, for they grow downward, and the very mole and quantity of his body is sufficient to arme him against the sear of death. Thus they argument for the horns of Elephants.

The Poets have a prety refemblance of dreams, comparing true dreams to horns, and false dreams to Ivory, because falshood is ever more burnished, then naked and ragged truth. And besides the eye of man is translucent, and containeth in it a horny substance, and by the eye we alway receive the best assurance, but by the mouth (signified by teeth) are many falshoods vented: and for that horns turn upward to heaven, the fountain of truth, but the teeth of an Elephant grow downward towards the earth the mother of error. And for this cause Aeneas by Virgil and Homer, is said to come in at the horny gate of Somnus, and to go forth at the Ivory : Virgils Verses are these:

> Sunt gemine Somni porte, quarum altera fertur Cornea, qua veris facilis datur exitus umbris. Altera candenti perfecta nitens Elephanto, Sed falfa ad calum mittunt infomnia manes. His ubi dum natum Anchises, unaque Sibyllam Profequitur dictis, portaque emittit eburna.

And here we will leave, and profecute no further this discourse of their horns and teeth, but proceed to the other outward parts of this beaft.

The tongue is very small though broad, his trunck called Probofes and Promufein, is a large hollow Ar flotle. thing hanging from his nose like skin to the groundward; and when he feedeth it lyeth open, like Elianm. the skin upon the bill of a Turkey-cock, to draw in both his meat and drink, using it for a hand, and therefore improperly it is called a hand. For by it he receiveth of his keeper what soever he giveth him, with it he overthroweth trees, and wherefoever he swimmeth, through it he draweth breath. It is crooked, griftly, and inflexible at the root next to the nose: within it hath two passages, one into the head and body by which he breatheth, and the other into his mouth where. Gilliui. by he receiveth his meat: and herein is the work of God most wonderful, not only in giving unto it such a divers proportion and anatomy, but also giving him reason to know this benefit of it, that so long as he is in the water and holdeth up that trunck, he cannot perifh.

With this he fighteth in war, and is able to take up a finall piece of money from the earth: with Vertomannie. it he hath been feen to pull down the top of a tree, which twenty four men with a rope could not make to bend. With it he driveth away his Hunters when he is chased, for he can draw up therein a great quantity of water, and shoot it forth again, to the amazement and overthrow of them that persecute him. The Moors say that he hath two hearts, one wherewithal he is incensed, and another whereby he is pacified.

But the truth is, as Ariffolle in the diflection of the heart observed, there is a double ventricle and bone in the heart of an Elephant. He hath a Liver without any apparent gall, but that side of the Liver being cut, whereon the gall should lie, a certain humour cometh forth like a gall. Wherefore Ælianu faith, he hath his gall in his maw-gut, which is fo full of finews, that one would think he had four bellies; in this receiveth he his meat, having no other receptacle for it. His intrails are like unto a Swines, but much greater.

His Liver four times so great as an Oxes, and so all the retidue except the Milt. He hath two pappes a lietle beside his brest under his shoulders, and not between his hinder legs or loins, they Aristotle.

Rob. Cenalis.

Of the Elephant.

are very finall and cannot be feen on the fide. The reasons hereof are given, first that he hath but two pappes, because he bringeth forth but one at a time, and they stand under his shoulders like an Apes, because he hath no hoofs but distinct feet like a mans, and also because from the breast floweth more aboundance of milke.

The genital part is like a Horses, but lesser then the proportion of his body affordeth: the fones are not outwardly feen, because they cleave to his reins. But the semale hath her genital betwirt her thighes: the forelegs are much longer then the hinder legs; and the feet be greater. His legs are of equal quantity, both above and beneath the knees, and it hath ancie bones very low. The articles do not afcend fo high as in other creatures, but kept low neer the earth. He bendeth his hinder legs like a mans when he sitteth, but by reason of his great weight he is not able to bend on both fides together, but either leaneth to the right hand or to the left, and fo fleepeth: It is false that they have no joints or articles in their legs, for when they please they can use, bend, and move them, but after they grow old, they use not to lie down or strain them, by reason of and move them, but after they given being to a tree; and if they did not bend their legs, they their great weight, but take their reft leaning to a tree; and if they did not bend their legs, they could never go any ordinary and stayed pace. Their seet are round like a Horses, but so as they reach from the middle every way two spans length, and are as broad as a bushel, having five distinct toes upon each foot, the which toes are very httle cloven, to the intent that the foot may be fronger and yet parted, that when he treadeth upon foft ground, the weight of his body presse not down the leg too deep. He hath no nails upon his toes, his tail is like an Oxes tail, having a little hair ar the end, and the refidue thereof peeled and without hair: He hath not any brilly hairs to cover his back. And thus much for their feveral parts and their uses.

There is not any creature fo capable of understanding as an Elephant, and therefore it is requisite to tarry somewhat the longer in expressing the several properties, and natural qualities thereof, which fundry and variable inclinations, cannot choose but bring great delight to the Reader. They have a wonderful love to their own Countrey, fo as although they be never fo well delighted with divers meats and joyes in other places, yet in memory thereof they fend forth tears, and they love also the waters, rivers, and marishes, so as they are not unfitly called Riparii, such as five by the rivers fides: although they cannot fwim by reason of their great and heavie bodies, untill they be taught. Also they never live solitary, but in great flocks, except they be sick or watch their young ones, and for either of these they remain adventurous unto death, the eldest leadeth the herd, and the second driveth them forward, if they meet any man they give him way, and go

Their voice is called by the word Barrire, that is, to bray, and thereupon the Elephants themselves are called Barri; for his voice cometh out of his mouth and nostrils together, like as when a man speaketh breathing, wherefore Aristotle calleth it Raucity, or hoarfness, like the low found of a

Trumpet, this found is very terrible in battails as shall be afterward declared.

They live upon the fruits of Plants and roots, and with their truncks and heads, overthrow the tops of trees, and eat the boughs and bodies of them, and many times upon the leaves of trees he devoureth Chamaleons, whereby he is poisoned and dyeth, if he eat not immediately a wilde Ol.ve. They eat earth often without harm, but if they eat it feldom, it is hurtful and procureth pain in their bellies, fo also they eat stones. They are so loving to their fellows, that they will not eat their meat alone, but having found a prey, they go and invite the refidue to their fealts and chear, more like to reasonable civil men, then unreasonable brute beast. There are certain noble Melons in Ethiopia, which the Elephants being sharp imelling beafts, do winde a great way off, and by the conduct of their nofes come to those Gardens of Melons, and there eat and devour them. When they are tamed they will eat Barlie either whole or ground: of whole at one time is given them nine Macedonian Bushels, but of Meal fix, and of drink either wine or water, thirty Macedonian pints at at a time, that is, fourteen gallons; but this is observed, that they drink not wine except in war, when they are to fight, but water at all times, whereof they will not talt, except it be muddy and not clear, for they avoid clear water, loathing to fee their own shadow therein; and therefore when the Indians are to passe the water with their Elephants, they chuse dark and cloudy nights wherein the Moon affordeth no light. If they perceive but a Mouse run over their meat, they will not eat thereof, for there is in them a great hatred of this creature. Also they will eat dryed Figs, Grapes, Onions, Bulrushes, Palmes, and Ivy leaves: There is a Region in India, called Phalacim, which fignifieth Balde, because of an herb growing therein, which causeth every living thing that eateth thereof, to lose both horn and hair, and therefore no man can be more industrious or wary to avoid those places, then is an Elephant, and to forbear every green thing growing in that place when he passeth thorough it.

It will forbear drink eight dayes together, and drink wine to drunkennes like an Ape. It is delighted above measure with sweet savours, ointments, and smelling flowers, for which cause their keepers will in the Summer time lead them into the medowes of flowers, where they of themselves will by the quickness of their smelling, chuse out and gather the sweetest flowers, and put them into a basket if their keeper have any; which being filled, like dainty and neat men, they also defire to wash, and so will go and seek out water to wash themselves, and of their own accord return back again to the basket of flowers, which if they find not, they will bray and call for them. Afterward being led into their stable, they will not eat meat untill they take of their flowers and dreffe the brims of their mangers therewith, and likewise strew their room or standing

place, pleafing themselves with their meat, because of the savour of the flowers stuck about their cratch, like dainty fed persons which set their dishes with green herbs, and put them into their

Their pace is very flow, for a childe may overtake them by reason of their high and large bodies (except in their feare) and for that cause cannot swim: as also by reason that the toes of their feet Gillim. are very short and smally divided. When they are brought into a Ship, they have a bridge made of The shipping wood, and covered with earth, and green boughs are set on either side, so that they imagine of Elephants. they go upon the land untill they enter into the Ship, because the boughs keep them from fight of the Sea. They are most chast, and keep true unto their males without all inconstant love or Elianus. feparation, admitting no adulteries amongst them, and like men which tast of Venus not for any corporal luft, but for defire of heirs and successors in their families; so do Elephants without all unchast and unlawful lust, take their venereal complements, for the continuation of their kinde, and never above thrice in all their dayes, either male or female luffer carnall copulation (but the female only twice.) Yet is their rage great when the female provoketh them, and although they fight not among themselves for their females, (except very seldom) yet do they so burn in this fury, that many times they overthrow trees and houses in India by their tuskes, and running their head like a Ram against them, wherefore then they keep them low and down by subtraction of their meat. and also bring some stranger to beat them. There was a certain cunning Hunter sent into Mauritania, by the Roman Emperor, to hunt and take Elephants; on a day he saw a goodly young Elephant in copulation with another, and instantly a third approached with a directal braying, as if Elianus. he would have eaten up all the company, and as it afterward appeared, he was an arrival to the female, which we faw in copulation with the other male: when he approached neer, both of them fet themselves to combat, which they performed like some unresistable waves of the Sea, or as the hils which are shaken together by an earthquake, wherein each one charged the other most furioully for their love, to the terror and admiration of all the beholders, and so at last became both disarmed of their teeth and horns by their often blowes, before one had overcome the other, and so at last by the hunters were parted asunder, being ever afterward quiet from such contentions about their females for copulation.

The Indians separate the stables of the semales far asunder from the males, because at that time The place and they overthrow their houses. They are modest and shamefast in this action, for they seek the mannet of Deferts, Woods, and fecret places for procreation, and sometimes the waters, because the waters their copulatido support the male in that action, whereby he ascendeth and descendeth from the back of the Play. female with more ease: and once it was feen, that in Virgea (a Countrey of the Corascens) two Elephants did engender out of India, otherwise they couple not out of their own Countries. When they go to copulation, they turn their heads towards the East, but whether in remem- Albertus. brance of Paradife, or for the Mandragoras, or for any other cause I cannot tell : the semale sitteth while she is covered. They begin to engender, the male at fix, ten, twelve, fifteen or twenty year old, the female not before ten years old. They couple but five dayes in two years, and never after the female is filled till the have been clear one whole year; and after the fecond copu- Solinus. lation, he never more toucheth his female. At that time the male breatheth forth at his nose a The time of certain fat humour like a menstruous thing, but the female hath them not till her place of con- copulation, ception be opened : and alway the day after her filling, the washeth herself before the return Arrianus.

to the flock.

The time of their going with young is according to fome, two years, and according to other, Ariffolle, three; the occasion of this diversity is, because their time of copulation cannot certainly be known. The time of because of their secrecy, for the greater bodies that beasts have, they are the lesse fruitful. She is their going delivered in great pain, leaning upon her hinder legs. They never bring forth but one at a time, and with young. that is not much greater then a great Cow-calfe (of three monthes old) which fire nourisheth fix or Diodorus. eight year. As foon as it is Calved, it feeth and goeth, and fucketh with the mouth, not with the Pogius. trunck, and so groweth to a great stature.

The females when they have calved are most fierce, for fear of their young ones, but if a man come and touch them, they are not angry, for it feemeth they understand that he toucheth them The love of the not for any defire to take or harm them, but rather to ftroke and admire them. Sometimes they male to the fegointo the water to the belly, and there calve for fear of the Dragon the male never for faketh her, both to the but keepeth with her for the like fear of the Dragon, and feed and defend their young ones with Calf. fingular love and constancy unto death; as appeareth by the example of one, that heard the bray- Tzetzes. ingofher calf fallen into a ditch, and not able to arife, the female ran unto it, and for haft fell down uponit, so crushing it to death, and breaking her own neck with one and the same violent love.

As they live in herds, so when they are to passe over a river or water, they send over the least or youngest first, because their glear bodies together should not cause the deep water to swell or tife above their height: the other stand on the bank and observe how deep he wadeth, and so make account that the greater may with more affurance follow after the younger and smaller, then they the elder and raller; and the females carry over their Calves upon their fnowts, and Plutarch. long eminent teeth binding them faft with their truncks, (like as with ropes or male girts, that they Æliami. may not fall) being fometime holpen by the male; wherein appeareth an admirable point of natus Philoftrains. al wildom, both in the cariage of their young, and in fending of the leffer foremoft, not only for the reason aforesaid, but also because they being hunted and prosecuted, it is requisite that the greatest

They are never fo fierce, violent, or wilde, but the fight of a Ram tameth and difmayeth them. for they fear his horns; for which cause the Egyptians picture an Elephant and a Ram, to signifie a foolish King that runneth away for a fearfull sight in the field. And not only a Ram, but also the gruntling clamour or cry of Hogs: by which means the Komans overthrew the Garthauinians and Pyrthus which trufted overmuch to their Elephants. When Antipater besieged the Metari-Their fear of ans very straitly with many Elephants, the Citizens took certain Swine and anointed them with Rams, Swine, pitch, then fet them on fire and turned them out among the Elephants, who crying horribly by reafon of the fire on their bodies, so distempered the Elephants, that all the wit of the Macedonians could not restrain them from madness, fury, and flying upon their own company, only because of the cry of the Swine. And to take away that fear from Elephants, they bring up with them when they are tamed, young Pigges and Swine ever fince that time. When Elephants are chased in hunting, if the Lions see them, they run from them like Hinde-calves from the Dogs of Hunters, and yet Iphicrates fayeth, that among the Hesperian or western Ethiopians, Lions set upon the young Calves of Elephants and wound them: but at the fight of the mothers, which come The crucky of with speed to them, when they hear them cry, the Lions run away, and when the mothers finde their young ones imbrued in their own bloud, they themselves are so inraged that they kill them, and so retire from them, after which time the Lions return and eat their flesh. They will not indure the savour of a Mouse, but refuse the meat which they have run over: in the river Ganges of India, there are blew Wormes of fixty cubits long having two armes; these when the Elephants come to drink in that river, take their trunks in their hands and pull them off. There are Dragons among the Ethiopians, which are thirty yards or paces long, these have no name among the inhabitants but Elephant-killers. And among the Indians also there is as an inbred and native hateful hostility between Dragons and Elephants: for which cause the Dragons being not ignorant that the Elephants feed upon the fruits and leaves of green trees, do fecretly convey themselves into them or to the tops of rocks: covering their hinder part with leaves, and letting his head and fore part hang down like a rope, on a suddain when the Elephant cometh to crop the top of the tree, the leapeth into his face, and diggeth out his eyes, and because that revenge of malice is too little to fatisfie a Serpent, the twineth her gable like body about the throat of the amazed Elephant, and fo

strangleth him to death. Again they marke the footsteps of the Elephant when he goeth to feed, and so with their tails, net in and entangle his legs and feet : when the Elephant perceiveth and feeleth them, he putteth down his trunck to remove and untie their knots and gins; then one of them thrusteth his poifoned stinging head into his Nostrils, and so stops up his breath, the other prick and gore his tender belly-parts. Some again meet him and flie upon his eyes and pull them forth, fo that at the last he must yeeld to their rage, and fall down upon them, killing them in his death by his fall, whom he could not result or overcome being alive: and this must be understood, that for somuch as Elephants go together by flocks and herds, the fubtil Dragons let the foremost passe, and set upon the hindmost,

that so they may not be oppressed with multitude.

Also it is reported that the bloud of an Elephant is the coldest blood in the world, and that Dragons in the scorching heat of Summer, cannot get any thing to cool them, except this bloud; for which cause they hide themselves in rivers and brooks whither the Elephants come to drink, and when he putteth down his trunck they take hold thereof, and instantly in great numbers leap up unto his ear, which is naked, bare and without defence: whereout they fuck the blood of the Elephant untill he fall down dead, and so they perish both together.

Of Cinnabaris or the best red

Of this blood cometh that ancient Ginnabaris, made by commixture of the bloud of Elephants and Dragons both together, which alone is able, and nothing but it, to make the best representation of blood in painting. Some have corrupted it with Goats-blood, and call it Milton, and Mimum, and Monocroma: it hath a most rare and singular vertue against all possons, beside the unmatchable property aforesaid.

These Serpents or Dragons are bred in Taprobana, in whose heads are many pretious stones, with fuch naturall seals or figurative impressions, as if they were framed by the hand of man, for Podi-Sippus and Tzetzes affirm, that they have seen one of them taken out of a Dragons head, having upon it the lively and artificial stampe of a Chariot.

Elephants are enemies to wilde Buls, and the Rhinocerots, for in the games of Pompey, when an Elephant and a Rhinoceros were brought together, the Rhinoceros ran inftantly and whet his horn upon a from and so prepared himself to fight, striking most of all at the belly of the Elephant, because he knew that it was the tenderest and most penetrable part of the body.

Of the Elephant.

The Rhinoceres was as long as the Elephant, but the legs thereof were much shorter, and as the Rhinocerotes sharpen their horns upon the stones, so do the Elephants their teeth upon trees; the tharpnels of either yeeldeth not to any feel. Especially the khinocerot teareth and pricketh the legs Elianus. of the Elephant. They fight in the woods for no other cause, but for the meat they live upon, but Orgianus. if the Rhinocerot get not the advantage of the Elephants belly, but fet upon him in some other Strabo. part of his body, he is soon put to the worst, by the sharpness of the Ivory tooth which pierceth through his more then buffe-hard skin (not to be pierced with any dart) with great facility, being fet on with the strength of so able an adversary. The Tygre also feareth not an Elephant, but is Eustalbius. fiercer and stronger, for he leapeth upon his head and teareth out his throat, but the Gryphins which overcome almost all beasts, are not able to stand with the Lions or Elephants.

The females are far more strong, chearful, and couragious then the males, and also they are apt to bear the greater burthens; but in War the male is more graceful and acceptable, be- Vartomannus. cause he is taller, giving more assured ensignes of victory and fortitude: for their strength is The condition admirable, as may be conjectured by that which is formerly recited of their trunck, as Varioman on & courage affirmeth, that he faw three Elephants with their only heads, drive a great Ship out of the Sea of male and female. water where it was fastened unto the shore. When he is most loaded he goeth surest, for he can carry Gillius. a wooden Tower on his back with thirty men therein, and their sufficient food and warlike in-

The King of India was wont to go to war with 30000 Elephants of war, and beside these he had Abertus. also followed him 3000 of the chiefest and strongest in India, which at his command would over. The strength throw Trees, Houses, Wals, or any such thing standing against him: and indeed upon these and burthen of were the Indians wont to fight, for the defence of their Coast and Countrey. The farthest region of that continent is called Partalia, inhabited by the Gangarides and Galinga, the King whereof was wont to have seven hundred Elephants to watch his Army, and there was no mean Prince in all 'liny. India which was not Lord of many Elephants. The King of Palibotra kept in stipend, eight thousand The keepers every day, and beyond his Territory was the King of Modube and Molinde, which had four hundred & maintainers Elephants. These fight with men and overthrow all that come within their reach both with Elephants. These fight with men, and overthrow all that come within their reach, both with Solinus. their truncks and teeth.

There were certain officers and guiders of these Elephants, which were called Elephantarche, who were the governors of fixteen Elephants, and they which did institute and teach them Martial discipline, were called Elephantagogi. The Military Elephant did carry four persons on his bare Pollux back, one fighting on the right hand, another fighting on the left hand, a third which stood fight. The instruction ing backward from the Elephants head, and a fourth in the middle of these holding the rains and on of Eleguiding the beaft to the descretion of the Souldiers, even as the Pilot in a Ship guideth the stern, Phants for war, wherein was required an equall knowledge and dexterity, for they understand any language quick. Elianus, ly; for when the Indian which ruled them faid, Strike here on the right hand, or elfe on the left, or refrain and stand still, no reasonable man could yeeld readier obedience. They did sasten by iron chains, first of all upon the Elephant that was to bear ten, fifteen, twenty, or thirty men, on either side two panniers of iron bound underneath their belly, and upon them the like panniers of wood hollow, wherein they place their men at armes, and covered them over with small boards, for the trunck of the Elephant was covered with a mail for defence, and upon that a broad sword, and two cubits long: this (as also the wooden Castle or panniers aforesaid) were fastened first to the neck, and then to the rump of the Elephant. Being thus, armed, they entred the battel, and they shewed unto the beaft to make them more fierce, wine, red liquor made of Rice, and white cloth, for at the fight of any of these, his courage and rage increaseth above all measure; then at the sound of the Trumpet he beginneth with teeth to ftrike, tear, beat, spoil, take up into the air, cast down again, stamp upon men under feet, ovethrow with his trunck, and make way, for his riders to pierce with Spear, Shield, and Sword; so that his horrible voice, his wonderful body, his terrible force, his admirable skill, his ready and inclinable obedience, and his strange and seldom seen shape, produced in a main battel no mean accidents and overturns. For this cause we read how that Pyribus first off all produced Elephants against the Romans in Lucania: afterward Afdrubal in Africa, Amiochas in the East, and Jugurtha in Numidia.

Against this new kinds of Castle-fighting, and Souldier-bearing beasts, on the contrary they The fight as invented new kinds of stratagems, as is before fet down, and also new anstruments of war, for gainst Elea Centurion in Lucania with a new devised sharp Sword cut off the trunck of this beast, again phanes. other invented, that two armed Horses should draw a Chariot, and in the same armed men with Javelins and sharp Spears, the speedy Horses should with all force run upon the Blephants, and the spear-men directing their course and weapons, some upon the beast, tother upon the riders, did not only wound the beaft, but also by celerity of the Horses, cleape

Other again sent against him armed Souldiers, having their Armour made full of sharp pricks or piercing piked Nailes, fo that when the beast did strike at them with his trunck, he received grievous wounds by his own blowes. Again there were certain young men Souldiers, armed with light armour, which being mounted upon swift Horses, could cast Darts with singular facility. and without the reach of the beaft, many times wounding him with long Spears, and so by

The fight of Elephants. Pliny.

example of the Horse-men, the Foot-men, grew more bold, and with piles in the earth annoyed the belly of the beaft, and utterly vanquifning it and the rider. Again, they devised flings to cast stones, whereby they beat off the riders, and many times overthrew the Castle-bearer, as it were by some violent stroke of a Cannon shot; neither was there ever any more easie way to disaster these morfter-feeming Souldiers, then by casting of stones; and lastly they would suffer their Blephants and their riders by poor hopes and appearances of fear, to enter into the midft among them, and fo begirt and inclose them, that they took the Elephants alive; and also more shooters of Darts carryed in Chariots with the strong course of horses, did so annoy them, that whereas their bodies were great and unweildy, not nimble to stir out of place, it became more easie to kill an Elephant then a Horse, because many shooters at one time could pierce so fair a mark with unresistible weapons. And these things are related by Vegetius.

Games of Elephants.

At the last the fight with Elephants turned into a publick game or pastime, both to see them sought withall by men, and also among themselves. When certain prisoners of the Romans were taken by Annibal, he first constrained them to skirmish among themselves, and so slew one another except only one; and he was by the like commandement forced to fight with an Elephant, but upon condition of liberty if he escaped alive: and thereupon joyned combate, and slew the Elephant, to the great grief and amazement of all the Carthaginians; but going home, according to agreement, Amibal fearing that by this fact those great beafts would grow into contempt, sent certain Horsemen to kill him by the way.

Feneficla.

Their trunck or hand is most easie to be cut off; for so it happered in the adility or templeoffice of Claudius, Antonius and Postburnus being Confuls, and afterward in the Circus, when the Luculi were the commons officers. And when Pompey was Conful the second time, there were 17 or 20 which at one time fought within the Circus, at the dedication of the Temple of Venus the Villoria, where the Getulians fought with them with Spears and Darts; for there happened an admirable accident, one of the Souldiers who having a hurt in his feet did creep upon his knees betwint the legs of the Elephants, and cast up the Darts over his head into the beasts belly, which fell down round about him, to the great pleasure of the beholders, so that many of the Elephants perished rather by Art then the strength of the Souldier. No lesse was the Miracle of another slain with one stroke, for a pile ran into his temples through his eye, and there stuck so sast, that it could not be pulled forth again; which thing was afterward affayed by Juliu Cofar, and in the third time of his Confulthip, there were twenty Elephants, which in the Games fought with five hundred men, and so many with Towers on their backs, bearing threescore men in every Tower.

To conclude, Elephants are afraid of fire, and Martial made this Epigram of a Bull flain by an Elephant, which was wont to domineer in all their triuphant games, wherewithal I will conclude this discourse.

> Qui modo per totam flammib flimulatus arenam Suffulerat raptas Taurus in aftra pilas, Occubuit tandem cornuto ardore petitus, Dum facilem tolli fic Elephanta putat.

The taking of Elephants. Pliny. Strabo.

In the next place it is good to relate the story of the taking and taming of Elephants, for in Lybia about the Troglodyia, the hunting and taking of Elephants have given many names to feverall Towns, as Elephantina, and Elephantis, Epithere, Philothera, and the hunting of Elephants by Ptoleman, by the Port Saba, the City Daraba, and Licha. In Africk they take them in great ditches, whereinto when they are fallen, the people presently with boughs, mattocks, leaves, and digging down of high raised places, take them out again, and so turn them into a valley wrought by the labour of man, most firmely walled on both sides, where with famine they tame him; for when he would gently take a bough at the hand of a man, they adjudged him tamed, and grew familiar with him, leading him away without all scruple.

Pliny.

But the Indians use a more ingenious and speedy means to tame them, which is this first, they dig also a great ditch, and place such meat therein as the beast loveth, who winding it, and coming thereunto, for defire thereof falleth into the fosse or ditch : being so fallen in, and not able to come forth again, one cometh to him with Whips, beating him very grievously for a good space, to the great grief of the beast, who through his inclosing can neither run away nor help himself; then cometh another during this time of punishment, and blameth the first man for beating the beaft, who departeth presently as one afraid of his rebuke, the other pitieth the beaft, and stroaketh him, and to goeth away; then cometh the whipper again, and fcourgeth the Elephant as before and that more grievously to his greater torment for a good space together: whereupon the time fulfilled, the other cometh again and fighteth with the whipper, and forcibly feemeth to drive him away, and relieve the poor beaft; and this they do successively three or four times; so at the last, the Elephant groweth to know and love his deliverer, who by that means draweth him out and leadeth him away quietly: While this thing is doing, the smiter and whipper useth a strange and unwonted kind of habit, so as he may never be known by the Elephant after he is tamed, for fear of revenge: of which you shall hear more afterward, in the farther discourse and opening the nature of this beaft. Arrians

arrians and Strafe relate another way whereby the Indians take their Elephants, which because they write upon their own eye fight, of the things they knew affuredly, I have thought good to expresse the devise; Four or five Hunters first of all chuse out some plain place, without Trees or Hils, but declining, by the space of some four or five farlongs; this they die like A wide ditch as aforefaid; and with the earth they take up, they raife wals about it like a trench and in the fides of the trench they make certain dens with holes, to convey in light to the Watch-men, whom they place therein, to give notice and observe when the Elephants are inclosed: then make they a narrow bridge covered with earth at the farther end of the trench that the beafts may dread no fallacy; and for the more speedy effecting and compassing their defire; they also include in the trench three or four tame semale Elephants, to entife and draw into them the wilde ones.

Now these beasts in the day time feed not so boldly as in the night, and therefore they cabnot easily be deceived or taken in the light; but in the night great flocks of them follow the Captain (as we have already shewed) and so coming neer this trench, partly by the voice, and partly by the favour and smell of the females, they are drawn into the trenches then the Watchmen with all speed, pull down the bridge, and other of them go into the next Townes to call for help, who upon the first notice thereof, come to the place mounted upon the best and strongest tame Elephants, and so compasse them about, giving meat in their presence to the tame. but besieging the inclosed, they keep them from all meat and food, until they be so weakned that they dare enter in among them, but in this manner, they turn in their tame Blephants, and go under their bellies, and so when they come near the wilde Elephants, they speedily convey themselves under his belly, and lay unavoidable fetters upon their seet: then provoke they the tame ones to beat and fight with the wilde, who by reason of the manacles upon their seet are easily overthrown and fall to the ground; being on the ground, they put halters upon their necks made of raw Oxe hides, and so bind them to the tame and domestical Elephants: And while they lie on the ground, they get upon them, and to the intent that their Riders may be without danger of harm by them, they cut the skin of their necks round about in a circle, with a sharp fword, and upon the wound they tie and faiten a rope, that so the pain may constrain the beast to be quiet, so that by this they begin to feel their own weakness, and leave off their wildeness, betaking themselves to the mercy of their new Masters.

But thus raifed from the earth again, and yoaked by the necks and legs to the tamed Elephants, they are fafely led home into stables, where they are fastened to great pillars by their necks, and if they refuse to eat their meat, with Tymbrels, Cymbals, Harpes, and other mufical instruments, they are so entited from fullen wildeness, that they forget their first natures, and yeeld all loving obedience to men, as to their victorious conquerors and unrefittible Masters.

These beats by their sagacity and natural inflinct, do sometime foreste their own peril, and Elianal, discover the trains and secret intentions of the Hunt ers, so as they cannot be drawn into the ditches and fosses by any allurements, but presaging their own missortunes, turn back again upon their Hunters, even through the midt of them, and to feek to fave themselves by flight, overthrowing their enemies that dare approach unto them. At which time there is a fierce fight, to the great flaughter many times both of men and beafts; for the men to flay his flight, bend their spears, and charge their darts and arrowes, to frike the Elephant directly on the face, and if the heaft perceive that he hath overthrown any man, inflantly he maketh to him, taketh him in his teeth." lifting him up into the air, and eafting him down again, stampeth upon him, wounding him many times with his teeth or horns, whereby he putteth him to cruel torments, and leaveth him not till he be dead.

And when they invade or fet upon a man, they spread forth their broad ears, (which are fashioned like the winges of Offriches) as the fails of a Imp, and drawing up their trunck under their teeth their nofes ftand forth like the beak of fome thip, and fo wiffh they with unrefiltible violence upon the weak bodies of men, loverturning them in no other fort; then a mighty great Hulk or man's of war, the little Oares or Whirries in the Sea.

And as the Trumpets in war give the figures of fighting, fo do thefe fend forth fuelt retrible yelling and roaring clamors, as bringeth no mean aftonishment to his persecutors: beside the lamentable and mournful voices, of men, by them wounded and fallen to the earth; some having their knees and bones broken, other their eyes tood out of their head, other their nofes preffed flat to their faces, and their whole visages to disfigured and disfavoured in a moment, that their neerelt friends, kindred and acquaintance cannot know them. These also fil the spacious air with diseas ful cries, that are heard a great way off, into the Towns and Cities adjoyning, having no other means to escape out of the way, and from the teeth of the beaft, except he firske his tooth into some root and there is slick fast untill the pook overthrown man can creep aside and save himself

y flight.

In this conflict, sometime the Elephants, and sometimes men are the conquerors, by beinging upon the beafts divers terrors and manacles, out of which they are not very eafly delivered : for men alfo have their trumpets, and so make the woods and fields ring with them, the rathing of their Armour and Shields, and their own howling and whooping, kindling fires on the earth, page in the latter own howling and whooping, kindling fires on the earth, page in the latter own howling and whooping kindling fires on the earth, page in the latter own how in th ing both fire-brands and burning Torohes into the face of the Biephane, by all which the hade

Albert 14.

bead is not a little differenced and terrified. So that being bereft of their wits, they turn back and run into the ditch which they to carefully avoided before.

But if their rage proceed undeterred, and men be forced to yeeld unto them, forth they go into the woods, making the trees to bend unto them as a Dog or an Ox doth the standing corn at harvest; breaking off their tops and branches, which hinder their course and flight, as another beaft would crop off the ears of corn; but where they are taller then the woods, there they firain every layer and member in them to get ground land overgo their Hunters; which they may perform and attain more easily, because of their customary aboad in those places: and when they are cicaped out of the fight of their followers, and make account that they are freed from further perfecution, then cast they off all fear, and compound their distracted fenses into a remembrance of mear, and so gather their food from Palms, Trees or bushes; afterward betaking themselves to rest and

But if their Hunters come again into their fight, they also again take them to their heels, untill they have gotten more ground from them, and then they rest again; and if the Sun decline, and light of day fail the Hunters, and darkness make an end of the chase; then do they compasse in the beasts way, and set the wood a fire, (for Blephants sear fire as much as Lions:) So that by all this it appeareth, that the fabulous tales of Gabinius the Roman writer of Elephants, are not to be believed, when he affirmeth, that Elephants will fight against and refift the

The Troglodyte hunt and take Elephants after another manner, for they climbe up into the trees. and there fit till the flocks of Blephants passe by, and upon the last, the Watch-man suddenly leadeth (with great courage) taking hold upon his tail and fo fliding down to his legs, and with a fharp Axe which he hath hanging at his back cutteth the nerves and finews of his legs with fo great celes rity, that the beaft cannot turn about to relieve it felf, before the be wounded and made unable to sevenge her harm, or prevent her taking : and fometimes the falleth down on the wounded fide, and crafteth the Hunter watch-man to death, or elfe with her force in running, dasheth out his brains

The Elephant-paters (called Elephantophagi) do observe the like policy, for by stealth and secretly they fet upon the hindmost, or elfe the wandring foliary Elephant, and cut his finews, which of taking Elec caufeth the beaft to fall down, whom prefently they behead, and afterward they eat the hinder parts of this beaft fo cast down and taken.

Other among the aforelaid Trogbaine, use a more safie, cunning and leffe perillous kinde of taking Elephants; for they fee on the ground very strong charged bent-bowes, which are kept by many of sheir frongel youngmen, and fo when the flooks of Elephants paffe by, they theor their finarp auniwes dipped to the gell of Serpents, and wound force one of them, and follow him by the bloud, untill he be unable to make refistance. There are three at every bow, two which hold it, and one that draweth the ftring. Other again, watch the trees whereunto the heaft leaneth when he fleeneth, near fome waters, and the same shey cue half asunder, whereanto when he declineth his hody, the tree is overturned and the beats also, and being unable to rise again because of the thort nerves and no flexions in his lega, there he lyeth till the Watch man come and cut off

Arifful adeleriheth another manner of takingo Blephants in this fort; The Hunter (faith he) getteth up upon a tamed Elephant, and followers the wilde one till he have overtaken it, then commandeth he thetame beat to firike the other, and for continueth chafing and beating him, till he have wearyed him and broken his untameable nature. Then doth the rider leap upon the wearyed and tyred Blephant, and with a sharp pointed Sickle doth govern him after the tame one, and so in short space he groweth gentle. And some of them when the rider alighteth from their backs, grow wildeand fierce again, for which cause they blinde their forelegs with strong bands, and by this means they take both great and frust old and young ones; but as the old ones are more wilde and oblimate, and to difficult to be taken, to the younger keep formuch with the elder, that like impossibility or difficulty interposeth it self from apprehending them.

In the Caspian lake, there are certain fishes (called Owninitions of wirom is made such a firme glew, that it will not be diffolved in ten dayes after it hath taken hold, for which cause they use it in h no mene an mound

the taking of Elephants There are in the Illand Zeira many Elephants, whom they take on this manner ! If the Mountains they make certain doyfters in the earth, having two great trees flanding at the mouth of the cloyfters, and in those trees they hangup a great paracullis gate, within that cloyfter they places tamasomale Elephant, at the time of their usual cogulation : the wilde Elephants do freedily wind her and make to lien, and to at the lathhaving found the way betwire the two trees, enter into het; formatime twenty, and fometime thirty ava sime when are there two iten in the faid trees, which cut the nope, whereby the gate hangeth, fo it falleth down and includeth the Elephants, where they fuffer them alone for fix or feven dayes without meat, whereby they are fo infeebled and familhed, that they are not able contand upon their legs. 19310 bear 131 1911 1910 1910

ablicativo or three strong men enter in among them, and with great staves and clitis, belabour and scholgel them, till by that means they grow tame, and gentle; and although an Elephant bes. monthrous great beath and very subtil, yet by thefe and such like means do the inhabitants of India

Against these sleights of men, may beloposed the subtil and cautelous evasions of the beast, avoi- The subtilty of ding all the footsteps of men, if they imell them upon any herb or leaf, and for their fight with the Elephanis a-Hunters, they observe this order. First of all; they set them foremost which have the least reeth, gainst their that so they may not be afraid of combate, and when they are weary, by breaking down of trees they escape and flie away. But for their hunting, they know that they are not hunted in India for no other cause, then for their teeth, and therefore to discourage the Hunters, they set them which have the worst teeth before, and reserve the strongest for the second encounter: for their wisdom or natural discretion is herein to be admired, that they will so dispose themselves in all their battails when they are in chase, that ever they fight by course, and inclose the youngest from perill. fo that lying under the belly of their Dams they can scarce be seen: and when one of them styeth they all flie away, to their usual resting places, striving which of them shall go foremost: And if at any time they come to a wide and deep Ditch, which they cannot paffe over without a bridge, then one of them descendeth, and goeth down into the Ditch, and standeth transverse or crosse the fame, by his great body filling up the empty parts, and the residue passe over upon his back as upon

Afterward when they are all over, they tarry and help their fellow out of the Ditch or Trenchagain, by this sleight or devise, one of them putteth down to him his leg, and the other in the Dich windeth histrunck about the same, the residue standers by cast in bundles of sprigs with Ælianus. their mouthes, which the Elephant warily and speedily putteth under his feet, and so raiseth him Tzetzer. felf out of the Trench again, and departeth with his fellowes.

But if they fall in and cannot finde any help or means to come forth, they lay afide their natural wilde disposition, and are contented to take meat and drink at the hands of men, whose presence before they abhorred; and being delivered they think no more upon their former condition, but in forgetfulness thereof, remain obedient to their deliverers.

Being thus taken, as it hath been faid, it is also expedient to express by what art and means they Theart of inare cicurated and tamed. First of all therefore when they are taken, they are fastened to some Tree ming Eleor Pillar in the earth, fo as they can neither kick backward nor leap forward, and there hunger, phanes, thirst, and famine, like two most strong and forcible Riders abate their natural wildeness, strength, Ellennes. fear and hatred of men: Afterward when their keepers perceive by their dejection of minde, that they begin to be mollified and altered, then they give unto them meat out of their hands, upon whom the beast doth cast a far more favorable and cheerful eye, considering their own bondage, and so at the last necessity frameth them unto a contented and tractable course and

But the Indians by great labour and industry take their young Calves at their watering places, and so lead them away, inticing them by many allurements of meat to love and obey them, fo as they grow to understand the Indian language, but the elder Indian Elephants do very hardly and seldom grow tame, because of their remembrance of their former liberty, by any bands and oppression; nevertheless by instrumental musick; joyned with some of their Countrey songs and ditties, they abate their fierceness, and bring down their high untractable stomachs, so as without all bands they remain quiet, peaceable and obedient, taking their meat which is layed

Pliny and Solinus prescribe the juyce of Barly to be given to them for their mitification, whereunto also agreeth Dioscorides (calling that kind of drink Zyibw) and the reason hereof is, because of the tart sharpness in Barly water if it stand a little while; and therefore also they prescribe Vinegar and affes to rub the beafts mouth, for it hath power in it to pierce stones, all sharp Plutarch. things penetrate deep into his flesh, and alter his nature; the invention whereof is attributed to Democritue.

Being thus tamed, they grow into civill and familiar uses, for Cafar ascended into the Capitol betwirt four hundred Elephants, carrying at either fide burning Torches, and Heliegabalus brought Philofir artus. four Waggons drawn with Elephants in Vaticanum, and men commonly ride upon them, for Apclloniw faw neer the River Indus, a Boy of thirteen year old riding alone upon an Elephant, spurring and pricking him as freely as any man will do a lean horse.

They are taught to bend one of their hinder legs to take up the Rider, who also must receive The taking ap help from some other present standers by, or else it is impossible to mount on the back of so high a of their tiders. in letters.

. . . Chim

Mulians which was thrice Conful, affirmed to Pliny, that he faw an Elephant which learned the Their learning Greek letters, and was able with his tongue to write these words, Antos ego Tadegrapsa laphura te Lifter inches, and who have these things and dedicated the Celtican spoils: but in these actions of withing, the hand of the teacher must be also present to teach him how to frame the letters, and then, as Alianus laith, they will write upon Tables, and follow the true proportion of the Characters expressed before their face, whereupon they look as attentively as any Grammarian, In, India they are taught many ports, as to Dance and leap, which caused Mattial to write thus;

Turpes effeda qued trebunt bisontes, Et molles dare juffa quod choreas Digro hellua nil legat megistro, Quis fpettacula non putet deorum ?

When the Prizes of Germanicus Cesar were played, there were many Elephants which acted frange feats or parts, four, of them went upon Ropes and over the Tables of meat, whereon they fet their feet fo warily that they never touched any of the ghefts, the boardes or standing cups being fully furnished. And also they learned to dance after Pipes by measure, sometime dancing foftly, and fometime space, and then again leaping upright, according to the number fung or played upon the instrument; and they are apt to learn, remember, meditate, and conceive such things as a man can hardly perform.

Their industrious care to perform the things they are taught, appeareth herein, because when they are fecret, and alone by themselves, they will practise leaping, dancing, and other strange feats, which they could not learn suddenly in the presence of their Masters : as Pliny affirmeth for certain truth of an Elephant which was dull and hard of understanding, his keeper found him in the night practifing those things which he had taught him with many stripes the day before, and

could not prevail by reason of the beasts slow conceit.

There was an Elephant playing upon a Cymbal, and others of his fellowes dancing about him, for there was fastened to either of both of his forelegs one Cymbal, and another hanged to his trunck, the beaft would observe just time, and strike upon one, and then the other, to the admiration of all the beholders. There was a certain banquet prepared for Elephants upon a low bed in a parlour fet with divers dishes and pots of Wine, whereinto were admitted twelve, fix males, apparelled like men, and fix females apparelled like women : when they faw it, they fat down with great modesty, taking here and there like discreet temperate ghests, neither ravening upon one dish or other, and when they should, drink, they took the cup receiving in the liquor very mannerly, and for sport and festivity would through their truncks squirt or cast a little of their drink upon their attendants; so that this beast is not only of an admirable greatness, but of a more wonderful meekness and docibility.

They are faid to discern betwixt Kings and common persons, for they adore and bend unto them,

pointing to their Crowns, which caused Martial to write this Tetrastichon;

Quad pius & Supplex Elephas te Casar adorat, Hic modo qui tauro tam metuendus erat, Non facit boc jussus, nulloque docente magistro : Crede mibi numen fentit & ille tuum.

of Elephants

The King of Indians was watched with four and twenty Elephants, who were taught to forbeat sleep, and to come in their turns at certain hours, and so were they most faithful, careful and invincible. And as there be of them three kinds, the Palufirians or Marishie Elephants are hair brained and inconstant, the Elephants of the Mountains are subtil and evill natured, lying in wait to destroy and devoure, but the Campestrial Elephants are meek, gentle, docible, and apt to imitate men. In these is the understanding of their Countrey language, of obedience to Princes, government, and offices; the love and pleasure of glory and praise: and also that which is not alway in men; namely, equity, wildom, and probity. They have also a kind of Religion, for they worship, reverence, and observe the course of the

Sun, Moon, and Stars; for when the Moon thineth, they go to the Waters wherein the is apparent; The religion

Elephants facritical and thereupen.

like manner they reverence the Sun rifing, holding up their trunck or hand to heaven, in congratuluba was wont to fay, that this beaft was acceptable to those Gods which ruled Sea and Land, lation of her rifing. because of their reverence to Sun and Moon, and therefore Ptolomeus Philopator, offered four Elephants in a facrifice (to recover the quietness of his minde) thinking that the Gods would have

and when the Sun arifeth they salute and reverence his face: and it is observed in Ethiopia, that

when the Moon is changed untill her prime and appearance, these beasts by a secret motion of na-

ture, take boughs from off the trees they feed upon, and first of all lift them up to heaven, and then

look upon the Moon, which they do many times together, as it were in supplication to her. In

been well pleased therewith, but finding that his fearful dreams and visions departed not from him. but rather his disquietness increased, fearing that the gods were angry with him for that action, he Allanus. made four Elephants of Brafs, and dedicated them to the Sun, that To by this deed he might purchase Plutares. pardon for the former offence

This Religion of theirs, also appeareth before their death, for when they feel any mortal Tadaet. wounds, or other natural fignes of their later end, either they take up the duft, or else some green Finites. herb, and lift it up to Heaven in token of their innocency and imploration of their own weakness: and in like manner do they when they ear any herb by matural instinct to cure their difcases: first they lift it up to the Heavens (as it were to pray for a divine blessing upon it) and then

I cannot omit their care, to bury and cover the dead carkafes of their companions, or any other of their kinde; for finding them dead, they pass wor by them till they have lamented their common milery, by calting dust and earth on them, and alfo green boughts, in token of facrifice, holding it execrable to do otherwise: and they know by a matural instinct some assured fore-tokens of their own death. Belides when they wax old and unfit to gather their own meat, or fight for themselves, the younger of them feed, nourish, and defend them, yea they raise them out of Dicches and Trenches into which they are fallen, exempting them from all labour and perill, and interpolling their own bodies for their protection : neither do they forfake them in firkness, or in their wounds, but stand to them, pulling our Darts of their bodies, and helping both like skilful Chirurgions to cure wounds, and also like faithful friends to supply their wants.

Again, how much they love their young, which is a natural part, of religion we have shewed before. Antipater supposeth that they have a kinde of divination or divine understanding of law and Plingus. equity, for when King Becchus had condemned thirty men to be torn and trod in pieces by Elephants, Their underand tying them hand and foot to blocks or pieces of wood, call them among thirty Elephants, his flanding of and tying them hand and foot to blocks or pieces of wood, cast them among thirty Elephants, his justice international Officers could not by all their wit, skill, or provocation, make the Beasts touch one of equity. them: fo that it was apparent, they scorned and disdained to serve any mans cruel disposition, or to be the ministers of tyranny and murther. They moreover have not only an observation of chaitity Acianus. among themselves, but also are revengers of whoredom and adulterers in other, as may appear by these examples in History.

A certaian Elephant feeing his Master absent, and another man in bed with his Mistress, he went Therevenge of unto the bed and flew them both. The like was done at Rome, where the Elephant having flain admerties by both the adulterer and adulteress, he covered them with the bed-clothes untill his Keeper returned Elephants. home, and then by fignes drew him into his lodging place, where he uncovered the Adulterers, and shewed him his bloudy tooth that took revenge upon them both for such a villany : whereat the Master wondering, was the more pacified, because of the manifest-committed iniquity. And not only thus deal they against the woman, but they also spare not to revenge the adultery of men; yea of their own Keeper: for there was a rich man which had marryed a wife not very amiable or lovely, but like himself for wealth, riches, and possessions, which he having gained, first of all set his heart to love another, more fitting his luftful fancy, and being defirous to marry her, firangled his rich ill-favoured Wife, and buryed her not far from the Elephants stable, and so marryed with the other, and brought her home to his house: the Elephant abhorring such detestable murther, brought the new marryed Wife to the place where the other was buryed; and with his teeth digged up the ground and thewed her the naked body of her predeceffor, intimating thereby unto her secretly, how unworthily she had marryed with a man, murtherer of his former wife.

Their love and concord with all mankinde is most notorious, especially to their Keepers and Wo-Their love and concord with all mankinde is most notorious, especially to their Keepers and Women: for if through wrath they be incensed against their Keepers, they kill them, and ascerward their keepers by way of repentance, they confume themselves with mourning: And for the manifesting of this and all men point Arrianus telleth a notable story of an Indian, who had brought up from a foal a white Ele- that harm them phant, both loving it, and being beloved of it again, he was thereupon carryed with great admi- note ration. The King hearing of this white Elephant, fent unto the man for it, requiring it to be given to him for a present, whereat the man was much grieved, that another man should possess that which he had fo tenderly educated and loved, fitting him to his bow and purposes, and therefore like a rival in his Elephants love, relolved to deny the King, and to shift for himself in some other place: whereupon he fled into a Defert region with his Elephant, and the King understanding thereof grew offended with him, fent messengers after him to take away the Elephant, and withal to bring the man back again, to receive punishment for his contempt.

When they came to the place where he remained, and began to take order for their apprehenfion, the man ascended into a steep place, and there kept the Kings messengers off from him by casting of itones, and so also did the Beast, like as one that had received some injury by them, at last, they got neer the Indian, and cast him down, but the Elephant made upon them, killing some of them, and desending his Master and nourisher, put the residue to slight, and then taking up his Matter with his trunk, carryed him fafe into his lodging, which thing is worthy to be remembred, as a noble underflanding part both of a loving friend and faithful fervant.

The like may be faid of the Elephant of Porus, carrying his wounded Master the King in the batte! he fought with Alexander, for the Beast drew the Darts gently out of his Masters body without all pain, and did not cast him untill he perceived him to be dead, and without bloud and breath, and then did first of all bend his own body as near the earth as he could, that if his Master had any life

their Keepers and all men that harm them not.

Their love of

beautiful wo-

Plutarch.

men.

lest in him, he might not receive any harm in his alighting or falling down. Generally, as is already Their love to faid, they love all men after they be tamed, for if they meet a man erring out of his way, they gently bring him into the right again, yet being wilde are they afraid of the foot-steps of men if they winde their treadings before they fee their perfons, and when they finde an herb that yeeldeth a fufpicion of a mans presence, they smell thereunto one by one; and if all agree in one favour, the last Beaft lifteth up his voyce and cryeth out for a token and watch-word to make them all fly away.

Giero affirmech that they come so near to a mans disposition, that their small Company or Na-

tion feemeth to over-go or equall most men in sense and understanding.

At the fight of a beautiful woman they leave off all rage and grow meek and gentle; and therefore Alianus faith, that there was an Elephant in Egypt, which was in love with a woman that fold Corrals, the felf same woman was wooed by Aristophanes; and therefore it was not likely, that she was chosen of the Elephant without singular admiration of her beauty, wherein Arishophanes might fav as never man could; that he had an Elephant for his rivall; and this also did the Elephant manifelt unto the man: for on a day in the market, he brought her certain Apples, and put them into her bosom, holding his trunk a great while therein, handling and playing with her breasts. Another likewise loved a Syrian woman, with whose aspect he was suddenly taken, and in admiration of her face froked the same with his trunk, with testification of farther love : the Woman likewise failed not to frame for the Elephant amorous devices with Beads and Corrals, Silver, and such

things as are grateful to these brute Beasts, so she enjoyed his labour and dilgence to her great

profit, and he her love and kindeness without all offence to his contentment, which caused Horas. to write this verse:

Quid tibi vie mulier nigrie dignissima barris?

At last, the woman dyed, whom the Elephant missing, like a lover distracted betwixt love and forrow fell beside himself and so perished. Neither ought any man to marvel at such a passion in this Beaft, who hath such a memory as is attributed unto him, and understanding of his charge and businels, as may appear by manifold examples: for Antipater affirmeth that he saw an Elephant that knew again, and took acquaintaince of his Master which had nourished him in his youth after many

years abience.

When they are hurt by any man, they feldom forget a revenge, and so also they remember Their revenge on the contrary to recompenie all benefits, as it hath been manifested already. They observe things done both in weight and measure, especially in their own meat. Agnon writeth that an Elephant was kept in a great mans house in Syria, having a man appointed to be his Overseer, who did dayly defraud the Beast of his allowance: but on a day as his Master looked on, he brought the whole measure and gave it to him: the Beast seeing the same, and remembring how he had served him in times times path, in the presence of his Master exactly divided the Corn into two parts, and so laid one of them aside: by this fact shewing the fraud of the servant to his Matter. The like story is related by Plutarch and Elianus, of another Elephant, discovering to his Master the falshood and privy theft of an unjust fervant.

About Lychain Africk there are certain springs of water, which if at any time they dry up, by

Strabo.

of hazens and

their meat.

Gillius.

he come to the ground. Plutarch affirmeth, that in Rome, a boy pricking the trunck of an Elephant with a goad, the Beast caught him, and lift him up into the air to shoot him away and kill him: but the people and standers by feeing it, made so great a noise and cry thereat, that the Beast set him down again fair and foftly without any harm to him at all; as if he thought it sufficient to have put him in tear of fuch a death. In the night time they feem to lament with fighs and tears their captivity and bondage, but if any come to that speed, like unto modest persons they refrain suddenly, and are ashmed to be found elther murmuring or forrowing. They live to a long age, even to 200 or 300 years; if sickness or

the teeth of Elephants they are opened and recovered again. They are most gentle and meek, never fighting or striking Man or Beast, except they be provoked, and then being angred, they will take up a man in their trunk and cast him into the air like an arrow, so as many times he is dead before

Gillius. Philoftratus. Aristotle. their life.

ing in tectet, wounds prevent not their life : and some but to a 120 years; they are in their best strength of body at threefcore, for then beginneth their youth. Iuba King of Lybia writeth, that he hath seen tame Elephants which have descended from the Father to the fon, (by way of inheritance) many generations: and that Piolemans Philadelphus had an Elephant, which continued alive many Ages, and another of Seleucus Nicanor, which remained alive to the last overthrow of all the Amiochi.

The Inhabitants of Taxila in India affirm, that they had an Elephant at the least three hundred and fifty years old, for they faid it was the same that fought so faithfully with Alexander for King Porus, for which cause Alexander cald him Aiax, and did afterward dedicate him to the Sun, and put certain golden chains about his teeth with this inscription upon them : Alexander filius lovis Alacem Soli : Alexander the fon of Inpiter confecrateth this Aiex to the Sun. The like story is related by Into, concrrning the age of an Elephant, which had the impression of a Tower on his teeth and was taken

in Atlas 400 years after the same was engraven.

There are certain people in the world which eat Elephants, and are therefore called of the Nomades (Elephantophagi) Elephant-caters, as is already declared: there are of these which dwell in Daraba, neer the Wood Eumenes, beyond the City Saba, where there is a place (called the hunting of Elephants. The Troplodyte live also hereupon, the people of Africk cald Afache, which live in Mountains, do likewise ear the flesh of Elephants, and the Adiabart of Megabari. The Nomades have Plin, Cities running upon Charriots, and the people next under their Territory, cut Elephants in pieces, Solinus.

and both fell and eat them.

Some use the hard flesh of the bagis, and office confirmend above all the delicates of the world the Variomarnum; reins of the Elephants; so that it is a wonder than a diame would write, that there was nothing in reins of the Elephants; for the list wonder that fill annow would write, that there was nothing in an Elephant good for meak, are referred to the frame, the list ps, and the marrow of his horns, or teeth. The skin of this Bear is exceeding his a, not to be preceed by any dart; whereupon came the Proverb, Culicom band was Elephant lateral Elephant careth not for the biting of a Gnat, to fignific a fufficient ability to tentially will; and that Elephant careth not for the biting of a Gnat, to fignific a fufficient ability to tentially will; and that Total Elephant careth not revenge small injuries.

It cannot be but in such any and that there is no area for the world less able to endure of Elephants cold or Winter, for their supplications of all there is no area for the world less able to endure of Elephants. Cold or Winter, for their supplications of self-phants in flamation. Also in Supplier, when the same is hottest, they cool one another by casting during and filthy water upon each of the provided of greatest shadow. It such been shewed already, that they devour Chamalesons and thereof perish, except they water within Olive.

ons, and thereof periff, except they the a wide. Olive.

When they fuffer inflamation and are bounding the belly, entire Black Wines of nothing will cure them. When they drink a Leach they are grisvourly pamed? For their wounds by darit or otherwise, they are cured by Swings field, or Diesthy, or by Oyl, or by the flower of the 10live. They fall mad sometime, for which I know no other cure, but to tye them up fast in Iron chains. When they are tyred for want of sleep; they are excovered by rubbing their shoulders with Salo, Oyl and Water. Cows milk warmed and infused into their eyes, cureth all evils in them, and they presently

Water. Cows milk warmed and infused intogener eyes, curetn all evils in them, and they presently like reasonable men acknowledge the benefit of the medicine.

The medicinal vertues in this Beast are by Authors observed to be these? The bloud of an Elephant and the ashes of a Westil, cure the great Leprosic; and the same bloudds prositable against all in Elephants. Rhumatick fluxes, and the Sciatica. The first and cold, or heavy far and cold is abominable: Marcellus, for if it be sod and steeped in Vinegar with the field, and given to a Woman with childe, it maketh her presently suffer abortment. But if a man taste thereof sale and steeped with the seed. aforefaid, it cureth an old cough. The fat is a good Antidote either by Ointment or Perfume: it Rafis. cureth alfo the pain in the head.

The Ivory of tooth is cold and dry in the first degree, and the whole substance thereof corrobo-rates in the heart and helpeth conception, it is often adulterated by Fishes and Dogs bones burnt, and by white Marble. There is a Spedium made of Ivory in this manner; Take a pound of Ivory cut into pieces, and put into a raw new earthen pot, covering and glewing the cover with lome round about, and so let it burn till the pot be throughly hardned; afterward take off the pot, and beat your Ivory into small powder, and being so beaten, sift it, then put it into a glass, and pour up-on it two pound of distilled Rose-water, and let it dry. Thirdly, beat it unto powder again, and sift it the second time, and put into it again so much Rose-water as at the first, then let it dry, and put thereunto as much Camphire as will ly upon three or four fingle Groats, and work it all together up-

thereunto as much Camphire as will ly upon three or four fingle Groats, and work it all together upon a Marble stone into little Cakes, and so lay them up where the air may not corrupt and them. The vertue hereof is very pretious against soiting of Monta and the Bloudy slip and afforting for refrigeration without danger of bindung of all the Bloudy slip and afforting and as a selection without danger of bindung of the stone of the the Falling evilla

The Figure of the ELK with Horns.

The name of this Beaft.

An Elk the fame that Machlis.

This Bealt is called in Greek, Alke; and in Laine, Alces, or Alce; which was a name of one of And ons Dogs in Ovid: the Turks, Valachians, the Hungartans, Iajus, the Illyrians and Polonians, Loss in the fingular, and plurally, Loffe, for many Elks. Albertus Magnus calleth it Alches and Aley, and afterward Equicerous, a Horse-Hart. The Germans, Eleb, Ellend, and Elent, by a Metathefts of Alke, or Alce : and for my part I take it to be the same Beast which Pliny calleth Machin, for there is nothing attributed to an Elk which also doth not belong to Machlie.

The ELK without Horns.

I finde not any unreconcileable difference among Authors concerning this Beaft, except in Cafar, Cafars defect I ninge not any united that prior of an lib. 6. of his Commentaries, who by the relation of other, (not by his own fight) writeth that blk. there are Elks in the Hercynian Wood, like unto Goats in their spotted skins, who have no horns, nor joints in their legs to bend withall, but sleep by leaning unto trees like Elephants, because when they are down on the ground, they can never rise again. But the truth is, that they are like to Roes or Harts, because Goats have no spotted skins, but Deer have, and there may easily be a slip from Capres, a Roe, to Capra, a Goat : and Cafar himself confesseth, that the similitude is in their spotred skins, which are not competible in Goats, but in Roes.

And whereas he writeth that they have no Horns, the error of this relator may be this. that either he had only feen a young one before the horns came forth, or elfe an old one, that had lately lolt his horns; and by this I suppose that the authority of Cafar is sufficiently answered, so as we may proceed to the description of this Beast collected out of the ancient Writers, Paulanias, Vapilcus, Cafar, and Solinus, Pliny, and the later Writers confenting with them in all things, (excepting Cafar in the two things aforesaid) Albertus Magnus, Matheus, Michuanus, Seb. Munfter, Erafinus, stella lobannes, Bonarus, Biron of Balizce a Polonian, Jobannes Kentmannus, Jo. Pontanus, Antonius Schne-Lergeins, Christophorus Wirfungus, and that most worthy learned man Georgius Joachimus of Rhaila, and Bauron Sigifmund.

Paufaniss Inpposeth it to be a Beaft betwixt a Hart and a Camel, and Alberius, betwixt a Hart and a Ofthe quantit Horse; who therefore, as it hath been said, calleth it Equi-cervus, a Horse-Hart; but I rather by Benarus. the horns afterward described, and by the foot which Bonarus had, do take and hold it to be as big every way as two Harts, and greater then a Horse, because of the labour and qualities attributed thereunto: whereunto also agreeth Albertus.

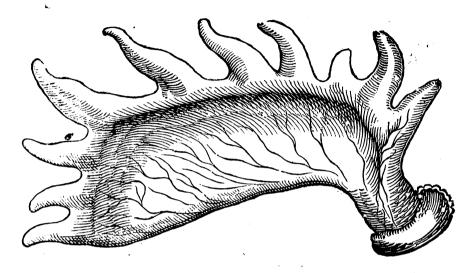

In Swedia and Riga they are tamed, and put into Coaches or Charriots to draw men through great The caming of snows, and upon the ice in the Winter time they also are most swift, and will run more miles in one day, then a Horse can at three. They were wont to be presents for Princes, because of their singular strength and swiftness; for which cause Alciatus relateth in an emblem, the answer of Alexander to one that asked him a question about celerity, whether haste doth not alway make waste: which Alexander deny ed by the example of the Elk in these Verses:

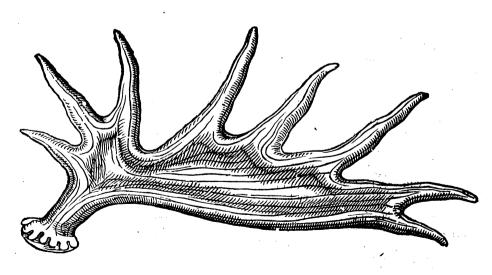

> Aloiate gentie infignia suffinet Alce, Unquibus & [meeden] fert [anaballomenos] Conftat Alexandrum fic respondisse roganti, Qui tot obivisset tempore gesta brevi. Nunquam inquit differre volens, quod & indicat Alce, Fortior bec dubites, ocyor anne fiet ?

Pliny affirmeth (in my opinion) very truly that this Beast is like an Oxe, except in his hair, which O. his parts is more like to a Hart, his upper lip is so great, and hangeth over the neather so far, that he can- and manner of not eat going forward, because it doubleth under his mouth, but as he eateth he goeth backward feeding. like a Sea-crab, and so gathereth up the grass that lay under his seet. His mane is divers both up. Plmy. on the top of his neck, and also underneath his throat it buncheth like a beard or curled lock of hair, howbeit, they are alway maned on the top of the neck. Their neck is very short, and doth not answer to the proportion of the residue of his body, and therefore I have expressed both figures

Their fore-head is very broad, two spans at the least: it hath two very large horns, which we have here also expressed, both for the right side and the left: so as they bend toward the back in the plain edge, and the spires or pikes stand forward to the face: both males and females have horns, they are folid at the root, and round, but afterward branched, and grow out of their Mantier. eye-lids, they are broader tien a Harts, and are also very heavy, for they weigh at the leaft twelve Kentmannus. pounds, and are not above two foot long, and the breadth measured from the longest spire to the Pontanus. other opposite side, about ten inches: the root next to the skin, is more then a man can well griple in his hand, and therefore here is expressed the figure of both horns, both in male and semale; for there is not any difference in their natures that I can learn, and these horns they lose every year. His ears and back are very long, and hanging down, the colour for the most part like a Hare, and sometime white; and Munster affirmeth, that in the Summer they are of russet colour, and in the Winter brown or blackish coloured. His fore-legs without all joynts to bend, Baro. herein resembling an Elemant, and therefore it sleepeth leaning to Posts or Trees, and not Of the colour. lying on the ground. His hoofs are cloven like a Harts, and with the fore-feet he pierceth The marinet the Dogs that hunt him, for he fighteth not with his horns, but with his fore-legs. It is a melan- of their fight. cholick Beaft, and fearful to be feen, having an ambling pace, and keeping in the wet, watry, and his about marshy places, delighting in nothing but in moisture. The slesh is fat and sweet, but ingrate- The name of in to the palate, and engendereth melancholy. The Germans call this Beaft Ellend, which in this beaft in their language fignifieth miserable or wretched, and in truth if the report thereof be not false, it the German is in a most miserable and wretched case, for every day throughout the year it liath the Falling-tongue, and sickness and the true significant for fickness, and continueth in the pangs thereof, untill the hoof of his right fore-foot touch his left ear, fication dierewhich comes not to pass but by the extream torments of the body, for whilest the members are of. reached and stretched with many strains and Convulsions (as it salleth out in that sickness) The sickness

by chance the aforesaid soot rubbeth the said ear, and immediately thereupon the Beast is delivered from his pangs: whereby we are to admire the works of our Creator, which having laid fo heavy an infirmity upon this poor Beast, wherewith he is dayly tormented, yet hath he also provided a rean imminity upon this poor Beat, where with it is asy, you making the torments of the difease to be the Apomedy for that evill in the hoof of his own foot, making the torments of the difease to be the Apomedy for that evill in the hoof of his own foot, thecary for applying the remedy to the place of cure.

Their fight with Wolves.

They live in heards and flocks together in Scandivania, and when the waters are frozenup, the wilde Mountain Wolves let upon them in great multitudes together, whom they receive in battel upon the lee, nghting most hercely and cruelly till one part be vanquished : In the nean time the Husbandme 1 of t. e Country observe this combate, & when they see one side go to the wall, they perfecure them, & take the victors part, for it is indifferent to take either the one fide or the other; but most commonly the Elks are conquerers by reason of their fore-feet, for with them they pierce the Wolves or Dogs skins, as with any tharp pointed Spear or Javeim.

Some have been of opinion that these are wilde Asses, but they are led hereinto with no reason. except because they are used for travel and burthen as is before said, for there is no proportion or refemblance of body betwixt them: besides, they have cloven hoofs, for the most part, although Significandus Baro affirm, that there are some of this kinde which have their hoofs whole and undivided. Being wilde it is a most fearful creature, and rather desireth to ly hid in secret, then to fly. Their manner except perioed by Hunters; and there is no danger in hunting of this Beaft, except a man come right to hunt them before him, for on his fides he may fafely strike and wound him; but if the Bealt fatten his fore-lest without danon him, he cannot escape without death. Notwithstanding it is a Beast (as hath been faid) as great as two Harts, yet is it above measure searful, and if it receive any small wound, or Their admirathot, inflantly it falleth down and yeeldeth to death, as Bonarus hunting with Sigismund the fe- ble tear and cond King of Polonia in the Woods of Linamia tryed with his own hand, for with his hunting pufillanimity. Spear he pierced one a very little way in the skin in the presence of the King, who presently fell

In some Countries of ancient time (saith Pausanias) they took them on this manner. They The ancient having found out the field or hill where the Beatls are lodged, they compass it in by the space of a manner of tathousand paces round in circle with welts and toils invented for that purpose, then do they draw in king Eiks. their nets round like a purse, and so inclose the Bealls by multitude, who commonly finelling his Hunters, hideth himself in some deep ditch or cave of the earth; for the nature of this Beatt hath framed to it felf a most sharp fagacity, or quick sent of smelling, being not herein inseriour to any of the best Dogs in the world, because it can a great way off discover the Hunters, and many times while men are abroad in hunting of other Beafts, this is fuddenly started out of her lodging place, and so discovered, chased, and taken,

Other again take it by the same means that they take Elephants, for when they have found the trees whereunto they lean, they fo cut and faw them, that when the Beast cometh, he overthroweth

them, and falleth down with them, and so is taken alive.

We read that there were Elks in the triumph of Aurelian at Rome, and in the games dedicated by Vopifius. Apollo and Diana, and celebrated by Valerius Publicola, were many Elephants, Elks, and Tygers. Likewise there were ten Elks at Rome under Gordianus. When they are chased eagerly, and can finde no place to rest themselves in and lie secret, they run to the waters, and therein stand, taking up Their resistwater into their mouths, and within short space do so heat it, that being squirted or shot out of them once in the waupon the Dogs, the heat thereof fo oppresseth and scaldeth them, that they dare not once approach ters, or come nigh her any more.

The greatest vertue of medicine that I can learn or finde to be in this Beast, is in the hoof, for that The medicine worn in a Ring, it refifteth and freeth a man from the Falling evill, the Cramp, and cureth the fits in an Elk, or pangs, if it be put on when he is in his forming extremity: also scraped into powder and put into Wine and drunk, it is used in Polonia against the same evill. In like fort they mingle with Triacle, and apply it to the heart, or else hang it about their neck for an Amulet to touch their skin against that dilease: and because that both in ancient time, and also now adays, this Beatt is seldom seen, and more seldom taken, the hoof thereof being so often approved for the uses before said, the rarity (I say thereof) maketh it to be fold very dear, which would be (if they could be found or taken) in more plentiful manner.

Some Mounte-banks fell in stead thereof a Bugles hoof, but it may easily be described by scraping, for (it is faid) it smelleth very sweet, whereas a Bugles savoureth very ill and strong. It is observed also, that it hath not this vertue except it be cut off from the Beast while he is yet alive, and that in the months of August and September, at what time these Elks are most of all annoyed with the Fal-

ling-sickness, and then it hath strongest vertue to cure it in others.

Others affirm, it wanteth his operation if it be cut off from a young one, which never tafted of carnal copulation, and so hath not been dulled thereby : but howsoever, this is certain, that sometimes it cureth, and sometime it faileth, and as there can be given no good reason of the cure, so I rather ascribe it to a superstitious conceit or belief of the party that weareth it, rather then to any hidden or affured work of nature. The skins of this B. aft are dreffed by Tawyers, with the fat of fifnes and Alum, to make breast-plates; and to shelter one from rain, and they sell them for three or their skins. four Nobles a piece; but in Cracovia for fifteen Florens. It may be discerned from a Harts skin by blowing upon it, for the breath will come through like as in a Buffe, and the hairs also of this Beaft have also hollow passages in them when they grow upon the back of the Beast, or else soon after the skin is taken off.

Some also use the Nerves against the Crampe, binding the offended member therewith, and herewith do we conclude this story of an Elk, referring the reader to the fable of Acida related before in Cacur, if he have defire to know it for the affinity betwirt the name thereof, and Alces an Elk.

Of the FERRET.

The names in Grick.

Take it to be most true without all exception, that the Gracians call a Ferret Gala Agria, a wilde Weafil, Idys and Phereoikes, although Eymologus and Helychius ascribe the reason of this latter name to her lodging under Oaks and Olive-trees. Itys allo was a common name of all Weafils, to those Gracians which never knew or faw any other then one kinde of them, or as Scaliger against Cardan will have it to fignifie a wilde Campestrial Weasil, and not a tame kinde, being domestical and living in houses, and that these differ only from one another in place and manner of living, and not in cojour, stature or qualities. And where Ariflophanes citeth it among other Beafts which are devourers of fish; in my opinion there is no Beaft that more desireth Fish, then The etymology Ferrets and Cats; and for this cause it hath his name Itys quasi Ichthus, of eating of Fish; and yet I cannot consent unto them which will have it descend and hunt Fish in the waters, like Otters or Beavers : for it abhorreth both fwimming or diving, but neer to the waters it hunteth Fish, where for the most part being wilde it remain-The Latines call this Beaft Viverra, and

Furo, and Furetus, and Furedus, because (as

shall be afterward manifested) it preyeth

Their courage and nature in the carth. Scaliger.

stealth, and in the earth will kill a Cony fix times as big as herfelf, but being abroad on the land, in the open air is nothing fo wilde, strong or full of courage. From letyr is derived Iltiffus, and the German, Iltis, for a Ferret : this is called by the French, Furen, Furet, and Fuson, and tufet : by the Spaniards, Furon, and Furan, and from the English, Ferret, is the German Fret, derived by a common Syncope, and in the time of Georgius Agricola,

Whether Ferreis be 18hs.

Gaza, the intepreter of Ariftotle, that it was most greedy of Honey, and for that cause it will feek out the Hives of Bees, and enter them without all fear of flings. But when Plin speaketh of 1817, he doth not call it Viverra, or once artribute unto it the love of Honey, but rather the hatred and loathing thereof, in so high a degree, that if he talk of it, he falleth into Consumptions, and hardly escapeth death. And these things Sealiger alleadgeth against Cardan, only to

Beafts, and that Cardan was mistaken in affirming, that they were but several names, expressing prove that Itys and Viverral, are two diffinct

one and the same Beast.

first fight of derivation.

The aniwer whereunto may be very easie, for although Pliny leaveth without rehearfal their love of Hony, it doth not necessarily follow, that they love it not (as Ar finite before him constantly affirm. eth) and Scaliger nameth no Author, nor bringeth any reason to demonstrate their hate of Honey. or any harm which infueth them by eating thereof; and therefore against his authority may Strate be oppoled, who in his third Book, speaking of the Conies of Spain, and of their Hunters and starters, out of their holes, he taketh and nameth indifferently without all diffinction and exception, Vivera, and lays, for the one and other. Niphus translateth 1891, a Marcel, but without reafon: for the same man finding in Ariflotle, that there is war betwist Locusts and Serpents, which is fitly called Ophiomachia; whereas Ariffotle nameth Akris, a Locult, he falleth in doubt whether it were not better to be 1815, a Martel, or as other copies have it Apis, an Aspe, which can by no means agree unto them, for there is a kinde of Locults (called Optionichum) because of their contimusl combates with Serpents. And therefore not to fland any longer upon this difference, omitting also the conjecture of Tzerzer, which confoundeth lays with Milvui, a Glead or Kyte, which cannot stand reasonable, because Homer faith, there was a kinde of Caps made of the hairs of 1811. nor yet of Atterius his new found name of Antatines, nor Avicenna his Kanz, or the French, Filian, which is a Poul-Cat. I will descend to the desembion of the parts and qualities, wherein the Authors themselves at variance, make their own reconcilement, by attributing the lame things to the 1812, and Ferret, except that of an obscure Author, which faith that live is Ankaomer, as big as a Gray-hound, and that it is wifer and more indifferous in his youth and tenderage, then in his perfection of strength and years. and years.

These Ferrets are lesser then the Melitean or Gentlewomens Dogs, and they were first of all Gazt, brought out of street, into Spain and therefore are called by Strato, African We-file, because of their Their several similitude with Weasils : for Spain, Italy, France, and Germany, have not this Bealt bred among them, parts. but brought to them out of other Countries. But in England they breed naturally of the quantity Countries of

Of the Ferret.

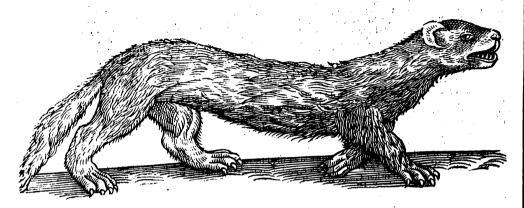

aforelaid, and they are tamed to liunt Conies out of the earth. It is a bold and audacious Beaft; ene-breed. my to all other, except his own kinde, drinking and fucking in the bloud of the Beath it bitech, but eateth not the flesh. When the Warrener setteth it down to hunt, he first of all maketh a great Istorus. noise to fray all the Conies that are abroad into their holes, and so having frighted them, pitcheth Perolus. his Nets, and then putteth his tame Ferret into the earth, having a long thring or cord with Bels about Their drink. her neck, whose mouth he muzzleth, that so it may not bite the Cony, but only terrific her out of ing of bl. ud. her borough and earth with her presence or claws; which being performed; the is by Dogs chaired Agricals, into the ners, and there overwhelmed as is aforefuld in the history of the Conies. into the nets, and there overwhelmed, as is aforefaid in the hiltory of the Conics.

Their body is longer for the proportion then their quantity may afford, for I have feen them Their colour two spans long, but very thin and small. Their colour is variable, sometime black, and white on the and eyes, belly, but most commonly of a yellowish fandy colour, tike Hermeline or Wool, dyed in urine. The head little like a Moules, and therefore into what soever hole or chink she putteth it in, all her body will easily follow after. The eyes small, but fiery, like red hot iron, and therefore the feeth most clearly in the dark : Her voyce is a whyning cry, neither doth the change it as a Cat : She heth only two teeth in the neather chap, standing out, and not joyned or growing together. The genital of the male is of a bony substance, (wherein Pliny and Scaliger agree with Cardan and Strabo for the Itys also) and therefore it alway standeth stiffe, and is not lesser at one time then at other. The pleafure of the fense in copulation is not in the yard or genital part, but in the perves, muscles, and tunicles wherein the said genital runneth. When they are in copulation, the semale lyeth down or bendeth her knees, and continually cryeth live a Cat, either because the Male pincheth and claweth her skin with his sharp nails, or else because of the rigidity of his genital. And when the female defireth copulation, except the be with convenient speed brought to a male, or he suffered to of their young come to her, she swelleth and dyeth. They are very fruitful in procreation, for they bring forth ones. feven or eight at a time, bearing them in their little belly not above forty days. The young ones newly littered are blinde 30 days together, and within forty days after they can fee, they may be fet to hunting. The Noble men of France keep them for this pleasure, who are greatly given to hunt Conies, and they are fold there for a French crown. Young boys and scholars also wie them to put them into the holes of rocks and walls to hunt out birds, and likewife into hollow trees, where-out they bring the Birds in the claws of their feet.

They are nourished being tamed with Milk, or with Barley bread, and they can fast a very long Their food, time. When they go, they contract their long back and make it stand upright in the middle, round like a bowl. When they are touched, they smell like a Martel, and they sleep very much: being wilde, they live upon the bloud of Conies, Hens, Chickens, Hares, or other fuch things, which they can finde and over-master. In their sleep also they dream, which appeareth by whyning and crying in their sleep. Whereas a long fly (called a Fryer) flying to the flaming candles in the night, is accounted among poysons, the Antidote and resister thereof is by Pliny affirmed to be a Goats gall The medicines or liver, mixed with a Ferret, or wilde Weafil, and the gall of Ferrets is held pretious against the of Ferrets. poyson of Aspes, although the flesh and teeth of a Ferret be accounted poyson. Livewise the gall of a Ferret is commended against the Falling disease, and not only the gall (saith Marcel'u) but the whole body, if it be rosted, dressed, and eaten fasting, like a young pig. It is said by Rasis and Aberias, that if the head of a Wolf be hanged up in a Dove-cote, neither Cat, Ferret, Weasil, Stoat, or other noysome Beaft dare to enter therein. These Ferrets are kept in little hutches, in houses,

and there fed, where they sleep much: they are of a very hot temperature and constitution, and therefore, quickly digest their meat, and being wilde by reason of their fear, they rather seek their meat in the night then in the day time.

The quantity and nature of this Beaft. Stumpfius. Acricola.

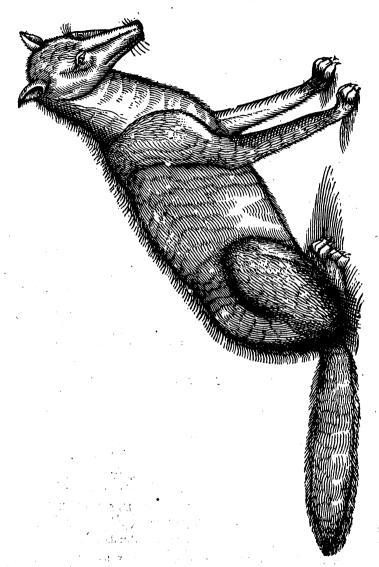

The skins and

Isidorus. Their meat and Subtilty not to be deferyed.

He difference of a Poul-Cat, from the Wilde-Cat, is because of her strong stinking savour. and therefore is called Putorius, of Putore, because of his ill smell : for all Wealils being incensed and provok't to wrath, finell strongly, and especially the Poul-Cat; likewise whenin the Spring time they endeavour procreation, for which cause among the Germans, when they would express an infamous Whore or Whoremaster, they say they stink like an Iliu, that is a Fitch or Poul-Cat. The French call this Beaft Putois, and Poytois, as it is to be found in Gerolus Figulus; the Savoyans, Poutiert; the Illyrians and Bobemians, Tohorz; and the Polonians, Vii. dra; and Scaliger calleth it in Latine (Catum fuinam) by another name then Putoring, It is greater then an ordinary Weasil, but lesser then the wilde Martel, and yet commonly fatter: the hairs of it are neither smooth and of one length, or of one colour; for the short hairs are somewhat yellowish, and the long ones black, so as one would think that in many places of the body, there were spots of divers colours, but yet about the mouth it is most ordinarily white.

The skin is stiff, harsh, and rugged in handling, and therefore long lasting in Garments, yet because the Beast is alway far, the savour of it is so rank, that it is not in any great request, and moreover it is said, that it offendeth the head, and procureth ach therein; and therefore it is fold cheaper then a Fox skin, and the fattest is alway the worst of all. The Skinners approve the skins of Fitches and Martels best, which are killed in Winter, because their flesh and lust is much lower, and therefore rendereth a less hurtfull smell then at other times. The tail is not above two hands or palms long, and therefore shorter then is a Martels. In all other parts of the body it equalleth a Martell, or exceedeth very little, having thinner necks, but larger and greater bellies, the tail, legs, and breast, are also of a blacker colour, but the belly and sides more yellow. Some have delivered that the lest legs thereof are fhorter then the right legs, but this is found untrue by daily experience: They keep in the tops of houses and secret corners, delighting to kill and eat Hens and Chickens, whose crast in devouring his prey is fingular; for to the intent that the filly creatures to be devoured may not bewray them to the House-keepers, the first part that they lay hold upon with their mouths is the head of the Hen and Chicken, and by that means stayeth his crying by cropping off the head. Some of these Fitches wander and keep in the Woods, and thereby live upon Birds and Mife, and fuch things: fome again live by the Sea fides in Rocks, and they take Fishes like Beavers and Otters: and some creep into the Caves of hollow trees, where they eat Frogs, and most of all they delight to be near stals of Cattel, Hay-houses, and houses, where they meet oftentimes with Egges, wherein they delight above all other kindes of meat. And thus much for this Beaft.

Of the FOX.

Fox is called in Hebrem, Schnal; and in Chaldee, Thaal; and therefore in Pfal. 61. where the The several A Hebrew readeth Schualim, there the Chaldee translateth it Thealaia; the Arabians call him Tha- names of leb; and Avicen calleth a Fox sometime Chabel, and also Chalchail; the Greek Septuagints, Alopekon, and vulgarly Alopex, and Alopon; the Latine, Vulpes, and Vulpecula of Volipes, his tumblingpace; the Italians, Volpe; the French, Regnard, and a little Fox Regnardeau; the Spaniards, Kapoja, of ravening; the Germans, Fuchs; the Flemings, Vos; and the Illyrians, Lifika.

The Epithets expressing the nature hereof among Writers, both Poets and others, are these: crasty, wary, deceitful, flinking, ftrong-fmelling, quick-fmelling, tayled, warlike or contentious, wicked of Foxes, and rough; the Gracians fiery colored, and subtil for flaughter; and therefore Christ called Herod a Fox, because he understood how by crafty means he sought to entrap and kill him: and all the

Of the Fox.

The Countries breeding }. xcs. Mitanus. Munfter.

Aristotle. Albertus. The co'our Yoxes. Olaus mag. Ancients called such kinde of men Vulpioner, which every Nation under Heaven doth imitate.

There are store of Foxes in the Alpine regions of Helvetia, and amongst the Capians they abound. there are more of rocks in the zapine to provide the Cities, and attending upon men like fo that their multitude maketh them tame, comming into the Cities, and attending upon men like tame Dogs. The Foxes of Sardinia are very ravenous, for they kill the frongest Rams and Goats, and also young Calves; and in Egypt they are lesser then in Grecia, and most commonly all Foxes are and and young caives; and in Egypt they are left the third and more white toward the head. In of stature like to a shepherds Dog. Their colour is reddish and more white toward the head. In Muje via are both black and white, viz about the river Woga, black and ash-coloured, and in the Province of Offing all black, and these are of the smaller fort, which are nourished to make caps of their skins, and are therefore fold at twenty or thirty Florens a skin. In Spain they are all white, and their skins are often brought by the Merchants to be fold at Francford Mart.

In the Septentrional or Northern Woods, there are black, white, and red Foxes, and fuch as are cald Cinergere, that is Crofs-bearing Foxes, for on their backs and orethwart their fhoulders there is a black crois, like an Asses: and there are Foxes asperfed over with black spots, and all these are of one and the fame malignant and crafty nature : and thefe (faith George Fabritius) are diffinguished by their regions or habitations: for it is most commonly seen, that Foxes which keep and breed toward the South and West, are of an ash colour, and like to Wolves, having loose hanging hairs, as is to be seen both in Spain and Italy; and these are noted by two names among the Germans, from the colour of their throat. One kinde of them is called Koler, whose throat seemeth to be sprinkled and darkned with cole-duft, upon white, so as the tops of the hair appear black, the foot and stalk

The other Birkfuebse, because their throat is all white, and of this kinde the most splendent white, being white. is most pretious. A second there is (called Kreutzsuchse) because of the cross it beareth upon his back and shoulders down to his fore-feet, being in other parts like the former, except the throat which is blacker then any of the other before spoken of, and these are not bred in Germany, but

brought thither from other Nations. A third kinde is of a bright skie-colour (called Blauwfuchse) and this colour hath given a different name to Horses, which they call Blaumschimmel, but in the Foxes it is much more mingled, and these

Foxes which have rougher and deeper hair are called Brandfuchfe.

The Moscovians and Tartarians make most account of the black skins, because their Princes and great Nobles wear them in their garments: yet are they more eafily adulterated, and counterfeited by the fume or smoke of Torches made of pitch. The white and blew skins are less esteemed, because the hair falleth off, and are alfo leffer then the other : the red ones are most plentiful; and Soaliger affirmeth that he faw skins brought into France by certain Merchants, which had divers white hairs disposed in rows very elegantly upon them, and in divers places they grew also single. In Norvegia and Suctio, as there are white Hares and Bears, fo there are also white Foxes : In Wolocha they are black, as it is affirmed by Stillmundus Liber, the picture of the Cross-bearing-Fox which is less then the former is here following expressed and fet down.

The Crucigeran FOX.

Adamantius. nature of Foxes.

Ariftotle.

Serpents, Apes, and Foxes, and all other dangerous harmful Beafts, have small eyes, but Sheep and Oxen which are simple, very great eyes. The Germans when they describe a good Horse, they decipher in him the outward parts of many Beafts, from whom (it seemeth) he particularly bushess. taketh his generofity, and from a Fox they afcribe unto him short ears, a long and bushy tail, an easic and soft treading step, (for these belong to a Fox.) The male Fox hath a hard bony genital, his tail is long and hairy at the end, his temperament and constitution is hor, as appeareth both because of his resemblance or similitude with Dogs and Weasils, and also his rank and ftrong smelling savour; for being dead, his skin hath power in it of heating, and his fat or oyl after a decoction is of the same force and condition.

The greatest occasion of his hunting is the benefit of his skin, for his flesh is in all things like a Foxes evill to Dogs, and although Galen, Mnesimachus, and Silvius affirm, that in the Autumn or latter part of the year, some men use to eat the silvius affirm, that in the Autumn or latter part of the year, some men use to eat the silvius affirm, that in the Autumn or latter part of the year, some men use to eat the silvius affirm, that in the Autumn or latter part of the imelling: but Ætius and Rafis affirm, (and that with great reason) that their flesh, and the flesh of

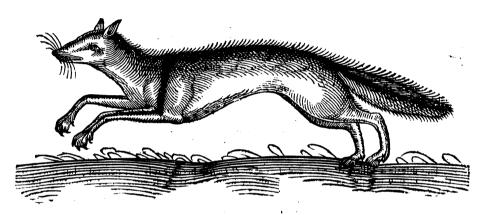

The use of their skins.

Hedg-hogs and Hares, is not agreeable to the nature of man. But their skin retaineth the qualities of the hot Beaft being pulled off, by reason of the long and foft hair growing thereupon; and the skins of Cubs which are preferred before the elder, are of least value, because their hair is apt to fall off, which being thin doth not admit any deep rootings of the hair. The Thracians in the time of Xenophon, wore Caps of Foxes skins upon their heads and ears, in the coldest and hardest Winters, and from hence it cometh, that in some Authors the covers of mens heads, (commonly called in Greek, Pericephalea) are tearmed Alopecia, or Alopecia; and for this purpose in Germany at this day, they slit a sunder the skin of Foxes tails, and sow it together again, adding to it a sufficient number till it be framed into a Cap: but the skin of the belly and fides is of more pretious estimation, because it is more fost and smooth, and therefore is sold for twice fo much as the other parts,

In the Summer time the skins are little worth, because that then the beatts are troubled with the Alopecia; that is, the falling off or loofeness of the hair; and therefore then also they are dangerous to be used, because of that disease: men which have the Gowt, shrinking up of the finews, or other old fluxions of the Rhewme in their legs, can use no better or more wholesome thing then to wear buskins of the skins of Foxes; the Scythians make them shooes, and soal them Alex ab alex with the backs of Fox and Mife skins, upon which they go. The Latins have a proper word for the donaine. voice of a Fox, which is, Gannie Gannie, to Ganne, and it is also metaphorically applyed to men, when by scrieching clamors they trouble others; as Terence in Adelph. Quid ille gannit? Quid vult? The voice of And Planter alfo, Gannit odiofus omni toti familia; and for this voice did Mantuan write his Verse;

Pates ululare lupos, gannire fagaces
Vulpeculas————

But yet as Albertus and Conftantinus have truly observed that in the time of his hunting he will bank like a little Dog, and the Harts are greatly afraid of this ganning of Foxes.

It hath been already shewed in the story of the Badger, how the Fox by laying his extrements in Their dens the Badgers den, getteth the same to his own use; for the abode of Foxes in the day time is in the and caves in caves and holes in the earth, and come not abroad till the night. These dens have many caves in the carth. them, and passages in and out, that when the Terriars shall set upon him in the earth, he may go Gillius. forth some other way: and forasmuch as the Wolfis an enemy to the Fox, he layeth in the mouth Ofpianus. of his den, an Herb (called Sea-onion) which is so contrary to the nature of the Wolf, and he so Zoroafter. greatly terrified therewith, that he will never come neer the place where it either growth or Gillim. lyeth; the same is affirmed of the Turtle to save her young ones, but I have not read that Wolves will prey upon Turtles, and therefore we reject that as a fable.

When Aristomanes was taken by the Lacademonians, and included into a rock or quarrey of stones. Fling. heescaped out of their hands, by digging another passage out of it then where he was put in; saying, that it was a shame for a Man to have less wit then a Fox. When they are in their dens, they lie upon their bellies with their hinder legs firetched forthat length, like as a man when he fleepeth on his belly, and therefore it feemeth that their legs are so framed to creep and pierce

under the earth and dig out their way after their own pleasure.

This is such a devouring beast, that it for laketh nothing fit to be eaten, for it killeth Hares and Conies, and with his breath draweth field Mice out of their holes, like as a Hart draweth out Serpents with his breath, and devoureth them. He devourethalso all kinde of Pullen, they The sood of also eat Grapes, Apples, and Pears; whereupon came the proverb in Plantu, Tam sicile vinces Serpents.

quam vulpes pyrum comest, Thou shale as easily overcome him, as a Fox eateth a Pear: which is applyed to any easie or dispatchable business. In Arabia, and Spria Palesima, they are so ravenous, harmful, and audacious, that in the night by gaining and barking, they invite one another (asit were) by a Watchword, to affemble in great multitudes together, for to prey upon all things, and they fear not to carry into their dens, old shooes and vessels, or instruments of hysbandry: for which cause, when the Husbandmen hear thereof, they gather all things into their houses and watch them.

But as it falleth out in all gluttonous ravening persons, that while they strive to fill their belies. The harme of they poison their lives, so also it fareth with Foxes, for nature hath so ordained, that if a Fox, eat any meat wherein are bitter Almonds, they die thereof if they drink not presently : and the Dioscorides. fame thing do Aloes in their meat work upon them, as Scaliger affirmeth upon his own fight or, Scrapis, knowledge. Aprenin or Bear-foot gives to Dogs, Wolves, Foxes, and all other beafts which are

littered blind, in fat or any other meat killeth them, if vomit help them not, which falleth out very feldom, and the feeds of this herb have the same operation. It is reported by Democritue, that if wilde Rue be secretly hunge under a Hens wing, no Fox will meddle with her; and the same writer also declareth for approved, that if you mingle the gall of a Fox, or a Cat, with their ordinary food they shall remain free from the dangers of these beafts.

Their carnal copalation.

When they engender and admit copulation, they are joyned like Dogs, the male upon the female: and the female when the perceiveth her womb filled, the departeth and liveth very fecret, for it falleth out very feldom that a female or Bitch-fox is taken great with young. She bringeth forth ordinarily four at a time, and those blind and imperfect, without Articles in their legs, which are perfected and framed by licking, for Bears, Wolves, Lions, Foxes, Dogs, and Thoes which are Aiu'tipara and Multifica, that is, fruitful, bearing many at one time, and also Cloven or slit-footed into many clawes, have not the benefit of nature to perfect their young ones in their

Kites, Vultures, and Eagles lie in wait to destroy the Foxes Cubs or Whelps. Foxes do not only engender with their own kinde, but also with Wolves, Dogs, or any other beasts of equal proportion, both of quantity and time of going with young: fo the Laconian Dogs are engendred by a Dog and a Fox; and the Hyana, of a Wolfand a Fox (as Albertus affirmeth) and the Simivulpa of an Ape

and a Fox, as is already in the story of Apes declared.

There be also many evils wherewithal Foxes are annoyed, and first of all he falleth sometime into madness as a Dog, and the same evils follow a mad Fox, which already are manifested to accompany a mad Dog, and that more often in Summer then in Winter.

of Foxes. Albertus. Liber. Aetius.

The discases

When a Fox feeleth himself sick, nature hath taught him to eat the gum of Pinetrees, wherewithal he is not only cured, but also receiveth length of dayes.. They are also vexed with the fal-ling away of their hair, called therefore Alopecia, because Foxes are most commonly vexed therewith, and as we see in Plants, that some of them dry and consume through want of moisture to seed them, other are suffocated and choaked by abundance, and as it were drowned in humidity : so it happeneth in hair, which groweth out of the body of beafts, and the heads of men, no otherwise then Plants out of the earth, and are therefore to be nourished by humours; which if they fail and wax dry, the hair also shorteneth with them, and as it were rotteth away in length: but if they abound and overflow, then do they loofen the roots of the hair, and cause them to fall

This difease is called Alopecia, and the other Ophiasit, because it is not general, but only particular in one member or part of the body or head, and there it windeth or indenteth like a

Serpents figure.

Michael Ferm affirmeth, that sometime the liver of the Fox inflameth, and then it is not cured but by the Ulcerous blood flowing to the skin, and that evill blood causeth the Alopeeia, or falling away of the hair, for which cause (as is already said) a Foxes skin is little worth that is taken in the Summer time.

The length of their life.

Varinus.

The length of the life of a Fox is not certainly known, yet as Stumpfius and others affirm, it is longer then the life of a Dog. If the urine of a Fox fall upon the graffe or other herbs, it dryeth and killeth them, and the earth remaineth barren ever afterward. The savour of a Fox is more ftrong then of any other vulgar beaft, he ftinketh at nofe and tail, for which cause Martial calleth it Olidam Vulpem, an Olent or fmelling beaft.

Hic olidam clamosus ages in retia vu'pem.

The hunting Foxes.

Ælianus.

Oppianm.

Touching the hunting or taking of Foxes, I approve the opinion of Xenophen, who avoucheth, and taking of Leporum capturam venatico studio quam vulpium digniorem; that is, the hunting of the Hare is a more

noble game or pastime then the hunting of the Fox.

This beaft is more fearful of a Dog then a Hare, for the only barking of Dogs causeth him to rife many times from his den or lodgings out of the earth, or from the middle of bushes, briars, and brambles, wherein he hid himfelf: and for his hunting this is to be observed, that as in hunting of a Hart it hath been already related, the Hunter must drive the beaft with the winde, because it hindereth his refrigeration; so in hunting of a Fox he drive him against the winde and then he preventeth all his crafty and subtill agitations and devises; for it stayeth his speed in runhing, and also Belle arius. keepeth his favour fresh alway in the nose of the Dogs that follow him : for the Dogs that kill a Fox must be swift, strong and quick sented, and it is not good to put on a few at once, but a good company together, for be affured the Fox will not lose his own bloud till he hazzard some of his

enemies, and with his tail which he windeth every way, doth he delude the Hunters; when the Dogs are pressed neer unto him, and are ready to bite him, he striketh his tail betwixt his legs, and with his own urine wetteth the same, and so instantly striketh it into the Dogs mouths, whereof when they have tasted, so many of them asit toucheth will commonly leave off and sol-

Textor.

Their teeth are exceeding sharp, and therefore they fear not to assault or contend with beasts, exceeding their stature, strength, and quantity. Sometime he leapeth up into a tree, and there standeth to be seen and bayed at by the Dogs and Hunters, like as a Champion in some Fort of Caftle, and although fire be cast at him, yet will he not descend down among the Dogs; yea he endureth to be beaten and pierced with Hunters spears, but at length being compelled to forsake his hold and give over to his enemies, down he leapeth, falling upon the crew of barking Dogs, like a flath of lightning, and where he layerh hold there he never loofeth teeth, or allwageth wrath. till other Dogs, have torn his limbs, and driven breath out of his body.

If at any time he take the earth, then with Torriar Dogs they ferret him out of his den again. In some places they take upon them to take him with nets, which seldom proveth, because with his

teeth he teareth them in pieces; yet by Calentin this devise is allowed in this Verse;

Es laqueo Vulpes & decipe casse fuinas.

But this must be wrought under the earth in the caves, dens, or furrowes, made of purpose, which is to be performed two manner of wayes, one by placing the Gin in some perch of wood. so as that as foon as the beaft is taken by the Neck, it may prefently flie up and hang him, for otherwise with his reeth he will shear it afunder and escape away alive : or else that neer the place where the rope is fastened, to flip upon the head of the Fox, there be placed some thick collar or brace, so as he can never bite it afunder.

The French have a kinde of Gin to take by the legs (which they call Haufepied) and I have heard A noble inof some which have found the Foxes leg in the same Gin , bitten off with his own teeth from Bance of a his body, rather putting himself to that torment with his own teeth, then to expect the mercy Foxes courage. of the Hunter, and fo went away upon three feet: and other have counterfeited themfelves dead refraining their breath and winking, not flirring any member when they faw the Hunter come to take. The subilety of them out of the Gin , who coming and taking his leg forth , not suspecting any life in them, to a Fextaken in foon as the Pox perceiveth himself free, away he went and never gave thanks for his deliverance; a frare. for this cause Blondus saith truly, that only wise and old Hunters are fit to take Foxes, for they have to many devices to beguile men, and deliver themselves, that it is hard to know when he is fafely taken, untill he be throughly dead.

They also use to set up Gins for them baited with Chickens in bushes and hedges: but if the fetter be not at hand fo foon as the Fox is infnared, it is dangerous but that the beaft will deliver it felf. In some places again they set up an iron toile, having in it a ring for the Fox to thrust in his head, and through that sharp pikes, at the farther end whereof is placed a piece of flesh, so that when the hungry Fox cometh to bite at the meat and thrusteth in his head, the pikes stick fast in his neck, and he inevitably infrared. Moreover, as the harmefulness of this beaft hath troubled many, fo also they have devised more engins to deceive and take him; for this cause there is another policy to kill him by a bow, full bent, with a sharp arrow, and so tenderly placed as is a trap for a Mouse, and as foon as ever the Fox treadeth thereon, prefently the arrow is discharged into his own bowels.

Again, for the killing of this beaft they use this fleight, they take of Bacon-grease or Bacon as much as ones hand, and roft the fame a little, and therewith anoint their shoot-soles, and then take the liver of a Hog cut in pieces, and as they come out of the wood where the bealt lodgeth, they must scatter the said pieces in their foot-steps and draw the carcasse of a dead Cat after them. the favour whereof will provoke the beaft to follow the foot-steps, then have they a cunning Archer or handler of a Gun, who observeth and watcheth in secret till the beast come within his

reach, and so giveth him his great and deadly wound.

But if the Fox be in the earth, and they have found his den, then they take this course to work him out. They take a long thing like a Bee-hive, and open at one end, and iron wiers at the other like a grate, and at the open end is fet a little door to fall down upon the mouth, and to inclose the Fox when he entreth in by touching of a fmall rod that supporteth that door. This frame is fet to the Foxes dens mouth, and all the other passages watched and stopped. The Fox having a defire to go forth, and feeing light by the wiers, misdeemeth no harm, and entreth into the hive which is wrought close into the mouth of his den, and being entred into it, the rod turneth the door fast at the lower end or entrance, and so the Fox is intrapped, to be disposed of at the will

Foxes are annoyed with many enemies; and to begin with the least, the small slies, called The beasts Gnats, do much trouble and infect them, against whom the Fox useth this policy; He taketh a that are encmouthful of straw or fost hay, or hair, and so goeth into the water, dipping his hinder parts by little mics of Foxes. and little, then the flies betake themselves to his head, which be keepeth out of the water, which the Fox feeling, dippeth or diveth also the same under water to his mouth, wherein he holdeth the hay as aforefaid, whereunto the flies runne for fanctuary or dry refuge, which the Fox perceiving, Abertus, suddenly castern it out of his mouth, and runneth out of the water, by this means easing himself of

In like manner, as all beafts are his enemies, and he friend and loving to none, so with strength, courage, and policy, he dealeth with every one, not only against the beasts of the Land, but also against the monsters of the Sea. When he findeth a nest of Waspes in the earth, or in other places, as in trees, he layeth his tail to the hole, and so gathereth into it a great many of them, which he presently dasheth against the wall, or tree, or stones adjoyning, and so destroyeth them, and thus he continueth untill he have killed them all, and so maketh himself executor to their heaps of hony.

Oppianus.

His

Gilius.

His manner is when he perceiveth or feeth a flock of fowl to flie in the air, to rowl himself in red earth, making his skin to look bloody, and lie upon his back, winking with his eye, and holding red earth, making his skill to look bloody, and he bords, namely Crows, Ravens and such like observing, in his breath as if he were dead, which thing the birds, namely Crows, Ravens and such like observing, because of the hatred of his person, they for joy alight and triumph at his overthrow, and this the Fox endureth for a good season, till opportunity serving his turn, and some of the soul come neer his fnowt, then fuddenly he catcheth some one of them in his mouth, feeding upon him like a living and not a dead Fox, and fo doth devour and eat him, as the Leopard doth devour and eat Apes, and the Sea frog other little fishes.

In like fort he deceiveth the Hedge-hog, for when the Hedge-hog perceiveth the Fox coming to him, he rowleth himself together, like a foot-ball, and so nothing appeareth outward except his prickles, which the Fox cannot indure to take into his mouth, and then the cunning Fox to compasse his desire, licketh gently the face and snowt of the Hedge hog, by that means bringing him to unfold himself again, and to stand upon his legs, which being done, he instantly devouresh, or elfe poisoneth the beast with the urine that he rendereth upon the Hedge-hogs face : and at other times he goeth to the waters, and with his tail draweth fishes to the brim of the River, and when that he observeth a good booty, he casteth the Fishes clean out of the water upon the dry land, and

All kindes of Hawkes are enemies to Foxes, and Foxes to them, because they live upon then devoureth them. Carrion, and so in the Province of Ula. Avicen faw a Fox and a Crow fight together a long season, and the Crow with his talons to be gripling the Foxes mouth that he could not bark, and in the mean time fe e beat and picked his head with her bill untill he bled again. The Eagles fight with Foxes and kill them; and Olaw Magnus affirmeth, that in the Northern Regions they lay Egges and hatch their young in those skins which they themselves have stripped off from Foxes and other beafts.

The Kites, Vultures, and Wolves, are Enemies to Foxes, because they are all flesh-devouring creatures, but the Fox which hath so many enemies, by strength or subtilties overcometh all. Whereupon Persim calleth a subtil man a Fox, saying,

Asutam varido servas sub pettere vulpem.

Sextus.

The medicines The medicinal uses of this beast are these, First, (as Pliny and Marcellus affirm) a Fox fod in arifing out of water till nothing of the Fox be left whole except the bones, and the legs or other parts of a gowty body washed and daily bathed therein, it shall drive away all pain and grief, strengthning the defective and weak members; fo alfoit cureth all the thrinking up and pains in the finews: and Galen attributeth the same virtue to an Hyana sod in Oil, and the same person bathed therein, for it hath fuch power to evacuate and draw forth whatfoever evill humour aboundeth in the body of man, that it leaveth nothing hurtful behind.

Neverthelesse, such bodies are soon again replemshed through evill diet, and relapsed into the same disease again. The Fox may be boyled in fresh or falt water with Annise and Thyme, and with his skin on whole and not thit, or else his head cut off, there being added to the decoction

Mathæolus.

Albertus.

Al Syrtus.

Silvins.

The flesh of a Fox fod and layed to a fore bitten by a Sea-hare, it cureth and healeth the same. The Foxes skin (as is already faid) is profitable against all moist Fluxes in the skin of the body, and also the Gowt, and cold in the sinews. The ashes of Foxes slesh burnt and drunk in wine, is profitable against the shortness of breath and stoppings of the Liver.

The bloud of a Fox diffected and taken forth of his urine alive, and fo drunk, breaketh the flone in the bladder; or elfe (as Myrepjus faith) kill the Fox, and take the bloud and drink a cupful thereof, and afterward with the same wash the genital parts, and within an hour the stone shall be voided:

the same virtue is in it being dryed and drunk in Wine with Sugar,

Oxycraton and Foxes blood infused into the Nostrils of a lethargick Horse, cureth him. The satis next to a Buls and a Swines, so as the fat or lard of Swine may be used for the fat of Foxes, and the fat of Foxes for the Swines grease in medicine. Some do herewith anoint the places which have the Cramp, and all trembling and shaking members. The fat of a Fox and a Drake inclosed in the belly of a Goose, and so rosted, with the dripping that cometh from it, they anoint paralytick

Actius.

The same with powder of Vine twigs mollified and sod in lie, attenuateth and bringeth down all swelling tumours in the flesh. The fat alone healeth the Alopecias and looseness of the hair; it is commended in the cure of all Sores and Ulcers of the head; but the gall and fime with Mustardseed is more approved. The fat is also respected for the cure of pain in the ears, if it be warmed and melt at the fire, and so instilled; and this is used against tingling in the ears If the hairs rot away on a Horse tail, they recover them again by washing the place with Urine and Bran, with Wine and Oil and afterward anoint it with Foxes greafe. When Sores or Ulcers have procured the hair to fall off from the head, take the head of a young Fox burned with the leaves of black Orchanes and Alconium, and the powder cast upon the head recovereth again the hair.

Theomnestus. Ægineta.

Hierocles.

AbGriks.

If the brain be often given to Infants and sucking children, it maketh them that they shall remain free from the falling evill. Pliny prescribeth a man which twinkleth with his eyes, and cannot look stedfastly, to wear in a chain the tongue of a Fox; and Marcellus bicdeth to cutout the conque of a live Fox, and fo turn him away, and hang up that tongue to dry in purole thred. and afterward put it about his neck that is troubled with the whiteness of the eyes, and it fliall

But it is more certainly affirmed, that the tongue either dryed or green, layed to the flesh Dioscorides. wherein is any Dart or other sharp head, it draweth them forth violently, and renteth not the flesh, but only where it is entred. The Liver dryed and drunk cureth often sighing. The same or the Lights drunk in black wine, openeth the passinges of breathing. The same washed in wine and dryed in an earthen pot in an Oven, and afterward featoned with Sugar, is the best medicine in the world for an old Cough, for it hath been approved to cure it, although it hath continued twenty years. drinking every day two spoonfuls in wine.

The Lights of Foxes drunk in water after they have been dryed into powder, helpeth the Pling. Milt: and Myrep: affirmeth, that when he gave the fame powder to one almost suffocated in a Partite, it prevailed for a remedy. Archigene prescribeth the dryed Liver of a Fox for the Splenetick with O symel : and Marcel in a for the Milt drunk after the fame manner ; and S. wiss advifeth to Sentis.

drink it fimply without composition of Oxymel.

The Gall of a Fox instilled into the ears with Oil, cureth the pain in them; and mixed with Hony Attick and anointed upon the eyes, taketh away all dimness from them, after an admirable manner. The Milt bound upon the tumors and bunches of the breft, cureth the Milt in mans body. The reins dryed and mingled with Hony, being anointed upon kernels, take them away For the swelling of the chaps, rub the reins of a Fox within the mouth. The genitals because of their griftly and bony substance, are approved for the dispersing of the stone in the Hadder.

The stones take away pimples and spots in the face. The dung pounded with Vinegar, by anoint -

ment cureth the Leptofie speedily.

These and such other virtues Medicinal both the elder and later Physicians have observed in a Fox, wherewithal we will conclude this difcourfe; faving that many writers have devited divers witty inventions and fables of Foxes, under them to express vices of the world, as when they fet a Fox in a Fryers weed, preaching to a fort of Hens and Geefe, following the fiction of Architectus Fox, to fignifie how irreligious Paftors in holy habits beguile the fimple with subtility. Also of a Fox teaching a Hare to fay his Credo or Creed betwint his legs, and for this cause almighty God in his word compareth false Prophets to Foxes, Ezek. 13. destroying the young Grapes and Plants. The Weafil brought a Fox into a Garner of Corn through a small hole, and when he had filled his belly, he affayed to come out again at the same place, but in vain, because his body swelled with over eating, and therefore he was constrained to come out as empty and hungry as he came in whereupon this conference was betwixt them;

> Forte per angustam tenuis Vulgecula rimam, Repferat in cameram framenti, poftea rurfus Ire for as pleno tentabat corpore fruffra. Cui mustela procul, Sivu, ait, effugere istbine, Macra cavum repetes arctum, quem macra (ubifti,

Of the GENNET-CAT, called GENETHA.

T'His beait is called Genitocatus, either for the similitude it holdeth with a Cat, or else because it I hath been believed that it was engendred by a Cat, but I rather do affent that the right name thereofis Ginetts or Ginetha, because they are bred in Spain with the Genner horses, and so taketh his name from the place. Aibertus (though a learned man, yet many times he was deceived in the names of beafts) called this creature Genocha, and the Germans call it Ein Gennithkaiz. The quantity or stature hereof is greater then a Cat, but lesser then a Fox, and therefore I think it about the Albertut. mold or bigness of a young Fox of fix moneths old. It is a meek and gentle creature, except it be provoked; for in Conflantinople they are kept came, and are suffered to go up and down from house Bellonius. to house like Cats. Being wilde, they love the vallies and low places, especially the Marishes or land neer the waters, for the steep rocky mountains they cannot endure. And these Cardan taketh to be Isidorus. of the Weafil kinde, because the forme and disposition thereof, especially to the tame and Domesti- Vincentint. cal Weafil, and in Spain they are cald Foinai, being black and afh-coloured, distinguished and vari- Belnac. ably interlined with many spots.

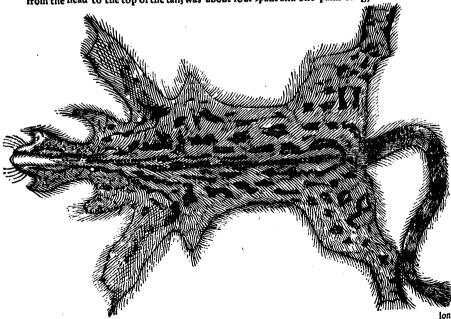

But Scaliger who was delighted to contradict Jerom Cardan, cannot endure to hear of this comparison betwirt Weasils and Ginnet-cats, because he saith, the skin of a Gennita is bigger then three Weafils, and that it refembleth a Weafil in nothing except in the ears; but Cardans comparison toucheth not the quantity, but only the outward form and qualities, and he himself disagreeth not that it is equall in quantity to an Otter. But certainly the skin thereof is admirable and beautiful to behold, and if they were not common, but rare and seldom found beasts, it is no question but the price thereof and due estimation would excell many others: For the abun-

dance

dance of spots, their natural and uniform order, their shining splendor and brightness, give place to no other party-coloured beaft, as you may observe in the true figure thereof here declared.

In the next place I have thought good to express the figure of the skin taken off, which skin, Of the skin. from the head to the top of the tail, was about four spans and one palm long, and the tail was as

long as the body being levered from the skin': the latitude or breadth thereof in the middle, was long as the body the middle of the belly, and the upper part of the neck, were ash colourabout one fundamental were eight black circles and fo many white, one fuccessively following the other: the whole body afperfed with black spots, and the relidue yellowish white.

The skin smelt sweetly and somewhat like to a Musk-cat, and from Lyons in France they are Oppianula brought into Germany, three or four of them being fold for a Noble. It is very probable that it is a little kinde of Panther or Leopard, for there is a little Panther which hath fuch spots, and besides of Juch a stature and harmless disposition, whose skin in old time was pretiously used for garments. and the favour thereof was very pleasant, and therefore I supersede any further discourse hereof, till we come to the declaration of the greater beaft.

Of the GOAT. Male and Female.

"He male or great Goat-Buck, is called in Hebrew, Atud, and the lefter Seir, and Zeir. The The feveral Chalde translateth it, Gen. 13. Teias-jaii, and Numb. 15, Ize; the Arabidus, Tem and Magz, name. the Persians, Asteban, and Busan; the Grecians, Trages, or devouring or ravening in ment according to the Verse;

Tracus ab Edendo qued grana fracia pane.

Alfo Chimeron and Enerchan; the Latins, Hirow, and fometime Caper, which word properly fightfieth a Gelded Goat, as Martial useth in this Verse:

Dum jugulas hircum, factus es ipfe Caper.

The Italians, Beccho; the Germans, Bock, and for diffinction fake, Geifsbock, and Reechbock, and Books the Spaniards, Cabron ; the French, Bouc, the Illyrians, Kozel.

The reason of the Latin word Hirow, is derived of Hirow (signifying rough) by reason of the roughness of their bodies. And it is further to be understood; that the general kind of Goats (which the Latins diftinguish by Hirrus, Capra, and Hadm, that is, by their fex, or by their age; the Helliens call them lingularly Ex, and plurally Ixim, Numb. 15. for a Goat of a year old, you shall read Izbaift netb. The Chalde useth also the general word Oza; the Arabian, Schaab; the Persian, Buz, and whereas Levit. 16. Seir is put for Caper a gelded Goat, there the Chalde rendereth it Zephirah; the Arabam, Aud, and the Persian Buzgalaie. And in the same Chapter you shall read Azazel, which David Kimbi rendereth for the name of a mountain neer Single where Goats use to feed and lodge; and the Sipuagints translate it Apopompaion, signifying emission or fending away, and for this cause I suppose, that when the Scape-goat was by the Priest sent out of the Temple, he went to that mountain, and therefore the word Azazel feemeth to be compounded of Ez, a Goat, and Azal Init, that is, he went; for the Scape Goat went and carryed away the evill.

The Greciani call the female Goat Aix, which Teemeth to be derived of Ex the Hebrew word. The Aratians, Dokh, and Metaham, as I find in Avicen; the Saragens, Anse; the Italians, Pecche, changing
B from the male into P; and the Spaniards, Capron; the French Chener or Chieuere; the Germans, Geiss; Assumulli. the Illyrians, Koza; and the Tufcanes at this day call a female Goat Zebei. And this may suffice for the names of both male and female.

Their nature is to be declared leverally, except in those things wherein they agree without difference: and first of all, the male is rightly termed Dus of maritus Caprarum, the guide and husband of the females, and therefore Virgil faith of him not improperly. Vir gregis ipfe Caper, The He-goat is the husband of the flockiand except in his genitals and horns, he differeth not in any proportion or substance from the female. His horns are longer and stronger then are the females, and therefore upon Their several provocation he striketh through an ordinary piece of Armon or Shield at one blow: his force and the parts. sharpness of his horns are so pregnable. He hath many responses among the learned, as lest-sided, The Epithets aged, greedy, bearded, fwift, long legged, both bearer, aprain of the flock, heavy, rough, hoarfe- of Goats, voiced, rugged, unarmed, unclean, frong finelling, legterous, briftler, wanderer, vile, wanton, thatp, flinking, two-horned, and fuch like where the nature and qualities are so deciphered, as it needeth no long treatife of explication.

needeth no long treatife of explication.

There is no bealt that is more prone and the property to be it a Goat, for the owner in copulation. The venereous before all other bealts. Seven dayes after it period and kiddened, it begins than yeeldeth feed, disposition of although without proof. At fewen moneths day it engended to be a few to be it to accomplish that work of metities. When the layer and after that time is retired to accomplish that work of metities. When the layer will describe fecundity or ability the great on, they do it by picturing of a male Goat

That which is most strange and horrible among other beasts is ordinary and common among thefe, for in them flarce the Brother joyneth with the Sifter, and a Camel can never be brought to cover his Dam: but among these the young ones being males, cover their Mother, even while they fuck their milk. If they be fat, they are leffe venereous then being macilent or lean. Herodotus declareth that in his time a Goat of Mendefia in Egypt, had carnal copulation with a woman in the open

fight of men, and afterward was led about to be feen. When they defire copulation they have a proper voice wherewithal (asit feemeth) they provoke the female to love. This is called it in Italy. Biccarie and Biccarie, which the Venetians apply to all lecherous companions as commonly as a proverb, and this they never use but at that time. By reason of his lust, his eyes sink deep into the corners of their holes (called Hirqui) and Apuleius with other Grammarians do derive the word Hirau. whereby this beaft is called, from that disposition.

By drinking falt water they are made desirous and apt to procreation. At that time they fight mutually one with another for their females, and it is a term among the late writers, to call those men Hirei, Goats, which are contented to permit other men to lie with their wives in publick before their own faces for gain, because they imagine that such is the property of Goats. But I know not Galius. with what reason they are moved hereunto, for there is a memorable story to the contrary,

In Sibaris there was a young man called Crathis, which being not able to retain luft, but A memorable forfaken of God, and given over to a reprobate sense, committed buggery with a semale Goat, the story of the purwhich thing the mafter Goat beheld and looked upon, and diffembled, concealing his mind and milment of icalousie for the pollution of his female. Afterward finding the said young man afteep, (for he was buggery. a Shepherd) he made all his force upon him, and with his horns dashed out the buggerers brains. The man being found dead on this manner, and the Goat which he had ravished delivered of a monster, having a Mans face, and a Goats legs, they call it Silvanus, and place it in the rank of idoll Gods, but the wretched man himfelf was buried with more honour then befeemed, for they gave him a noble funeral, and finding a River in Achaia which mingled water with another, they called it Crathin, after the name of that unnatural and beaftly monfter; whereupon also came the Italian Crathis which Strabo remembreth. By which story it is evident, that jealous rivality resteth as well in Goats as in Men of more reasonable capacity and understanding.

The females defire of copulation is no leffe then the males, for while they fuck they admit the Calius. male, and at the seventh month they conceive. The best time of their admission to procreation is Strabo. about the end of Autumn (according to Columella his opinion) They are not filled the first day of The lust of the copulation, but the second or third, and those which are joyned in November do bring forth their their copulavoung in the Spring when all things grow fresh and green: wherefore if they chance to be slack, tion. and not willing to engender or couple, their keepers use this sleight or policy, to procure and stir up their luft. They rub their udders with Nettles untill they constrain bloud, and afterward with Means to fir a handful of Salt and Nitre, or else with Pepper or Myrrhe; after which rubbing, their defire of up the Goats to copulation much increaseth, and it maketh the female to provoke the male and undergo him more copulation. willingly; and this thing alfo procureth in them aboundance of milk (as Ariffolle affirmeth) he had Ælianus. feen tryed by making experiment thereof upon the brefts of Women, Virgins, and Widows: And generally all the keepers of Cattel do herewith rub their genitals, for the furthering and provoking in them carnal copulation, with the things aforesaid.

They being filled and with young, they carry them in their belly five moneths before deliverance. Floreminus. After three years old the female ceafeth to retain in her felf or confer to her Kids the strength of The time of After three years old the female ceafeth to retain in her felt or confer to her mas the irrength or nature, and the male after four, fo that it is not a part of good husbandry to keep their young which with young. they bring forth after those years, but rather to kill them and make them away: So also it is not good to keep their firstings, or those which are first of al engendred, but rather the second or third seed of procreation. Some of them bring forth twins, and some more, as it is reported of the Goats of Egypt. The multipliwhich bring forth five at a time, because they drink of the fruitful river of Nilus: for the Goat- cation of yong which bring forth five at a time, because they grink of the Third into all parts of that region, herds of the Countrey do give thereof to their Cattel, and fetch it into all parts of that region, and in Ilyria they breed twice a year, bringing sometime three, four, or five at once, but there at a time are never to be kept, but killed and eaten, for they are accounted not worth their bringing up; only cold maketh them to suffer abortments, and sometimes they bring four the suffer of the total control of the suffer abortments. forth monsters like to other Cattel (for all little beasts are more apt to engender monsters then the greater.)

Concerning the time that they bear young, it is in Italy eight years, and being fat they are not apt The time of to conceive, wherefore they make them lean before they admit them to their bucks. One male is their young furnished on the force of the time of their young furnished on the force of the time of their young furnished on the force of the time of their young force of the time of the time of their young furnished on the force of the time of their young force of the time of the time of their young the time of the time of the time of their young the time of t fufficient for ten females, and fome (faith Varro) provide but one for 15 (as Menas) and other but one for 20 (as Murus.) There is no creature that smelleth so strongly as doth a male Goat, by reason of The strong his immoderate luft, and in imitation of them the Latins call men which have ftrong breaths (Hiscoft) fmell or favour Goatish: wherefore Plantus faith to an old lecherous fellow, which could not keep his lips from of a Goat.

In Mercal. flavering of women.

> Cum sis jam etatis plenus, anima fatida, Senen bircofe tu ofculere mulierem.

And therefore Tiberius Cafar who was such a filthy and greasie-sinelling old man, was called (Hircus vetulus) an old Goat, in the Atellanican Comadie. They conjecture of men that have hairy legs to be unchast and full of lust, by reason of their similitude with a Goat, and those which have a shril and clamorous voice, the Gredians call Margoi, (that is, blockheads.) Those which have eyes like to Plutarch. Goats they call Aegopoi, Goat-eyes, that is very red eyes. The Egyptians affirm that their female A fectes in Goats when Sirius the Star in the beginning of Dog-dayes rifeth with the Sun, do continually look female Goats. upon the East, and that their attentive observation is a most certain argument of the revolution, that is the appearance and departure of the faid Dog dayes. The like things do the Lybians report Elianus. of their Goats concerning that Star, and moreover that they foresee and foreshew change of weather, for they depart from their stables, and run wantonly abroad before showers, and afterward having well fed of their own accord return to their folds again.

Concerning the description of their several parts, it is good to follow the direction of Coffinius, and their best. first to look to their age (as is before said) if men desire to provide Goats for herd-breed and properties.

Lorentius.

profit, to as their Kids may be like them, and they bear young or continue procreation eight prom, to as their kinds may be like them; and they bear be firm, great, well compacted, full of years at the leaft. And for their outward parts, let them be firm, great, well compacted, full of years at the least. Isnu for their outward parts, let their be strong suchout bunches or indentures a muscles, and the superficies of their whole body be soft and equall, without bunches or indentures a therefore a thick hair, two dugs hanging under their snowt or chin, are good signes of the best Goats.

Albertus.

There are two kindes of Goats, one horned, and of this fort the long there horsed bealts, with kinds of Goats broad forcheads, are the most approved, and by the civeles of their floring their age is differed. But the unborned are best for breed, procreation and milk and such breche Capital Goate which are for the most part white, flat nosed, and little of growth. Their eyes are very deep in their heads, and

therefore their light sharp, strong and continual seeing bright and clear in the night, but the colour of their eyes variable, like to the colour of their bodies ; The males have more teeth then the Elianus. females, for the females want their upper teeth ? But males and females have large beards under 1 liny. their chins, and this is called Aduren (laith Eryngur) but the reason hereof is, because that when a Goat is taken by the beard and drawn out of the fold, all the residue stand amazed, and so also when any of them hath eaten Sea-holly (cald Eryngium :) fo that Ariffute confoundeth Eringium for Aruni. cum and so taketh one for another. Once in Lemnos there was a male Goat which had so much milk wrung out of his paps growing betwith this less, that therewith a Callyby licking it received the beeflings, but afterward the male kid begotten by the same Goat had the like udders, whereat the owner being much amazed, because it was a prodigious thing, for his satisfaction asked counsel at the Oracle, from whom he received this answer, that it betokened nothing but plentiful encrease of his Cattel. The females have two udders under their loins next to the imail of their belly except Orthogorus. the Libian Goats, and their udders lie under their breast or forepart of their bellvilike an Apes. Aristoile. In Naxus the Goats have greater Gals then its any other part of the world, and the forepart is Naxus. held prodigious: On the contrary, in Chalce the Goats have no gail at all. Firey have many belies Elianus. and a round Milt, which thing no other horned beat hath, except a Sheep. The males have harfher and a round with, which change to the Libian Goats have hair as long as womens, and very rough carled, which the inhabitants shear off every year, and therewith the ship wrights make, cable ropes a but in Cilicia and Phrygia, they thear them and make the fuffe called Zambelot: and another kinder of Of the cilician Cloth called Mathaliane. In arabia they make Tents of Cloth campiled of Affec and Goats hair and Cloth made of it seemeth that Cilicia received his name of this kinde of Cloth, which is called in Latin, Cilicium or; Goars hair, else that this Cloth was first invented among them, whereupon it received that denomination; but among the Grammarians and Poets, Lana Caprina (Goats wool), grew to a proverb, to fightfield thing of no weight or moment, as it is in Horace; 5 1 DB 7

Alter ricatur de lana sape coprina, Propugnat nugis armatus

There are another fort of Goats which are called Syrian Goats, and of some Manbin Goats, and of the seem-most commonly Indian Goats, because they are most noble in that Countrey, and that in Cothe 1 and brin or Syrian likewise in the Region of Danjats, for Mambre is a Mountain neer Hebren, from whende it is probable, Goats. that the word Mambrin competh; wherefore I have thought good to expresse the figure both of the greatest of that kinde, as it was taken by Amongs Musa Brasinalus, thysician to the Noble Duke Hercules de Este, at Ferraria, by one of these Goats brought thither to be seen.

Thefe

These lesser were found pictured in an old manuscript in Germany, which book did intreat of the Holy Land. The greater Goat I conjecture to be the same which Lee Afer calleth Adimain and is found in Mauritania, being as tall as an Asse, and hath very long broad ears pendant, and under them next to their necks two things like dugs or paps, which hang down from their throat

The History of Four-footed Beasts.

and these are most fruitful in milk, and with these the Lybians plow, and keep them in Read of Kie and other Cattel, for they milk them, and of their milk make Butter and Cheefe. Their hair is very short, and they very gentle and familiar; fo that the faid Les affirmeth, that when he was a young man, and loved those rath and wanton foorts wherewithal youth are delighted, he got up upon one of these, and rode quietly upon the back of it above a quarter of a mile. They keep, being wilde, in the Deserts of Lybia, and if at any time they fray or wander into Numidia; and the fields thereof, it is accounted by the people and inliabitants a prodigious and monstrous

The leffer kinde I conjecture to be the right Mambrine or Syrian Goat . although fome of the late writers call it an Indian

Goat; the reason is, because (as hath been said) they call all strange beasts by the names of Indian; if they finde them not in their own Countrey. The ears of it are large and broad, as the picture describeth, and such ears have the Goats of Gallia-Narbon, being at the least as broad as a mans span; they are of colour like wilde Goats, their horns very sharp, and standing not far distant one from the other, and have stones like a stone Horse, being in all other parts not unlike to the vulgar and common Goat.

Some curious herdimen (as Alomeon and Archelant) have delivered to the world, that Goats take breath through their ears; and Phyler approveth their conceit, because he had seen an experiment of a Goat, that his mouth and nothrils being stopped fath, nevertheless he seemed not to be troubled for want of breath : and for this also is alleadged the authority of Oppianus, who writeth of certain Goats (called Aegari) that they have a certain hole or passage in the middle of their head, betwixt the horns, which goeth directly unto the liver, and the same stopped with liquid Wax, suffocateth

If this be true (as I would not any way extenuate the authority of the writer) then it is very likely that some have (without difference) attributed to all kindes of Goats that which was proper to this kinde alone, for the former opinion is not reasonable: Nevertheless I leave every man to

his own liberty of believing or refusing. There is no beast that heaeeth so perfectly and so sure as a Goat, for he is not only holp in this fense with his ears, but also hath the Organ of hearing in part of his throat, wherefore when the Egyptians describe a man which hath an excellent ear , they express him by a Goat. There are fome kinde of Goats in Illyria which have whole hoofs like a Horse, and these are only found in that Region. In all other Nations of the World they are cloven footed.

The use of their several parts is singular, and first of all to begin with their skin, the people of Sardinia (as faith Nymphidorus) nourish Goats for their skins, whereof they make them garments, being dreffed with the hair upon them; and they affirm frange virtue in them, namely, that they heat their bodies in the Winter, and cool them in the Summer; and the hairs growing upon those skins are a cubit long, therefore the man that weareth them in Winter time, turneth the hairy fide next to his body, and so is warmed by it; and in Summer the raw side, and so the hair keepeth the Sun from piercing his skin and violence of heat: And this also is usual in Suevia, where the women wear garments of Goats hair in the Winter, and also make their childrens coats thereof, according to Virgils faying in Moreto,

- Et cinetus villofe tegmine Capra.

For this cause the Merchants buy them rough in those parts of Savoy neer Gentva, and their choice is, of the young ones which die naturally, or are kild, or else such as were not above two years old. The Tyrians in the Persian war, wore upon their backs Goat-skins. In ancient time they made hetcof Dipibera, that was a kinde of Parchment, whereon they wrote on both fides, and had the name in Greck from that use: which Hermolam by a metaphorical allusion, called Opisiographi. From the use of these in garments, came the appellation of harlots to be cald Pelices, and a whores bag was called Penula Scortea, fuch a one is used by Pilgrims which go to visit the Church of Saint Pames of Calee, and fuch Carriers or Foot-polls had wont to use in their journes, which caused Martial to write thus; Ingrediate

Ingrediare viam colo liget ufa: (ereno. An lubitas nulquem (certea cepit aquer.

The Sandals which men were wont to wear on their feet in the East Countries, were also made of Goats skins, and there was a custome in Athens, that men for honour of Bacchus, did dance upon certain Bottles made of Goats skins, and full of wind, the which were placed in the middelt of the Theatre, and the dancer was to use but one leg, to the intent that he might often fall from the flippery bottles, and make the people sport; whereunto Virgil alluded this faying:

Mallibus in pratie unclos faliere pro utres.

Pling.

There is also a Ladanum tree in Carmania, by the cutting of the bark whereof there issueth forth a certain gum, which they take and preserve in a Goats skin; their use in War wherein the Souldiers were wont to lie all Winter, and therefore we read that Claudius the Emperour had given him thirty tents of Goats skins for his Souldiers attend upon the Judges, and the Mariners also by these defended themselves from the violence of storms upon the Sea : and so I leave this part of the beaft, with remembrance of that which is written in holy Scripture, Heb. 11, that the people of God in ancient times did flee away from the rage of superstition, being anparelled, or rather meanly disguised in Goat skins, being charitably holped by the beasts, that were cruelly put to death by wretched men.

In the next place the milke of Goats cometh to be considered, for that also hath been, The milk of is, and will be of great account for Butter and Cheefe; which the Writers call Tyrogeia, Gons. and Virgil celebrateth the fingular commendation both of the Wool and of the Milke, in

thefe Verfes :

Hac quoque non cura nobis leviore tuenda. Nec minor usus erit, quamvis Milesia magno Vellera mutentur Tyrios incocta rubores. Denfior hine foboles, hine largi copia lattis; Que magis exchausto sumaverit ubere multira, Leta mugis pressis manubint flumina mammie. Nec minus interea barbas, incanaque menta Cyniphit tondent biroi (etasque comantes Usum in Castrorum : & miferia velamina nautis.

Therefore their Milk is profitable for Butter, although inferior to a Cows, yet equal to a Sheeps, To increase and the herdsmen give their Goats salt before they be delivered of their young for this maketh them Goats milk. to abound in milk. Others with Goats milk preserve their Wine from corruption by sowreness; Albertus. first they put into their Wine the twentyeth part so much as is of the Wine, and so let it standin the A secret in the fame veffell covered three or four dayes, afterward they turn it into a fweet and fresh veffel, and milk of Gons, fo it remaineth preserved from all annoyance of sowreness.

Myrepsus.

Cheefes made of Goats milk were wont to be called Velabrenfes Cafei, because autonest the Komans they were made at Velabrum, and that with smoak, whereupon Martial made this Distiction :

> Non quemeunque focum; nee fumum caseus omnem; Sed Velabrenlem qui bibit , ipfe fapit.

Aristolle and Julius Pollux do commend the Sieilian Cheese, which was made of Sheep and Goats milke together, and by Athenaus it is called Cafeus Tromilious, and by Simonides Stromilius. In Rhatid of Helvetia there are excelent Cheefes made of Goats milk and Cow milk mixed together. The milk also of a Goat mixed to a Womans milk is best for the nourishment of man, because it is not Hermolatti too fat ; yet Galen faith, if it be eaten without Hony, Water, and Salt, it curdleth in the belly of a man like a Cheese and strangleth him; and being so used it purgeth the belly: from thence came the fiction of the Poets, that Jupiter was nourled by a Goat, and that afterward in his War against the Thanes or Giants, he slew that Goat by the counsel of Themis, and wore her skin for an armor, and so having obtained victory, placed the Goat among the Stars, whereupon she was called Aix curania, a heavenly Goat, and so Germanions Cefar made this Verse upon him, and Jupiter himfelf was called Aigiochus.

> Illa putatur Nutrix effe Jovis, fi ver's Jupiter infans Ubera Creies sunit fidiffima Capra, Sydere qua claro gratum testatur alumnum.

Guatt.

Of the flesh of The flesh of male Goats is not wholesome for mans body, but the flesh of a female in the Spring and Fall of the leaf, by reason of the good nourishment may be eaten without danger. They are and rail of the leaf, by reason of the goarper in concoction and hotter, wherefore if they digeft not well, they increase melancholy. The liver of a Goat being eaten, doth bring the Falling sickness; yet being salted a good space, and then sod with Vine-branches, or other such broad leaves, to keep them afunder, and some Wine poured into the Water when they almost fod, they become are very which and delicate meat; and therefore the Athenians praised the Lacadenichtans, that in their feat

The History of Four-footed Beasts.

fweet they called Copide, they flew a Goat; and held it for a divine meat. weet they caned Copias, they new a Coat, relateth of a certain T bibane Champion, which excelled Also Chomachus an Academick of Garthage, relateth of a certain T bibane Champion, which excelled in frength all the Champions of his time, and that he did eat continually Goats flesh, for it is very ftrong. and remaineth a long season in the body, and doth much good being digested, not withstanding the throng and rank smell thereof, otherwise it is dangerous, as is already said, therefore Fiera

having commended the Kyd, when he cometh to speak of the Goat he writeth thus:

Cum male olet siccat, fit jam caper improbus, absit, Et cadat ante foces victima Bacche tuot.

But Pliny affirmeth, that if a male Goat eat Barley bread, or Parfneps washed, the same day that he is killed, then there is no poylon in his flesh : the stones of a Buck goat, resist concoction, and beget evill humors in the body : wherefore fuch a banquet is called in Greek (Tragos Hulibertas) for Goats after their copulation, have an evil flesh, not fat, but dry, and the remedy to make their flesh sweeter, is to geld the male when he is young and tender, for so his temperature is amended by a cold and moist constitution.

The Inhabitants of Portugal eat Goats fleth, and account it delicate meat; especially such as dwell in the Mountains. In Germany they make of it a kinde of meat which is called Klobuusst, and is prepared on this manner: they take a Goats heart newly taken out of the body, and flit it into small pieces, and break fix Egges upon it, and the crums of white bread, seasoned with spices and Saffron, and so put into a bag, and sod or roasted: afterward they are served upon the table, and strewed

The guts being salted, are called (Hilla) which the French stuffe like puddings, and call them (Saulover with Kitchin Sugar. ciffer) from whence cometh our English Sawfadge, of this fewet and fat of Goats are the best candles made, because it is hard and not over liquid. The bloud of a Goat hath an unspeakable property, for it scoureth rusty iron better then a file, it also softneth an Adamant stone, and that which no fire is able to melt, nor iron to break, being of fuch an invincible nature, that it contemneth all violent things, yet is it diffolved by the warm bloud of a Goat. The Load-stone draweth iron, and the same being rubbed with garlick, dyeth and lofeth that property, but being dipped again in Goats-bloud,

reviveth and recovereth the former nature. Ofthanes prescribeth for a remedy of love, the urine of a Goat to be mingled with Spikenard, and fo drunk by him which is overcome with that passion, assuring him thereby that they shall fall in as great loathing as ever before they were in loving. With the hoofs of a Goat they drive away Serpents, and allo with the hairs by burning and perfuming them in the place where the Serpents lodge. With the horns of Goats they make bows; for in Delos there was dedicated the horn of a Goat, which was two cubits long and a span; and hereat ought no man to wonder, for that noble Bow of Pandarus, which Homer commendeth, was made of a horn of a female Goat.

Afficanus declareth, that in ancient time they made fruitful their Vine-yards by this means: they took three horns of a female Goat, and buryed them in the earth with their points or tops downward, to the root of the Vine-stocks, leaving the hollow tops, standing a little out of the ground, and so when the rain descended, it filled the horns, and soked to the root of the Vine, perswading themselves thereby that they received no small advantage in their Grapes. The gall of a female Goat put into a veffel, and fet in the earth, is faid by Albertus to have a natural power to draw Goats unto it, as though they received great commodity thereby. Likewife, if you would have white hairs to grow in any part of a Horfe; shave off the hair and anoint the place with a gall of a Goat, fo shall you have your defire. The Sabeans, by reason of continual use of Myrrhe and Frankincense, grow to a loathing of that savour: for remedy of which annoyance, they perfume their houses by burning storax in Goats skins. And thus much for the several parts of a Goat.

There were in ancient time three kindes of Heards-men which received dignity one above another; the first were called (Bucolici) Neat-heard, because they keep the greater Cattel: the second were (Opiliones) Shepheards, of their attendance upon Sheep : the third, last, and lowest kinde, were termed Aepoli, and Caprarii, that is, Goat-heards, or Keepers of Goats, and fuch were the Locenfians, who were called Ozole, because of their filthy smell, for they had the most part of their conver-

fation among other Beafts. A Goat-heard or Keeper of these Cattel must be sharp, stern, hard, laborious, patient, bold and chearful, and tuch a one as can eafily run over the Rocks through the Wildernels, and among the bushes without fear or grief, fo that he must not follow his flock like other heards, but go be fore them: they must also be light and nimble, to follow the wandering Goats, that run away from their fellows, and so bring them back again, for Goats are nimble, moveable, and inconstant, and therefore apt to depart away, except they be restrained by the herd and his Dog. Neither have Goats a Captain or Bell-bearer like unto Sheep, whom they follow, but every one is directed after his own will, and herein appeareth the pride of this Beaft, that he fcorneth to come behinde either Cattel, or Sheep, but always goeth before; and also in their own herds among themselves, the Buck goeth before the female for the reverence of his beard, (as Alianus faith) the labour of the Goat-herd must be to fee his Cattel well fed abroad in the day time, and well foulded at night; the first rule therefore in this husbandry is to divide the flocks, and not to put any great number of them together, for herein they differ from Sheep, who love to live together in multitudes, as it were affecting fociety by which they thrive better, and mourn not fo much as when they are alone: but Goats love fingularity, and may well be called Schifmaticks among Cattel, and therefore they thrive best lying together in small numbers, otherwise in great flocks they are soon infeeled with the peltilence, and therefore in France, they care not to have Magnos Greges, fed plures: not great flocks, but many.

The number of their flock ought not to exceed fifty, whereupon Varro writeth this flory of Gabisus a Roman Knight, who had a field under the Suburbs: containing a thousand Akers of pasture ground, who feeing a poor Goat-herd bring his Goats every day to the City, and received for their milk a peny a peece, he being led with covetousness, proponed to himself this gain, that if he stored his faid field with a thousand Milch-semale-goats, he also should receive for their milk a thousand pence a day; whereupon he added action to his intent, and filled his field with a thoufand Goats, but the event fell out otherways then he expected : for in short time the multitude infeeted one another, and so he lost both milk and flesh: whereby it is apparent, that it is not fafe to

feed great flocks of these Cattel together. In India in the Region Couba, the Inhabitants give their Milch-goats dryed fishes to cat, but their

ordinary food is leaves, tender branches, and boughs of trees, and also bushes or brambles; whereupon Virgil wrote in this manner;

> Pascuntur verò silvac & summa Lycai, Horrantesque rubos & amantes ardua dumos.

They love to feed on the Mountains better then in the Vallies and green Fields; always striving to lick up the Ivie or green plants, or to climbe upon trees, cropping off with their teethall manner wilde herbs, and if they be restrained and enclosed in fields, then they do the like to the plants that they finde there; wherefore there was an ancient law among the Romans, when a man let out his ground to farm, he should always condition and except with the Farmer that he should not breed any Goat in his ground, for their teeth are enemies to all tender plants: their teeth are also exitiable to a tree, and Pliny and Varro affirm, that the Goat by licking the Olive-tree maketh it barren; for which cause in ancient time, a Goat was not sacrificed to Minerva to whom the Olive was facred.

There is no creature that feedeth upon such diversity of meat as Goats, for which cause they are elegantly brought in by Euphin the old Poet, bragging of their belly chear a wherein they number up above five and twenty feveral things, different in name, nature, and tafte and for this cause Eustathius defended by strong argument against Disarius, that men and cattel which feed upon divers things, have less health then those Beasts which eat one kinde of fruit alone. They love Tamerisk, Aldern, Elm-tree, Affaraback, and a tree called Alaternus, which never beareth fruit but only leaves: also three-leaved-grass, Ivie, the herb Lada, which groweth no where but in Arabia, whereby it cometh to pais, that many times the hair of Goats is found in the gumb called Ladanum, for the peoples greedy desire of the gumb, causeth them to wipe the juyce from the Goats heard,

For the increase of milk in them, give them Cinquesoul five days together before they drink, presse binde Dittany to their besties, or (as Lacuna translateth the words out of Africanus) you may lay milk to their bellies, belike by rubbing it thereupon. The wilde Goats of Creet, eat Ditte- Ariffolle. my aforefaid against the strokes of Darts; and Strapion avoucheth by the experience of Galen, that Goats by lighting the leaves of Tamarisk, lose their gall; and likewise that he saw them licking 8tr-South by high ing the reaves and anniation; substitute Benry and the event thereof was, theo their age never turked or changed into whiteness on other external figures, thereof no seems the should be should

changed into whiteness quother external figues, thereof. To you the should be should b they shall never have any Spleen; if any one of their eat Sea-holly, the residue of the sock stand till and will not go forward, till the meat be out of his mouth. The Grammarians fay that Wingers Elianus. was killed by Bellerophon, the fon of Glaucus, in the Mountain Lyoius, and the reason hereofies, what the Poets faigned Chimerato be composed of a Lyon, a Dragon, and a Goat, sand in that Mountain all those three were kept and feet: for in thosop were Lybbs, in the middle were Goats, and also at the foor thereof Serpents! If they suffer heat or cold they lare much endangered, for such is their nature, that they avoid all extremity, and the females with young are mult of all anothered with cold; if they have conceived in the Winter, then many Abortments on casting their young

In like fort it hapnoth if they cat Walnuts (and not to their full) unripry therefore either they mult be suffered to eat of chemico saciety, or elle they are not to be permitted to themis do a difference for the same of the permitted to the same of the same o

The History of Four-footed Beasts.

Diofoorides. Piny.

Horus.

If at any time the eat Scammony, Hellebore, Lesseron, or Mercury, they are much troubled in It at any time the eat Standing, Fellebore, Lenton, or The Publicans in the Province their stomach, and lose their milk, especially the white Hellebore. The Publicans in the Province of Cyrene, have all the government of the pattures, and therefore they permit not Benzwine to grow of Cyrene, nave an the government of the pandies, and if at any time their Sheep or Goats meet with any in their Countrey, finding thereby great gain; and if at any time their Sheep or Goats meet with any branch thereof, they eat it greedily, but the Sheep immediately fall to sleep, and the Goats to Neezing. Egolethros and Sabine are poyson to Goats. The Herb called in Greek, Rhododendron, and may be Englished Rose-tree, is poyson to Goats, and yet the same helpeth a man against the venome of

The prickle or spindle tree (called also Euonymus) which groweth in the Mount Occynius called Or. dyne) about the bigness of a Pine-apple-tree, having fost leaves like the same, and it buddeth in September, and the flower is like to a white Violet flower, this killeth Goats, except they be purged with black Hellebore immediately after they have eaten thereof. The Egyptians when they will dewith Diack received infinediately after they picture the herb Curilago or Conyza, because it also killeth them. Also as Cleary sippus affirmeth they avoid Cumin, for it maketh them mad, or bringeth

upon them Lethargies, and such like infirmities.

He avoideth also the spettle of man, for it is hurtful to him, and to the Sea-fish Scolopendra, and yet he eateth many venemous herbs and groweth fat thereby; and this also may be added, that Goats Ælianus. grow fat when they are with young, but by drinking of Honey they are weakned, and indangered of death. Concerning their drink, it is necessary for a skilful Goat-herd to observe the nature of the beaft, and the best time and place of their watering, according to the saying of Virgill:

> - Jubeo frondentia Capris Arbuta sufficere, & fluvios prabere recentes.

Aristotle. Myndius. Ælianus. In the Summer they are to be watered twice a day, and at other times once only in the afternoon: but it is reported of the Goats of Cephalenia, that they drink not every day like other Goats, but only once or twice in fix months, and therefore they turn themselves to the winde or cold air of the Sea, and by yawning, fuck into their mouths or bellies that which serveth them in sead of water. When the Sun declineth, they ly and look not upon one another but on the contrary, and they which lodge in the fields take up their rest amongst their acquaintance. But if they be used to fold or house, they remember it, and repair thither of their own accord, which thing caused the Poet to write in this manner:

> Atque ipfe memores redeunt in tella; fuofque Ducunt : & gravido (uperant vin ubere limen.

Columella.

Concerning their stables or houses to lodge in, for their defence against the cold, the diligent herd man must observe, that nothing must be laid under the Goat to ly upon, and it is best to make his stable upon stones, or some some such hard stoor, and the same must be kept and turned dry every day from the annoyance of their dung, for that hurteth their heads. It is good to fet the window of their stable to the Sun, and from the winde, according to the counsel of Virgil;

> Et stabula a ventis byberno opponere foli. Ad medium conversa diem oum frigidus olim Jam cadit extremoque irrorat Aquarius, anno.

Although Goats be stronger then Sheep, yet they are never so sound, for in buying and selling of them, he was never accounted a wife man, that either hoped to buy, or promifed to fell without fault. It was sufficient in open Market places, when and where Goats were to be fold, to promise, Hedie capras rette effe & bibere poffe & eas licite habere, that is, that the day of their fale they were well, and could drink, and they were his own, and it was lawful for him to have them.

But farther no man was urged, for (Archelaus faith) they are ever Febricitantes, because their breath is hotter, and their copulation more fiery, and therefore their herdmen must not be unprovided of good and sufficient medicine to help them, and not only against their natural diseases, but also their continual horn-wounds which they give one another by their often fightings, and also when they aspire to climbe upon steep and craggy pointed rocks or trees, they often fall and are wounded, in fuch cases they have no such Physician as their Keeper, whose bag and box must be as an Apothecaries

shop to yeeld continual remedies to all their grievances.

The best means to preserve them in health, next to a good diet and warm lodging, is, to plant Absfin neer to their stabling houses. And their continual Ague spoken of before is profitable to their body, for when it departeth and leaveth them, presently they perish and dy. Sheep and Goats have a natural forefight of the Pestilence or Murrain, of Earth-quakes, and of wholesome temperate weather, and of abundance and store of fruits; but neither of both shall be ever infested by the Pestilence, if you give them the powder of a Storks Ventricle or maw one spoonful thereofin

And whereas all other kinde of Cattel when they are fick, confume and pule away by little and little, only Goats perish suddenly, insomuch as all that are sick are unrecoverable, and the other Of the Goat.

of the flock mult be initantly let bloud and separated before the infection overspread all: and the reason of their sudden death, is because of their aboundance of food, which ministreth speedy flax for the fire of their disease to burn. At such times they must not feed all the day long, hut only thrice or four times a day be led forth to grass, and brought in again to their stables.

If any other fickness annoy them, they are to be cured with Reed, and the roots of white Thorn heat together with Iron Peltles, and mingled with rain Water; and so given to the Cattel to be drunk: but if this medicine help not, then either sell them away, or else kill them, and salt them till vou

minde to eat them. Goats are not troubled with Lice or Nits, but only with Tickes.

There is a certain Wine called Melampodion, the report is, that one Melampor a Shepherd had it revealed unto him, to cure the madnels of Goats: it is made of black Hellebore, and Goats milk. Goats are also molested and subject to the Falling sickness, and this is known by their voyce and cold most brains; and therefore the Koman Priests were commanded to abstain from touching such Calius.

They are also troubled with the Gowt; the Female-goat easeigh the pain of her eyes by pricking them upon a Bull-rush, and the Male-good by pricking them upon a Thorn, and so pituitous matter followeth the prick, whereby the fight is recovered without any harm done to the Apple; and from hence it is supposed, that the Physicians learned theit Parakentests pricking of fore eyes Elianus; with a Needle.

The Females never wink in their sleep, being herein like the Roe-bucks. There are certain Birds (called Capri-mulgi) because of their sucking of Goats, and when these or any of them have sucked a Goat, she presently falleth blinde. If at any time she be troubled with the Dropsie, Pliny. an iffue must be made under her shoulder, and when the humour is avoided, stop up the hole with liquid pitch. They drink the seed of Sefelie to make them have an easie deliverance of their young, and for that cause Columella prescribeth a pinte of sod Corn and Wine to be infused into their throats in that extremity; their other maladies being like unto Sheep, we will referve their description and cure to that History.

These Goats have in ancient times been used for Sacrifices, not only by the Soveraign command of Probus. Almighty God, but also by the practife of Heathen people; for their perfect facrifice which consisted

of a Ram, a Goat, a Hog, and a Bull, was called Hecatombe and Tryttin.

The reason why Swine and Goats were sacrificed among the Heathen, was, because the Swine dig up the earth with their nofes, and root out the Corn, they were facrificed to Ceres; and the Goats spoil the Vines by biting, for which cause they sacrificed him to Bacchus; that so the drunken God might be pacified with the bloud of that Beaft, whose hallowed grapes he had devoured; whereupon the Poet writeth thus :

> Sus dederat pænas: exemplo territus horum Palmite debueras abstinuisse, Caper. Quem spectans aliquis dentes in vite prementems Talia non tacito dilla dolore dedit : Rode vaper vitem, tamen bint cum ftabis ad aras, In tua quod [pargi cornua possit, evit.

When they facrificed a Goat in Gracia, they tryed him by giving him Peafe or cold water to drink, which if he refused, they also refused him for sacrifice, but if he tasted it, they took and of-

Martiall having seen, or rather heard of a Countrey Priest, sacrificing a Goat, and being affished by a Countreyman, when the Beast was slain, the Priest commanded the poor Countrey man to cut off the stones, Teter ut immunde carnis abiret ador, to let the unwholesome vapour of the unclean flesh out of the body. Afterward the Priest being busic about the Sacrifice, and stooping down to the carkais of the Beaft, his cods appeared behinde him betwixt his legs, the which when the Countreyman faw, he fuddenly cut them off with his sharp knife, thinking that the ancient ceremony of fasting required this to be done : whereupon Martial wrote this Epigram,

Sto modo qui Tulcus fuera, nune Gallas araffex, Dum jugulus biroum, factus es ipse caper.

The Mendestans worshipped Goats both males and females, because as they imagine they were Greatdus. like to their God Pan. The Egyptians also deiffed the male Goat for his genital members, as other Nations did Priapus. The Gentiles had also a brazen Goat, whereupon Venus rode in bras, which picture they called (Pandemon) and Venus (Epitragia:) I think that lust could not be better described then by this emblem, for venereous persons will suffer their whores to do any digrace unto them. for their carnal pleasure. And thus much for these male and semale Goats, now follow the stories of the wilde Goats and the Kids in order.

...11...

Here is no man that shall see this Beast, but will easily yeeld unto my opinion, that it is a Goat, and not a Deer, the hair, beard, and whole proportion of body most evidently demonstrating so much, neither is there any difficulty herein, except for the horns which turn forward at the point, and not backward, which thing yet swarveth not so much from a Goat as from a Deer, and therefore can be no good reason to alter my opinion. There are of this kinde, as Do-Ctor G., affirmeth, in the Northern part of England, and that figure which is engraven at Rome in a Marble pillar, being a remembrance of some Triumph, which Pliny, setteth forth, differeth in no part from this Beafts description and proportion: Yet I take it that it may be brought into England from some other Nation, and so be seen in some Noble many house, but that it should be bred there, I cannot finde any monument of authority, but I rather conjecture the same to be bred in Spain. Of these kindes there are three Epigrams in Marital, whereby is declared their mutual fights killing one another; their fear of Dogs, and their fielh delired both of men and

The first Epigram describing their wilful fight, one killing another, and so saving a labour to the Hunter, for they kill themselves to his hand, is thus;

> Frontibus adversis molles concurrere damas Vidimus & fati forte jacere pari. Spectavere Canes pradam, Stupuitq; Superbus Venator, cultro nil Supereffe Suo. Unde leves anima tanto caluere furore? Sic pugnant Tauri, fic cecidere viri.

The second Epigram is a Dialogue speaking to the Emperour, who took care to encrease his game, feeing not only men were enemies to them, but they also to one another whereupon he writeth this distichon:

Aspicis imbelles tentent quam fortia dama, san but Prella; jam ilmidis quanta sit ira feria- 1998 dess In mortem parvie concurrere frontiburaudent o mort mer frombinte Vie Cefar damie parcere P, mitte Canes

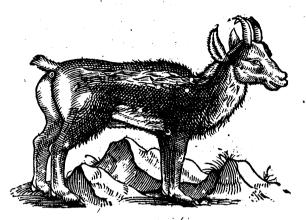

The third Epigram is a complaint of their weak and unarmed states having neither teeth like Bores, nor horns like Harts to defend themselves, but lie open to the violence of all their enemies :

Dente timetur Sper, desquaint connua cervum,
Imballes davie quid pifs preda sumus?

Thefe are of a whicith, yellow colour on the back, and are nourthed fometime for the pleafare, and fometime for the profit of their possessor, for they will suffer hunting like a Deer, and allo be rained for milk like a Goat. And hereof I finde no other especial mention among Australia, believe that which is already rehearfed.

Of the WILDE GOAT, and the Figure of the Helvetian, Alpian. WILDE OF ROCK-GOAT.

Of the Goat.

Ilde-goats are transfigured into many similitudes, and also dispersed into many Countries Wilde-goats are transngured into many initiations, and allow wilde Goat is here fet down.

beyond the Seas and in the Alpes, the picture of the Alpine wilde Goat is here fet down. They are also to be found in Italy, in the Mountains of Fiscela and Tetrica, in so much as the tame Vario. Goats which are nourished there, are said to be derived of these wilde Goats, these are called Cynthian Goats, because they are bred in the Mountains of Delos called Cynthus. There are of these which are found in the tops of the Lybian Mountains as great as Oxen, whose shoulders and legs abound with loofe shaggy hair, their shins small, their faces are round, their eyes are hollow and hard to be fcen.

Their horns crooking backward to their shoulders, not like other Goats, for they stand far distant one from another: and among all other Goats they are indued with a most singular dexterity of leaping, for they leap from one top to another, Randing a great way afunder, and although many times they fall down upon the hard rocks, which are interposed betwixt the Mountains, yet receive they no harm: for such is the hardness of their members, to result that violence, and of their horns to break their falls, that they neither are offended thereby in head nor legs.

Such are the Goats of Soratium as Cate writeth, which leapeth from Rock to Rock, above three-fore foot: of this kinde are those Goats before spaken of in the History of the tame Goat, which are thought to breath out of their ears, and not out of their nostrils, they are very swift and strong horned; the love betwixt the Dams and the Kids in this kinde, is most admirable; for the Dam doth most carefully educate and nourish her young; the young ones again, do most thankfully recom-penie their mothers carefulnes, much like unto reasonable men, which keep and nourish their own Parents in their old decrepit age, (which the love of God and nature doth enjoyn them) for fatisfaction of their own education; so do these young wilde Goats, toward their own mothers; for in their age they gather their meat and bring it to them, and likewise they run to the rivers or watering places, and with their mouths suck up water, which they bring to quench the thirst of their Parents: and when as their bodies are rough and ugly to look upon the young ones lick them over with their tongues, so making them smooth and neat.

And it at any time the Dam be taken by the Hunters, the young one doth not for sake her till he be also insnared: and you would think by the behaviour of the imprisoned Dam towards her young Kids, and likewise of the Kid towards his Dam, that they mutually contend one to give it self for the other: for the Dam foreseeing her young one to hover about her in the hands of her ennies, and cyntinually to follow; with fighs and tears feemeth to wish and perswade them to depart, and to fave themselves by flight, as if they could say in the language of men, Fugite silii infestor venatofrom these harmful and greedy Hunters, lest if you be taken with me, I be for ever deprived of the name of a mother. The young ones again on the other fide wandring about their Mother, the name of a mother. The young ones again on the other line wanting about their faces, with pibleat forth many a mournful fong, leaping to the Hunters, and looking in their faces, with pittil afpects, as if they faid unto him; We adjute you (oh Hunters) by the Maker of us all, that you deliver our Mother from your thraldom, and indicad of her take us her unhappy children, bend your hard hearts, fear the laws of God which forbiddeth innocents to be punished, and consider what reverence you owe to the old age of a mother; therefore again (we pray you) let our lives fatisfic you for our Dime liberty. But noon creatures, when they fee that nothing can our lives fatisfie you for our Dams liberty. But poor creatures, when they fee that nothing can

Of

Allertus.

Pliny.

move they unexorable minde of the Hunters, they resolve to dye with her whom the cannot deliver, move they unexorable minue of the fauncers, they seem the hands of the Hunters, and so are led and thereupon of their own accord, give themselves into the hands of the Hunters, and so are led

Concerning the Lybian Goats before spoken of, which live in the tops of Mountains, they are away with their mother. taken by nets, or snares, or else killed by Darts and Arrows, or some other art of hunting. But if taken by nets, or mates, or the kined by plain fields, they are no less troubled, then if they were in the at any time they descend down into the plain fields, they are no less troubled, then if they were in the at any time they delicend down into the parameter any man of a flow pace may there take them, without waves of fome great water. And therefore any man of a flow pace may there take them, without

y great dimenty. The greatest benefit that ariseth from them is their skin and their horns; with their skins they are the greatest benefit that arrest meets, Frosts, and Snow, and it is a common weed for Shepherds clothed in Winter time against Tempests, Frosts, and Snow, and it is a common weed for Shepherds ciotnea in vvincer time against tempers, and care of Buckets, to draw water out of the running streams, and Carpenters. The horns serve them in steed of Buckets, to draw water out of the running streams, and carpenters. The norm feet thirft, for they may drink out of them, as out of cups; they are fo wherewithan they quench their thinks, to they may are no draught, and when cunning artificers have the great, that no man is able to drink them off at one draught, and when cunning artificers have the

handling of them, they make them to receive three times as much more.

The self same things are written of the Wilde Goats of Egypt, who are said never to be hurt by Scorpions. There is a great City in Egypt (called Coptus) who were wont to be much addicted to the worship of Isis, and in that place there are great abundance of Scorpions, which with their the worming of the same that the the words and deadly wounds to the people, whilest they mourn strings and poyson, do oftentimes give mortal and deadly wounds to the people, whilest they mourn strings and poyson, do oftentimes give mortal and deadly wounds to the people, whilest they mourn about the Chappel (for they worship that Goddes) with funeral lamentarion: against the stinging of these Scorpions, the Egyptians have invented a thousand devises, whereof this was the ing or their scorpions, the Egyptian have hire and wilde female Goats naked among the Scorprincipal; At the time of their affembly, they turn in wilde female Goats naked among the Scorprincipal; principal; Actue time of their ancingly, they are delivered and escape free from the wounds pions lying on the ground, by whose presence they are delivered and escape free from the wounds proms tyring on the Geptites do religiously confecrate these female Goats to divinity, of the Serpents, whereupon the Copities do religiously confecrate these female Goats to divinity, thinking that their Idoll Isis did wholly love them, and therefore they facrificed the males, but never

It is reported by Plutarch, that wilde Goats do above other meat love meal and figs, wherefore the females. in Armenia there are certain black tishes which are poyson; with the powder or meal of these sishes they cover these figs, and cast them abroad where the Goats do haunt, and assoon as the Beasts have tasted them, they presently dy. Now to the Wilde Goat before pictured, called in Latine, Rupita. pra, and Capricornus, and in Greek, a Gargos, and Aigastros, and of Homer Ixalon; of the Germans, Gem. mes, or Gemmus; the Rhettans which speak Italian, call it Camuza; the Spaniards, Capramontes; the Polonians, Dzykakoza; the Bohimians, Korytanski Keulik; that is to say, a Carinthian Goat, because that

part of the Alpes called Carinthia is neer bordering upon Bohemia.

Bellonius writeth, that the French call him Chambris, and in their ancient tongue Tfard, this is not very great of body, but hath crooked horns which bend backward to his back, whereupon he stayeth

himlelf when he falleth from the flippery Rocks or Mountains. These horns they are not fit to fight they are so small and weak, and therefore nature hath beflowed them upon them for the cause aforesaid. Of all other Goats this is the least, it hath red eyes, but a quick eye-fight, his horns are black, being nine or ten fingers long, and compassed about with divers circles, but at the top none at all, which is sharp and crooked like a hook. They arise at the root Parallelwife, that is by equal distance one from another, being hollow the breadth of ones thumb,

The Males in this kinde differ not from the Females, neither in horn, colour, or proportion of the residue solid like the Harts. body: they are in bigness like the common Goat, but somewhat higher. Their colour is betwixt brown and red. In the Summer time they are red, and in the Winter time they are brown. There hath been seen of them which were white and black, in distinct colour one from another: and the reafon hereof is; because they change colour many times in the year. There are some of them altogether white, but these are seldom found; they inhabit for the most part the Rocks or Mountains, but not the tops like the Ibecks, neither do they leap fo far as the foresaid Goats. They come down fometime to the roots of the Alper, and there they lick fand from the Rocks, like as the Villagetame-goats to procure them an appetite.

The Helvetians call these places in their natural tongue Fultzen, that is Salares: about these places do the Hunters hide themselves, and secretly with guns, bows, or other such instruments, they suddenly froot and kill them. When they are hunted they ftep up to the fteepeft Rocks, and most inacceffible for Dogs, by that means providing their own fafety: but if the Hunters prefs after them and climbe upon the Rocks with hands and feet, they leap from thence, from stone to stone, making their way to the tops of the Mountains, fo long as the; are able to go or climbe, and then they have by the horns of their head, as if they were ready to fall, which caused Martial to write thus:

Pendentem summa Capream de rupe videbis, Casuram speres, decipit illa Canes.

Where the Poet attributeth that to the Roe which belongeth to the Wilde Goat, and there they hang many times till they perish, because they cannot loose chemselve again, or else they are shot with Guns, or fall down headlong, or else are dried off by the Hunters. From the day of Saint James they use themselves to the colds of the Managaine sheeks are dried of the dried of the Managaine sheeks are dried of the Managaine sheeks are dried of the dried of parts of the Mountains, that by degrees they may be accustomed to the cold. I have known fork

Of the Goat.

of these made tame, so that they have descended down to the flocks of tame Goats, whom they do not avoid like the Ibex.

From these wilde Goats hath that same herb (called Doronicum) and of the Grecians, Doronicu, given a name among the Germans, Gemesse Wort; that is, Wilde-goats-herb, being excellent to cure the Colick, and therefore highly effeemed among the Arabians, Gracians, and Mauritanians. It is not and dry in the second degree; and the Countrey people in Helvetta, do give it against dizinels in the head because these wilde Goats oftentimes feed upon the same, and yet are never troubled with that infirmity, although they run round about the Mountains.

There are Hunters which drink the bloud of this Goat coming hot out of his body, immediately after the wound given, against that sickness. The fat and milk of a wilde Goat mingled together. have cured one long fick of the Prifick. The wilde Goats of Greet, being wounded with poyloned darts, run presently and eat of the herb Dittani, by the vertue and juyce whereof they not only avoid

the arrow which sticketh in their skin, but also death, and cure the poyson.

Of the KID.

TAving formerly discoursed of several kindes of Goats, now it followeth that we should also Of the name. intreat of the Kid, which is the iffue of a Goat; and first of the several names thereof. It is called in Hebrew, Egedi; which because it fignifieth also a Lamb, they put unto it Haissim, and the plural Masculine is Gedaiim, and the seminie Gedioth, Gen. 35. where the Chaldean translation hath Gadela ; the Persian, Bushabale, or else Cabali buson; for the Persians render Cabale for Sheter; in Hebrew, Bufan, for Isim. The Septuagints render Erifon; and vulgarly at this day, the Gracians call him Eriphon; but the truth is, that Eriphot are Kids of three or four months old, and after that time untill their procreation, they are called Chimeroi , the Latines call him Varinm. Heedi ab edendo . from eating (as Isidorus faith) for then their flesh is tender and fat, and the talt thereof pleasant. The Italians call it Cauretto, or Capretto, and Ciaverello; the Rhetians which speak Italian, Ulzol: the Spaniards, Cabrito; the French, Cherern; the Germans, Gitfe, or Kuflein; the Po-

lonians, Coziel. It was a question whether nature would finish her parts upon a young one out of the dams belly, wherefore a triall was made upon a Kid which never faw his dam, for upon a feafon a diffection was made upon a Female-goat great with young, and out of her belly was a young one saken alive, fo as it could never see the mother; the same Kid was put into a house where were many bowls full of Wine, Oyl, Milk, and Hony, and other liquid things: there also lay befide him divers kindes of fruits, both of the Vine, of Corn, and of Plants; at last this Kid was seen to arise and stand upon his seet, and as if some body had told him that his legs were made to walk upon, he shook off all that moistness which he brought with him out of his mothers belly, afterward he scratched his side with his foot, and then went and smelled at all the former vessels, and at last coming to the milk bowl, he supped and licked thereof, which when the beholders saw, they all cryed out that Hippocrat 1 rule was most true, Animalium naturas effe indoctus, that is to say, the natures of creatures are not formed by art, but of their own inclination.

There is nothing more wanton then a Kid, whereupon Ovid made this verse:

Splendidier vitro, tenero lascivior balo.

They often jump and leap among themselves, and then they promise fair weather, but if they keep continually with the flocks, and depart not from their mothers, or continually fuck or lick up their meat, they fore-shew a storm, and therefore they must be gathered to their folds, according to the Poets faving:

-Si fine fine modoque Pabula delibent cum tutas vesper adire Compellat caulus, monftrabunt adfore nimbos.

If Geese swallow the hairs of Kids or Goats, they dy thereof. Kids are not to be separated from their Dams, or weared till they be three months old, at which time they may be joyned to the Anatoliut, flocks: they are nourished when they are young after the same manner as they be at a year old, ex- Varro. cept that they must be more narrowly looked unto, lest their lasciviousness overthrow their age: and besides their Milk, you must give unto them Three-leaved grass, Ivie, and the tops of Lentils, Palladius. tender leaves, or small twigs of trees: and whereas commonly they are brought forthin twins, it is best, to choose out the strongest headed Kid for the flock, and to fell the other away to the Butchers. Out of the rennet of the Galyes or Kids is the Coagulation. ... to

There was a certain law (as appeareth by Baifym) in the Books of the civil Lawyers, that shooes should be made of the skins of Kids, as appeared by ancient Marble monuments at Rome, which thing Mertiall approveth in his verses to Phebus; shewing how time altereth all things; and that the skins of Kids which were wont to cover bald heads, are now put upon bare legs, the verles are these that follow,

Halina

Hædina tibi pelle contegenti Nuda tempora verticemque calve. Festive tibi . Phabe, dixit ille Qui dixit caput effe calceatum.

A!bertus.

Out of the hide of a Kid is made good glew, and in the time of Cicero they stuffed beds with Kids hair : their flesh hath been much esteemed for delicate meat; and for that cause dressed and trimmed fundry ways; the best Kids for meat have been said to come from Molos, or Umbraila, or Vibuti. num, which never tasted grass, but have more milk in them then bloud, according to the saying of Tuvenal.

De Viburtino ventet pinguissimus agro Hædulus & 1010 grege mollior, inscius berba, Nec dum ausus virgas bumilis mordere (alici.

Arnoldus.

For this cause they may safely be eaten all the year long while they suck, both of men of tempe. rate and hot constitution, for they are less hurtful then the Rams, and do easily digest, and hourish temperately, for they engender thin and moist bloud, and also help all hot and temperate bodies, and they are at the belt when as they are neither two old, that is above fix moneths, nor too young, that is under two moneths.

The red or fandy coloured are the best, yet is their flesh hurtful to the Colick. Simeon Seibi af. firmeth, that if a man eat a Kids liver before he drink in the morning, he shall not be over drunk that day. Celius also prescribeth it in the sickness of the Holy-sire. They are wholesome, sod, roasted, or baked, but the ribs are best fod. Platina tracheth one way whereby it was dressed in his time for a delicate diffi; they took fome field Herbs and lat broth; two whites of an Egge well beaten together, with two heads of Garlick, a little Saffron, and a little Pepper, with the Kids fleth, put all together into a dish , rosted before at the fire upon a spit (with Parsely, Rosemary, and Lawre) leaves) and fo ferv'd out with that sauce, and set on the table: but if they did not eat it before it was cold, it weakened the eye-fight, and raifed up venereal luft.

The bloud also of a Kid was made into a bludding, and given to be eaten of them which have the Bloudy-flix. They have also devised to dress a Kid hot, and to fill his belly with Spices and other good things : likewife it is fod in Milk with Lawrel with divers other fashions, which every Cook is able to practife without the knowledge of learning.

And thus I might conclude the discourse of Kids with a remembrance of their constellation in the Waggoner, upon the Bulls horn, which the Poets observe for fignes and tokens fore-shewing rain and clowdy weather, according to Wirgils verse's

Quantus ab occasu veniens pluvialibus Hædis.

These Stars rise in the Evening about the Nones of Ollober, and in December, they wont to facrifice a Kid with Wine to Faunus. There is a Bird called Outilus, which is a great devourer of Kids and Lambs, and the same also is hunted by a Dragon, for when she hath filled her self with these Beasts, being wearyed and idle, the Dragon doth easily fet upon her and overtake her. Also when they fish for the Worm seven cubits long in the River Indus, they bait their hook with a Lamb or Kid, asis reported by Bhones; and the Ancients were wont by inspection into the intrails of Kids, to declare or fearch into things to come, as Gyrakius amongst other their superstitious vanities rehearseth.

The manifold medicinal properties of Goats come now in the end of this story to be declared and first of all it is to be noted, that these properties are several, both in the male, female, and Kid; and therefore they are not to be confounded, but as the diligence of learned Authors hath invented and left them severally recorded, so they require at our hands which are the heirs of such beneficial helps, the same care and needful curtesie.

There are some which do continually nourish Goats in stables neer their dwelling houses, with an The medicines opinion that they help to continue them in health, for the Ancients ordained that a man which had heen bitten or ftroke by Serpents, and could not eafly be cured thereof should be lodged in a Goap stable. The hairs of a Goat-buck burned and perfumed in the prefence, or under a man whose genand a march Algebraich of Tylwers tal is decayed it cureth him.

The powder of a Wine bottle made of a Goats skin with a little Rosen, dothingt only flanchthe bloud of a green wound, but also cure the same. The powder of the Horn with Nitre and Tamarisk feed, Butter, and Oyl, after the head is shaven, by anointing it therewith, strength neth the hair from falling off, when it groweth again; and cureth the Alopeoia, and a horn bunto powder and mingled with meal, cureoh the chippings in the head, and the feaths of for taking away the imell of the arm-pits, they take the horn of an old Goat, and either scrape or burn the fame, the adde they to it a like quaintity of Myrrhe, the Goats gall, and first strape or shave off the hair, and afterward rub them therewith every day, and they are tured, by that perfrication!

male Goats. S xtus.

Pliny.

Sextus.

Of the Goat.

The bloud fryed in a pan, and afterwards drunk with Wine, is a preservative against intoxicati- Diosectides. ons, and cureth the Bloudy-flix, and the bloud in a Sear-cloth is applyed against the Gout, and Actius. ons, and careed away all Leprofies, and if the bloud come forth of the nole without stay, then rub the cleanieth away and any then rub the nofe with this bloud of a Goat. It being fitted to meat cureth all the pains of the inward parts: be- Marcellus. note with the loofeness of the belly, and the same applyed to the belly mixed with fine flowre, and Rozen, Cafeth the pain in the small guts; the same mixed with the marrow of a Goat, which hath been fed with Lentils, cureth the Dropsie; and being drunk alone, breaketh the tones in the reins; and with Parsley drunk in Wine, also dissolveth the stone in the bladder, and preventeth all such calculating gravel in time to come.

There is a Medicine called by the Apothecaries Divina mantes, Gods hand, against the Stone, and Albertus. they make it in this manner. When Grapes begin to wax ripe, they take a new earthen pot, and they make the and feether the fame till all the fcum or earthy fubitance thereof be ejected: and pour into it water, and feether the fame till all the fcum or earthy fubitance thereof be ejected: and the same pot cleanfed, then take out of the flock a Male-goat of four year old, or thereabouts, and receive his bloud as it runneth forth of his flaughtered body into that pot, so as you let go the first and last stream thereof to the ground, and save the residue : then let it thicken in the pot, and fo being therein congealed, break it into many pieces with a reed, and then covering it with and in being cloth, fet it abroad in the day time where it may gather dew, and then the next day fet it abroad in the Sun again to exhale the fame dew, (if in the mean time there fall no rain) then let it dry, and afterward make thereof a powder, and preserve it in a box, and when the evill pincheth, use a spoonful of it with Wine of Greet: and Philagrine commendeth the manifold benefit hereof, for he had often tryed it, and with a medicine made of an African Sparrow mixed with this, he procured one to make water, and to void a great stone which had not vented his urine in many days, and lived in the meantime in horrible pains; and the same vertue is attributed hereunto, if it be anointed neer the bladder; and one be bathed in the warm air, and so oftentimes both the Bath and the Oyntment be reiterated. Marcellus teacheth how one may make trival of the vertue of this bloud, for if he take a Male goat, and put him up close seven days, feeding him in the mean time continually with Bays, and afterward cause a young Boy to kill him, and receive his bloud in a bladder, and put in the faid bladder fandy stones, like unto those that are ingendered in the bladder of a man, within a short time he shall see those stones dissolved, and scarse to be found in the bladder of bloud, by which he confidently affirmeth, that nothing in the World is of like power to remove the Stone; but withal he willeth some superstitious observations, as namely, that he be killed by a chaste person; and on a Thursday, or Sunday, or such like: but the conclusion is, that the said Bloud must be dryed to powder in an Oven, and afterward prescribeth that three ounces hereof, one ounce of Thyme, one ounce of Pennyroyal, three ounces of burned Pohpus, one ounce of white Pepper, one ounce of Apian, and one ounce of Lovage feed to be given to the party in fweet Wine fasting, and having no meat in his stomach undigested, and having digested the medicine, he must eat presently.

And therefore if it be true, as all antiquity and experience approveth, that the Goats bloud breaketh and diffolverh the Adamant Rone; then much more (faith Jacobus Silvius) may it work upon the flone in a mans bladder. The flesh of Goats decocted in water, take away all bunches and kernels in Pling. the body. The fat of this beaft is more mout then a Females or a Kids, and therefore it is most strong in operation, to scatter, dissolve, and resolve more then a Sheep.

It cureth all Fiffures in the lips mixed with Goole-greafe, Rozen, Pitch, and the marrow of a Hart. Diefcorides Also if one be troubled with swellings in his Temples or in his Legs, let him use of this sewet half a pound, and a pound of Capons-grease mixed therewith, and spreading it upon a cloth like a Searcloth, let him apply, it to the fore, and it shall help mightily.

Also when the neck of an Ox swelleth, it hath been proved for a golden remedy, to take and Marcellus. anount it with Goats-greafe, liquid Pitch, the Marrow of a Bugle or Ox, and old Oyl, and may as well be called Tetrapharmacum, as that of Galen made of Wax, Rozen, Pitch, and Goats-fewer. Also Clumella. if the bloud be fallen into an Oxens legs, it must be let forth, or else it will breed the mangy; and therefore first of all the place must be cut with a knife, and then rubbed with clouts wet in Salt and Oyl, and last of all anounted with old Sewet and Goats-greafe.

Two ounces of this Goats-greafe, and a pinte of green Oyl mixed together, and melted in a pot, Rafif. and infused into one that hath the Bloudy-Aix, cureth him speedily; when the hot dung or fime of a Goat is mixed with Saffron, and applyed to the gowty members Hydropick, it worketh upon them a strange cure : and some adhere unto the stalks of Ivy beaten, Mustard-seed, and the slower of a wilde Cucumber.

The Liver of this Beaft laid upon a man that hath been bitten by a mad Dog, caufeth him never, Galen. to be afraid of swater : the same being sod, yeeldeth a certain liquor, and sore eyes being anointed with that liquor, within twelve times recover; and drunk in sharp Wine, and laid to the Navel, stayeth the Flux; also fod in Wine, no feum or froth being taken off from it, but permitted to joyn with

The entrails of a Goat eaten are profitable against the Falling Sickness. The gall killeth the Les Myrepsis. profie, all swelling and botches in such bodies, and being mingled with Cheese, Quick filver and powder of Sponge, and made as thick as Honey taketh away the spots and burls in the face. It also rooteth out and confumeth dead flesh in a wound, and also mingled with Bran and the Uring of a

wrig rada conflicte\$. 312.

Bull, cureth the scurffe in the head. Actius also teacheth women how to conceive with childe, if she dip a purple cloth in Goats blood, and apply it to her Navell feven dayes, and afterward lie with a man in the prime and encrease of the Moon. The Gall of a wilde Goat is commended privately for man in the prime and encrease of the Moon. The help of them that are purblind, and for all whiteness and Ulcers in the eyes: and when the hairs the help of them that are purblind, and for all whiteness and Ulcers in the eyes: which trouble the eyes be pulled up, if the place be anointed with the Gall of Goats, the hair will

Marcellus.

ever grow any more.

The Milt being fod, helpeth the Flux, and the Spleen taken out of the beafts belly, and applyed to the Spleen of a Man, doth within short time ease it of all pain, if afterward it be hanged up in any the spice of a small, well and Rafis fay, that if a Man eat two Goats stones, and presentrume or moan to be dry for the final bring forth a male childe, but if he eat but one, then shall the childe ly lie with his wife, she shall bring forth a male childe, but if he eat but one, then shall the childe baye but one stone. The fime decocted with Hony, and laid to Ulcers and swellings, dissolveth or nave but one none. The fille decourse, is most profitably used to take away black spots in draweth them, and mingled with Vinegar, is most profitably used to take away black spots in the face.

And if he which is fick of the falling evill do eat thereof fifteen pils, or little bals, it shall procure unto him much ease. If it be mingled with Mouse-dung, toasted at the fire and sprinkled with Hony, unto min macricale. And places, where you would have the hair to grow again, and mingled with and to anomited upon bath pieces, with been steeped, and bound to the forehead or temples, asswageth Vinegar wherein a Sea-onion hath been steeped, and bound to the forehead or temples, asswageth

The Pastoral Carthaginians, to the intent that the humour flowing out at their Childrens noses, the pain of the bran pan. may never hurt them, burna vein in the crown of the head with Wool, when they are four year old, and thereby they conceive that they are kept and conserved in perpetuall good health: and if when they burnt their children, they fell into a Cramp, they eased them presently by casting upon them the urine of Goats. When a Man is thick of hearing, mingle together the Gall of an Ox, and the Urine of a Goat, and infused into the ears, although there be in them a very mattery sub-

Galen prescribeth this portion to evacuate that Water which lyeth betwixt the skin by Urine, if flauce. one drink Hysope water and the Urine of a Goat; Likewise it helpeth the Dropsie, and the dust of an Elephants tooth drunk in this Goats Urine, it dissolveth the stone in the reins and bladder, with-

out all fearful peril and danger.

The nied cines arifing out of the female Goat arethese, We finde that the female Goat, and the land toad being sodden together, are cures of singular worth for the diseases of all living sourfooted beafts. The (Magi, or) wisemen say, that the right eye of a green living Lizard, being taken out, and his head forthwith struck off, and put in a Goats skin is of a great force against quartan Agues. The ashes of a Goats hide besmeared over with Oil, taketh away the spots in the face. The fame ashes made of a Goats hide, recovereth the blifters and gals of the feet. The shaving of the Goats skin being rubbed with Pumice stone, and mixed with Vinegar, is an excellent approved good remedy for the Smalpox.

If a Woman bleed overmuch at the nose, let her breasts be bound with a thong made of a Goats skin. The same being sodden with the hair on it, the juyce being soked up, stayeth the belly. It is not good for those that have the falling sickness to sleep or lie in a Goats skin, it at any time the passion moveth them to it; yet it is hurtful for their head, by reason of the rank smell, and not for any

other particular private cause.

Goats hairs being burnt, do appease all issues of bloud, which being mixed with Vinegar they are good to stanch the bleeding at nose, and you may blow in their nostrils Goats hairs burnt and whole, and also Myrrhe mixed with Goats hairs so burnt. The same also burned and mingled with Pitch and Vinegar, helpeth the bleeding at nofe, and being put in the nofe they fir

up lethargies. The favour of the Goats horn, or of the hair doth the like, Goats dung in sweet water, dotherpell the stone in the body, so doth the ashes of Goats hair in like manner, which being burned and bruiled, and given in a medicine, they do mightily help and recover the Strangury. It is also reported that Goats horn and the hair being burnt, will drive away Serpents: and their ashes soked

or anointed, is very good against strokes or stinging of Serpents.

To stay the Flux in the belly, take the hairs that grow behind on the Goats sitting place, and burn them, which being tempered with beaten Barley and Oil, must be perfumed under a

Goats flesh being rosted by the fire where dead men are burnt, is good for those that have the Falling-fickness. The same is a good remedy against the falling fickness. It is good for such to ab-stant from Hogs flesh, Beef, or Goats flesh. They that drink Goats bloud, wax pale presently on it. which is excellent to get out spots of any thing: it is also good against those that are intoxicate with poison, and therefore must be drunk with wine, and being sod with marrow, it is good against the fame disease, so is the male Goats blond. The root of Cinkesoyle drunk in wine, helpeth ill humors Goats bloud also, either of the male or semale, asswageth the inwards and the slowing or laskes of the belly it is good for those that have the Dropsie, being tempered with Hony, and

Cælius. Marcellus. Diofcorides.

Sextus.

Pliny.

Some use it against the Bloudy flux and pain of the belly being also sodden with marrow it is good allo fodden with marrow. against the same disease. If you mix Goats bloud with Chifel steept in broath, and a little Rollnow against the lame uneare. If you nox Coats brough with Chief there have parts, and it recovereth any paid into it, whereof make a plaister, and lay it to the belly or other parts, and it recovereth any The chereabouts.

The fat of a male Goat is more faiter, and therefore good for those that have the Bloudy flux Marcellinus The substance of a Goat is fat, yet is not the fat of a Goat so moist as a Swines, but for bittings, and those that are grieved in their belly Goats sat is better then Swines, not because it hath more operation in it to expell the grief, but by reason it is thick, whereas the Swines grease will run about like tion in the fat of Kids fo warm and dry as female Goats, neither the male Goats fo fat as Galen. the gelded Goats, in Latin called Hirem; also female Goats fat is more binding then the Tallow of Oxen, but the males fat is good against Scorpions made in a persume. It is also good for those of Oxen, but the mater with French green flies, called Cantharides. Being tempered with Wax, it taketh a- Actius. way the ftinging of Serpents; it helpeth any biting or wound. If a Womans breaft grieve her after her delivery of childe, let her feethe husked Barley and Scallions, and the fat of a male Goat, whereof let her drink a little. Against the ache of the eyes, take Goats sat and Sheeps together, with a Pling. little warm water.

Of the Goat.

Almost every grief of the body if it be no wound, will be more easily recovered by plaisters, Gal n. but if the grief be as it were grounded, (or an old grief) let it be burned, and upon the place fo fcorched, put Butter or the fat of a male Goat; it will also recover and heal kibes and Chilblanes. It helpeth the Kings evill; so doth the fat of the female Goats help the same disease. The males Columella. fat mixed with Arfevicke, taketh away the roughness of the nails: it also healeth the nails of the Leprofie without any pain, it expelleth the Cantharidans being applyed with the juyce of the Grape that groweth on a wilde Vine. This Goats fat is profitable to help any about the straightness of their mouths or lips, being tempered with wax it allayeth Sores and Blisters, and with Pitch Pling. and Brimstone it healeth them, and being applyed with Hony and the juice of a Brambel, it cureth the swellings arising in the hands or fingers, especially in curing of Fellons.

The fat of a Bull well salted, or if it be in an ach or grief, dipt in oil without Salt, and so after the same manner is the male Goats sat used, which being tempered with Roses, taketh away the wheales or blitters that rife in the night: being also dropped into the ears of one that is deaf, it

It helpeth the Falling fickness, putting thereto as much of the gall of Buls, just of the same weight, and feethe it together, and then lay it in the skin of the gall that it touch not the ground, and drink Æsculapius. it out of the water. It is also good against the stinging of Scorpions, being applied with Butter and the meal of Zea, warmed and washed with red Wine.

The broath that is confected of Goats fat fodden, is excellent for those that are troubled with Dioscorides. the Ptifick, to sup now and then a few; also it helpeth the Cough being tempered with new sweet wine, that an ounce may be put in a goblet, and so mixed with a branch of Rue. It being also sodden with husked Barley, easeth those that have fretting in the guts.

The same also sodden with Barley flowre and Wine made of Pomgranates and Cheese, let it Marcellus. be given to those that are troubled with the Bloudy flux, and let them take it with the juice of

husked Barly.

Rafis also faith, that the fat of a fierce Lion is of fuch fingular account, that if a Glyfter be made Dioscorides. of it, with the water of Barly sod, either with the water of tosted meal, and boyled Sunach, and so dissolved with Wax, it is a most pretious remedy for the swelling of the inwards. But Goats fat doth much help the griefs of the inward parts that nothing cometh forth but cold water. The fat of the Buck Goat many use (being sod with bread and ashes) against the Bloudy slux; and also the She Pliny. Goats fat being taken out of her back alone being a little cold, and then supped up: Other allow the fat to be fodden with Barly flower, Cinnamon, Annife, and Vinegar mixed together. The fame fat taken so out of the back mixed with Barly, Bran, and Cinnamon, Annise, and Vinegar, of each of them alike, and feethe thereof, and being strained give it the patient that is diseased with the Bloudy flux, and it shall most speedily help him.

The same also mixed with Pellitory and Cyprian Wax, may be laid to the Gowt. Also sodden Marcellus

with Goats dung and Saffron, and layed on the Gowt it allwageth the grief.

The marrow of the female Goat, in the fourth place next after the marrow of the Hart, the Calf and the Bull is commended of Dioscorides, but the last of all is the Sheeps fat. The Harts is most renowned of all, next the Calves, then the Buck Goats, and last of all the female Goats. To help the grief of the eye, take the marrow of Goats and anoint your eyes, and it will cure them. Goats bloud fod with marrow may be taken against all toxical poison.

Pliny faith, that their dung being anointed with Hony, is good for the watering or drop-Ping of the eys, and their marrow against aches. The bloud of Goats, their marrow, and their Liver, is very good to ease the belly. Goats bloud sodden with the marrow, helpeth the Bloudy flux, and those that have the Dropsie; and I think that the Bucksis more effectual and of greater operation, so it be eaten with Mastick. Also the Goats marrow is good for the pliny. cyes of Horses.

The right horn of a Goat is of some held to be of more effect then the other, which I rather pling. hold to be superstitious; whatsoever other reason or secret quality the Horn may afford for the bitings of Serpents, take Goats horn and burn the hairs of them, and the after of them foked in water, and Goats milk with the horn, and wilde Marjoram, and three cups of Wine put together, and being drunk against the stinging of an adder expelleth the poston.

The aftes of Goats horn being all anointed with Oil, tempered with Mittle, flayethithe sweating Sexiut. of the body. Harts horn and Goats being burned, and (if it be requisite) is good to wash the teeth

Pliny.

Galen.

Sextus.

withil, and it will make them look white, and the gums foft. It is also good against the Bloudy flux withil, and it will make them look white, and the gains total be proposed the Bloudy flux and watering of the eyes in regard they are most usual; yet they neither asswage the griefes nor confume them, which are of a cold and dry nature.

Harts horn being burnt as also a Goats horn, taketh away bitings. Goats dung or the horn being Harts from being burnt as and a Coacs norn, taken and the corrupt bloud that cometh out of burnt to ashes, and dipped in Vinegar, stoppeth the bloud. The corrupt bloud that cometh out of burnt to athes, and dipped in vinegar, hopped the ploud. The contage blood that confett out of a Buck Goat, is more effectual and of a better operation; and the affect of a Goats horn or dung foked in Wine or Vinegar, and anoint the Nostrils, stayeth bleeding at the Nose.

Pliny.

Goats horn being burned at the end, and the pieces or scorchings that arise thereof, must be Coats norn being ourned at the end, and the preceding then beat and bruife them with shaken into a new vessel untill the horn be quite consumed, then beat and bruise them with thaken into a new vener unon the norm be quite commines, then occur and ordine them with Vinegar made of Sea onions, and anoint the evill called Saint Anthonies fire; and it is of a mi-

neurous operation.

It will make one sleep that is troubled with the weakness of his head and watching, if it be laid. raculous operation. it will make one neep that is troubled with Bran and Oil of Mirtle, it keepeth the hairs fast that are under their pillow. It being mixed with Bran and Oil of Mirtle, it keepeth the hairs fast that are under their pinow. It being install the falling off the head. The favour of the horn burned descrieth the Falling sickness, so doth the smell of falling off the head. The savour of the horn burned descrieth the Falling sickness, so doth the smell of talling of the near. The layout of the hoth bather it raifeth up a Lethargick man. They use also the the intrails of a Goat or the Liver caten; likewise it raiseth up a Lethargick man. They use also the the intrains of a Goats to make white the teeth, and to faiten the gums. The fame shorn or horns of Harts and Goats to make white the teeth, and to faiten the gums. The fame shorn or thorns of Harts and Goals to make white the flux of the belly. In the pain of the belly perfume the fluxings thaven into mixt hony, repreffeth the flux of the belly. In the pain of the belly perfume the fluxings inaven into mixt nony, represent the man of the fame perfume is good to be laid upon the of the fame, mingled with Oil and burned Barly; the fame perfume is good to be laid upon the

The hoofs of Goats are prescribed by Palladius to be burned for the driving away of Serpents, and Ulcers of Horses. the dust of them put into Vinegar cureth the Alopecias. The dust of their hoofs is good to rub the the duit of them put into vinegal culter that the diffeafe called St. Anthonies fire, burn the foot teeth withall, allo to drive away the swellings in the diffeafe called St. Anthonies fire, burn the foot of the Goat with the horn, and referve the dust thereof in a box, and when you will use it, wet the

place first with Wine, and afterwards cast on the powder. The juice of a Goats head fod with hair, is commended for burstness in the belly, and the ancient Ine juice of a Goals head for William, is to little infants against the Falling sickness, but presed through a gold Ring, the same cureth Carbunkles in the belly being taken with Hony.

frough a gold King, the lame cureth Carbunates in the body or head be rubbed with that water or meat which falleth out of the mouth of a Goat, mingled with Hony and Salt, they kill all kinde of Lice, and the same thing giveth remedy to the pain of the belly, but if it be taken overmuch it purgeth. The broth of the entrails to be gargarized in

the mouth, cureth the exulceration of the tongue and arteries.

Galen. Diofcorides.

The Liver of the semale Goat sod and eaten, is given against the Falling evill, and taketh from them Convulsion, and with the liquor thereof, after it is fod, it is good to anoint the purblind eye, also it is good to hold the eyes open over it while it seetheth, and to receive into them the sume, and the reason hereos is, because Goats see as persectly in the night as in the day time, and therefore Cellus faith, that this medicine is most agreeable to them that cannot see at all in the night, as it hapneth to Women whose monethly courses are stopped, and then it is good for them to anoint their eyes with the bloud of a Goat, and eat the Liver fod or rosted. The powder of the Liver burnt

purged and drunk in Wine cureth the Colick.

Trallianus.

It a woman in travel or with childe be swollen up, let her take a Goats liver rowled in warm ashes, and let her eat it in four dayes, and drink old wine thereunto, so shall she be delivered. The Gall is contrary to all poisoned Witch-crast made upon the rustick Weasil; and if the Kings evill be daily touched therewith at the beginning, it will keep it from overspreading, and with beaten Alum it disperseth Scabs. The old Magicians were wont to say, that when a Man rubbed his eyes when he lay down, and put it underneath his pillow, he should sleep soundly; it driveth away scabbes in the head if it be mingled with Fullers chaulke, so as the hairs may be dry a little; and the fame with Hony helpeth the eyes, according to the faying of Serenus;

Pliny.

Marcellus.

Hyblei mellis succi cum felle caprino Subveniunt oculis dira caligine pressis.

The Physitians in application hereof to the cure of eyestake many wayes, and mixe it with other drugs, as when they give it against whiteness in the eyes with Hellebore, against wounds and Pin and Webs with Wine; and against the broken tunicles with a womans milk, and therefore Rasis and Albertus do justly call the Gall of a Goat an Eye-salve, and also being instilled into the ears when they are full of pain, it cureth them, first mingling it with a scruple of Hony in an earthen sheard,

Marcellus.

and fo infuling into the ear, and shutting it in with a little wool. Also all the pains in the ears are cured by the stalkes or juyce of Leeks, Gall of Goats, and sweet water; and if there be any Rupture in the ear, then use therewith a womans milk, or warm Oil of Roses: likewise against the Cankers in the gums, and the Squinancy, it is profitable to use it with Hony. For all tumors or swellings in the neck, take equal quantities of this Gall, of Goose-grease, and the yolk of an Egge, and these being all mingled together, let the offended place

The same with the juyce of Cyclamine and a little Alum looseneth the belly, and Wool being well be rubbed therewith. dipped therein and bound to the Navel of the belly, expelleth the Worms, it cureth the faults in the feat by anointment ; it also bath another virtue in it expressed by the Poet in this Verse;

Languidus antiquo purgatur penis laccho. Ac super illinitur facunde felle capelle.

The melt fod cureth the Bloudy-flix, and the bladder burnt and given in poffet-drink is good for Sextus. them that cannot contain urine in their fleep, and the fecunds of a female Goat being drunk in Wine Pliny. of women after their delivery, ejecteth and casteth forth their seconds also. The milk is many ways or women and the first the Physician, in the recovery of Confide the daughter of Servillus, which avanance, le daugnet di derring, which had been Conful, used the milk of Goats a long season which he fed with Lentils : Sea-crabs mixed with this milk, expelleth poyfon; and the first milk of a Goat which is milked from her after the weaning of the Kid, drunk by him that hath a quartane Ague, easeth the fits thereof. And some Columella. of the ancient Physicians gave as much dung of Swallows as will ly upon three groats, mixed with Plmy. this milk against a quartane Ague, and when young Lambs were sick, the shepheards cured them by infuling into their chaps the milk of Goats; the powder of Betony drunk out of Goats milk flayeth

The holy fire is a disease of Sheep almost incurable, because if any remedy do but touch them, they fall mad: but they only in this malady admit for the recreation of temedy Goats milk. The root of the greater Siler decocted in Goats milk, cureth those cold ustions in the flesh or belly, when the place looketh black or lofeth fense: and Aefculapius taught his followers and patients to drink it against the Itch, or any biting, and if at any time there be any strain in any member of the body, to that the Article feemeth to decline and lose his former ftrength and humor, it is recovered again by binding unto it Lyne-feed fod in Goats milk. Funerius adviceth to wash the face therewith, that the beauty of it may be more splendant. Take seven Sea-crabs, and being beaten to powder, mingle them with one pinte of Goats milk, and a cup of Oyl, and fo strain them diligently, and infuse them into a Horses mouth which is sick of the Head-ach, and it shall cure him.

The milk alfo by the couniel of Thilistion, with the juyce of Cabages, Salt, and Hony, is given against the shortness of breath; and if the right eye of a Chamaleon be pulled out of her alive, and put into

Goats milk, and applyed to the eyes, it cureth the whiteness of the eyes.

The fat of a Bull mixed with this milk, and infused into the ears, cureth their mattery evils, and causeth them to hear more assuredly and firmly. The gums of children anointed therewith, causeth their teeth to come forth with less pain, and fasteneth the loose teeth by often rubbing: the corners in the throat, and the Arteries are delivered from exulcerations by gargarizing this malk, either warmed at the fire, or else as it cometh forth of the udder.

The feed of Creffes decocted in this milk, and drunk, eafeth the pains in the stomach, and also Pliny. purgeth being mixed with Salt and Hony. Marcellus prescribeth this excellent purgation, which shall Marcellus. never make the party fick, that is a pinte of Goats milk, two ounces of falt Ammoniack; and one ounce of the best Meen, beat them all together, and give them to the patient fasting, and to let him walk a good while, till the medicine be wrought in his body; and if a woman be with childe, and Hippocrates.

oppressed with Head-ach, or have an Ague, she may safely take this milk sod with Hony.

The Physicians make a special drink of this milk, which they call Schiffon; it is sod in a new earthen pot, and hath put into it the branches of a fig-tree, and to many cups of sweet water; as there were pintes of milk, and when it boyleth, keep it from feething over, by purting into it affliver reffet with cold water, & being taken from the fire, divide it into many veffels till it beedid, to the whay will part from the milk : and some take the whay and seethe it again till the third part be only left; and afterward fet it abroad in the Sun to cool, and this may be fafely drunk five days together (every day a pinte) at five several times, against the Falling evill, Melancholy, Palsies in Leprosies, Gowes or pains in the Articles, and the sickness of the Liver, which is like to a Pleuresie. Or let him drink the Goats milk, the third part thereof mingled with Hony (as Hippocrates prescribeth) or with the feed of Mathe first and a sumble of a thrum, (as Serenus counselleth) in this verse :

Semina Mathri falla oum latte capella.

arguedt in the resit where the A draught of Goats milk fodden with Mallows, and a little Salt put to le, represent the gratings of Pling. the belly, and if you put a little Rennet unto it, it will be more profitable. Chair milk tempered with Rennet, before it be altogether strained, while it is warm, it must be given to those that have the Bloudy-flix to drink, and it will help them presently: pint also to a good potion of sweet Wine Marcellus. mingled with Goats milk, and a little Rennet of a Kid (as much as a Nut-kernel is) which being tempered with the hand, let it be given to the patient, labouring with the Bloudy fix, before it be frained, for the space of three days. Let this drink be given one that is fasting about the time he rifeth, Morcellus. and being boyled, put sufficient-Barley flowre to it, and being in like manner like pap or pottagelyou must give it to the patient to drink for the same discase.

Goats milk being fodden half away, may be given to those that have the Bloudy-flix. If they pling, that be troubled with fretting of the guts, and the Flix, are weakened by reason of their often go-

The broath of a fat Hen fod with Butter or Goats milk, or Sheeps, warmed by it felf; or elfe fod with Butter, is very good to be given unto them. Take three ounces of Amplum, being a kinde

Training at their senior.

"th, tylet" may the peril.

Marcellus.

Languidm

Marcellus. Dioscorides. of meat, three moneths old, into as much Goats milk fod as you shall think fit, and so give it the patior meat, titree moneths ord, mich as much Goats milk, flayeth the exulceration to suppository means for the Bloudy-flix. Oxen, Sheeps, or Goats milk, flayeth the exulceration to supposit or the patients of the bloudy-flix. ons and flowings of the belly, so it be sod on the coals, after the use of glysters, if a mans secret inwards ons and nowings of the beny, to it be low on the cours, the laid to the roots and stock of the yard, fresh do abound with filth, but if not, after the foments be laid to the roots and stock of the yard, fresh Goats milk must be applyed about the measure Hemian, and no less, but it must not be done all to. gether, but apart. The next day let the milk feethe till the one half be diminished, still taking away that which is uppermost (I mean the skin or froth that gathereth in fetling) and so use it.

Actius.

For the rifings and flowings of the belly and the Flix, it is very good to get Cows milk or Goats, as is before mentioned of the Cow. Panick being fod in Goats milk, helpeth the belly, being taken twice a day, and so it is good for the fretting of the guts. Old bread tempered with Goats milk, being given those that have the Flux in their belly twice a day, in manner of supping, it is a pre-

P!iny.

Plmy.

The juyce of planted peafe, foaked with Goats milk, helpeth the lask of the belly. The milt is good with Goats milk, after one hath fasted two days, let him drink Goats milk, that are fed with Ivy, without any other kinde of meat, for three days together.

They that are troubled with the pain in the milt, the best remedy is this: let milch Goats be kept failing three days, and in the third day let him eat Ivy only, and let them be milked before they drink; and let the fasting patient grieved about his milt, take three Sextaries warm of that milk, so foon as she is milked, and so let him drink it the space of three days, during which time he shall not eat nor drink any other meat, and it shall help him marvellously. He that hath the Consump. tion of the Spleen, let him drink the whay of Goats that are fed with Ivy. Goats milk also half fodden, so it be of them that feed on Ivy only, it may be given to children that are troubled with the pain in the milt. A drink made of Goats milk and rennet put to it (as Cheese is accustomed to be made) and given to those that have the Dropsie, they shall be holpen. Also Goats milk killeth Those that are troubled with the grief of the reins, let them take three cups of Cretian sod in the Worms.

А (си!аріня. Sextus.

Marcellus.

Anatolius.

Pelagonius. Marcellus.

Wine, and so much of Goats milk, and three and thirty grains of Cowcumber-feed, all well bruised together, which he may drink at one draught. Anatolius faith, that a porrenger full of Goats milk, with as much Amylum, which is as much as three porrengers of Sheeps milk, and three ounces of Oyl, all which well tempered together, must be given through a horn to a Horse that pisseth bloud, andit will remedy the same : and Polygonius faith, that Goats milk and Anylum, with three Egges and the juyce of Pellitory, is good for the same disease in Horses. The meal of Betony soaked out of Goss milk, flayeth the bloud dropping out of the paps. Physitians do drink certain medicines made of Goats

The men of The falia drink another root of a certain herb (called Orobin) being fofter and nothing inferior with Goats milk to flir up men to carnal copulation, and they drink the harder kinde of root lo tempered to flay it. The root Raga ort (as some call it) being given to women with childe, it maketh them that they cannot conceive, being of watery condition : against which Goats milk

Sextus.

foaked with Honey, is an excellent remedy. If the hinder parts that are somewhat flothy stand further out then the rest, and open, anoint them with Goats milk warmed. If any mans Sheep be fick, let him take Goats milk mingled with Wine, and so let him give it them to drink. If Lambs be troubled with Agues or sickness, let Goats milk be

Columella.

Cheefe made of Goats milk is an excellent help for those that have drunk Miselden. For other given them through a horn. bitings of Beafts, (besides that of a mad Dog) Goats Cheese well dryed with wilde Marjoram must be drunk. The same also is excellent against the stinging of Serpents; for all other bitings and stingings of lesser Beasts, it is also a very good remedy. Being dryed out of Vinegar and Honey, taketh

away Ulcers and Blifters.

Serenus. Pliny.

Æsculapius. Pliny.

This same Cheese when it is new, so it be well pressed, and no whay left in it, and mixed with Honey, is most excellent against the quartain Ague. Goats cheese also represset all dolors and punctions; and being foft and new, and made with Honey, and covered with a woollen or linnen cloth, taketh away the puffing up of the flesh. It being dryed with scallions, you may anoint Saint Antonies fire with it. Being dryed out of Honey and Vinegar, (when men do bath) without Oyl it may be anointed on black wheals. That which is fresh and well riwated, being laid on the eyes, it quickly asswageth the pain. It is also exceeding good for the pricking of the eyes, the grief of the head and feet, it is also good for the dropping of the eyes, with a little warm water applyed unto it, and if it be a swelling of the eyes, then out of Honey, either of which griefs is to be kept warm

For the grief of a mans Yard, see the Goats Cheese and Honey, of a like quantity in a Poultess made in a new earthen pot, and so laid thereunto twice a day, but first wash the place with old Wine that is to be cured. It is good for Carbuncles; and if a woman be fick of her womb, and troubled with a Fever, let her take half a Chenix of Pettispurge, and so much Nettle-seed, and half a Chenix of Goats Cheese scraped, being tempered with old Wine, and afterward being sodden, let her sup it up, and if the have the Flix, let her drink the black wilde Grape, and the rinde of a Pomgranate, and a Nut-kernel, and the rennet of a Bull, these being washed in black Wine, Goats Cheese, and Wheat-Brown To Brown Co flower, put them together.

100

The fime or dung of such Females as live in the Mountains drunk in Wine, cureth the Falling evill; Diofeorides, and in Galens time they gave the trindles of Goats in Wine against the Jaundise, and with the fime they anoint them that have the Flux, and made into a Poultes, is very helpful against the Colick; but Marcellus prepareth it on this manner: first it must besteeped in water and strained, with fixty grains of Pepper, and three porringers of Sweet water, and so divide it into three equal potions to be grans, in three several days: but the body of the patient must be first washed or anointed with Acoput, so as all perfrictions by sweat may be avoided.

Active against the hardness of the Spicen, prescribeth a plaister made of Goats dung, Barley meal, and the dung alone against all tumors or swellings of the milt. Against water lying betwixt the skin, Archigener. and the skin and the fiesh this is prepared many ways, and first against the Dropsie, they see the it the in urine of a Boy which hath tafted of poylon, or in the Goats urine, till it be as thick that it will flick and cleave, and it will purge all by the belly, and also the shavings of hides which Coriers make, sod in Vinegar with Goats dung is accounted in England a singular medicine to repress all hydropick

swelling in the legs and belly. The fime of Female-goats drunk in sweet water expelleth the Stone out of the Bladder. Against Pline the pain in the hips, the Arabians prescribe it in this manner, which they call adustion (betwixt the thumb and the hand) there is a hollow place wherein they put Wool dipped in Oyl: afterward they fet on fire little piles of Goats dung in the same Wooll, and there let it burn till the sume and vapour thereof be fensibly felt in the hip-bone : some use to apply this to the fat, but in our time it is all out of use, and seeing yet the pains of the hip do rather fall into the thighs, thins and legs, then ascend up into the Arms and shoulders, Aetius and Cornarius say, that this adultion for the hips was used in the ancient time divers ways, and some on this manner, holding the burning dung in a pair of tongs unto the leg of that fide where the pain lyeth, untill the adultion be felt in the hip, and this course used Diotcorides.

Quintillius used another way, which was this: he first of all heat the Goats dung, and therewithall burned the foft and fleshy part of the great toe, neer unto the nail, untill it pierced to the fick place; after fuch ustions, they lay beaten leaves of Leeks with Salt to the place, but in the hard bo-dies of Country men inured to labour, they apply the Dung of Goats with Barley meal and

Vinegar.

The same with Saffron and Goats sewet, applyed to the Gowt, healeth it; or else Mustard-seed, stalks of Ivy, Bettony, or the flower of Wilde-cowcumber, the same drunk with Spikenard, or other Spice, stirreth up a Womans flowres, and causeth easie deliverance, but being beaten into Meal and Vinegar, and laid to a Womans belly, with Wooll and Frankincense, stayeth all Fluxes and Issues: also little bals of the same with hairs, and the fat of a Sea-cals, wrought al together and perfumed under a woman, hath the same effect, or else the liver of a Sea-cals, and the shavings of Cedar-wood.

Pliny affirmeth, that the Mid-wives of his time stayd the greatest Flux of the belly by drinking the urine of a Goat, and afterwards anointing it with the dung of a Horse that hath bruised bis hoof; Vegetim Goats bloud with Vinegar cureth the same, and if an Aple-tree have worms in it, the dung of a Goat Anatolius.

and the urine of a man laid to the root drive them away.

The urine of Goats bloud drunk with Vinegar, resistent the stinging of Serpents, and also being laid to bunches and swellings in the flesh, in what part soever they be, it disperseth and expelleth them. Against the stifness of the neck, which they call Opifibotonis, take unine of a Goat, and the heads of Scallions bruifed to juyce, and infuse them into the ears; and the same mingled with the Oyl of Roses and a little Nitre, cureth the pain in the ears by infusion, or by ahe smoke persumed in a Goats horn twenty days together.

Against natural deafness take the horn of a Goat newly slain, and fill it with urine, and hang it up nine days in the smoke, and afterwards use it. The urine of a Goat made warm, and instilled into Gallus. the ears, and the fime anointed with fat, is good for the veins of the throat. For the Dropfie drink one spoonful mingled with Cardum, and warm it at the fire ; also mingled with Wine or Water, it ex-

pelleth the Stone in the Bladder, according to the faying of Serenu:

Nec non obscanus capra potabitur humor. Obruit bie morbum tabefallaque fara remittis.

The same Physician prescribeth Goats trindles to be drank in Wine against the Jaundise, and to stay the fluxes of women, the same dung tyed in a cloth about unquiet children, especially womenkinde, maketh them more still; being mingled with Wine, cureth the bitings of Vipers, and the dung taken out of the Goats belly and anointed upon the fore, cureth it with all speed; the same versue it hath to heal men wounded by Scorpions, being decocted in Vinegar, it cureth also the biting of a mad Dog, mixed with Honey and Wine.

Being laid upon a Wound it keepeth it from swelling sit hath the same vertue mingled with Barley, meal, but healeth the Kings evill. It is used also to ripen fores and ruptures, heing applyed to the suppurations, it keepeth down the swellings of womens brests, being first drynd, and then steeped

in new Wine, and so laid to the fore, for it digesteth inflamation! When the eye-lids be thick, hard red and bald, take Goats dung and Mouse dung, of either a like quantity burned, and twice so much of the powder of the Grecian canes, with Honey Attick; and

Pliny.

anoint them therewith; being heat with Vinegar, and put upon the fore, it cureth Tetters and Ring-worms, and differfeth Carbuncles in the belly: also being heated in Vinegar with Cow milk, Oyl of Cipress and Laurel, it purgeth and cureth all wounds of the legs and thins, it pulleth out Cyl of Cipreis and Laurei, it purgetti and Cateful and Whyfitian Mylia hath proved, as Sheeps dung thorns or sharp pricks out of the body, as that learned Physician Mylia hath proved, as Sheeps dung also doth: laying it round about the wound, it cureth burnings and draweth out heat, with Oyl of Rofes and Vinegar (as Galen writeth.)

It is also commended for broken joynts, because it suffereth them not to swell or start out, being once set, therefore it must be used with Honey and Wine, and it hath the same operation for broken ribs, for it openeth, draweth and healeth: also it being decocted wirh Vinegar, it healeth the pains in the nerves, although they be ready to rot, and easeth the pain in the joynts: the fime of a fat Goat cureth the Gout, and the contraction or shrinking of the nerves, being dressed with Vinegar, and made as thick as Honey, it helpeth the trembling members. It is very dry, and therefore (Amoland made as thick as Honey) it helpeth the trembling members. and made as thick as a long, a making a plaister thereof with the meal of Beans, Wine and Leigh, which hath been seen wonderfully to dry up the Fistula. With Oxymel and Vinegar it cureth the Aleptius, but it must be burned.

Take seaven bals of Goats dung, work them in Vinegar, then anoint your fore-head therewith, and it eafeth the pain in the head, or elfe mingle it with Oyl of Roses, and spread it upon a cloth laying it to your temples, change it morning and evening, and you shall finde great ease thereby.

If the eyes be swoln at any time, binde this dung unto them : being mingled with liquid pitch and Honey, healeth them which are fick of the Quinfie; being gargarized in the mouth, he which is sick of an old Cough, let him take the dryed trindles and put them into the best Wine, and drink it off, fo shall he presently avoid his fleam and filthy humor, and be healed.

The Remedies out of a Wilde Goat.

The same vertue which are in the Goats before spoken of, do also belong to the wilde Goats, the bloud taketh away bunches in the flesh; and being mingled with Sea-palm, causeth the hair to fall off. An Ointment made of the fat of Goats, is profitable to them which have webs in their eyes; and the fat of Mountain Goats, helpeth infected Lights: His liver broiled upon coals and taken alone, helpeth the Flix, but most certainly when it is dryed and drunk in Wine: the gawl is good for many things; especially it is a Treacle against poyson, suffusions, whiteness and blindness of the eyes, by anointing, it cureth the purblinde and the webs in the eye; and generally it hath the same properties in every part as the tame Goats before spoken of.

The like may be faid of the Kids or young Goats, and first of all a Kid being slit asunder alive, and his warm flesh laid to a poysoned wound, doth most assuredly heal the same. Others take the warm flesh of Kids and perfume them with hair, by the savour whereof they drive away Serpents: the skin newly pulled off, and put upon the body beaten with stripes, taketh away their pain : others again use it against the Crampsand not without reason, for the tender skins of Lambs & Goats, being sprinkled or dipped in warm Oyl, giveth very much strength and paience to endure the Convulsion.

Praxagoras prescribeth the fieth against the Falling evill; and by gargarizing the broath when it was fod, cureth the Quinfie and foreness of the throat. Demetrius faith, that the brain being drawn through a gold ring, and given to a Hawk which hath the Falling fickness, it will work admirably upon her. The bloud being dryed and decocted with marrow, is good against all intoxicate passions, and being mingled with sharp Vinegar before it be congealed, it helpeth the spitting of bloud: the fame being eaten, cureth all kinde of Flixes, being taken three days together. Galen rehearfethin the Antidote of Urbane, among other things, the bloud of Kids to draw the dead young ones out of the Dams belly.

With the fat there is an Ointment made with Rose water, to heal the fissures of the lips and nose, which is much defired of Women, not only for the before rehearfed vertue, but also because by anointing they keep by it their face from Sun-burning. The French and Italians call it (Pomato) because it smelleth like Apples, they put also into it Musk and Rose water, a pound of Kids sewet, and warm it in a Bath untill all be white, and so wash it with the said Rose water, and afterward reposeit in a glass: The Ointment which is called (Unguentum album) is like unto it: the ashes of the thighs of a Kid, healeth burstness, and stancheth bloud: the rennet is also commendable against Hemlock, or Toad-Rool, and againft all the poyfonful strokes of Sea-beasts; being drunk in Wine, it flayeth bleeding, and refresheth excreations of bloud; being raken with Vinegar it helpeth allo the flix; being drunk fasting, it hath some operation to stay womens flowers. The lights of a Kid fod and eaten fasting, preserveth from drunkenness that day; and the powder of it burned, easeth the itching of the eyes, and peel'd eye-lids, if it be applyed like Stibium: likewise the bladder of afemale Kid drunk in powder, helpeth the inconstancy of urine : the milt laid upon the spleen of aninfant, affwageth the pain and tumors thereof; the liver is not fit for temperate men, but for west

The Inhabitanes of the Mount Allas do gather Euforbium, and corrupt it with Kids milk, but it is de feerned by fire; for the good Enforbium being burned, yeeldeth an unacceptable favour, and fo we conclude this flory, with the two Emblems of Alciatus. One against them that take much pain, and make good beginnings, but evillends, like a Goat which giveth a good mess of milk, and over-turnship has Good mess of milk and over-turnship has good mess of mil eth it with her foot :

Quad fine egregios turpi maculaveris orfus Innoxamque tuum verteris officium, Fecifit quod Capra fui multiraria lattie Cum ferit . & propries calce profundit opes.

The other Emblem is upon a Goat, the which by her Keeper was constrained to give a young Wolf fuck, who afterward notwithstanding that good turn, devoureth his Nurse; and it may be applied unto them which nourish their own harms, and save a theef from the gallows.

Capra lupum nen Sponte mep nunc ubere lacto. Quod male pastoris provida cura jubet : Creverit ille simul, mea me post ubere pascit : Improbitas nullo flectitur obsequio.

There is a pretty comparison of a Harlots love to a fisherman, which putteth upon him a Goats skin with the horns, to deceive the Sargus-fifth, for that fifth loveth a Goat above all other creatures, and therefore the fifther-man beguileth her with a falle appearance, as the flattering love of Harlots doe simple mindes by fained protestations.

Of the GVLON.

His Beast was not known by the Ancients, L but hath been fince discovered in the Northern parts of the World, and because of the great voracity thereof, it is called (Gulo) that is, a devourer in imitation of the Germans, who call fuch devouring creatures Vilfius, and the Swedians, Gerff; in Litua-nia and Muscovia, it is called Rossomokal. It Matthiss is thought to be engendered by a Hyena and a Lioness, for in quality it resembleth a Hiena, and it is the same which is called (Crocuta:) it is a devouring and an unprofitable creature, having sharper teeth then other creatures. Some think it is derived of a Wolf and a Dog, for it is about the bignels of a Dog: it hath the face of a Cat, the body and tail of a Fox; being black of colour: his feet and nails be most sharp, his skin rufty, the hair very fligre, and it feedeth upon dead carkafes.

When it hath found a dead carkals he eateth thereof fo violently, that his belly standeth out like a bell; then he feeketh for fome narrow passage betwint two trees, and there draweth through his body, by pressing whereof, he driveth out the meat which he had eaten ; and being so emptied returneth and devoured as

much as he did before, and goeth again and emptieth himfelt as in former manner, and to much as he did before, and goeth again, and emptieth himselt as in 195mer manner, and to continueth eating and emptying till all begaten. It may be that God hath oxdained such a creature in those Countries, to express the about may know their true deformed hathre, and lively ugly figure, represented in this Monster-eatingbeast; for it is the fashion of the Noble men in those parts, to six from moon till midnight, cating and drinking, and never rise from the table, but to disgorge their stomache, or ease their belies; and then return with refreshed appeties to ingurgitate, and consume more of Gods creatures: wherein they grow to such a beighth of beastliness, that they lose both sense and reason, and thow no difference between head and tail. Such they are in Masania, in Lituania, and most shameful of all in Taitaira.

These things are reported by Olgin Magnis, and Maiblin Michou; But I would to God shat this fame (more then beastly intemperate gluttony) had been encycymfyr bed and confined within the limits of those unchristian or heretical-apostatical countries, and had not spread it self and infected our more civil and Christian parts of the World; so should not Nobility, Society, Amity, good sellowship, neighbourhood, and honesty; be ever placed upon drunken or gluttonous companions: or any man be commended for bibbing and sucking in Wine and Beer like a Swine: When in the mean season no spark of grace, or Christianity, appeareth in them: which notwithstanding

they take upon them, being herein worse then Beasts, who still reserve the notes of their nature, and they take upon them, being never works then bearing, memory and fenfe, with the preserve their lives; but these lose the markes of humanity, reason, memory and sense, with the preserve their sives; but these sole one marges of numerity, season, memory and sense, with the conditions of their families, applying themselves to consume both partimony and pence in this voracity, and forget the Badges of Christians, offering factifice to nothing but their bellies. The Church city, and forget the Dauges of Children them, the civil world abhorreth them, the Lord condemneth forfaketh them, the spirit accurrent them, the civil world abhorreth them, the Lord condemneth them, the Devil expecteth them, and the fire of Hellit self is prepared for them; and all such de-

onrers or your good creature. To help their digettion, for although the Hiend and Gulen, and forme other monflers are subject vources of Gods good creature. to this gluttony, yet are there many creatures more in the world, who although they be Bealts and to this gluttony, yet are there many creatures more in the world, who have they not be drawn to exceed their natural rate of the Beaffs wo kindes, diffinguished rat appetites, or measure in eating or drinking. There are of the Beaffs wo kindes, diffinguished rat appetites, or measure in eating or drinking. There are of the Beaffs wo kindes, diffinguished by colour, one black, and the other like a Wolf, they feldom killa Man, or any live Beaits, but by colour, one black, and the other like a Wolf, they feldom killa Man, or any live Beaits, but by colour, one black, and the other line a tron, they feed upon carrion and dead carkaffes, as is before faid; yet sometimes when they are hungry, they prey upon Bealts, as Horses, and such like, and then they subtilly ascend up into a tree, and when prey upon Beans, as Andress, and when they leap down upon him and destroy him. A Bear is afraid to meet they see a Beast under the same, they leap down upon him and destroy him. them, and unable to match them by reason of their sharp teet

This Beaft is tamed, and nourished in the Courts of Princes, for no other cause then for an example of incredible voracity. When he hath filled his belly, if he can finde no trees growing fo mar together, as by sliding betwirt them, he may expel his excrements; thien taketh he an Aider tree, and with his fore-feet rendeth the same asunder, and passeth through the midst of it, for the cause and with its love-received wilde, men kill them with bows and gins, for no other cause than for their skins which are precious and profitable; for they are white spotted, changeably interlined like divers flowers; for which cause the greatest Princes, and richest Nobles use them in garments in the Winter time, fuch are the Kings of Polonia, Sweveland, Goatland, and the Princes of Germany; neither is their any skin which will sooner take a colour, or more constantly retain it. The outward appearance of the faid skin is like to a damaskt garment, and besides this outward part, there is no other memorable thing worthy observation in this ravenous Beast, and therefore in Germany, it is

called a four-footed Vulture.

Of the GORGON or frange Lybian Beaft.

The countrey and descriptiA Mong the manifold and divers forts of Beafts which are bred in Africk, it is shought that the Gorgon is brought forth in that Countrey. It is a fearful and terrible beaft to behold, it it hath high and thick eye-lids, eyes not very great, but much like an Ozecor Bugils, but affifely-bloudy, which neither look directly forward, nor yet upwards but continually down to the earth, and there-which neither look directly forward, nor yet upwards but continually down to their note they have a fore are called in Greek, Catoblepontal From the crown of their head down to their note they have a long hanging mane, which make them to look fearfully. It eater indeadly and poyfonful herbs, and if at any time he fee a Bull or other creature whereof he is afraid, he prefently caufeth his mane to stand upright, and being so listed up, opening his lips, and gaping wide. Sendeth forth of his throat a certain sharp and horrible breath, which infecteth and poysoneth the arrabove his bead, so that all living treatures which draw in the breath of that air are grievously assisted thereby losing both voyce and sight, they fall into lethal and deadly Convulsions. It is bred in Heferia and Lybia.

Ælianus.

The Poets have a fiction, that the Gorgmes were the daughters of Madufe and Phinoyan, and are called Stringo, and by Heftodus Stheno, and Euryale, inhabiting the Gorgadian Islands in the Athonic Ocean, over against the gardens of Hefteria. Medusa is said to have the hairs of her head to be living Serpents, against whom Perfeut fought, and cut off her head; for which cause he was placed in Heaven, on the North fide of the Zodiack above the Waggon, and on the left hand, holding the Gorgons head. The truth is that that there were certain Amazontan women in Africk, divers from the Seylotans, against whom Perfeus madewar; and the Captain of those Women was call Medula, whom Scylbians, against whom Perfeus made war; and the Captain of those Women was call Medula, whom Perfeus overthrew, and that off, her head, and from thence came the Poets fiction, defertibing it with Snakes growing out of it as is aforefaid. These Gorgons are bred in that Countrey, said have such has about their heads, as not only exceedeth all other Bealts, but also poysolide when the 'flandeth upright. Plmy called this Catablepon, because it continually looketh downward, and farist that all the parts of it are but small, excepting the head, which is very heavy, and between the proportion of his body, which is never lifted up, but all living creatures dy that see 'the cyes.

By which there arises a question, whether the poyson which he lendeth forth, protected from his breath, or from his eyes. Whereupon it is more probable, that like the Cockatrice he killed by seeing, then by the breath of his mouth, which is not competible to any other Beasts in the world by fides when the Souldiers of Marius followed Juguruba, they saw one of these Gorgons, and supposing

fides when the Souldiers of Majius followed Jugurtha, they saw one of these Gorgons, and supposing it was some Sheep, bending the head continually to the earth; and moving slowly self-by set upon him with their swords; wherear the Beast disdaining, suddenly discovered his eyes, self-ing his hair upright; at the sight whereof the Souldiers fell down dead.

Majius hearing thereof sent other Souldiers to kill the Beast, but they likewise dyed as the former.

At last the Inhabitants of the Countries would be sould be sould

At last the Inhabitants of the Countrey, told the Captain the poylon of this Beasts nature, and that if he were not killed upon a fudden, with the only fight of his eyes, he fent death into his

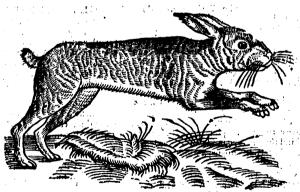

Of the Hare.

hunters: then did the Captain lay an ambush of Soldiers for him, who slew him suddenly with their foears, and brought him to the Emperour; whereupon Marile fent his skin to Rome, which was hund no in the Temple of Hercules, wherein the people were feathed after the triumphs; by which it is apparent that they kill with their eyes, and not with their breath.

So that the fable of Serviut, which reporteth that in the furtheft place of Atlar , thefe Goreons are bred, and that they have but one eye a piece, is not to be believed, except he mean as elfewhere he confesseth, that there were certain maids which were sisters, call Gorgons; and were so beautiful, that all young men were amazed to behold them. Whereupon it was faid, that they were turned into stones: meaning that their love bereft them of their wit and sense. They were called the daughters of Cetter; and three of them were made Nymphs, which were called Pephredo, Env. and the third Dinon: fo called as Geraldul faith, because they were old women so soon as they were born, whereunto was alligned one eye and one tooth. But to omit these sables, it is certain that sharp poyloned fights are called Gorgon Blepen, and therefore we will follow the authority of Pliny and Atheneus. It is a Beaft all fet over with scales like a Dragon, having no hair except on his Highings. head, great teeth like Swine, having wings to fly, and hands to handle, in stature betwire a Bull and a Calf.

There be Islands called Gorgonies, wherein these Monster-Gorgons were bred, and unto the days of Pline, the people of that Countrey retained some part of their prodigious mature. It is reported by Xenophon, that Hanno King of Carthage ranged with his Army in that Region, and found there carrain women of incredible swiftness and pernicity of foot. Whereof he took two only of all that appeared in fight, which had fuch rough and tharp bodies, as never before were feen. Wherefore when they were dead, he hung up their skins in the Temple of Juno, for a monument of their strange natures, which remained there untill the destruction of Caribage. By the consideration of this Beast there appeareth one manifest argument of the Creators divine wildom and Providence, who hath turned the eves of this Beaft downward to the earth, as it were thereby burying his poyfon from the hurt of man and shadowing them with rough, long, and strong hair, that their poysoned beams should not restect upwards, until the Beast were provoked by sear or danger, the heaviness of his head being like a clog to reftrain the liberty of his poyfonful nature; but what other parts, vertues, or vices are contained in the compais of this Monster, God only knoweth, who peradventure hath permitted it to live upon the face of the earth for no other cause but to be a punishment and scourge unto mankinde and an evident example of his own wrathful power to everlatting destruction. And thus much may ferve for a description of this Beast, untill by Gods Providence, more can be known thereof.

Of the HARB.

Hare is a four-footed Beaft of the earth, which the Hobrews call Arnebet, in the feminine gen? der, which word gave an occasion to an opinion that all Hares were semales, or at the least that the males bring forth young as well as females: whereof we shall see more in the sequell of this flory. And the Jews fay, that it signifieth nothing else in Hebrew but a Hare; for which word Of the several Deut. 14. the Chaldee translateth Arneba; the Arabians, Ernab; the Persians, Kargos. Avicenna calleth it Arneberri , Silvatious, Arnaberri, Arnebus, and Arnaben; the Saracent, Arneps ; the Gracians , Lagor, Lagor, Lagoor, because of his immoderate lust. It is called Proon for his feat, and in Latine, Legus, of Lewipes, fignifying swiftness of feet, and that it is not heard when it goeth; howsoever some men derive it from Leporis the Greek word, others derive Lagos from La, betokening elevation, and Cos, fignifying an ear, because she pricketh up one of her ears when she runneth. The Italians, call it Livora; the French, Lieure, and Leurault, Leureteau; the Spaniards, Liebre; the Germans, Haft, or Haas; the Ilyrians, Zagiczo

O' the several kindes.

There be four forte of Hares, fome live in the Mountains, some in the Fields, some in the Ma. rifles, and fome every where without any certain place of abode. They of the Mountains are most wift, they of the fields less nimble, they of the marches most flow, and the wandring Hares most twire, they or kine pend the field, running are most dangerous to follow: for they are so enthing in the ways, and mules of the field, running up the hole and tooks, because by custom they know the nearest way,, and forbearing down hils, to the confusion of the Dogs, and the dilmay.

Of the Elyan Hares.

got the riunter. Rolling faith, there be certain Hares called Elmost (almost as big as Foxes), being blackish, of long bodies, and large white spots upon the top of their tails; these are so called of their countrey 1008 poules, and 1008 miles there be also Hares called Meschia, so called because of their sweet smell Clike the they leave in their foot fleps fuch a ftrong favour, whereup to when the Doga fmell, they or the time they teer in the the Harcs be very great, because they have more grate are said to be almost mad. At Pils the Harcs be very great, because there they have more grate

Hermolaus.

A secret in the Muschian Marcs. their leveral Bonarus.

In the neither Pannonia they are much fatter and better talted than they be in Italy, the Italian Hare full meat then in other places. an the neutrer someone city are more part of his back-pale or yellowith, the belly white, the ears long: In Gel. lia beyond the Alper; they are also white, and therefore some have thought that in the Winter time they gat from ; and this is certain, that when the from melteth, their colour is much altered. There Of the Country and hath been white haired Conies, whose skin was black, and hair of their ears black. They are breat try Hares, and hath been white haired Conies, whose skin was black, and hair of their ears black. They are breat in Lybia, in Scylbia, and in Italy, in the top of the Mountains, and to brought into other Countries Some again have been white in the Winter, and return to their former colour in Summer. There are great flore of white Conies in Viluo, and Leibsania, hunthey are lefter effeemed and fold cheapen (Sebinebergerus faith) the back of a Hare is commonly ruffer, or like Olive colour interlined with iome black spots: the common Hare of the Alper never thangeth colour, and it is greater than the ordinary Hare. There are white Hares also in England, and in Mulewia, there are a multitude of Hayes of all colours, but no where so many as in the Desert Mands, because there are no Foxes there to kill the young ones, or Eagles, which frequent the highest Mountains in the Continent, and the people that inhabit there regard not hunting.

The Hares of Ithaca.

In Albens (Mauerates faith) there were no Hares, but Alcent affirmeth the contrary. Hare brought into libace, dy presently, and if they range a little about the Countrey, yet return they back to the haven where they came to land, and depart not from the shore till they be dead. Hage Sander Dephus writeths, that in the reign of Antigonus, there was such a number of Hares in Aftipology (and afterward in Lerer) that the Inhabitanta were confirmed to go to the Oracle, and demand counsel how to result the Hares, from whom they received answer, that they must nourish Dogs and kill them; and whereas they so abounded in Leros, which at the peoples own request and care, multiplyed to their great harm; afterward a fign of the Hare was placed in Heaven, to remember them, that nothing fo much hurteth man-kinde, as their own defires; yet in ancient time there was not a Hare in those Countries.

In the next place we are to describe all the parts and members of Hares, for it is admirable to behold how every limb and part of this Beaft is composed for celerity: and first of all the head is round, nimble, short, and of convenient longitude, prone to turn every way; the ears long and lofty like an Asses, for Nature hath so provided, that every fearful and unarmed creature should have long and large ears, that by hearing it might prevent its enemies, and save it felf by slight. The lips continually move seeping and waking, and from the flit which they have in the middle of their nose, cometh the term of Hare-lips, which are so divided in men; for if a Woman with childe se one of them suddenly, it is dangerous, if the childe prove not Hare-lipt. They have also teeth on

Whatsoever Beast be born in your flock, having that mark upon them, which is commonly called Hares-tooth, never suffer them to suck their dam, but cast them away as unprofitable and balled Hares-tooth, never suffer them to suck their dam, but cast them away as unprofitable and balled Hares-tooth, never suffer them to suck their dam, but cast them away as unprofitable and balled Hares-tooth, never suffer them to suck their dam, but cast them away as unprofitable and balled Hares-tooth, never suffer them to suck the suck the suffer them to suck the suffer them to suck the suffer them to suck the suck stand cattel; the neck of a Hare is long, small, round, soft, and flexible, the shoulder, bone straight and broad, for her more easie turning; her legs before soft and sound, standing a little a sunder, very flexible, broader behind then before, and the hinder tege longer then the former; a breat not natrow, but fitted to take breath in courfe; a nimble back, and fleshie belly, tender loins, hollow fides, fat buttocks filled up, comely, ftrong, and nervy loins, the fore-feet very flexible; only it wantetha Of their feve- commodious tail for course. The eyes are brown, it is a subtile Beast, but not bold; it seldom looketh forward, because it goeth by jumps. The eye-lids coming from the brows, are too short to cover their eyes, and therefore this fense is very weak in them ; and, besides their over-much sleep, their fear of Dogs and swiftnels, causeth them to fee the less ; when they watch, they thui their epe;

A fecret.

Orus.

ral senses.

and when they fleep they open them. Wherefore the Egyptians when they will fignifie and open a manifest matter, they pictures have fleeping. They watch for the most part all the might: when the eye-lid of a man is pulled back, so as it will not cover the ball of the eye; the Gracians call it Lagophihalmous, that is, Haces-eyes, for fo doth Caliu define it, it cometh fometimes, when in the cure it is cut away too much, or eller when the binder it fill the cure it is cut away too much, or eller when the hinder lid falleth down, and standeth not up to meet the other, but concerning the color of their eyes, it is not very possible to discover it, as well for the causes aforesaid, as also because it followers and have determined by is feldom taken but dead; yet this is certain, that with what colour it beginneth, in that it come nueth to the last, according to Virgils verses;

Quem fuga non rapit ore Canums non occulit umbra. Concolor immorum sub Jove terra tegit.

The liver is fo parted afunder, that a man would think there were two livers in one body, and Pliny is bold to affirm, that in Briletum, Thirne, Propontie, Sycynum, Bolba, and other places they are all fuch. Archelaus upon this occasion affirmeth, that a Hare beareth young both male and female, Whether male fo that the Grammarians know not of what fex to make it. Albertus and Democritus are absolute in bear young this point.

like females.

Riandus confesseth he cannot tell; the common fort of people suppose, they are one year male. and another female. Elianus also affirmeth fo much, and by relation of his friend, he ventureth the matter, and faith moreover, that a male Hare was once found almost dead, whose belly being opened. there were three young ones alive taken out of her belly, and that one of them looked up alive. after it had lien a while in the Sun, and it put out the tongue as though it defired meat, whereupon

milk was brought to it, and fo it was nourifhed.

But all this is easily answered, if a man follow the counsel of Archadius, and look upon the fecrets of nature, he shall finde a most plain distinction : but the Hunters object that there be some which are only females, and no more: but no male that is not also a female, and so they make him an Hermaphrodite. Niphus also affirmeth so much, for he saw a Hare which had stones and a yard, and yet was great with young, and also another which wanted stones, and the males genital, and also had young in her belly. Rondelius saith, that they are not stones, but certain little bladders filled with young in her belly. Romann state, that they are not tones, ou certain the blanders matter, which men finde in female Hares with young fuch as are upon the belly of a Beaver, wherein allo the vulgar fort are deceived, taking those bunches for Rones, as they do these bladders. And the use of these parts both in Beavers and Hares is this; that against rain both one and other sex fuck thereout a certain humor, and anoint their bodies all over therewith, and so are desended in time of rain. The belly of a Sow, a Bitch, and a Hare, have many cels in them, because they bring forth many at a time, when a Hare lyeth down, the bendeth her hinder legs under her loins, as all rough-footed Beafts do.

They are deceived, which deliver by authority of holy Scriptures, that Hareslove to lodge them upon Rocks, but we have manifested esse-where, that those places are to be understood of Conies. They have fore-knowledge both of winde and weather, Summer and Winter by their noies, for Elianus. in the Winter they make their forms in the Sun-stine, because they cannot abide frost and cold, Their nature and in the Summer they rest toward the North, remaining in some higher ground, where they re- and dispositi-

We have shewed already that their fight is dim, but yet herein it is true that Plutarch saith, they have Visum indefession, an indefatigable sense of seeing, so that the continuance in a mean degree, countervaileth in them the want of excellency. Their hearing is most pregnant; for the Egyptians when they fignifie hearing, picture a Hare; and for this cause we have shewed you already that their ears are long like horns, their voyce is a whining voyce, and therefore Authors call it Vagitum, as they do a young childes, according to the verse of Ovid:

Intus ut infanti vagiat ore Puer.

They reft in the day time, and walk abroad to feed in the night, never feeding near home, either Their time of because they are delighted with forein food, or else because they would exercist their legs in go- fleep and food, ing, or elfe by fecret inftinct of nature, to conceal their forms and lodging places unknown; their heart and bloud is cold, which Albertus assigneth for a cause of their night-feeding: they eat also Grapes, and when they are overcome with heat, they eat of an herb called Latinua Leporina, and of Elianus. the Romans, and Hetrurians, Cilerbita, of the Venetians, Laducinos; of the French, Laderones; that is, Hares-lettice, Hares-house, Hares palace; and there is no disease in this Beast the cure whereof she doth not feek for in this herb. Hares are faid to chew the cud in holy Scripture, they never drink, but content themselves with the dew, and for that cause they often fall rotten. It is reported by Philippus Belot, that when a Hare drunk Wine, the instantly dyed; they render their urine backward, and their milk is as thick as a Swines, and of all creatures they have milk in udders before they deliver their young.

They are very exceedingly given to fleep, because they never wink persectly: some Author's derive their name Lagon in Greek, from Lucin to see, and thereupon the Grecians have a consmon proverb Lagos Carbendon, a sleeping Hare for a dissembling and counterfeiting person, because the Ha seeth when she sleepeth; for this is an admirable and rare work of Nature, that all the residue of her bodily parts take their rest, but the eye standeth continually sentinel Hares admit copulation backward, and herein they are like to Conies, because they Of their copubreed every moneth for the most part, and that many; at that time the female provoking station and enthe male to carnal copulation, and while they have young ones in their belly they admit copulation, whereby it cometh to pass, that they do not litter all at a time, but many dayes afunder, bringing forth one perfect, and another bald without hair, but all blinde like other cloven-footed-beafts. It is reported that two Hares brought into the Isle Carpainus, filled that Island with such abundance, that in short time they destroyed all the fruits, whereupon came

the proverb Carpathius Leporem, to fignific them which plow and fow their own miferies. te falleth out by divine Providence, that Hares and other fearful! Beafts which are good for

meat, shall multiply to greater numbers in short space, because they are naked and unarmed, lymeat, man multiply to greater numbers in those cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures, which live only ing open to the violence of men and beats, but the cruel and malignant creatures. upon the devouting of their interious, as the world, and God in his creaturesike epith down the fridom, because there is less use for them in the world, and God in his creaturesike epith down the cruel and ravenous, but advanceth the simple; weak, and despised: when the female hach littered her young ones, the first laketh them with her tongue; and afterward facketh out the male for

Hares feldom

Hares do feldom wax tame, and yet they are amongst them, which are neither Placida nor Free, tame nor wilde, but middle betwirt both, and Cardane givethellis reason of their untameable nature An example of because they are perswaded that all men are their enemies. Scaliger writethy that he saw a tame Harein the Cafile of Mount-Pelal, who with her hinder legs would come and frike the Dogs of her own accord, as it were defying their force, and provoking them to follow hert. Therefore for their meat they may be tamed and accustomed to the hand of man, but they remain uncapable of all difcipline, and ignorant of their teachers voyce, fo as they can never he brought to be obedient to the call and command of their teacher, neither will goe nor come at his pleasures

It is a simple creature, having no defence but to run away, yet it is subtile, as may appear by changing of her form, and by scraping out her footsteps when she leapeth into her form, that so she may deceive her Hunters, also she keepeth not her young ones together in one litter, but layeth them a furlong one from another, that fo the may not lofe them all together, if peradventure men or beafts light upon them. Neither is the careful to feed her felf alone, but also to be defended against her enemics, the Eagle, the Hawk, the Fox, and the Woolf, for the feareth all these naturally, neither can there be any peace made betwixt her and them, but the rather trusteth the feratching brambles, the folitary woods, the ditches and corners of rocks or hedges, the bodies of hollow trees, and

fuch like places, then a diffembling peace with her adversaries;

The wilde Hawk when the taketh a Hare, the fetteth one of her talons in the earth, and with the other holding her prey, striving and wrestling with the Beast untill she have pulled out his eyes,

and then killeth him. The Foxes also compass the poor Hare by cunning for in the night time when he falleth into her foot-fleps, he restraineth his breath, and holdeth in his savour going forward by little and little, untill he finde the form of the Hare, and then thinking to surprize her on a sudden leapeth at her to catch her; but the watchful Hare doth not take sleep after a careles manner, delighting rather in suspicion than security, when the perceiveth the approaching of such a

quest, (for the windeth him with her nostrils) and thinketh it better to go from home, than makea

Wherefore the leapeth out of her form and runneth away with all speed she can. The Fox also followeth, but a far off, and the hearing her adversary no more, betaketh her felf to rest again, under fome bramble, or other buth, supposing that the ground she hath gotten shall never be recovered of her again: but the Proverb is old and true Fair and foftly goeth far; fo the Fox which feldom getteth meat, but winneth it with his wit and his heels, followeth as fast as he can; for a flow pace overtaketh the Hare at rest, which when she perceiveth, forth she goeth again, forsaking her quiet fleep, for the safe-gard of her life, and having gone so much ground as she did before, she betaketh her to rest the second time, hoping that now she hath quit her self from her foe; but the Foxes belly hath no ears, and therefore hunger is to him like a thousand whips, or a whole kennel of Hounds, forcing him forward after his game.

The Hare for her better safegard getteth up into some small tree, being sleepy and weary through the Foxes pursue; the Fox cometh to the tree and shaketh it by the roots, and will not sufferthe Hare to take any rest, for he hopeth that time and travel will bring her to his dish; she leaps away again, and letteth no grass grow under his feet, hoping that her heels shall deliver her from the Foxes teeth: After follows the Fox, and at length (as the greater purse over-weigheth the smaller, and the great Horse of War over-wearieth the little hunting Nag,) so doth the lusty limbs of the Fox, out last the weak legs of the Hare, and when she can go no more needs must her weakness betray her to her foe, and so was her flight and want of rest like a fickness before her death, and the Foxes pre-

sence like the voyce of a passing bell. And on the contrary, all the labour of the Fox, like a gentle and kinde exercise for the preparing of his stomach to such a feast. The fift and least kinde of Wolves are also enemies to Hares, and the Weafil do craftily sport and play with the Hare untill he have wearied him, and then hangeth faftupon her throat, and will not lose her hold, run the Hare never fo fast, till at last through want of breath, and loss of bloud, she falleth into the hands of her cruel play-fellow, who sumeth sport into good earnest, and taketh nothing from her but her bloud, leaving her carcase to be devoured by the hands of others, and in this manner is the fully Hare hunted by beafts : Now let us hear how the is

It is before expressed, that every limb of a Hare is composed for celerity, and therefore the never hunted of men. travelleth but jumpeth, her ears lead her the way in her chase, for with one of them she harkeneth to the voyce of the Dogs, and the other she stretcheth forth like a fail to hasten her course, always ftretching her hinder-feet beyond her former, and yet not hindering them at all; but fometime when her ardent desire maketh her strain to fly from the Dogs, the falleth into the nets, for fich

Ælianus. The Cubriley of Hares. The defence the Hare againft her enemics.

Albertus.

Of the Hare.

is the state of the miserable, that while they run from one perill, they fall into another: according to the faying of holy Scripture, Ifa. 24. He that scapeth out of the snare, shall fall into the ditch. And this is to be noted, that if the Hare had the wit to run forthright, and never to turn, the could not he fo easily over-taken; but because of her love to the place of her breed, there she is taken and loseth her life where she had her beginning : for she preserreth that place above all other for safety. Again some of the elder Hares, assoon as they hear the Dogs, sty to the tops of the high Moun-

rains, for they more easily run up the hill, then down.

wherefore the Hunter must studiously avoid that disadvantage, and keep her down in the vallies. In paths and high ways the runneth more speedily, wherefore they must be kept from that also. The Hares of the Mountains do oftentimes exercise themselves in the plain, and through practise grow acquainted with the neerest ways to their own lodging; so that if at any time the husbandmen set upon them in the fields, they dally with them till they feem to be almost taken, and then on a sudden take the neerest way to the Mountains, not suspected by the Hunters, and so take sanctuary in the macceflible places, whither Dogs nor Horse dare ascend. For the Hares which we keep in the bushes are not able to endure labour, and not very swift (by reason of the pain in their feet) growing fat through idleness and discontinuance of running, they must be hunted on this fort : first of all they go through young woods and hedges, such as grow not very thick, for the thicker hedges they leap over, but when they come to many thick places that they must leap over, they quickly fall down

The Dogs first of all go from them carelessly, because they cannot see them through the trees. but suffer them to run in the Woods following a far off by the scent, untill at last they get the sight of her, and through their better exercise and skill, easily overtake her: but the campestrial or Field-hare being leaner of body, and oftner chased, is taken with more difficulty, by reason of her fingular agility. The therefore when the begins her courfe, leapeth up from the ground as if the flew; afterward paffeth through brambles and thick bushes with all expedition; and if at any time the come into deep grafs or corn the easily delivereth her felf and flideth through it. And as it is faid of the Lyons, that with their tails they ftir up their strength and courage; so are the ears of this Bealt like Angels wings, Ships fails, and rowing Oars, to help her in her flight; for when the runneth she bendeth them backward, and useth them in stead of sharp spurs to prick forward her dulnels, and in her course she taketh not one way, but maketh heads like labyrinths to circumvent and trouble the Dogs, that so she may go whither she will, always holding up one ear, and bending it at her pleasure to be the moderator of her chase. Neither is the so unprovident or prodigal of her strength, as to spend it all in one course, but observeth the force of her prosecutor, who if he be flow and fluggish, the is not profuse of her celerity, but only walketh gently before the Dogs, and yet safely from their clutches, reserving her greatest strength to her greatest necessity; for she knoweth that she can out-run the Dogs when she pleaseth, and therefore it is a vain conceit to trouble her self more then she is urged. But if there be a Dog following her more swiftly then the residue, then she setteth forward with all the force she can, and when she hath lest both Hunters and Dogs a great way behinde her, she getteth to some little hill or rising of the earth, there she raiseth her felf upon her hinder legs, like a Watch-man in his Tower, observing how far or near the enemy approacheth, and perceiving that she is delivered from persuit of all danger, seemeth to deride the imbecillity of their forces.

The younger Hares by reason of their weak members, tread heavier upon the earth then the elder, and therefore leave the greater favour behinde them: and in ancient time, if the Hunters had taken a young Leverit, they let her go again in the honour of Diana. At a year old they run very swift, and their favour is stronger in the Woods then in the plain fields.

The Hare is followed by the foot and fo descryed, especially in soft grounds or high-ways, but if they go to the Rocks, to the Mountains, or to the hollow places, they are more uncertain, if they ly down upon the earth (as they love to do) in red fallow grounds they are ea-

When they are started in the plain fields they run far, but in the Woods they make short courses: If they hear the Dogs, they raise themselves on their legs and run from them; but if fearful imagination oppress them, as they oftentimes are very sad and melancholy, supposing to hear the noise of Dogs where there are none such stirring, then do they run to and fro, fearing and trembling, as if

they were fallen mad.

Their footsteps in the Winter time are more apparent then in the Summer, because as the nights be longer, so they travel farther: neither do they smell in the Winter mornings so soon as it is day, untill the frost and ice be thawed, but especially their footsteps are uncertain in the full Moon, for then they leap and play together, scattering and putting out the savour; nor in the Spring time also when they do ingender, they confound one anothers footsteps by multitude.

They which will go forth to hunt or take pleasure in that passine, must rise early, lest they be deprived of the smell of her footsteps, so shall not the Dogs be able any way to finde the Hare, nor the Hunters their game and pastime: for the nature of the footstep remaineth not long, but suddenly in a manner vanisheth away every hour. Again, they must set the Hils and Rocks, the Rivers, and also the Brooks with nets and gins, thereby as it were stopping up the starting holes, paths, and ways, wherein the Hare for the most part trusteth, whether they be broad or narrow : The best time for the effecting and bringing hereof is after the Sun-riling, and not in twylight or

A:lianw

The hunting of Hares.

break of the day, lest the nets be set neer the Hares form, and she be scared away, but if they break of the day, lett the liefs be let fiel the departure after the Sun is up, because then she beset a far off, there is no danger of her departure after the Sun is up, because then she giveth her felf to sleep: the nets must be set on this manner, let the rodes be pitched up. giveti her ien to neep. the neet in the middle, and hang a long stone at one right, fastning their snares to the tops, raising the net in the middle, and hang a long stone at one right, lattning their mares to the tops, laming the new not go out again. When the Hare is railed, he which fide, that when the Hare is in the net fine may not go out again. When the Hare is railed, he which followeth her to the nets, must drive her in with a great cry, and being in the net, he must gently rolloweth ner to the nets, mule unive her in with a great er, see the net, ne mult gently restrain the Dogs, and make signification to the hunter that she is taken, or else if it fail, let him

The History of Four-footed Beasts.

The keeper of the nets must keep silence, lest by hearing of his voice she be averted, and the hunter must take the Dogs and go to the forme, there to start the Hare; and the fashion the nunter must take the Dog. and E. first of all to call upon spollo and Diana, (their imagined was in ancient time among the Pagans, first of all to call upon spollo and Diana, (their imagined was in ancient time among the sport, and to whom they promifed part of their game. But when the Dog is sent forth, and after much winding and casting about, falleth into the footstep of when the Dog is tent to the founds, let the Hare, then let him loofe another, and feeing them run in one courfe, uncouple all the Hounds, let the mare, then let min look another, and by name, faying now A, then B. Hoika C. and fuch like words of Art, not pressing them too eagerly at the beginning, but gently encouraging them to

The Dogs take this for a fign of joy, and being glad to gratifie their Masters run along with a gallant cry, turning over the doubtful footsteps; now one way, then another, like the cuts of Indentures, through rough and plain, crooked and ftraight, direct and compass, wagging of their tails, and gliftering with their eyes, untill they finde the Hares form: then they make fignification tains, and gintering with their tails, voices, and paces; now running together, now standing still thereor to the nunter with their tails, voices, and paces, now turning together, now manding hill divided afunder, they fet upon the beaft, who fuddainly rifeth and turns the cry of the Hounds after her flight, then must the Hunters cry out, Jo Dogs, there boyes, there, Jo, A, Jo, B, Jo, C, and the short

test word is fittest to applaud the Dogs.

Let the Hunter also run after, so as he never meet the Hare and trouble the hounds, the poor Hare gets her out of fight, and runs to the place where she was first started, but if she fall into the nets by the way, the keeper of the nets must give token to the Hunters by his hollowing voice, after the usual manner of woodmen: O oba, O obe, that the game is at an end, and then call the Dogs by name. If the Hare run far, and stand long on foot, and if the Dogs passe over the Hares sootsleps and discry them not, then must the Hunter recall them with a peculiar hunting term, and lead them to the place, or casting himself about it as near as he can, rebuking the Dogs that range at uncertainties, and exhorting them that be diligent; who when they have found the footings again, run on as before, with all alacrity. In the mean feafon let the Hunter stand still till the Dogs do infallibly demonstrate unto him that they have found the game again, then let the Hunter proceed as before, exhorting his Dogs to the sport, and if it last all day, the Hunter must regard that he restrain and keep the Dogs to the wearied Hare, lest if they start a fresh one, their labour be lost. If it be in Summer about noon, let him rest his Dogs for strengthning of their feet till the heat be over; if it be snowie weather, and the winde set Northerly, the sootsteps remain long and are not easily melted, but if the South winde blow, the footsteps are very quickly shortned : and neither when the snow falleth fast, or the winde bloweth strong, must the Dogs be led forth to hunting, for the snow burneth the Dogs nose, and the frost killeth the heat of the Hares foot; then let the Hunter take his nets and some other companion with him, and go to the Woods or Mountains, tracing out the footsteps of the beaft in the snow unto the form, which is in some steep or shadowed place, where the windes blow over the snow, for in such places doth the Hare seek her lodging; having found it, let him not come too neer, lest he raise her from her seat, but call round about, and if he find no footings from that place, he may take it for granted that the Hare is found.

Having so done, let him leave her, and seek another before the snow be melt, and the sootings dashed, having respect to the time of the day, that so he may inclose and take them before the evening: then let him draw his nets round about them, compating the whole plat wherein the resteth, and then raise her from her stool : if she avoide the net, he must follow her by the soot unto her next lodging place, which will not be far off, if he follow her close, for the snow doth weary her and clot upon her hinder feet, so as the Hunter may take her with his hand, or kill her

Blondus showeth another way of taking Hares: The Hunters spread and divide themselves by the untilled and rough wayes, leading a Gray-hound in a flip, beating the dushes, hedges, and thorns, and many times fending before them a quick smelling Hound, which raiseth the Hare out of her mule, and then let go the Gray-hound with hunting terms, and cryes, exhorting him to follow the game; and many times the Dogs tear the Hare into many pieces, but the Hunters must pull them bleeding

Others again lie in wait behinde bushes and trees to take the Hare on a sudden, and some in the from the mouth of their Dogs. Vineyards, for when they are fat and refty, they are eafily overtaken, especially in the cold of Wineyards. ter. Cyru (as appeareth in Xenophon) was taught to make ditches for the trapping of Hares in the course, and the Eagles and Hawkes watch the Hare when she is raised and hunted by the Hounds; and fet upon her on the right fide, whereby they kill and take her, fo that it is true which was faid at the beginning, that Hares are hunted by Men and Beafts. Having

Having thus discoursed of Hunting and taking of Hares, now it followeth also in a word or two Of Parket and to discourse of Parks or inclosed Warrens, wherein Hares, Comies, Deer, Bores, and other such beasts Warrens of may alwayes be ready, as it were out of a store house or Seminary, to serve the pleasure and use of Hates. may alwayes be ready, as the that the first Rogum that eyer inclosed wilds beatts, was Fulping Hipping, and Gellin faith, that Varro had the first Warren of Hares: the manner was stick Columnia that Richmen possessed of whole Towns and Lordships, neer some Village, inclosed a piece of land by Richmen ponened of whole I owns and Lordanps, neet tolke village, inclosed a piece of land by pail, mudwall, or bush, storing the same with divers wilds healts, and such a one there was in the Lordship that Varro bought of Marcus Pilo in Julyulanum a and Reintus Hartensium saw at Laureium a wood inclosed, containing fifty Acres, wherein were nourshed all forts of wilde beasts, within the

Quintus Althea commanded his Forrester to call the beatte together before him and his guests sitting at Supper, and instantly he sounded his pipe, at the voice whereof there assembled together a great company of all forts, to the admiration of the beholders. Quintum Fulpium had a Park in Taraginium, wherein were included not only all the beaft before spoken off, but also wilde sheen, and this contained forty Acres of ground belides he had two other, Pompeim greated a Parke in France containing the compais of three thousand paces, wherein he preserved not only Dear, Mares, and Conies, but also Dor-mise, Bees, and other Beasts: the manner whereof ought to be thus , first that the wals or pales be high, or close joynted, to as neither Badgers, nor Cate may creep through, or Wolves, or Foxes, may leap over : Wherein ought allo to be hulbes, and broad trees for to dever Woives, or roxes, may seap over: wherein auguranto so be notices, and another for the deverte beats against heat and gold, and other secret places to consent their natures, and to dashed them from Eagliss and other ravening Fowls: In which, there are four couple of Hasse do quickly moltiply into a great Warren. It is also good to fow Gourds, Mileline, Corn, Barly, Beas, and the like, wherein flarts delight and will thereby quickly wax far. For their facting, the Hanners wis another devile, they put Wax into their ears, and so make them dear, then turn them into the place where they should seed, where being freed from the sear of sounds (because they want hearing) they grow the results of their their other of their their section. fat before other of their kinde.

Concerning the use of their skins, in some Countries they make sleeves and breeches of these, The civil use of especially lynings for all outward cold diseases, Heliegabalus lay upon a bed filled with flew or wool their Geral of Hares, for than that there is nothing more fait, for which saule the Greenent mede lounges thereof, parts. to clenfe the eyes of men. The Goldmiths use the feet or dege of Hares in Asad of beuthes or brooms, to take of the dust from their plate. The fieth of Harse hath ever been assounted a deligate meat (among all other four-footed beasts) as the Thrush among the fowls of the air, according to a brillian rail or whom

the faying of Mertial:

Inter aves Tyrdne, fi quiq me judice cerut. Inter quadrupedes, gloria prima lepme.

In ancient time (as Calius faith) the Britant were forbidden to eat Hares, like as the Jims by the law of Meles, Lev. 11. Dept. 14. Plusareb enquireth the reason why the Jews worship Swian, and Hares, because they did not eat their siest: whereunto answer was mode, that they abstained from Hares, because their colour, ears and eyes, were like Affes ; wherein the ignorance of Gods law eppeared, for they abitained from Hares at Gods commandment, because they ware not sloven-footed, for the Egyptians accounted all fwift creatures to be partakers of Divinity.

Their fielh ingendereth thick bloud, therefore it is to be prescribed for a dry diet, for it bindath the belly, procureth uring, and helpeth the pain in the bowels: but yet it is not good for an ordinary diet, it is not and dry in the second degree, and therefore it nourisheth but little being so

hard, as Gallen witneffeth.

The bloud is far more hor then the flesh, it is thin, and therefore watery like the bloud of all fearfull beafts; the hinder parts from the loins are most delicate meaticalled in Late Pulpanestem, twee The bloud and wont to be dreffed with falt, and Coriander feed, ver the forepart is the fweater, for the mannen if fielh eaten. the dreffing whereof I leave to every mans humour. It was once believed that the eating, of the hinder loins of a Hare would make one fair, or procure beauty, whateupon Martiel received a share from Gellia a friend of his with this mediages. والساورين

Formofus feptem Marce diebus eris.

And he retorted the jest in this manner upon Gellia;

Si me non fallis, si verum (luze mea) diois, Edefti nunquam, Gellie, tu leparem.

Lampridim writeth that a certain Poet played upon Alexander Severus the Emperour for cating Hares flesh, which made him fair, whereas in truth he was very black; In this manner:

> Pulabrum quad vides elle nestrum regens Quem Syrum fuum detulit propage,

1 ft 211 >

Venatus facit, & lepus comejus, Ex quo continuum capit leporem.

The Emperour seeing those Verses, for Emperours have long ears and hands, made answer unto them as followeth:

> Pulchrum quod putas effe vestrum regens Vulgari (miserande) de fabella, Si verum putas effe, non irafcor ; Tantum in comedas velim lepufculos, Ut fias animi malie repulfis Pulcher, ne invideas livore mentis.

If any man finde fault with the Emperours Verses, Erasimus hath already answered the objection, that It any man time taute with the Elisabetto laws of verfifying; besides his answer was in Greek, and this

monftrous

Hares.

The eating of Hares procureth fleep, and thus much for the flesh and parts. The Epithets of a The eating or mares procurett meep, and thus much for the field and parts. The Epithets of a The Epithets of Hare expressing their natures are, Eared, trusting their sect, searful, careful, structurely, flying, raging, unhorned, little, crasty, tender, sharp-smelling, swift, whining, and wandring, besides many other unhorned, little, crasty, tender, sharp-smelling, swift, which sames. When Xerxes gathered his Army to go against Grecia, a Mare brought forth a Hare, which foreshewed that great Army should work no strange effect. And another Mare of three which foreshewed that great Army should work no strange effect. years old brought forth an Hare which spake as soon as it was littered, biting her mother with her teeth, and killing her, and while they looked upon her, fucking her dams bloud, feathers grew out of her back in fashion of wings, which being done, the monster lifting up the voice spake in this manner; Fundite jam lachrymas & suspiria mifert mortales, ego hine abeo : that is to say, O ve wretched mortal men weep and figh, I go away : at which words the flew away and was never

There were present at the fight hereof seven publick notaries, which called witnesses and made instruments thereupon, (as Antonim Bautim writeth in his Epistle to Petrm Toletm of Lyons in the year 1337 in December t) whereunto the said Toletm made this answer, The dayes shall come (saith he) except the mercy of God prevent them, that 'children shall think they do obedience to their

Parents if they put them to death.

They shall grieve because they were born, and say they are adulterate, as the Hare that was born of the More. Likewise it is reported by Lifander, that when the Corinthians refused the conduct of the Lacdemonians, and the Lacedemonians befleging the City, fell to be very much afraid, and unwilling to scale the wals; whiles they stood in this amaze, suddenly a Hare leaped out of the town ditch; which thing when Lifander faw, he exhorted his Souldiers, taying, Be not afraid (Oye Spartant) of this fluggifh and unexercifed people, for you fee they ftir not out of the City, but suffer Hares to lodge under their wals; whereupon came the proverb (Dormire leports fub manthu) Hares fleep under their wals, to fignifie a flothfull, secure, fluggish, idle, and unthrity

The Eagles of Nerway lay their young ones in Hares skins, which themselves pull off. There is alfo a bird in Scythia; about the bignels of a Bustard, which bringeth forth two at a time, and keepeth them in a Hares skin which he hangeth upon a bough. Hares were dedicated to love, because (Kenophon faith) there is no man that feeth a Hare but he remembreth what he

hath loved.

They say the City Bocas of Laconia was builded by a sign of good fortune taken from a Hare, for when the Inhabitants were driven out of their Countrey they went to the Oracle to de fire a place to dwell in, from whom they received answer, that Diana should shew them a dwelling place: they going out of their Countrey a Hare met with them, which they confented to follow, and there to build where the Hare should lodge, and they followed her to a Myrtle tree, where the Hare hid her felf, in which place they builded their City, and ever afterwards retained with veneration a Myrtle tree. And thus I will conclude this moral discourse of Hares, with that Epigram of Martial made upon occasion of a Hare that in sport passed through the mouth and teeth of a tame Lion, saying that she was ambitious in offering her life to the Lions teeth in this wife:

Paufanias.

Non facit ad (evos cervix nift prima leones, Quid fugia bos dentes, ambitiose lepus? Scilicet a magnis ad te descendere tauris, Et que non cernunt frangere colla velint. Desperanda tibi est ingentie gloria fati : Non potes boc tenuis prada fub boste mori.

The medicines of Hares, Pliny.

The powder of a Hare with oil of myrtle, driveth away pain in the head, and the same burned cureth the Cough: the powder thereof is good for the frone in the bladder: also the blond and fime of a Hare burnt in a raw pot to powder, afterwards drunk fasting with Wine and warm water, it curethene from: and Semus faith, he made triall of it by putting a spoonful of the powder into water wherein was a fand stone, and the same stone did inflantly melt and dissolve: so likewise a woung Hare cut out of the dams belly and burnt to powder, hatti the fame operation. A waltcoat sade of Hares skins straighten the bodies of young and Mt also the fame dipped in Oil laid to the fore places of a Horses legs where the skin is off by over reaching, it often threth the fore: the bloud taken warm out of the body amendeth Smi burning, freckles, pimples, and many other faults in skin and facet, which Griffer prescribeth to be done first by withing the place many hours together, in the morning with the bloud, and afterwards anomating it with oil: the fame virtue is in the fat of Swans mingled with oil according to the faying the f

or Kids, and whereas Nicander praises i canche first place, for the virtue it hath in it against pollon, or Kids, and whereas tyrenmer prairies; to be befor it is full of fharp digefting power; and thereforc bath a drying quality. It dissolves the congealed and coaguisted milk in the belly; and also clotted bloud within in the stomach mose effectually then the Rennet of anylother heast, being all way the better for the age.

Dioscorides.

Being mingled with Vinegar, it is drunk against poison; and also if a Man or Beast be anointed with it, no Serpent, Scorpion, Spider or wilde Moule, whole teeth are venomous will venture to fling the body to anointed, or elfe inwardly take thereof shree spoonfuls with Wine against the faid bli-tings, or of any Sea-fish or Hemlock after the wound received; and with Vinegar it is soversign against all poison of Chameleons, or the bloud of Buls.

The same being drunk in Vinegar, or applied outwardly to womens breasts, disperseth the coagulated milk in them : also being mingled with Snails, or any other shellfish, which feed upon green herbs or leaves, it draweth forth Thornes, Darts, Arrowes, or Reeds out of the belly : or mingled with gum of Frankincenfe, Oil, bird lime, and Bees-glew, of each an equal quantity with Vinegar, it flancheth bloud, and all iffues of bloud flowing out of the belly: and it allo ripeneth an old fore according to the faying of Serenue :

Marcellus.

Si inducas leperis aspersa ceagula vino.

Being layed to the Kings evill in Lint with Vinegar, it disperseth and cureth it : also it healeth Cankers, it cureth a Quartan Ague, also mixed with Wine and drunk with Vinegar; against the Falling evill and the frone in the bladder : If it be mixed with Sagapanum and Wine Annny, and infufed into the ears, giveth help, as also the pain of the seeth. It dissolveth bloud in the lights, and easeth the pain of bloud congealed in your flomach : when one spitteth bloud, if he drink Samla and Myrtle with the Rennet of a Hare, it shall give him very present ease.

The latter learned Physicians take a drink made of Vinegar and Water, and give it warm to eject and expell bloud out of the Lights; and if any drop thereof cleave in the bowels, then do they three or four times together iterate this potion, and after apply and minister all binding aftringent medicines and emplatters, and for the Bloudy flux it is good to be used : It is held also prefitable by Discorder and other the ancients, that if the pap or brest of a Woman be anointed therewith, it stayeth the sucking Infants looseness in the belly, or eliegiven to the childe with Wine, or (if the have an Ague) with Water.

There is, faith Ariffelle, in the Renneta fiery quality, but not in the highest degree, for ad fire dissolveth and discerneth, so doth this inmilk distinguish the airy part from the watery, and the watery from the earthy; Wherefore when one tasteth an old Rennety be shall think he tastethan old putrified Cheele; but as leaven is to bread, which hardneth, joyneth land seasonethiche same, it is Rennet to Cheele; and therefore both of them have the same qualities of dissolving and binding. Galen affirmeth that he cured one of Gowty tumours and swellings, by applying theteunto old and firong putrified Cheele beaten in a morter, and mixed with the falted fat or legiof a Swine. If a Man lick of the Bloudy flux drink thereof in a reer Egge two scruples for two dayes together falling,

For pacifying the Colick, drink the Rennet of a Hage the same mingled with Goose greats, stayeth the incontinencie of Urine, it also retaineth womens flowers. If it be drunk with Vinegar'it helpeth the seconds, and being applyed with Saffron and the juyce of Leeks, driveth a dead childron of the womb, If it be drunk three or four dayes together after childe-birth, it caufeth barrenness There are (faith Pliny) a kind of Wormes which being bound to Women before the Sun rifing in a Harts skin, cause them that they cannot conceive : thus power is called Afocion.

Mesarim saith, that if a Woman drink this Rennesto her meat beforesshe condeive withchilde, the should be delivered of a Male child, and such is the foolish repinion of themiswhich affirm at this day, that if men eat parfly or white buds of black ivie, it maketh them unable to carnall to third Pennel, and the dived by · Fe Carl

The Rannet of a Hare eafeth and difperfeth all tumors and swellings in Womens broftsicht Lights of a Hare powdred with falt, with Frankincenfe, and white wine, helpeth him that is weekd with the Falling fickness, if he receive it thirty dayes together Sextm afcribeth the fame remedy to the Hart, and Pliny commendeth the Lights to heal the main in the eyes Being drunk in powder, at careth the fecrets. If the heels be troubled with Kibes they are healed with the fact of Bears, the after be wring with a cold, they are healed with the dult of a Hares hair, on the powder of the Lights Likewife when the foot is hurt with the light thoose, it has the fame operation. The arcient Met took the skin of an Oxe in powder, with the light of a Hares of the Light took the skin of an Oxe in powder, with the light of Bayes, and sprinkled it on this cost of the feet, binding the heart of a Hare to the hands of him that hat a Quartan Ague a and some care in the hand of the heart of a word of the heart of the hands of him that had been of the fitting the heart of a word of the fitting the heart of the fitting the heart of a word of the fitting the heart o by hanging the heart of a young Hare or Leveret to the neck or armel in the beginning of the fitof him that is so visited. The heart of a Hare dried mixed with Frankingense or Manhaum white wine drunk thirty dayes together, current the Falling fixingly.

For the pain in the belly take the same medicine, and drunk with warm water mingled with former contains the belly take the same medicine, and drunk with warm water mingled with

Samia, cyreth the fluxes of women; also if a man that hath the flux ear the Liver of a blare dipped in that p Vinegar it helpeth him if he be Liver sick; or if one have the Falling sickness, ear the quantity of an ounce thereof, and it helpeth him. The Gall of a Hare, the Heare, Lungs, Eights and Liver of

Of the Hudge-bog.

of a Wealel, mixed together, three drams, one dram of Castoreum, four drams of Myrrha; a dram of ota Wearer, make beat together, cureth him that hath a swimming or dizzines in his brain. The Vinegar and About the mingled with a like portion of hony, and warm in the skin of an onion, and Galen. fo put into the ear, giveth remedy to him that can hear nothing.

If he that is fick in the milt, that is, if it be over hard, swallow down the milt of a Hare not touch.

ing it with his teeth, or feeing it with his eyes, it cureth him. The belly of a Hare with the intrails tolted and burned in a frying pan mixed with Oil, and anointed upon the head, restoreth decayed tolted and pur the reins of a Hare inverterated and drunk in Wine, expelleth the stone, and being sod, cut and Avicen; dred in the Sun, helpeth the pain in the reins, if it be swallowed down and not touched with the reeth. The reins of a Hare, and of a Moor-hen, cureth them that are poisoned by Spiders, the froncs of a Hare roasted and drunk in Wine, stayeth the incontinency of Urine. In the pain of the loins, and of the hip bones, they have the same operation. The secrets and stones of Hares are given to Men and Women to make them apter to copulation and conception, but this opinion hath no other ground beside the secundity of the beast that beareth them. They which carry about with them the ankle bone of a Hare, shall never be pained in the belly (as Pliny faith) So likewise Sexume

Take the ankle bone out of a live Hare, and hairs from her belly, therewithal make a threed and hind the faid bone to him that hath the Colick, and it shall ease him. The faid bone also beaten to powder is reckoned among the chief remedies against the stone. When Women have hard travel, out it into Cretick-wine with the liquor of Penyroyal, and it procureth speedy delivery, being bound to the benummed joynts of a man's leg bringeth great ease: so also do the feet being bruised and drunk in warm Wine, relieve the arteries and shortness of breath; and some believe that by the foot of a Harecut off alive, the Gout is eased.

The fime of a Hare cureth scorched members, and whereas it was no small honour to Virgins in encient time, to have their brefts continually stand out, every one was prescribed to drink in Wine or such other things, nine grains of Hares dung : the same drunk in Wine in the evening stayeth Coughing in the night; in a potion of warm wine it is given to them that have the Bloudy flux. likewise if a man be fick of the Colick, and drink three pieles thereof in sweet Wine, it procureth him much ease: being decocted with hony and eaten every day, the quantity of a Bean in desperate cases, mendeth Ruptures in the bowels.

Asclepiades in his medicine whereby he procured fruitsulness to Noble Women, he gave them four drams of Myrrha, two drams of Flower-deluce, two of Hares dung, confeded with Collyrial water, & so put up into their bellies after ceasing of the flowers, before they lay with their Husbands. Albertus and Raphael prescribe this medicine to help a woman that wanteth milk in her brefts, Crystal, white Mustard-seed, and Hares dung put into broath made with Fennel.

Of the HEDGE-HOG.

D'Orasmuch as there be two sorts of Hedge hogs, one of the Sea, and another of the Land, our Of the kinds of I purpose in this place is only to discourse of the Land Hedge-hog, the Hibrers call him Kipod, Hedge-hogs which in the 14. of Isa. and Zepha. 2. is so translated by the Septingmis; although that some of the Hebrews would have it to fignifie, a ravening bird, but seeing that I find the word Kapaz in most Hebrew dictionaries to fignifie Claudere and Contrabere, and that is most proper to shut up and draw together, I do rather believe that the proper meaning thereof is a Hedge-hog, because this beaft so draweth it self together, when it is in danger, as we shall hear more at large afterwards, according to the old Verie:

Implicitumque sinu spinost corporie erem.

The Arabians call him Ceufud, or Coufed; the Caldeans, Caupeda; the Settuagints, Mugale. Silvations calleth it Agilium, Avicen, Aduldus, and Aliberha fignifieth a great Mountain Hedge-hog : the Grecians, Cher, and Acanebonocos, or Echinos, by reason of the prickes upon his back. The Latines, Echinus, Ericius, Ricius, Herix, and Erinacem; the Italians, Riccio, and Rizo; the Spaniards, Erizo; the Portingals, Ourifo, or Orizo, Cache, because of hiding themselves; the French, Herison; the Germans, Igal, as in lower Germany in Holland, Een Yjeren Verchen; in English a Hedge-bog, or an Urchine; by which name we call a Manthat holdeth his neck in his bosome : the Italians, Geft, Malax : and the Illyrians, Azvuiter, Zatho, and Orzischan. So then for the entrance of our discourse, we take it for granted, that Herinacew and Echinus signifie one thing, except one of them signifie that kinde which is like to a Hog, and the other that kinde which is like to a Dog, for they differ in place, or in habitation: some of them Their place of keep in the Mountains, and in the Woods or hollow trees, and other about Barnes and Houses: abode. in the Summer time they keep neer Vineyards and Bushie places, and gather fruit, laying it up a- The quantity. gainst Winter.

It is about the bigness of a Cony, but more like to a Hog, being beset and compassed all over with The parts. tharp thorny hairs, as well on the face as on the feet: and those tharp prickles are covered with a Hermolams kind of fost mosse, but when the is angred or gathereth her food she striketh them up by an admirable inflinet of nature, as sharp as pins or needles: these are hair at the beginning, but afterwards

Pliny.

11.1

Sexius.

Actius.

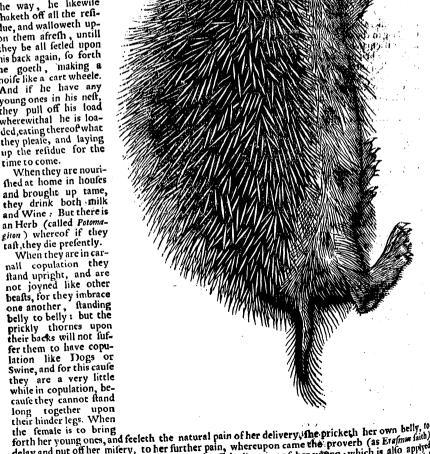

grow to be prickles, which is the leffe to be marvelled at, because there be Mise in Egypt (as Pliny faith) which have hair like Hedge-hogs. It hath none of these prickles on the belly, and therefore, when the skin is off, it is in all parts like a Hog.

Albertus.

His stones are inward and cleave to his loins like as a birds, he hath two holes under his tail, to eject his excrements, which no creature living hath besides him. His meat is Apples, Wormes, or Grapes; When he findeth apples or grapes on the earth, he rowleth himself upon them, untill he have filled all his prickles, and then carryeth them home to his . den, never bearing aboye one in his mouth. And if it fortune that one of them fall off by the way, he likewise shaketh off all the residue, and walloweth upon them afresh, untill they be all fetled upon his back again, fo forth he goeth, making a noise like a cart wheele. And if he have any young ones in his nest, they pull off his load wherewithal he is loaded, eating thereof what they please, and laying up the residue for the time to come.

thed at home in houses and brought up tame, they drink both milk and Wine . But there is an Herb (called Potomagiton) whereof if they

Their copula-

delay and put off her misery, to her further pain, whereupon came the proverb (as Erasmus faith) Febinus partum differt, the Hedge-hog putteth off the littering of her young; which is also applyed against them which put off and defer those necessary works, which God and nature bath provided them to undergo; as when a poor man deferreth the payment of his debt, untill the value and fum grow to be far more great then the principal.

The inward disposition of this beast, appeareth to be very crafty and full of subtlety, by this be- Their inward . the inward and of the that Nauplim had a cunning crooked wit, and was called by him a Hedge-hige parts and discause (Lycophron faith) that Nauplim had a cunning crooked wit, and was called by him a Hedge-hige parts and discause (Lycophron faith) when they hide themselves in their den, they have a natural understanding of the turning of the position. winde, South and North, and they that are nourished tame in houses, immediately before that change remove from one wall to another; the wilde ones have two holes in their cave, the one North, the other South, observing to stop the mouth against the winde, as the skilful mariner, to feer and turn the rudder or fails, for which occasion Aristotle faith, that fome have held opinion, that Coppianus. they do naturally foreknow the change of weather.

There is mortal hatred betwirt the Serpent and the Hedge hog, the Serpent feeketh out, the The enemies Hedge-hogs den, and falleth upon her to kill her, the Hedge-hog draweth it delf up together nound to Hedge hogs. like a foot-ball, fo that nothing appeareth on her but her thorny prickles; whereat the Screent hireth in vain, for the more she laboureth to annoy the Hedge-hog, the more she is wounded and harmeth herfelf, yet notwithstanding the height of her minde, and hate of her heart, doth not suffer

her to let go her hold, till one or both parties be destoyed.

The Hedge-hog rowleth upon the Serpent piercing his skin and flesh, (yea many times tearing the fich from the bones) whereby he scapeth alive and killeth his adversary, carrying the flesh upon his spears, like an honorable banner won from his adversary in the field. The Wolf also is assaid. of and fleeth from the Hedge-hog; and there is also a story of hatred between the Hare and the Hedge-hog, for it is faid, that a Hare was seen to pluck off the prickles from the Hedge-hog, and leave her bald, pieled and naked, without any defence. The Fox is also an enemy to the poor. Hedge-hog, and lyeth in wait to kill it, for the proverb istrue, Multa novit Vulpet, Echinus vice unum. manum: that is to fay, the Fox knoweth many devices to help himself; but the Hedge, hog, knows but one great one, for by rowling up her felf (as before faid) the opposeth the thorns of her back against the Foxes teeth : which alone were sufficient to secure her from a greater adversary; but the wily Fox perceiveth that he can no where fasten his teeth without danger of himself, pisseth upon the Hedge-hogs face and poisoneth her: whereupon the poor beast is forced to lay open himself, and to take breath against the Foxes stinking excrement : which thing the Fox espying, loseth no opportunity, but presently teareth the Hedge-hog in pieces; thus the poor beast, avoiding the poilon, falleth into the mouth of her enemy.

The manner of Hedge-hogs is, that whenfoever they are hunted by Men, they draw up their legs and put down their head to the mossie part of their belly, so as nothing of them can be taken but their prickles: and perceiving that shift will not serve the turn, but their case growing desperate, they render out of their own bodies a certain urine hurtful to their skin and back, envying that any good thereby should ever come to mankinde, and therefore seeing they naturally know the manifold uses of their own hides, here is the cunning of her hunting, to cause her first of all to render her urine, and afterward to take her, for the urine maketh the thornes of her back to fall off every day, and therefore they take this courfe for their laft, refuge. But in these cases the Hunters must poure upon the Hedge-hog warm water, for feeling warmth the presently unfolds her felf, and lyeth open; which the Hunter must observe, and instantly take her by one of her hinder legs, so hanging her up till she be killed with famine; otherwise there cometh no benefit by her taking.

With the same skin slead off, brushes are made for garments, so that they complain ill which affirm, that there is no good or profitable condition coming to mankind by this beaft. Again this is to be referved and used for dresting of flax (as Massarius faith) and also it is set upon a Caliu. Javeline at the dore to drive away Dogs. In ancient time they did not eat the fleth of Hedge-hogs, The eating of but now a dayes men eat thereof, (of them which are of the swinish kind) When the skin is off their flesh. their bodies, they scald it a little in Wine or Vinegar, afterward lard it and put it upon a spit, and there let it be roafted, and afterwards eaten, but if the head be not cut off at one blow, the flesh is

ot good. The Epithets belonging to this beaft are not many; it is called red, tharp, marine, volible, and rough, whereupon Erasmus said,

Ex birco in levem nunquam mutabis Eobinum.

And thus much for the natural and moral parts of this beaft. Now followeth the medici- The medicinall. Ten sprigs of Lawrel, seven grains of Pepper, and of Openanax as big as a Pease, the parts of skin of the ribs of a Hedge-hog, dryed and beaten cast into three cups of Water and warmed, Hedge-hogs. so being drunk of one that hath the Colick, and let rest, he shall be in perfect health; but with this Actius. exception, that for a manit must be the membrane of a male Hedge-hog, and for a woman a

The same membrane or the body of all Hedge-hogs burnt to ashes, hath power in it of cleansing, digetting, and detracting, and therefore it is used by Physitians for taking down of proud swelling. wounds, and also for the cleanling of Ulcers and Boyles, but specially the powder of the skin hath that virtue; also it being roasted with the head, and afterwards beat unto powder and anointed on Rasis. the head with hony, cureth the Alopecias.

Marcellus.

The same powder restoreth hair upon a wound if it be mingled with Pitch, and if you add therethe same powder renoteth han apaid and his head of hair again, if the place be rubbed until it unto Dears greate, to will remote unter the Piftula, and fome mingle red Snails with this duft, applying it in a plaister to Ruptures and Swellings in the cods, and being mingled with oil by anointplying it in a planter to Ruptules and the fade, and being drunk in wine is a remedy against the pains of the reins or the water betwixt the skin and the fleffr.

Ælianus.

A sustaining the water between the said and said, under them that have their Urine stopped, by Gods help (faith my Autlior) the Ropping shall be removed, if it proceed not from the stone, nor from neip traitin my Author/the hopping and beat to powder, and fo drunk with sweet Vinegar an impossume. The flesh salted, dryed, and beat to powder, and so drunk with sweet Vinegar. an importune. The neutral technique of Dropfies, Convultions, and Leprofies, and all those helpeth the pain in the reins, the beginning of Dropfies, Convultions, and Leprofies, and all those neipetit the pain in the terms, the affection. The Mountain Hedge-hog is better then the affections which the Gretians call Cathelle. The Mountain Hedge-hog is better then the domestical, having prickles like Needles points, But legs like to the other: the meat is of domenical, naving privates that for the flomath, foftning the belly, and provoking the Urine better tafte, and doth more help to the flomath, foftning the belly, and provoking the Urine more effectually, and all this which is attributed to Hedge-hogs is much more powerful in the

Porcupine.

Marcelius.

Dioferides.

Avicen.

Albertus.

Pliny.

orcupine. The Hedge-hog salted and eaten is good against the Leprosie, the Cramp, and all sickness in the Nerves and Ptifick and pain in the belly, rifing of windiness and difficulty of digestion : the powder anointed on Women with childe, alwayes keepeth them from abortment. The flesh being stale given to a mad Man, cureth him; and being eaten keepeth one from the Strangury; also being given to a mad Man, curett min; and being drunk in wine, expelleth the ftone in the bladder, and is good against the Quotidian Feaver, and the birings of Serpents. The fat of a Hedge-hog ftayeth the flux of the bowels: If the fat with warm water and hony be gargarized, it amendeth a broken and hoarse voice; the left eye being fryed with Oil, yeelderh a liquor which causeth sleep, if it be insufed into the ears with a quilk. The gall with the brain of a Bat and the milk of a Dog, cureth the reins; likewife, the faid gall doth not fuffer uncontrolly hairs to grow again upon the eye-browes, where once they have been pulled up. It maketh

Warts of all forts are likewife taken away by the same; the milt fod and eaten with meat, it healeth all pains in the milt, and the reins dryed are good against a Leprosie or Prisick coming by Ulcer, or the difficulty of Urine, the Bloudy flux and the Cough. The dung of a Hedge-hog fresh, anid Sandaracha with Vinegar and liquid pitch, being layed to the head, ftayeth the falling away of

When a man is bitten with a mad Dog, or pricked with prickles of a Hedge-hog, his own Urine laid thereunto with a spunge or wool, is the best cure : or if the thornes stick in the wound of his foot, let him hold it in the warm Urine of a Man, and it shall easily shake them forth : and Albeita and Rafis affirm, that if the right eye of a Fredge-hog be fryed with the oil of Alderne or Linfeed, and put in a vessel of red brasse, and afterward anoint his eyes therewith, as with an eye-salve, he shall fee as well in the dark as in the light. And thus I wist conclude this discourse with one story, that a Hedge hog of the earth was dedicated to the good God among the foolish Pagans, and the water Hedge ling to the evill, and that once in the Ciry of Phrygia called Azanium, when a great famine troubled the inhabitants, and no factifice could remove it; one Eupborbso facrificed a Hedge-liog, whereupon the famine removed, and he was made Prieft, and the City was called Traganos upon the occasion of that facrifice.

Of the HORSE.

W Hen I confider the wonderful work of God in the creation of this Beaft, enduing it with a fingular body and a noble spirit, the principal whereof is a loving and dutiful inclination to the service of Man; wherein he never faileth in Peace nor War, being every way more neer unto him for labour and travel: and therefore more dear (the food of man only excepted) we must needs account it the most noble and necessary creature of all four footed Beasts, before whom no one for multitude and generality of good qualities is to be preferred, compared or equalled, wholecommendations shall appear in the whole discourse following.

The feveral names of Horics.

It is called in Hebrew, Sus, and a Mare Sufab, the which word fome derive from Sis, fignifying Joy; the Syrians call it Rekesh and Sousias; the Arabians, Ranica; and the Caldeans, Ramakim, Sufaathu ; the Arabians , Bagel ; the Perfians , Athaca ; the Greekens , Hippor , and at this day Alogo ; the Lains , Fquus, and Caballus; the Italians and Spaniards, Cavallo; the French, Chevall; the Germans, Roffz; the Bobernians, Kun ; the Illyrians, Kobyla ; the Polonians, Konii.

The derivation names.

It is also profitable to confider the reason of some of these names, Both in the Latin and Grek tongue ; and firit of all Eque feemeth to be derived, Ab equalitate, from equality ; because they were first used in Charets and draughts, and were joyned together being of equal strength, legs and say ture ; Cabellus feemeth to be derived from the Greek word Cabeller, which was a common name for ordinary Hackney-horses, and Horses of carriage, wherenon Seneca commendeth Marcin Cato, that in his triumph of Cenforthip, Uno Caballo contentum et ne toto quidem, partem enim farcine ab utroque latet dependentes occupabant; that is to fay, that he was contented with one Horfe for his own faddle, and yet not totally one neither, for the packes that hang on either side of him, possessed the

greatest part, and the true derivation of this word, feemeth to accord with Caxe, which fignifyeth a greatent part, and the true derivation of the manger, and Alu aboundance, because riding Horses are more plentifully sed, and these Horses were also used for plowing, according to the saying of Horace;

Optat ephippia bos piger, optat arare Caballus.

The Grecians call it Hippor, which feemes to be derived from standing upon his feet, and this beast

only feemeth to be one of the number of them, which are called Armenta.

And besides all Histories are filled with appellative names of Horses, such as these are, Alastor. Aethon, Nicleus, and Ornem, the Horses of Pluto. Aetha a Mare of Agamemnon remembred by Homer. Aethlon, Statio, Eous, Phlego, Pyron; the Horses of the Sun: Lampus, Podargus, Xampus, Arnon, the Horses of Ermus: by whose aid Hercules is said to overcome Cygnus, the Son of Mars: Ballus, Xanthus, and Padafus, the Horses of Abbilles. Beriftenes, for whom Adrianus made a grave (as Dion writeth) Bromius, Gerus, Calydon, Camphasus, Cnafius, Corishe, and Herpinus, two names of Britain Horses cited by Mar. tial and Gillius. Cylarus, the swift Horse of Castor, Dimos, and Phobos, the Horses of Mars. Enrick. Glaucus, and Sthenon, the Horses of Neptune, Parthenia, and Euripha, Mares belonging to the Contauts of Hippodamia, flain by Ornomaus. Harps, another Mare. Phanix, and Corax, the Horses of Eleosthenes. Epidaminus, who wan the prizes in the fixty fixth Olympiade, and caused a statue to be made in Olympus, and his faid Horses and Chariot called Pantarces, and beside these, other Cnacius and Samus.

Also Pedarces, Rhabus, Strymon, Tagus, Theron, Thoes, Volneris, Which was a Horse of Prasinum and it is repoted, that Verus the Emperor so much affected this Horse, that he not only caused him to be brought into his own Palace, and to have his meat alway given in his prefence, but made of hima picture with a manger, wherein were Grapes and Corn, from whence came the first Golden

Horses or prizes of Chivalry:

Primus equum volucrem Massyli munera regis Haud fpernenda tulit :

Unto these may be added the affected names of Poets in love of their favorites, as Rholandus, Vegiantinus, Baiardut, the Horse of Rainaldus, Rubicanus of Argalifas, Hippogryjus of Rugerius, Frontinus and

Fratalaius of Sacrapan, and Rondellius of Oliverins.

The Epithets that belong to Horses, are either general or particular, the general may be rehearfed in this place, fuch as these are following; braffe-footed, continual, horn-footed, founding-footed, foming, bridle-bearer, neighing, maned, dufty, four-footed, fretting, saddle-bearing, water ry, or sweating, whole-footed; and many such others both among the Greeks and Latins, which howfoever they may contain divers Allegories in them, and therefore may feem to be figuratively fed down, yet I thought good being of other opinion to reckon them in the beginning, that is the Reader may confider, that I would be unwilling to omit any thing in this story, which might any way tend to the dignity of the subject we intreat of, or the expressing of his nature. Wherefore we will first of all begin with the description of the natural parts of a good Horse.

The hair of a Horse falleth off every year, the neather eye lid or brow hath no long hairs growing upon it, and therefore Nicon that famous painter of Greece when he had most curiously limbed forth a Horses persection, and faild in no part of nature of art, but only in placing hairs under his eye, for

that only fault he received a difgraceful blame.

The hair of the manes ought to be long, that part which groweth betwixt the ears, upon the Temples, hanging down betwirt the eyes, the Grecians term Procomion, the Latins, Caprona, and in English it may be called a fore-top, which is granted to Horses not only for ornament sake, but allo for necessity to defend their eyes. The Hories are naturally proud of these locks and manes, as may appear by those Mares which are kept for procreation of Mules, by copulation with Asis, which at the first despise to ingender with those shaveling and thort haired Stalions. Wherefore their keepers shave off their manes, and their fore-tops, afterwards leading them to the waters, wherein while the Mares behold their own deformity, they grow fo shamed, dejected, and discoursged, that ever after they admit with quietness the Asses to cover them. Therefore it is never good to cut the mane or the fetter-locks, except necessity require, for the mane and fore-top is an ornament to the neck and head, and the fetter-locks to the legs and feet : and he that keepeth Horfes must as well regard to have them comely for outward grace, as frong and able for necessary labour. Many use to cut the necks of their riding Horses, even as they do of their drawing Horses, which thingstthough it may feem to be done for greater encrease, and farther growth of hair, yet is it unfeemly for an honest rider : some again cut it to stand compass like a bow, and many use the America fathion, cutting the Mane by rowes, leaving fome longer then other, as it were the batlements of Church ; but the best fashion of all is the Persian cut, whereby the one half of the thickness is cut away on the left fide, and the other on the right fide fmoothly turned over and combed, according to the faying of Virgil:

Densa juba & dextre jattata recumbit in arme.

But if the Horse be double maned, and so the hair fall half on the one side, and half on the other, then cut all the middle hairs away, and leave both the fides whole; for such was the intention of the Paribians. In a Colt or young fole, the hinder part is higher then the forepart, but as he grows in years, so likewise the forepart groweth higher then the hinder.

Of the Horse.

This beaft hath two bones in his head, and other two descending from his forehead to the Nostrils. two inferiour Gumbes, or cheek-bones, forty teeth, that is to fay, four and twenty grinders, four canine, and twelve biting teeth; there are seven crosse ribs in his neck, and seven from his reins to his hole, his tail hath twelve commissures, and two Ragula in his fore-shoulders, from his shoulders to his legs other two, from his legs to his knees two more, in his knees there are two supporters, and from the thin to the Articles two more, there are sixteen small bones in the bottom of his hoof, and but one in his brest, in the inward parts there are six and twenty ribs, from the hinder parts to the top of his reins, the two grinding bones; and from them to the hinder part of the head there are two more, and two little ribs from the upper part of Vigetitie. the thigh to the Gamba, and from thence to the hairs of the patterns, there are two, and the little ones to the hooves fixteen; fo all the bones in number are accounted a hundred and fe-

Now it followeth to declare the measure and number of the members; there are twelve steps or degrees in the roof of his mouth, his tongue is half a foot long, the upper lip hath twelve inches, the under lip five, every one of the cheeks ten: from the fore-lock to the Nostrils he hath one foot in length, his two ears contain fix inches, and his eyes four inches a piece. From his fore-lock to the Mercurius, there are contained eight inches, the back-bone containeth three and thirty crosse ribs. From the convulsion of the reins to the top of the tail, are twelve commissures, the length of his Sagula containeth also twelve inches, from his shoulders to his legs six, from his legs to his knees a foot in length, from the Articles to the hoofs four inches, in his whole length fix feet. And this is the stature of a couragious and middle Horse, for I know there are both bigger

and leffer. The quality and the measure of the nerves or finews is this, from the middle nostrils through the head, neck and back-bone, is a dubble file or threed to the top of the tail, which containeth twelve foot in length. The two broad finews in the neck do contain four-foot, from the shoulders to the knees, there are two finews, from the knee to the bottom of the foot there are four finews, in the fore-legs there are ten finews, in the hinder-legs there are other ten finews, from the reins to the stones there are four sinews, so the whole number amounteth to thirty four. Consequently the number of the veins is to be declared. In the palat or roof of the mouth, their are two veins, under the eyes other two, in the breft other two, and in the legs other two, four under the pasternes, two in the ancles, four in the crown of the patternes, four out of the thighes, two out of the loins, two out of the Gambaes, one out of the rail, and two in the womb or Matrix, so the whole number is nine and twenty.

There are certain veins above the eyes which are divided in Horses, wherein they are let bloud, by making to them small incisions, the bloud also is taken out of the veins, in the palat or roof of the mouth. There was an ancient custome of letting Horses bloud upon Saint Stevens day, by reason of many holy dayes one succeeding another, but that custom is now grown out of use. Also some take bloud out of the Matrix veins, but that is not to be admitted in Geldings, because with their stones they lose a great part of their heat, excepting extream necessity, but out of the parat bloud may be let every moneth, and stallions when they are kept from Mares if the vein of their mouths be opened, fall into blindness, although it is no good part of husbandry to let them bleed that year, wherein they admit copulation, for the vacuation of bloud and feed, is a double

charge to nature. But the Organical vein of the neck, is the best letting of bloud, both in stoned and gelded Horses. The later Leaches make incision in the great vein called Fontanella, and in Inen Thymus of Jugulin. The eyes of a Horses are great or glassie, and it is reported by Augustus, that his eyes were much more brighter then other mens, resembling Horses: these eyes see persealy in the night, yet their colour varieth as it doth in Men, according to the caprine and glazie humour, And sometimes it falleth out, that one, and the farze Horfe hath two eyes of diftinct colours. When the eyes of a Horse hang outward, he is called Exophthalmes. Such fair eyes are best, for Bucephalm the Horse of Alexander had such eyes, but when the eyes hang inward, they are called Caloph Thalmoi, and Calius: the Paribians count them the best Horses, whose eyes are of divers colours, and are therefore called Heteroph Thalmoi, because the breed of that Horse was said to take the beginning from the Parthians, and thereason why the people loved not these Horses, was, because they were fearful, and apt to runaway in wars.

The ears of a Horse, are tokens and notes of his stomach, as a tail is to a Laion, his teeth are Aristotle. changed, yet they grow close together like a mans. It is a hard thing for a Horse to have a good mouth, except his stallion teeth be pulled out, for when he is chased or heated, he cannot be held back by his rider, but distaineth the bridle: wherefore after they be three year and a half old, those teeth ought to be pulled forth. In old age, a Horses teeth grow whiter, but in other creas tures blacker.

A Mare hath two udders betwirt her thighes, yet bringeth forth but one at a time: many of the Mares have no paps at all, but only they which are like their Dams. In the heart of a Horse

there is a little bone, like as in an Oze, and a Male; he hath no gall like Mules and Asses, and other whole-footed-bealts, howfoever (fome fay) it lyeth in his belly; and others, that it cleaveth to his whole-tooted-beatts, howhorts from any of a Horse lie near that gut, that so one side of his bellv liver, or to the gut-colon. The small guts of a Horse lie near that gut, that so one side of his bellv may be free and full of passage; and from hence it cometh, that the best Horses, when they run or travel hard, have a noise or rumbling in their belly. The Hip-bone of a Horse is called by some the haunch, as the Arabians say, the tail (because therewith he driveth away files) is called Mul. the haunen, as the Arabiani 124, the tail of hairs. The legs are called Gamba of Campo, fightfying treading; the hoofs of a Horse ought neither to be high nor very low, neither ought the Horse to rest upon his anckles, and those Horses which have straight bones in the Articles of their hinder knees, fet hard on the ground, and weary the Rider: but where the bones are fhort in the fame places, as they are in Dogs, there the Horse also breaketh, and woundeth one leg with another; places, as they are in Dos, and their and therefore such Horses are called Cynopode. They have also quick flesh in their hoofs, and their and therefore racines called horns, upon which for their better travel, men have deviled to faller noots are iometimes caned notins, apon which the tree start, near pays deviced to lallen iron plates or shoots. This hoof ought to be hard and hollow, that the Beast may not be offended when he goeth upon stones; they ought not to be white, nor broad, but almost kept moist, that so they may travel the better, having frong feet, hard and found hoofs, for which, cause the Gradans call them Eupodes. Porasmuch as it is requisite for every man to provide him Horses of the best race, and their kindee

The Horfes of divers Nations.

are divers in most places of the world, so the coursers of Horses do many times beguile the simpler fort of buyers, by lying and deceitful affirmation of the wrong Countreys of the best Horses which thing bringeth a confusion: for there are as many kindes of Horses as Nations. I will therefore declare severally the Countreys breeding the Horses, for the Region and air maketh in them much alteration, that so the Reader may in a short view see a muster of Horses made of all Nations. The Wilderness of Acarnania, and Etolla is as fit for feeding Horses as Their fally. The Horses of the Greeks, Armenians, and Trojans are fit for war, of the Greekish I will speak

Apollonius. Horfes with horns and wings.

Oppianus.

Alexandria was wont to take great delight in Horses, and combates of Horses : Apollonius writeth Lib. 5. Ethiopla (as it is reported) breedeth Horses having wings and horns. Varro commendeth the Apulian Horfes, and Volatteranns writeth, that they and the Horfes of Roles are moft fit for war: he meaneth above all the Horses of Italy. There have been very fruitful pastures in Arcadia for tatrel. especially for breeding Horses and Asses that are Stallions, for the procreation of Mules, and the breed of the Arcedien Hories excelleth. The fame man preferreth the Hories of Theffalla and the Greekish Horses, for they are sound of their feet and head, but not of comely Buttocks, they have their back bone whole, great and short.

Ruellius. Abfyrtus.

The latter two I might have referred to the whole body of the Horfe. The Horles of Armenia are very necessary and convenient for war, for they and the Capadociani do breed of the Paritian Horses, saving their heads are somewhat bigger. Of the Hackney or common Horses, will say more afterward, where I touch the difference of Horses, and of their pace. The Barbarian Horses are the same as the Lybian Horses. Vegetius commended the Horses of Toringa and Burgundia, after them of Vonufet. Britain breedeth little Horses and Amblers. Of Horses that are celebrate of them of Vonujet. Britain precedent little Flories and Antibers. Of Flories that are excluded the Calpian Mountain: See in the Spanish. The Horses of Cappedocia and America have the bred of the Parthiant; but their heads are bigger, and are of a most famous Nobility, for that Country, before any other land, is most commodious for the nourithing of Horses, according to the vertex of Nemesian: Cappadocumque notat referat generofa propago! one described propago! of Nemefian:

Vegetius.

Strabo.

The Cappadocians do pay to the Persians every year, beside silver, a thousand and fivehundred Horfes. Sc. The Meder have the double of thefe, and they fur-name the Cappadociani Hories famous and fwift; for he faith, that whiles there are young, they are accounted welk by rearch of their young teeth, and their body feeding on milk; but the older they grow; To much the fwifter they are, being very couragious, and apt for war and hunting, for they are not affeld of weapons, neither to encour ter with wilde Bealts. Mazaca is a City of Cappadasta, frenate under the Mountain Azelli, now called ter with whice Beaus. Mazaca is a City of Coppension, reface under the Mountain argue, how Cafarea, as Eufebius remembreth in his Chronicles, and from that City couleth the Mazacentan Horfe, for the Cappadocian Horfe. And not only the Countrey) but the City it fiff fometime was talled Cappadocia from this City or walled Town, I suppose the Horfes of Mazach were to called which appears to the Countrey of the Countrey of Mazach were to called which appears to the Countre of the Count

And perauventure Nem sianus understood certain Horses of Libia, by the name of the Mizaci an Horses, when as he joyns them with the Maurasian Horses, and calls them painted Mauzacian Horses. which agreeth not with Cappadician; writing also, that they are ruled with a stroke of air in stead of which agreed the hing we have read in Authors writing of the Maffilian Horses, in the Countrey of Libia, and whereof we will speak when we discourse of the Lybian Horses. But the Cappadorian Horses are swift and lusty in their old age, as it is related by Oppianus. Again, if Mazacian Horses be the same that the Cappadocian are; what is the reason why Oppianus doth name them apt, unless peradventure that the Lappan Horse is a Cappadecian, and not otherwise? The Horses of Chalambria, are so named of Various. a place in Lybia; the Chaonian Horses are the same with the Apriralen Horses. The Cosephonians and Menetians do bestow great labour in breeding of Horses; for the Colophonians dwell in a plain, as I have read in a certain Greek Author. Straballe, 14 writeth, that the Colophinians in times pail did abound with Sea-torces, and have much excelled in Horse-men; that wheresoever in any Nation there was waged war, they hired and required the aid of the Colophonian Horse-men, and so it was made a common Proverb: Colophonem addidit. Erasmus. The Horses of Crete are commended by Opplanus, and elsewhere. From their loins upward they are as big as the Cyrenian Horses, with well set thighes, excellent for the foundness of their feet, and holding their breath a long time in riding. and therefore ht for fingle races or in Chariots.

The Frean Horses are remembred of Orpianus, and the Epeans are a people of Achaia, and the Strabo.

Achaian Horses are commended of the same. The Lipidanean kinde of Horses is more excellent, and he preferreth the The falian Horses Hefore those of Epidauria, but the Epiestian Horses are biting and thubborn: Abfritus faith, that the Epicotian Horles, and the Samerican and Dalmatian, although they. are flubbornand will not abide the bridle, and besides are base and contemptible, yet they are bold in war and combates, and therefore the Epicotian Horses and the Sioilian despite not, if their qualities and comely parts be apparent in them, although sometime he hath run away from the enemy, as the Poet faith:

Quamvis Sape fuge verfos ille egerit boftes. Li patria Epirum referat.

Epiria and Chaonia, is also a part of Epirus Alpestrian, although sometimes it be taken for the whole Countrey of Epirus. The Horses of Chaonia are commended, as Gratius remembreth, writing of the Sicilian Horses, in these verses to this effect, that no man hath presumed to strive with the Chamians. and the Achaian hand doth not express their deferts:

> - Queis Chaonias contendere contra Aufit, via merita quas fignat Achuia palma.

There are people of Arabia called Erembi, which some call lebtbyophagans, and Troglodytans, Vegetius Oppianus, in the third place commendeth the Fryfian Horses for swiftness, and long continuance of course, after the Hunnian, Burgundians. The French Horse is the same that the Menapians, and S. Hisrom writeth, that worldly men are delighted with the French Goldings; but Zachartes Als looled from his bands, rejoyceth good men. Lucius Apuleius hath commended the French Bealts, for if the young fole be derived of a generous kinde, it is an argument it will prove a Noble Beaft.

The Gelanoian Horses are a kinde of base Horses, not fit for war; whether this name proceed of a krange Countrey, I have no certain knowledge thereof. There is a certain River in Sicilia called Gelus, of which Countrey the Horfes are of great value and much fet by. And also the Gelons are a people of Scythia, who in their flight fight upon Horses, of which Lucanus writeth to this effect;

> Massagetes quo fugit equo, fartesque Geloni: And Virgil, Bijalta quo more folent, aver que, Gelonue, Cum fugit in Rhodopen, aut in deserta Getarum. Et lao concretum cum fanguine potat equino.

Signifying thus much, that the Maffingetes & valiant Gelons fly away upon Horses like the Bifaltons, when they fly into Rhodope, or into the Wilderness of the Gelans, and drink milk mixed with Horse bloud for hunger and famine : But these fearful Horses are not meet for war. Germania hath greater Horses and hard trotters, whose pace is very hard and proublesome. The Getican Hories run most swifely. The Horses of the Greeks have good found broad feet, and of a great body; a comely fine head, their Elianus. fore-part fomewhat high of stature, straight and well compacted, and of a well fashioned body, but the joyning of their buttocks not fo agreeable and answerable to the roll: they are most swift and couragious, yet notwithstanding in all Greece the Thesselian Horses are most esteemed; Nemosianus written also of the Greekish Horses: Greece therefore yeeldeth choice Horses, and well hoosed. In Abstrus. Helveis the Horses are fitted, and very expert in war, and especially the Algerian Horses, which will had and last and continue a long time.

In Spain also the Horses are of a great stature of body, well proportioned and straight, having a fine head; the joynts of their bodies very well divided, fet apart, and ready or flexible, fimple and fhort buttocks, but not very strong and comely. They are strong and able to sustain the undergoing

Ruelius.

or compassing of journeys; neither are they sender bodyed or subject to leanness; but they are or companing or journeys; neither are they are words of the Authors following, neither are they nothing nimble for courie, as shall appear by the words of the Authors following, neither are they fourred when they are ridden: from their growing even to their middle age, they are pliant, and spurred when they are ridden: from their grown de ling. The Cappadocian Horse is renowned, the easie to be handled, afterward they wax wilde and biting. The Cappadocian Horse is renowned, the eane to be mandled, afterward they wax while and billing. The including the ring. Neither doth Shills like, or the next triumph or victory have the Spanish Horses in running the ring. Neither doth Shills yeeld Horses inserior for the ring then those; and Africa is accustomed to bring forth the most swift yeeld Horses inserior for the ring then those; and Africa is accustomed to bring forth the most swift. Horses by copulation with the Spanish bloud to the use of the saddle.

ories by copulation with the Spanish block are more excellent, and do so much surpass other Horses in swiftness, how much the Eagle or the winding Hawk in the air, and the Dolphin in the Sea. excelleth other birds and fifthes; but they are finall, and of little ftrength, and no courage: alexcellent other pirus and sinies; but read him well) that they are of a great stature of body, they being though Abjyrius affirmeth (if you read him well) that they are of a great stature of body, they being though Apprint ameline in you tell mind they are of a comely body; but their hoofs are rid but a little way do lofe their fwiftness of pace: they are of a comely body; but their hoofs are

or nonow or natu.

The Spanif Horses are desired of great Princes and Peers, and the Magnates, because their opinion is, that they are swift and nimble; and out of Spain they are respected for lightness and elegancy. on is, that they are white and mindle; and general breed of Horses, was this; that the greatest Horses are bred from the third Climate, to the end of the fixt; and most of all in Spain: yet we have seen fronger and bigger Horses bred in the seventh Climate, and those more able to endure labour then those that are under the third or fourth climate.

The Horses of the Celiberans somewhat a dusty colour: and they change if they be transported into the farther Spain; and the 'arthian Horses are like them in regard they excel in nimbleness and dexterity of running, whereof Martial writeth thus, Videbis altam Liciane Bilbilim, equit & armis pubi. lem: which Bilbilis a City of Celtiberia. Of the Callacians and Gennets, we will speak also in the Spamil Horses that are bred in the Calpian Mountain, afterward, when we entreat of the differences of

Horses according to their degree.

The Huns bring up their Horses hardly, able to endure cold and hunger, and they have great and crooked heads, staring eyes, strait nostrils, broad chaps, and strong and rough necks, and long manes down to their legs; great ribs, straight backs, bushy tails, strong shanks or legs, small feet, full and wide hoofs, their flanks hollow, and their whole body full of holes. There is no fatness in their hanch or buttocks, they have no strings in their sinews or arteries, and they exceed in length more then in height, having great bellies hanging down, big-boned, and leanness (which is a deformity in other Horses) in these it sheweth their stateliness: their courage is moderate and wary, and these are able to endure wounds. These Hunnian Horses elsewhere he calleth them Hunnican Horses, and the same in times past Huns ; but they are called now a days Ungain

The Companies or Armies of Hunt, wandering up and down with most swift Horses, filled all things with flaughter and terrour. They are biting and kicking Horses, as most Pannonicks are, (for they call Pannonia at this day Hungaria) of which there is a Proverb of Malignity sprung up, Non nifi irritati opinione aut offensa metu fercolunt : that is to fay ; They wax not ftern, or rage not , but either by opinion, or fear of offence, affirming that the Pannonians are very fit for War. There is not any that can hold and constrain or draw the bridles in, or loose them forth, that rideth an Indian Horse when he pranseth and runneth violently, but such a one that hath been trained up from his childehood in the skill of Horses: these men have accustomed to hold them with the bridle, and alfo to break their wilfulness by snaffles or bits, and those that are well skilled in handling Horses, do compell them from their unruliness, as restrain them within a small circuit. Yet notwithstanding to make this circle and finish it, it requireth the help of hands, and it is a great skil belonging to

They which are most skilful of this Art, and cunning doers of it, know very well how to bring their course into a circle, whose compass is not to be regarded chiesly when it can bear but two Souldiers fighting together at one time. There are among the Indian Pfillam (for there are also other Africks of that name) Horses bred no bigger then Rams, and they say that in India there are Horses with one horn, of which horn drinking cups may be made, having this vertue in them; that if you put poyson into them, and a man drink thereof, it shall not hurt him, because the horn doth drive away or expell the evill or poyson. Whereof you shall see more at large in the History of Monocenter: and Elianus himself elsewhere, and Philes following him, write the the same thing of a cup made of the horn of an Indian Afs, having one horn.

The Istrian Horses are of good able feet, very straight, whole backt, and hollow; but swift of courfe. The Moores Hories (faith Oppianus) are most excellent, as well to hold out long courses, as also to endure hard labours : the Lybians next unto these are of a most durable celerity: they are shaped alike, except that the Lybian Horses are big, and of a longer body, having thicker also and fides, and their breft is larger before on their creft; they can eafly abide the heat of the

Africa hath been accustomed to put the most swiftest Horses of the Spanish brood to the use of the faddle: (and Livius faith) in lib 23. that it was a custom to the Numidians, being in battel, to led two Horfes together, and in manner of vauters oftentimes, in the most sharp conflict could leap from the weary Horse to a fresh, (so great was the dexterity of the rider, and the docibility of the beast.) From Tunis of Africa, Massilia, and Namidia, there are also brought very singular Horse,

Of whe Horain passing for running, which the common people dall Barbary Horses. The Massigns (a people of passing have very good Horses, which they govern with a rod whithout a bridle, from whence Virl Dybis) navorth of his Anithri, calleth them undamed and wilde Numider : and Silius faith allo; she gli in his fourth of his Anithri faith allo; she

il in his rouren of the bridle in dollean up and down, here, and there, and every S. C. and Selection of Selection of Selection Community of the Community o

Although the place be nor desset, yet estat shat is spoken concerning the Numidian and Lybian Horses, is manifested as well bytiste words of Oppranius besoverested, as also by that which Although setteth down so it is shall set the still still set the still set the still set of the Lybian Horses of the men of that still not set all other still set shall set the still set of the still set the still set of the still set shall set the still set of the still set shall set the still set of the still set shall set the still set the still set of the still

fine, but very lean, and in the time of grafs they turn them out to feed in the field; but they ride not

The Horses of Mallylia are equal with the Lybians. The people of Magnetia have been renowned in feeding and bringing up Horles, and they are very skilful in combate on Horles back (as Lucumn faith.) The Magnetians are flegious for Horles, and the Nation of Nicata for Odts: Magnetia is a countrey of Matedonia, border His Mon't beffaly, to the City and Countrey of Afth Tyeth toward Maundiur.

Opianus commended the Manath Horses: The Moores fight often on Horse back with Speaks! but their Horses are naked, and their bridles made of rushes.

The Mallylians following the Lybians (for the most part) are furnished after that manner, and they relemble others, having little Horses, both swift, obedient, and easily to be ruled with a rod.

The collars of their Horses are made of wood or hair, whereby the bridles hang. The principal Strabo. Horles of Barbary are not fwift, but in respect they live on fodder, they are more handsome and better in flefth, which they use in eminentidanger, when it flanderly them upon to escape the rage of their enemies. Thus far I have related the words of Oppanies touching the hourishing of Horses, among the Lybiam, where he friewerh that they are all alike, both in shape and other proportion? Touching the Nemelian Horfes, they are all one with the Manrans and Marufans, (as Strabo withe Heth) calling them nimble and swift kindes amongst the Moores.

The Sicilians are swifter then the Moores, and the Moores are of a more valiant courage then the Scilians, or fome such like other thing, who are furnished with yellow colours, and shew to the eye most shining and splendant, and which is more, they only desire the redard shear to be excelwhich when they come to other wilde Beafts by way of hunting, he commendeth them to be excellent : then he faith that the vellow is the best colour.

Æli anus.

In the Countrey of Mauritania are great store of Lyons, and of the Nazacanos we have spoke of before sufficiently. The Median Horses are of exceeding greatness, and the men of that Countres are so bewitched with the rich attire and shape of their bodies, and also their Horses being so loose with superfluity or rankness, that the Horses take delight in their Masters, both in greatness and in fairness of body, and such costly furniture upon their backs, that they feem to perceive their own fature and comeliness. The Medes every year by way of custome pay three thousand Horses. Heradoug also calleth the Nifean Horses the Meder, whereof more shall be spoke afterwards. The Meneni ans amongst our Country-men, the only men which I suppose were once call'd French of Cafar, and the Rugians, (as Warriours) for the most part are in estimation, I also finde that the Rugians inhabited that Countrey which is now called Rugerland, and that Paulus Diaconus remembreth them, lib. 1.

Touching the affairs of Longebardus, there are than lay they departed into Mechelburgia. These are the right off spring of the Germant (faith Althametus), they are counted as Gromans, both in lanquage and vertue. Graties writeth of the Marcibians, faying the Marcibians fcarfe yeeld their tough neck to the sword. Virgill also declareth Mycenia to be a Countrey of most notable Horses: and

Gratius commendeth a Horse fit for hunting highly in these verses:

Consule Penei qualis perfunditur amne Theffalm, aut patria quem confpenere Mycene Glaucum, nempe ingens, nempe ardue fundet in auras Crura, quie Eleas potior lustravit arenas ? Ne tamen boc attingat opus, jallantior illi Virtus, quam silvas durumque laceffere Martem.

The Missian Horses were once great in chimation (as Camerarius writeths). Also the Nasamonianiane people of Lybia, living as spoylers of the ships in the Syrtes. Of all these Horses before said, the Nile. an Horse is the goodliest, and sittest to carry the body of a King, they are of a passing good shape. an easie pace, and very submissive to the bridle; having a little head, and a long and thick mane, with yellow or brown hairs hanging down on both fides : Armenia is very fit for feeding Horses, wherein is a certain medow called Hippoboans, by which they make their journey which pals from Persid and Babylon into the Caspian Border, in which place, they feed five hundred Mares which belong unto

The Nifean Horses (written with Tota and simple Sigma, as Eustathius writeth) are the most excellent and best; some say that they have their generation from Germany, others out of Armenia, but

they have a certain kinde of shape like the Parthians.

In India most of their living creatures are fan greater then in other places (except Horses) for the Nifean Horles, do exceed the Indian Horles, (as Herodotus writeth) in his feaventh Book, defenbeing the Persian Horse. Behinde the spears (faith he) came ten Horses in most sumptuous furniture, which were Nifeant, fo called, because there is a great field named Nifent in the Countrey of Midia, which yeeldeth Horses of a great stature. After these followed Jupiters Chariot drawn with eight Horses, after which Xerxes was served in a Chariot drawn by Niscan Horses, and by how much the greater the Lybian Elephant is then the Niscan Horse, so much the greater are the Niscan Horses then the Indian (as the same man faith) in his first Book; but the King was about to offer a white Horse, that is of the Nijean Horses, having a better mark as some expounded.

There are that say that Nifeus is a plain of Persis, where the most famous and notable Horses are bred. Some interpret it to the yellow Nisean Horse, because all the Horses of Nisean are of this colour. Between Sufinax and Ballria, there is a place which the Greeke call [Nifos] in which the most fingular fine Horses are bred. There are also that suppose they are had from the red Sea, and all those to be of a yellow colour. Herodous writing of Nifeus, maketh it a part of Media. Orpheus allo writeth that there is a place in the red Sea called Nife. Stephanus also maketh mention of [Nyfean Pedua] with the Medes, of which people the Horses are so called. Calius Rhodiginus reproved a certainman which translated the Islandish Horses for the Nisean Horses. Plutarch faith that Pyribus had an apparition of a Nifean Horse armed and furnished with a Rider, that Alexander the Great was Captain thereof.

The Medes have Colts of a most noble kinde of Horses, which (as antient Writers do teach us, and as we our felves have feen) men when they begin the battel with a fierce encounter are wont to

prance valiantly, which are called Nifean Horses.

Touching the Paphlagonians, about the education of their Horses, see more among the Ventians: The Parthian Horses are of a large body, couragious, of a gentle kinde, and most found of their set. Concerning those Horses which have but one eye, commended among the Partisons, and of those which are distinguished by diversity of colours, from those that come forth first, I have spoke already out of Abjyrtus, The Armenian and Parthian Horses are of a swifter pace then the Steillant, and the Iberi swifter then the Parthians, whereof Gratius writeth to this effect :

> Scilicet & Parthis inter sua mollia rura Mansit bonor : veniat Caudini saxa Taburni, Garganumque trucem, aut Ligurinas desuper Alpes, Ante opus excussis cadet unguibus; & tamen illi

Est animus fingetque mess se nisus in artes 2 Sed junta vitium posuit Deus .-

That is to fay, among the Parthians there hath remained honour for their foft Countries; but let That is to lay, and to the Rocks of Candmus, Tabernus, and too rough Gargarus, or upon the Ligurian Alpes, then he will quickly shake off his hoofs, and make a shew of great valiantness. The Horses of the then ne wind are formewhat white; and if they may be brought into Spain they change their colour. But the Parthians are alike, for they excel all others in nimbleness and dexterity of running: How the Parthian do make their pace easie in the trotters and hard sooting Horses, after the manner of the rational be declared afterwards for Perfia preferreth these Horses above the censure of their Geldings, shall be declared afterwards for Perfia preferreth these Horses above the censure of their Octomores as well to carry, (having an easie pace) and being of most excellent dignity: As for their pace it is thick and fhort, and he doth delight and lift up the Rider, being not instructed by art, but effecteth it by nature.

Amongst these ambling Nags, (called of the Latines among the common fort of Totonarii) their pace is indifferent, and whereas they are not alike, they are iupposed to have something common

from both; as it hath been proved: whereof Vegetius writeth in this manner.

In a fhort journey they have the more comeline s and grace in going, but when they travel far, they are impatient, stubborn, and unless they be tamed, will be stubborn against the Rider; and that which is a more greater marvel, when they are chafed, they are of a delightful comeliness, their neck turneth in manner of a Bow, that it feemeth to ly on their breaft. The Pharfalian Mares evermore bring Foals very like their Syre, and therefore very well fo named, Eque probe. We read of the Phasian Horles which receive their name (from the mark or brand of a bird fo named) or else because of their excellent beauty and comeliness.

The Rolean Horses, Varro so nameth of Rosea, which Volatteranus writeth to be most fit for War : Caliut. and this Roles, otherwise Roles, Festus faith, that it is a Countrey in the coasts of the Restians, so called, because the fields are said to be moist with that dew. The Horses of Sace, if they happen to throw down their Rider, they forthwith stand still, that they may get up again. Vegetius having commended the Persian Horses saith, that the Armenians and Sapharens do follow next. This Saphitime verily is an Island in the Arabian coast, and the people of Saphiria lye beside Pontus. The Horses of Epirota, Salmarica, and Dalmatia, although they will not abide to be bridled, yet they shew that

they are warlike by their legs.

The Sardinian Horses are nimble and fair, but leffer then others. The Sarmatican kind of Horses is feat Vegetius. and well fashioned in this kind very fit for running, unmixt, having a well set body, a strong head, and a comely neck. Some Horses they call Aetogenes, from a certain mark which they have in their shoulders and colour, which the Samatians do take unto themselves as very good, with which they do contend about their cruelty, wherefore they imploy them in warlike out-rodes, but those that bear the Eagles mark in their buttocks and tail, they are disallowed of them; and they report that they mark them so, because they will not use them, by reason lest they should quickly be destroyed or run into fome trouble.

The Sarmatians when they entend any long journeys, the day before they keep them fasting, giving Pling. thema little drink, and fo they will ride them a hundred and fifty miles continually going. These Horses are very fit for War, and many of them are found gelded in their tender age, and they say they never lose their teeth. It is a custome of Scylbia and Sarmatia to geld their Horses to make them more gentle: they are swift, little, and sierce, but very stubborn and untamed; neither doth Circo, (situate near Sicilia) breed Horses inseriour to the Spanish, as Vegetius writeth. The Epirotan and Signature culian Horsesare not to be despised, if they were well bred and educated, they want not comelines and good qualities.

The Siculian Horses are most swift. Lilybaum is a promontory of Sicilia lying towards Lybia, which a certain verse maketh more plain : but as I understand it is the Three-clift-topt-mountain Atne, which casteth forth fire, and covereth the carkcase of Enceladus the Giant, lying there under (whereof Oppianus writeth) and some others also. But (saith he) the Armenians and Parthians, have swifter courfers by far, then the Siculians. Now, let us hear Gratius himself, discoursing of the Siculian Horses,

as well as of the Lybican.

Sic & Strymonio facilis tutela Bifalta, Possent Æineas utinam se ferre per aries. Qui ludus Siculis : quid tum si turpia colla, Auttenuis dorse curvatur spina? per illos Cantalus Graits Agragas, villaque fragofum Ne broden liquere fere. O quantus in armis Ille meis, cujus dociles pecuaria fætus Sufficient, queis Chaonias contendere contra Aufit, vin merita quas fignat Achaia palmi.

But as for Grains, I suspect the place to be unperfect; for Agrages is a Mountain of Sicilia, having a Town fituate in the top of it, bearing the same name, where their Ancestors were wont to nourish and bring up the best Horses, There is also in Sicilia a Mountain called Nebrodes, which Nebrodon. some think to be so called by reason of the plenty of Dear, but they have no Author for it, and

Est animal

as for the printed Book of Gratius, I finde it expresses in the Horses but yes Son down, fay. as for the printed Book of Grains, I made our agious and notable Horses: but yet Servius saith, saing, that Agragas was a breeder of most couragious and notable Horses to the indianal said. ing, that Agragas was a precuer of more consumation of the justing or combates cording to indarus) that the Agrigentines in times past sent their Horses to the justing or combates of Gracia, returning with victory from thence, and we have also read, that in Cappadocia whole troops of Gracia, returning with victory nonfore of Horses from Agrigentine, and those were excellent. Artisophanes calleth those great Atmen Horses (Cambari) either of the greatness of the Mountain, or else great Canthars are bred in it, or of the Horses of Æina, being notable for swiftness and running. The Horses that are bred in Green and Cappadocia are also most excellent.

Strabo.

In Greece there are most notable Horses of Thessalp, which Absyrtus saith be the bestin all Greece The words of Gratius the Poet speaking of the The falian Horses are before recited. The Mares of Ametus were the most excellent, but as Homer reporteth the Thessalian were before them. The Solitude or Wilderness of Arcananus is as commodious to feed Horses, as Thessalia. It is certain that Thel. falia excels with Horses, from whence Xernes is said to have made a combate, that he might try hie Horses there where he understood the best breed of Greekish Horses to be, and from whence this proverb arose, Decernatur equa Thessalia (viz.) let the Thessalian Mare be tryed by battail, a proverb of excellent worth, because in old time the chiefest praise was of the Thessalian Mares: which is very apparent by the Oracle that was delivered to the Æginensians. Suidas relateth (but I know not our of what Author) that The falia hath excellent Horsmen; Thracia expert shooters; and India light armour : fo hath likewise Creet and Caria.

Erasmus writeth; that Thessalia is most fit to feed Horses, who do far excel the Arcadians and Foi. dauret, as Strabo witnesseth, lib 8. Cefar was said (when he was Dictator) to have made the first shew among the Romans of the Horses, fighting against Buls, and killing them, whereof Lucanus writeth thus:

Thessalius sonipes bellie feralibus omen.

Texter.

That is to fay; the Theffalian Horse is profitable for sence and deadly conflicts. There is also in Thel. Celia a City (named Pella) from whence I deem the Pellean Horses are so called of Gratius, yet there be other places called Pella (as Macedonia and Achaia) whereof Gratius writeth thus:

> Spadices vie Pellei valuere Cerauni, Et tibi devota magnum pecuaria Cyrrha Phabe decus nostras agere in sacraria tonsas.

Which (Cerauni) are Mounts of Epirus, and Cyrrbu is a Town of Phocis, fituate at the foot of the hill Parnaffus, where Apello Cyrrhaus was worthipped. The Tyrrheans being excellent warriors, are commended of Oppianus. Out of the Islands of the Tyrrhenian Sea (especially Corsion and Sardinia) there be

Volatteran.

very short Horses, but they are of good courage, and gentle withall.

The Thracian Horses are foul and ill shapen, being rough all over their bodies, and having very great shoulders, which in the Greek is named (Calampsen) such a one as will cast down the rider on the ground from off his back, they are crook-backt, or bunched out; or elfe of divers kindes; and therefore they have an unfure and reeling pace, and their course is very unconstant. Ablymus faith, the Thracian Horses are the best. The Thuringian Horses are neighbours to Hessis, which Pliny and Volateranus supposed, are called (Mediterranean Cimbri.)

There be some that suppose the Venetians to descend from a people of Paphlagonia (called Venetans) which after the destruction of Troy came to these places, and by these they make an argument, conjecturing it to be good, in regard they are wholly imployed about breeding Horses, which at this time faileth altogether, but in former days they were very careful to follow their business about the training up of young Mules, whereof Homer writeth. And Dionsfins the Tyrant of Salla ordained, that the breed of Horses should be setcht from hence, to make warlike combates with them, that among the Gracians the excellency of the Venetian breed should remain, and that a great while after that breed of Horses got the praise. Vuallachus this day is called of the Saxons a gelded Horse, and brought out of that Countrey, which sometimes was called Dacia. The Lycospatis and Lycophotians shall be spoken of hereafter.

of the choice of good Horses.

The members DAlladius adviseth to observe four things in choice of a Stallion Horse, the form or outward I proportion, the colour, the merit, and the beauty, all which are necessary to be observed in the choice of Colts or elder Horses, that they may be of a generous race, having fost legs, lofty paces, gently treading, such as will lead the way, and be not afraid of any water, bridge, or ludden noifes; having a gentle neck, a sharp head, a short belly, a fat back, a dapple colour, nimble ear, thick manelying on the right fide, a double bone descending by his loins, a sounding hoof, and legs that cannot fland fill, which Virgil expresses in these words in I be a market than

Nec non & pecorl eft idem delettus equino. Tumorlo; huos in fem fathis fummitiere gent is, Pracipuum jam inde wientele tupende laborem. Continue pecerie general pullus in arvivis Altineribeneditur. & mellia cruya repontt. Primus & ire vlam & fluvios tentare mineces Audet, & ignoto fefe committere ponti: Nec vanos borret crevittus, illa ardua cervix. Arentumque caput hrenie alvur obefaque terge 1: 0 Luxuriatque toris animolum pelius, bonesti Spadices glancique : color deterrimus albis Et gilvo e time, fe qua fonum procul arma dedere, Stara loca mefeit, micat auribus & tremitrarius: Collectiumque premens volvit fib naribus ignem. Denfe juba. & dexiro jatta recumbit in armo. At applemagitur per lumbos fpina, cavatque Tellurem, & folido graviter fonat ungula cornu.

monanto d'in Varro sheweth that at the first fooling of a Coult soman may observe by certain signes how he will Signs to chuse prove when he is in perfection of for if he be chearful, bold, and not terrified at any strange sight, if a good Coli. he run before the company, be wanton, and contend with his equals in course, and over-run them : if he leap over a ditch, go over a bridge, or through water, and being provoked appeareth meek a these are the most true signes of an elegible Colt.

Also it is to be considered, whether they rise quickly, being stirred from their rest, and run away freedily, if their bodies be great, long, full of muscles, and it arp, having a little head, black eyes. open and wide nostrils, there pricked ears, a fost and broad neck, not long, a thick mane curied, and falling on the right fide, a broad and full breaft, large shoulders, and shoulder-bones, round ribs a little belly, a double back-bone or at the least not thin bunchy, and extended it his loins preffed downwards, broad, and well fet, little and fmall stones, a long tail; with curled hair, high, straight and equal legs, round knees, not great, nor bending inward; round buttocks, brawny and fleshy thighs, high, hard, hollow, and round hoofs, well fee to the crown of their pastern, having weins confpicuous and apparent over all his body. That Colt which at the time of his foaling hath Columbia, the most highest legs, is likelieft by common reason to prove most able and noble in his age, for of Varro. all the joynts in the body the knees and legs grow least, and they which have flexible joynts in their Alberine. infancy, will be more nimble and flexible in their age. And thus much for the parts of a Colt. Now, Of the choise in the next place we must likewife take confideration of a Horse untamed, and ready for the saddle. Of a Horse una For the outward parts of his body, faith Xenophon, yeeld evident fignification of his minde, before he backed or no yet ridden.

Plate willeth that the flate of his body be ftraight, and articulate, his head bony, his cheeks little, his eyes standing out, and not funk into his head, flaming like bloud, looking cruelly if the body be black; but black eyes if the body be white, do argue a gentler and better disposition; short and little ear, the crown of his head greater then the relidue, broad nothrils, whereby he not only looketh more terribly, but breatheth more easily; for when one Horse is angry with another, in their rage they are wont to stretch out their nostrils vehemently.

The beak or fnowt of a Horse, ought not to stand out like a Swines, but to bend down a little crooked, the head to be so joyned to the neck, as it may bend more commodiously, that is, if the neck be small next to the head, so will the neck stand before the rider, and his eyes appear before his ket: and although he be full of stomach, yet will he never be violent or stiffe necked. It ought also to be confidered, whether his cheek bones be sharp, tender, or adequal, standing one above another, for their imparity maketh the Horfes neck to be hard and ftubborno

The back-bone above his shoulders higher commodious to see the saddle upon, and his whole boa dy the better compacted, if the back-bone be double, and smooth; for then shall the Rider sig more easily, and the form of the Horse appear more delectable. A large break sheweth his comelines and frength, making him fit to take longer reaches without doubling of his legs, because in a broad breaft the legs stand further asunder : large side or ribs swelling out above the belly, for they thew the ability of the Horse both to his food and work, a round even belly, and his loins being broad and short, causeth the fore-legs to be lifted up more easily, and the hinder-legs to follow; for the fmall loins do not only deform, but enfeeble and oppress the Horse, there fore the loins ought to be double, the ribs broad and fleshy, agreeable to the breast and sides, buttocks solid and broad, with a long tail reaching down to the heels of his hinder-legs, Thighs full of sinews, the bones of his least tail reaching down to the heels of his hinder-legs, his less thick like posts of the whole body, but that thickness ought neither to be of veins nor sesh, for then they are quickly inflamed and wounded, when they travel in rough and sharp wave. ways: for if the flesh be cut a little, the commissures part asunder, and causeth the Horse to half, and above all other things have a regard to his feet, and therein especially to his hoof, for being thick, it is better then being thin, likewife if they be hard, causeth the pastern to fland higher from the ground, for fo in their pace the foft and hard parts of the foot do equally.

fultam one another, and the hard hoof yeeldeth a found like a Cymbal, for the goodness of a Horse appeareth by the found of his feet. unings we islab mahi fo ir son to non ..

Now on the contrary fide it ingood salfo to dead down when faults and fignes of reprobation in Hories and first of all therefore; magical and steeling has a greatests, narrow nostrils, holloweyes. Horles, and first of all therefore; was really believe founders, narrow sides, and little sleshy sharp loins, bare ribs, hard and lieave legs, kiness bot aprecipited, weak thighs, not strong, the strong loins is the strong loins. crooked legs, thin, full fleshy, plain and low kook; all chefe things are to be avoided in the choice Ances, to space felo committee fants: of your Horse.

of the choise of Stallions and wree singuisties.

illiand and mulamina has supplement.

Ow in the next place, let us cuitident hasholdens by the form the next place, let us cuitident hasholdens by the form of the procreation, and we have the wed already, what in also the or procreation, and we have the wed already, what in also the or procreation, and we have the wed already, what is a supplementation. the colour, form, merit, and beautys. This Stallion is called in half Rozaine; in France, Estalon in Germany, Ein Springhengst; and in Latine, Admissariut, quia ad generandem sobblem admittitur, because he Of the colour, is sent to beget and engender. The Graciant, Anabites, or Ochemical First of all therefore, to begin with the colour: that Horse is best which is of one continued colour; atchough oftentimes (as Rusur faith) Horses of a despicable colour phoye as noble as any other minimis

The chief colours are these; bay, white, carnation, golden, ruffet, mouse-colour, slea-bitten. spotted, pale and black : of all those the black or bay is to be preferred. Opplinis maketh diffin. ction of Horses by their colour in this manner, the gray or blewish spotted is fittelt for the hunting of the Hart, the bright bay for the Bear and Loopards, the black with flaming eyes against the Lyons. The natural colour of the wilde Horfes are an africolour with a black brake from the head along the back to the tail; but among tame Horses there are many good ones of black white brown. red, and flea-bitten colour. Bibyet itis colbei remembred, that feldom or never Colts be foaled white, but rather of other colour, degenerating afterward by the increase of their age, for hith Hories are more lively, durable, and healthy, then other of their kinde, and therefore Plurarch commendeth a white Horse of Sylla for his swiftness of foot and Romach : among all colours, first the black, then the bay, next the white, and last the gray are most commended.

Camerarius commendeth a cereain rolour called in Latine Varius and may be englished daple gray, because of the divers in-textures of colours, which although thany Nations do disallow, yeundoubtedly than colour (faith he) is a figure and argument of a good wature, condituted and builded upon a temperate commixture of thumors. Where black, white and yellow hairs appear, fo that the fight of one of the sain nothing inferiour to the equestrial party coloured capabilons: Among Horses, which are divers coloured, they which have flars in their foreshead, and one white foot, were molt commended ; fuch were the Thracian Horsey not admitted in copulation; of which Virgil speakcellin this mannet to have a man will a common or and let the wall then we the restricted distriction of country to

Thracius albia Portat equat bicolor magulis, veftigia primi 111. am sent and Alba padies frontemque oftentans induus albamie tos has funt Acres of the Strate bearing

Black Horses also which have one russet or swart spot in their faces, or else a black tongue are highly commended for generation, but the pale coloured Horses are no wayes to be admitted to cover Mares, because their colour is of no account; and likewise it is seldom seen that the Foal proveth better then the Sire! The bay colour hath been received without exception for the best travellers, for it is supposed, that Baudim (amongst the Latines) is derived of Vadium, quia inter catera animalia firting vadat: because among other creatures he goeth most surely.

It is also behoveful that in a Stallion Horse, the mane be of the same colour with the body. Horsemeans to make keepers have devised to make their Mares conceive strange colours, for when the Mares would go to the Horse, they paint a Stallion with divers coldurs, and so bring him into the fight and prefence of the Mare; where they fuffer him to frand a good while, until the perfectly conceive in the imagination the true Idea and full impression of those pictures, and then they suffer him to cover her; which being performed, she conceiveth a Foal of those colours and like manner; Pigeons conceive young ones of divers colours.

The Germans to mingle the colour of Horses hairs (especially to bring black among white) hake the roots of Fearn, and of Sage, and feethe them together in lee, and them wash their Horses all over therewith. For the making of their Horses white, they take that fat which ariseth from the decoction of a moul in an earthen pot, and therewithall anoint the places they would have white, Also they shave off the hairs, and put upon the bald place crude Hony, and Badgers greale, which maketh the hairs to arise white : and many other means are used by Horse-leaches, 45 afterward shall be shewed. In the old age of a Horse his hair doth naturally change white, above all other beafts that we know, and the reason is, because the brain-pan, is a niere thin and flender bone, then the greatness of his body would require, which appeareth by this, that receiving 2 blow in that place, his life is more endangered then by hurting any other meniber; according to the observation of Homer:

Et qua fete barent cariti, letbaleque vulnus Pracipue fit equis .-

And thus much shall suffice for the colour of a Stallion : now followeth the form or outward The form, proportion of the body, which ought to be great and folid, his stature answerable to his strength, his lides large, his buttocks round, his breaft broad, his whole body full and rough, with knots of his floor dry and folid, having a high hoof at the heel. The parts of his beauty are The beauty of thefe, a little and dry head, the skin almost cleaving to the bones, short and pricked ears, great a Stallion. their, a most and priced ears, great eyes, broad nostrils, a long and large mane and tail, with a folid and fixed rotundity of his hoofs, eyes, promotion, as thrusteth his head deep into the water when he drinketh; his ribs and loins like an Oxes, a smooth and straight back, his hanches or hips long, broad, and fleshy, his legs large. defly and dry, the finews and joynctures thereof great, and not fleshy near the hoofs: that the hinder part of his body be higher then his forepart, like as in a Hart, and this beauty better appearethin a lean body then in a fat, for fatness covereth many faults; the former parts are thus expressed by Horace:

> Regibus bic mos est ubi equos mercantur, opertos Inspiciunt, ne si facies ut lepe decora Molli fulia pede eft, empterem inducat biantem, Quod pulchri clunes, breve qued caput, ardua cervix.

If you will make trial of your Stallion, whether he be fit for procreation, Hipparchus teacheth you this experiment: press the genital member with your two fingers, and with locks of Wooll draw out his feed, which being to drawn out, if it cleave and hang together, fo as it will not be cut nor easily parted, it is a demonstration of a good Stallion; but if it hang not together like birdlime, but easily go asunder like Milk or Whay, such a Horse is not to be admitted to cover your Mares. When Horses be old among other faults, they engender Foals lame in their feet, and therefore they The age of a are to be kept, and not to be admitted to copulation nor War, for his rage is like a weak fire among Stallion. wet stuble, according to these verses:

> -Morbo gravis aut segnior annie Deficit, abde domo, nec turpi ignosee senelle. Frigidus in venerem senior, frustraque laborem Ingiatum trabit: & si quando ad pralia ventum est, Ut quondam in stipulio magnus sine viribus ignu, Incoffum furit.

Therefore it behoveth that a Stallion Horse be not under three years old when he covereth a Mare, Columella. and it is best for him to begin at five, for so he will endure in generation, not only till he be twenty year old, but also to thirty or forty years, as in some Countreys hath been often proved. They are not to be admitted to cover above fifteen in one year at the most, and a young Horse not above ten or twelve in one year; the refidue may be suffered with observation of their strength and nature.

The King of Babylon beside his Horses for war had eight hundred Stallions, which were admitted Palladim. to cover fix thousand Mares, so that every one had twenty a peece; there is also a place in Syria near Applia, where in one plot of ground were nourished thirty thousand Mares, and three thousand Applia. fand Stallions (as Calius faith) fo that every Stallion had an hundred Mares to cover (in that place) which number exceedeth the proportion of nature. It is also to be remembred, that Stallions are to be separated from Mares all the year long, except at the time of procreation, and then also he must be largely sed according to these verses:

> His animadversis, instant sub tempus, & omnes Impendunt curas denso distendere pinquis Quem legere ducem, & pecori duxere moritum: Florentesque secant berbas, fluviosque ministrant, Farraque: ne blando nequeant superesse labori: Invalidique patrum referant jejunia nati : Isla autem macie tenuant armenta volentes. Atque jubi concubitus primos jam nota voluptas Solliotrat, frondesque negant, & sonibus avent. Sepe etiam cursu quatiuns, & Sole satigant: Cum gravites tunsis gemit area frugibus: & cum Surgentem ad Zephyrum palea jattantur inanes. Hoo faciunt, nimio ne luxu obiustor usus Sit genitali arvo, & fulcos oblimet inertes, Sed rapiat fitiens Venerem, interiufque recondati

Colts.

Marcs conccive the belt coloured

Artificial

Varrinus.

Abstrius.

It is also to be observed, that the males which are designed for procreation be not over much labored, for then he will be the more weak for generation, nor yet suffered to be too idle, for then a cerrain fleamy humor is increased in them, which likewise disableth them in copulation; and thus much for the males.

The choise of Marcs.

Almost all the same things which have been said of the male, belong to the semale, except the bellu of the female ought to be greater; but if there be any white speckles or spots in the eyes of the female, such as are not contracted by accident, but breed in them by nature, such a one is refused for breed : for an Horse born of such a Mare, when he cometh to be old, will likewise be affected with the same blindness; but if it be a semale, by reason of her yearly purgation, she may peradventure avoid that mischief.

It behooveth therefore that the Mares appointed for race, be well compacted, of a decent quality, being fair and beautiful to look upon, the belly and loins being great, in age not under three

nor above ten years old.

on of Horfes and Marcs.

Concerning their admission to generation, it is to be remembred, that the Latins have a proper term to fignifie the appetite of the female to the male, which they call, Equire, that is, Horfing and they continue in that lust fixty dayes together; the fignes whereof are these. They forfale their company, running not toward the East and West, but the contrary, to the North and South: neither permit they any body to come near them, untill they either be wearied or meet with the male, and if they meet with a female like themselves, they joyn neer to her, and seem to rejoyce at her fociety, lifting up the tail, changing of the voice, and fending forth of her secrets, a certain thin humour, somewhat like the seed of a Horse, which is called Hippomanes.

Aristotle. Albersus.

They also make water more often then at other times, so that among all the females in the world. there is none, beside a Woman, that is more greedy of procreation then a Mare, because they want a menstruous purgation, and yet eat aboundance of meat, which Virgil expresseth, setting down their unlimitable rage, which carryeth them over Mountains and Rivers, in the time of this furv.

> Scilicet ante omnes furor est insignis equarum, Et mentem Venus ipsa dedit, quo tempore Glauci Potniades malis membra absumpsere quadrige. Illas ducit amor trans Gargara, transque sonantem Ascanium, superant montes & flumina tranant.

Also at that time, their genital hangeth forth more then at other times, but if their manes be shorn off, their lust is extinguished. It is reported also by Columella that in Spain, in the Mountain Togro which reacheth into Portugal upon the Ocean, there be Mares which rage fo far in luft, that by their ardent desire of copulation they conceive by the Southwest winde, without the company of a Horse, (even as Hens do lay egges being not troad by a Cock) which are called Hypenemia, but those Foales live not till they be above three year old. And it is the property of these Mares (faith Avicen) by kicking against the winde with their hinder legs, to open their own womb, and to receive in that delectable air, wherewithal they are fatisfied.

Also he faith, that he heard of an old man, which was born in the Isle of Pealtupha, that the Mares thereof never cease running, from the one end of the Island to the other, when the rage of their luk is upon them; which thing is elegantly described by a Poet, how they turn themselves to the West, standing upon the rocks, and there draw in the cold aire, which oftentimes maketh them conceive, wondering that they conceive not rather by the Hast funrifing or South, then by the Westerly winde bordering upon the North; the Poets words are these:

> Continuoque avidis ubi subdita flamma medullis. Vere magis (quia vere calor redit offibus) illa Ore omnes verfe in Zephyrum, ftant rupibus altie Exceptantque leves auras: & fape fine ullis Conjugite vento gravida (mirabile diciu) Saxa per, & Joopulos, & depressas convalles Diffugiumt, non Eure twos neane Solis ad ortus : In Boream Caurumq; aut unde nigerrimus aufter Nascitur, & pluvie contristat frigore calum.

Sometimes Horses and Mares admit copulation at two year old, but those Foales never prove extelling lent, but at three year old or thirty moneths, they fuffer conjunction safely and with profit, because they cease to lose their teeth. They continue in their generation, bearing every second year, the male untill he be thirty year old, and the female as long as fhe liveth; but the male engendereth yearly: And it is reported of a Horse in Opm, that covered a Mareafter he was forty year old, being only holp up and down from the Mare.

stallion to his

Pliny.

Pliny, Opplanus, Elianus, and Ariftotle do confidently affirm, that when the King of Scythia had all his generous breed of Horses destroyed by a pestilence (except one of his best Mares and a Stallion which was a Foale of that Mares) being desirous to continue the breed, caused his Horsekeeper to put the Son and the Mother together, but the Horse resuled copulation with his

own Parent. Afterward the Horse-keeper covered the Mare with artificial skins, and likewife dreffed the Horse in such manner, as one could not know the other, whereupon being brought together the second time, the Stallion covered his own Mother: Afterward the Horsekeeper discovered them, the one to the other, whereby they knew the fraud, and grew guilty in themselves of incestuous commixtion : Whereupon they took no other revenge upon themselves. but ran to the top of an high rock, and there successively threw down themselves, one after another, so ending their miserable days, and preventing their Masters hopes; to teach all mankinde that they ought not to feek to thrive by fine against nature: the like is before rehearsed of a male Camel.

The very like story is reported of a Horse in the coasts of Rea, yet this is not held to be general: for bealts (as Aiffotle faith) do promiscuously cover one another; the Father the Daughter, the Son the Mother, the Brother the Sifter and this maketh them to be perfect bealts; and the stories before recited may be true, yet are they extraordinary: otherwise the common rule of Ovid remaineth true, That it is not a filthy thing for bears to observe no degrees of nature. ราง เมื่อว่า เดิดเป็นเป็นเป็น

> - Coeunt animalia nullo pudicini Catera delectu, nec babetar turpe juvencant Ferre patrem tergo, fit equo jua filia conjunt

The best time of the year for the joyning of Horses and Mares for copulation, is from the vernall aquinoctial to the Summer folftice, because ther the Colts which are foaled in due time, have the green herbs and all the warm weather for the fuccour of their infancy; and if the Mare (after the have been once covered) refuse the male, let her reft ten days, and then bring her to the male again; if the refuse the second time, you may rake it for granted, that the is filled already. Wherfore feeing it is known certainly that a Mare goeth twelve moneths with young, it is an easie matter so to order the time of her copulation, that her foale may alwayes be delivered in a warm and feasonable time of the year ; for which cause there is an invention for firring up of the luft both in the male and female the Hymenaun fhepherds, by the sweetness of fongs upon their pipes, stirred up their Horses and Mares to copulation, but the more affired way is, to follow the direction of Golumella and Abirtur, to provoke them by natural means, like as Buls

And first of all for the male, give him the tall of a Hare burned, mingled with wine Tand Themento anoint therewithal his stones and genital member, and so shall the dull Stallion be more profit to procure Horses venery; also there is a kind of Sayrium, which they give to them in drink, or the powder of a Horses to copulation flones : likewise if the semale refuse, take firtinges beaten soft with water (as thick as hone) therewithal touch the nature of the Mare in her purgation, and afterwards hold it to her noie; or elle take Hens dung mixed with Rozen and Turpentine, and anoint the secrets of the Mare, which shall so far increase her lust, as it cureth the sottlemeness better then the shrikips, and increaseth luk But you must regard, that no lean and off favoured Mare be anointed, beenufe the Horfe is quickly wearyed from his luft, and fo delighteeth only to barickled therewith without doing anything.

Other again do first of all bring some vulger Horse to the Mare, who provoketh and stirteth her to lust, and when he is neer the very fact of filling her; they lead her away to a more generous Stallion, to be covered by hims. And so is none of these means do prevail with her, they do rub the secrets with a Nettle, and that causeth her to suffer the Horse to enter.

Democritus also said that it is in our power to cause our Horses to bring forth males or semales; To ingender a for if we suffer them to couple when the North winder bloweth, or the third day before the full Moon, or bind his left stone, he shall get a mate; but if when the South winde bloweth, or three days after the full Moon, or bind the right flone of the Horse, it will prove a female.

Also if at the time of copulation, the Horse leap off from the Mare on the right fide, it is a token it will be a male, but if on the left fide, it will be a female. Carnal copulation is most acceptable to Horses, and lesse grievous unto them them to Near, for there is no kind (man only excepted) that is

to venereous and nimble in generation as is a Tibere or Mare hap the been but a few days to-The males know their females with whom they live, although they have been but a few days together; and if strange females fall into their company, they expell them away, by biting, feeding ingle and alone with their females by them fell very but if any male or other store thore come within their walks, then presently strey make force at his of their female the front store they extend het by biting; and in this time of their rage, they notified regard the life in store their adversary, nor the bridge, nor cruel stripes, not steep hits, nor tocks, nor adversary winds the annothing avour of their fellowes; according to the faying of which in their type him, and the control of which in their stripes and in the control of their stripes and the control of the stripes of the stripes

A ific.

It hath been also received, that a barren Mare shall conceive if you take a bunch of leeks bruised small and put into a cup of Wine and twelve French flies called Cantharides in water, put them two dayes together into the genital of a Mare, like a Glyster, and afterwards put her to a Horse anointing her forces with the faid ointment two several times, when the Horse leaps down from her; or essential take Niter, Sparrows dung, Rozen, and Turpentine, thrusting the same into the Mares genital whereby it hath been proved, that fecundity oftentimes followed.

Also some use Siler of the Mountains to procure conception in Mares and Cowes, and the true fign of conception is, when their nature (that is) the fluent humour out of their fecre s ceafeth for a moneth, or two, or three: and Pliny faith, that when a Mare is filled, the changeth her colour a moneth, or two, or three miss to be understood not of her hair, but of her skin, lips and eyes her hair standing more full then before. Then let them be separated from the males, exempting The ordering ner name manning more and labour, for all these are enemies to her foaling, and cause

Likewise they must not have too much meat nor too little, but only a temperate diet, and soft lodging, their better ordering is elegantly described in Vingil, by these Verses.

> Non illas gravibus quisquam juga ducere plaustris, Non faltu luperare viam fit paffus & acri Carpere prata fuga : fluviosque innare rapaces. Salcibus in vacuis pascant : & plena secundum Flumina, muscus ubi & viridissima gramine ripa, Speluncaque tegant : & faxea procubet umbra.

This is most certain, that if a Woman in, her flowers, touch a Mare with foal (or sometime do but (see her) it causeth to cast her foal, if that purgation be the first after her Virginity : In like manner if they fmell of the fnuffe of a Candle, or eat Buck-mast or Gentian. The Egyptians when they will describe a Woman suffering abortment, they picture a Mare treading upon a Wolf, for if a Mire kick at a Wolf, or tread where a Wolfhath troad, the cafteth her foale : If an Affe cover a Mare which a Horse hath formerly filled, there followeth abortment; but if a Horse cover a Mare which an Affe bath formerly filled, there followeth no abortment, because the Horses seed is hotter then the Affes. If a Mare be fick of abortment or foaling, Polypody mingled with warm water given her in a horn, is a present remedy.

. The Scribians when they perceive their Mares to be quick with foale, they ride upon them, holding opinion that thereby they cast forth their foales with leffe pain and difficulty. They carry their young one in their wombs, as bath been already faid, twelve moneths, but sometimes they come at eleven moneths and ten dayes, and those are commonly males. for the males are some perfected in the womb, then the females, and commonly the females are, foaled at twelve moneths and ten days, and those which tarry longer are unprofitable and not worth education. 'A Mare is most easily delivered of her young among other heasts, and beareth most commonly but one at a time, yet it hath been feen that twins hath proceeded from her. At the time of her delivery, the hath leffe purgation of bloud, then to great a molde of body can afford and when the hath foaled, flede-voureth her feconds, and also a thing that cleaveth to her foales forehead, being a piece of black fieth called Hippomauer, neither doth the fuffer her young one to fuck until the have eaten that, for by fmelling thereunto, the young and old Horses, or other of that kind would fall mad : and this thing have the imposters of the world, used for a Philtre or amorous cup, to draw women to love them,

have the imposters of the world, used for a Philtre or amorous cup, to draw women to love them, Virgil speaketh thus of it;

Quaritur & nascentia Equi desfronte tevulsus

Et matrix prayagus amor, and

And again still the standard of the s

This poisson made into a Candle (Angellaus faith) in the burning thereof there shall be a presentation of many monstrons Horses heads. There is very great poisson contained in this Hippomans, for the Arcadian Phormis made a Horse of brasses, and put Hippomans, but the same, and if the Horse at any time seen this Brazen Horse, they were so far invaged with 10th, that no halters or binds could hold them, but breaking all, run and leaped thom, the said Brazen horse, and although it wanted a tail, yet would they for sake any beautiful Mare, and run to cover it; neither when they came upto it, and sound it by their beales of sound and hard here. unto it, and found it by their heels to be founding, and hard braffe, would not they defpair of copulation, but more and more, with noile of mouth, rage, and endevor of body, labour to leap upon the fame, although the flippery braffe gave, them no admittion or flay of abode upon the back of that fubstance, neither could they be drawn from the faid Brazen Image, juntill by the great strength and cruell stripes of the riders they were forcibly driven away.

Some think this little piece of flesh to cleave, to the forehead, others to the loins, and many his the genirals; but how lover it is an unjoy each able part of floods providence, to make the Mares helly a repulcing for that poiling, for it is flightful dremain, in the males as in the females the whole race, of Hories would utterly perith and be destroyed through rage of luft for which cause the keepers and breeders of Hories and diligently observe the time of the mares, sinding, and instantly cur just the readers of Hories and diligently observe the time of the mares, sinding, and instantly cur just the readers of Hories and diligently observe the time of the mares, sinding, and instantly cur just the rage from the Collisten which they have the time of a Mare, to proper the Stallions, to carnal copulation, and the Mare will never love that foal, from whences the list in non-easy and company distributed the mare the Mare will never love that foal, from whences the list in non-easy and company distributed by chance or ignorantly they all berefor, they likewise fall, to be so mad, and practipined to list attempting where loves they are they can their lustiful eyes one every, kind of. Women attempting where loves them to ravish or ingender, with him; and besides because of this oppression of their sunder, their body consumeth and sadeth away: for three dayes, they for they are harmed by, often handling, only it is propitable; that it be suffered with the day in some warm and large stable, so as neither it be vexed, with cold, nor in danger to be oppressed by the Mare through want of rooms. Also their hoofs must be looked unto, left their dung sticking the Mare through want of rooms. Also their hoofs must be looked unto, lest their dung sticking unto them burn them, afterward when it waxeth stronger, turn him out into the field with his dam, left the Mare over-mourn her felf for want of her foal, for fuch beatts love their young ones

After three dayes let the Mare he exercised and rid up and down, but with such a pace as the foal may follow her, for that shall amend and encrease her milk. If the Colt have fost hoofs, it will make him run more speedily upon the hard ground, or else lay little stones under their speed by such means their hoofs are hardned, and it that prevail not, take Swines grease, and Brimstone never burned, and the stalks of Garlick bruised and mingled all together, and therewich alanoing the hoofs.

The Mountains also are good for the breeding of Colts, for two causes, first for that in those places their hoofs are hardened; and secondly by their continual ascending and descending. their bodies are better prepared for induring of labour. And thus much may fuffice for the educating and nurling of foals.

For their weaning observe this rule, first separate them from their dams twenty four hours together, in the next morning let them be admitted to fuck their belly full, and then removed to be never more luckled: at five moneths old begin to teach them to eat bread or hay, and at a year old give them Barly and Bran, and at two years old, wean them utterly.

Of handling, taming, or breaking of Hories.

They which are appointed to break Horses are called by the Grecians; Epochlice, Hippodami, and H precomi; the Latins, Equiones, Asulatores, and Cociones, in Italian, lo Roscopie. Ally, 146 is of opinion that foals are to be used to hand, and to be begun tobe tamed at 18 moneths old, not to be backed but only tyed by the head in a halter to a rack or manger, fo that it may not be terrified for any extraordinary noise, for which cause they use them to brakes, but the best time is at three Mears old, as Crescetienfis teacheth in many Chapters, wherefore when they begin to be handled, let him touch the rough parts of his body, as the mane and other places, wherein the Horse taketh delight to be handled : neither let him be over severe and Tyrannous, and seek to overcome the beat by firipes, but as Cicero faith, by fair means, or by hunger and famine.

Some have used to handle them tucking, and to hang up in their presence bits and bridles, that so by the fight and hearing the gingling thereof in their ears, they might grow more familiar. And when they came to hand to lay upon their backs a little boy flat on his belly; and afterwardto make him, fit upon him formally, holding him by the head, and this they do at three year old, but commit him to no fabour until he be four year old, yet domestical and small Horses for ordinary use are tamed at two year old, and the best time for the effecting hereof, is in the moneth of March.

It is also good in riding of a young Horse to light often, and to get up again, then let him bring him home and use him to the stable, the bottom whereof, is good to be paved with round stones, or else planks of Oak, strewing litter upon it when he lyeth down, that so he may lie soft and stand hard. It is also good to be regarded, that the plankes be so laid, as the Urine may continually the office from them, having a little close ditch to receive it, that so the Horses seet, may not be hurt thereby, and a good Master of Horses must oftentimes go into his stable, that so he may observe the usage of this beast. The manger also ought to be kept continually clean for the receiving of his seath. of his frovender, that so no filth or notiome thing be mingled therewith; there ought also to be partitions in it, that so every beast may cat his own allowance, for greedy Horses do not only speedily raven up their own meat; but also rob their fellows; Others again have such weak flomachs than they are offended with the breath of their fellows, and will not ear except they cat alone. The"

A 1

Of the Horse.

The rack allo is to be placed according to their flature, that fo their throat may not be too much The rack also is to be placed according to their nature, that the timor may not be too much extended, by reaching high, nor their eyes or head troubled, because it is placed too low. There ought also to be much light in the stable, left the beast accultomed to darkness, be offended at the ought and to be much ingue in the kappe, and wink over much, being not able to indure the beams when he is led abroad; but yet Sun light, and wink over much, being not able to the flable must be warm and not hot; for although heat do preserve sames, yet it bringeth indige. Stion and hurteth a Horses nature, therefore in the Winter time the stable must be so ordered, as the beaft may not be offended or fall into diseases by overmuch heat or suddain cold. In the Summer time let them lodge both night and day in the open air.

Vegetius.

This also in stabling of your Horses must be avoided, namely, the sties of Swine; for the slink, the breath, the gruntling of Hogs, is abominable for Horses, and nature liath framed no sympathy or concord betwirt the noble and couragious spirit of a Horse, and the beattly sluggish condition of a Swine. Remove also far away from your Horses stables all kinde of fowl, which were wont to haunt those places to gather up the remnant grains of their provender, leaving behind them their little feathers, which if the Horfe lick up in his meat, flick in his throat, or elfe their excrements which procureth the loofeness of his belly.

Camerarius.

It must also be regarded, that the stable must be kept neat, sweet, and clean, so as in absence of the Horfe, it may not lie like a place for Swine. The instruments also, and implements thereof, such as are the Horse cloathes, the Curry-combs, the Mane-combs, Saddles and Bridles, be disposed and hung up in order behind the Horle, so as it may neither trouble him eating or lying, nor yet give him occasion to gnaw, eat, and devour them to their own damage or hurt, for such is the nature of some wanton Horses, to pull asunder and destroy what soever they can reach.

They are therefore oftentimes to be exercised and backed, and principally to be kept in a good diet, for want of food dejecteth the spirit of the noblest Horse, and also maketh the mean Horse to be of no use; but on the contrary a good diet doth not only make a mean Horse to be serviceable. but also continue the worth and value of the beaft: which thing Poets confidered, when they sained that Arion the Horse of Neptune and some others were made by Ceres the Goddess of Corn, which any mean witted man may interpret to fignifie, that by abundance of provender the nature of Horses was so far advanced above ordinary, that like the Sons of the Gods they perform incredible things: whether therefore they cat chaffe, or hay, or graffe, or grain, according to the diverfities of Countries, let it be wholesome, clean, fresh, and sweet, without dust, gravel, mustiness, or

In the morning give them Barly or provender, a little at a time in distinct or several portions twice or thrice one after another, fo as he may chew and eke digest it throughly, otherwise if he raven it in, as he will do having much at a time, he rendreth it in his dung whole and not digened. About three hours after, he hath eaten his provender, give him a little of hay and three hours after that, his dinners allowance of grain, as in the morning, and afterwards about two or three a clock hay again, and then some drink; last of all give him his allowance of provender for supper, with a bottle or two of hay, which ought to be more plentiful then the former fervings: and yet these rules are not to be understood as though they might not be altered, for the times prefixed may be prevented if occasion require. Their best provender is Oats and Barley, yet Barly ingendreth the thinner and better bloud, and therefore it is to be preferred, only the measure of the provender is left to the discretion of the Horse-keeper, and there is no meat more wholesome for a

Horse, then Barly and Chasse, because it will make him full of life, and also able to indure labour,

In England in many places they give their Horses bread made of Fitches, Beans, and Peale. When one is to make a journey on horse-back, let him not give his Horse too much provender the noon before, but so much the more hay, and bread steeped in wine, and also let him serve him sooner at night then ordinary, that so the beaft may take the more rest. There be which refuse to give Horses wet provender or steeped bread, because they conceive that it will breed in them loathsomeness of meat; but the truth is, a reasonable Horse-keeper preventeth that mischief; and besides, the meat of a Horse is altogether so dry, that the beast himself is indangered to be sick of that diffese and therefore it is as safe to give him moistened food sometimes, as well as to give him bread mingled with falt.

Cameratius.

When a Horse is weary or sweateth, let him not drink nor eat provender, but after he is walked a little while, give him hay, first of all covering him with a large cloth, and remember, that hay is not to be call before a Horfe, as it is out of the reek, but first of all it must be pulled, and saken betwirt the hands, for the avoiding of dust and other filth. Restrain the Horse as much as you may from eating the litter under his feet, for even the best meat so defiled is unwholesome. It is also good sometimes to suffer him to pick up his mear on the ground betwixt his forelegs, that will make his neck to grow thinner, leaner and more comely. Let his neck be fast bound in the stable with a Leathern collar, and binde with a manicle his fore-leg to the hinder-leg on the contrary fide, and fo shall his be preserved in more health, because they cannot move out of their place but with difficulty.

Concerning the drink of Horses, something more is to be added in this place, and namely brackish and troubled water, such as runneth softly, as in great ponds, is sitted for Horses, because that water, being hot and thick nourisheth better, but the swift Water is colder, and therefore more unwholesome, but in hot times (as in Summer) the sweet and clearer water is more conve-

nient if custome be not against it. And because a Horse (except he drink freely) can never be fatlet his mouth oftentimes be washed within with Salt and Wine, and that will make him eat and drink more liberally: and yet the running water is more wholesome for Horses, because whatfoever is moveably fluent, is lesse subject to poison then that which standeth still; but if a Horse sweat or be weary, it is not safe to let him drink any thing, except he first stale, for in such cases followeth distention. And it is better to turn or lead forth your Horse to water, then to bring it unto them. And if at any time necessity cause this to be dope, then let the Water be very

His stable or lodging ought to be ordered, as neither it offend him by cold, in Winter; nor yet through heat in Summer, for both these extremities are pernicious: and therefore when the weathe isextream cold, then must the Horses back and belly be covered with a cloth; and when on the contrary it exceedeth in heat, then must his litter be taken away. Also in heat he must be covered with linnen to avoid flies, and in cold with woollen to help nature: likewise it is good toward night to pick, cleanse, and open his hoofs, with some artificial instrument, and to thrust into the hollow Cow-dung, or in defect thereof Horse-dung with a little straw, that so he may not the none again: but this is not good to be done every day, but rather every second day, and it is good to mingle therewith fewet or greafe, or else a new laid Egge with warm ashes. In ancient time they used not to shooe their Horses with iron, untill the dayes of Catulius, who remembreth this custome, saying.

Ferream ut soleam tenaci in voragine mula:

So that it seemeth that this devise was first of all invented for Mules. The Horse-shooes ought to be round like his feet, and not heavie, lest the Horses nimbleness be thereby hindered; and great care must be had in nailing or setting them on, lest the tender and steshie part of the foot be there-

Another charge of a Horse-keeper is to keep his Horses lips soft, tender, and gentle, so as he Pollux. may more sensibly feel his bit: and for this cause let him often rub them with his hands and warm water, and if need require with oil also: and in handling of a Horse this must be observed for a general rule, That neither he come to the Horse right before his face, nor behind his tail, because both these are dangerous to the rider; lest by his heels or mouth he harme him, but on his side he may safely set upon him or handle his Horse, and when he leadeth him, he must likewise go on his fide.

Likewise good and painful dressing of Horses is no small means to retain him in sound and perfect health; and therefore he must often be touched with the Curry-comb, and afterward with a handful of straw, so as the hand may follow the stroke to lay the hair smooth: and their fashion was in old time to brush over their Horses with a little linnen instrument made like a sword, whereby they excusse all dust from the beast: and herein it is wisdom to begin at the head and mane, and so to descend to other parts, and to touch the Horses back gently : he may wash the head and mane because it being so bony, it is dangerous lest the comb offend and grieve the beast, except it be layed on very tenderly, but it is not good to wash the legs, because dayly washing softneth the hoof by sliding down of the water, and therefore it is sufficient only to stroke them down with

The neather part also of the belly is not to be kept over clean, for the more it is cleansed with was Camerarius. ter, the more is the Horse pained therein: when a Horse is dressed, it is good to bring him out of the stable, that fo in the open air he may be tyed in a longer halter, and feem to be at liberty, whereby he shall be brought to more cleanness and tractable gentleness, standing upon some smooth stones, till all the dust and loose hairs both by the Comband Brush be driven away, and in the mean time the stable be emptied, and this is to be performed before the Horses watering. You must also regard the skin wherein the Horses yard runneth be kept clean; for if it be stopped it hindereth urine, and maketh the Horfe fick, and when your Horfe is in drefling, let him have before him no manner of meat either of hay or provender.

Let them be led to the Water twice a day, and wash therein both legs and belly, except in the Winter time, wherein it is not safe to wet the Beatt so often : and if there be in them any appea-Tance of fickness and infirmity, or if you have any purpose to give unto them any kind of medicine, then must you altogether forbear to water them. Some use to wash their Horses tegenwith warm Vegetius. wine-lees to refresh their joints and finews after hard journies, which collome feetieth very allowable : other use in stead thereof warme dish water one of the kitchin, and the backes they wash with cold water and falt.

Underneath their tails, and near their yards, you shall find them in the Summer time to be much annoyed with flies, and therefore it is a needful part of the Horfe-keepers watchfulnels to look in thole places and drive them away, for fo his charge will take the better reft.

And evermore there must be nourished a mutual benevolence betwist the Horse and Horse keeper, fo as the Beatt may delight in the presence and person of his attendant; and for this chile he man had been and person of his attendant; and for this chile he man had been and been and been and been also been he may be kept from hunger, wer litter, cold in the Winter, and flies in the Summer ! and furthermore kept from hunger, wer litter, cold in the Winter, and flies in the Summer ! thermore a diligent caution must be had, that the Beast be not provoked through overmuch sevel rity, for if the Horse by his keepers violence be often driven to his rack and manger to avoid

Gripes,

Of the Horse.

24.I

ftripes, either he hurteth his houlders or legs by his own weight or force, or elfe groweth into a ftripes, ettner ne nurtett ins mounts of the by the first state of the growth into a trembling at the presence of a man, and so never yeeldeth any loving obedience; or esse falleth into fome furious and unreclaimable evill qualities. The Master therefore ought often to enter into his fome turious and unrecialinable evil quality the Beaft will quickly take notice of him, espestable, and take a view of his Flories diages, and piece of ill husbandry to trust Servants and not to cially it he have but one, for it is a given toy, so that is, as the forehead is before the nape overfee them. Cate was wont to fay, Front occipitio prior: that is, as the forehead is before the nape overlee them. Gate was wont to any, a true hath fet him highest and formost, which should not hide of the neck; meaning thereby that nature hath fet him highest and formost, which should not hide of the neck; meaning thereby the him and discharge it, for it is not safe or any part of wisdome, to fee by another mans eyes, or work altogether by Deputies.

e by another mans eyes, of of lending their Horses, for the Germans have a pretty proverb, that they Men must also be all tall of least feasts out of their fight, for commonly they learn some evill fashion or other more then they had before; and fo much more Horses (after lending) return home a-

gain to their Masters with asteration of strength and quality.

of adorning and furnishing Horses.

The furniture of a Hotle and

T Cannot approve them that cut off their Horses tail or foretop; one received beginning from an ignorant perswassion of increasing the strength of the Horses back, and the other from an his trimming imagined comlines, by trimming it with ribben or some devised knot, or that it hindred the Horses fight. In the first the Beast is wronged and deprived of his help against the flies, and decency of his hinder parts; and in the fecond nature accused, for not adorning the Horses forehead with more gaudy and variable coloured hairs, and providing a bunch of hair to weaken his eyes; but neither of these are tolerable, for a wife man once to imagine, and therefore I will not spend any more time to confute this vain adorning of Horses.

Let the horse-keeper take heed that he harm not the Beast when he putteth on his Bridle, for a little negligence quickly bringeth a great offence, by touching, wringing, and oppreflingany tender part in the Horses head or mouth. He must alway put on his Bridle on the left side, and if the Horse of his own accord do not open his mouth to the bit, then must he gently open his mouth with one finger, and so put it upon him; and if by that means he open not his mouth. then presse or wring his lip upon his great canine tooth, which thing causeth any Horse to open

Also it must be regarded that the Horse in leading be not drawn after you, for so will he be made hard headed, unwilling to follow. Again his Cheeks must not be pinched by the Bridle, lest theskin grow senseles; and also it must not hang long or loose in his mouth, for so he will be alway biting his bit, and give lesse obedience to his Rider.

Gamerarius writeth that he hath seen some put Salt upon their bits, whereof the Horse licking or tafting, became more willing to take it into his mouth; and for the better performance hereof, it is necessary to observe by often triall, what kind or fashioned bit best beseemeth and fitteth the Horses mouth, and finding it, keep him thereunto continually: and when it is put on, neither wring his Cheeks, or let him rowl it betwixt his teeth.

The Saddle also must be so fastened to his back, as that it may not turn or rowl upon the same; wherefore he which layeth it thereupon, must come on the left side, and gently without violence or noise, set it upon the Beast; so that neither girths, peytril, sturrops, trappings, or crupyard, fall betwixt the Back and Saddle, neither covering therewith the Horses wither, nor yet touching his

First of all let the peytrill on the breast be buckled, then the girths in order neer the forelegs, not upon the belly, for upon the belly they will be fliding off, and that is against the rules of riding; for Bene equitant qui bene cingunt ; that is to fay, they ride well which bind fast : and this ought to be done in an open place, where both the Rider and the Horse may have more liberty: wherewithal a generous and great stomached Beast is much delighted: neither must be be tyed or drawn too hard till the Rider be feated. Look also often to the girths, that they wring not the fides, or pull off the skin.

Of Riding and litting on Horseback.

Hen you are to get up and mount on Horseback, take hold on the lower part of the Bridle neer the Bit, with the left hand, with such a distance as may both keep him from rising, nor give him offence, if you take advantage to get into the Saddle, and with the right hand take the rains on the top of the shoulders and the mane, and so hold them, as you give no check to the Horse mouth in mounting: there are other rules for this among Riders, wherewithal I will not meddle, only it is good to use your Horse to backing both sadled and bare, as well from the plain ground, as from blocks, and rifings invented for the ease of man.

Therefore before you go to Horseback, first stroke your Horse, and make much of him with gentle words, or other convenient found which the Horse understandeth, and so will he stand mote willingly till you be on his back: for this thing there is in Plutarch an excellent story of Alexandr the great, when Bucephalm was first of all presented to his Father King Philip, by a Thesialian called Philonia: For when the King was perswaded to go forth into the field to try the qualities of this beaft, which was fo highly commended for rare parts, and valued at fuch a price, as none but a King beatt, winter was then the Horfe began to fnort, and kick, and to admit no man to come unto might yeeld for the rains, but kept aloft like a wilde and untamed Horfe; yeelding no bim within the length of the Riders: whereat the King fell exceeding angry, and bid obedience to vote the unruly and untamed Horse: Alexander being present, complained of the ignother lead away the unruly and untamed Horse: Alexander being present, complained of the ignothem lead away the finders, and that they were the cause why such a generous and gallant rance and the same defined and bearing whereof, King Philip smiled, and yet so carryed himself as beatt was no better the words of his Son, untill Alexander repeated his faying the fecond time; whereunto his Father replyed, What (fir Boy) will you make your felf more skilfull then these old unning Riders? will you lay on them an imputation of fear and ignorance? Yes, faid Alexander, I will adventure to handle this Horse better then any other: Yea but (said Philip) what punishment then wile thou undergo if thou fail and perform not what thou halt faid? What punishment? (faid Alexander) why I will give them the price of the Horfe: Whereat the King laughed and firuck up the wager, and fo had Alexander the rains of the Horse delivered to him, who presently turned him about against the Sun-rising, that so he might not be terrified with the shadow of the beholders. and so led him up and down softly two or three turns, and at last wan the Horse to hand. which he gently stroked and applauded; and when he had gotten perfect intelligence and understanding of the Horsesstomach, he cast off his cloak, and addressed himself to mount on his back. so holding the rains and bearing his hand and whole body as he did not check or pinch the Horses mouth: so he inclined him first of all to lay away his stirred and angry minde, and afterward paced him to and fro gently, which the Horse endured: At last he put Spurs unto him, and made him run, leap. carreer, and curvet, to the terrour, at the first, of all the beholders, and afterward to the fingular admiration and praise of himself: which caused the company or train to applaude this fact. and forced the old man his Father, to fend forth tears for joy; and when Alexander descended from his Horse, he could not contain himself, but he must needs go kisse and embrace such a Son ; whereby it is manifest, that when a Man is to ride on a generous spirited Horse, he shall bend him to endure the burthen by gentleness and familiarity, to as the Beast may still know and love his Rider.

Likewise when the Master mounteth, it is requisite that the servant be on the other side of the Horse to hold the stirrop, for so shall he get up more surely, and set himself more softly. Some Horses are taught to ben'd their knees to take up their aged and sick Masters, that so they may be Xenophin. the leffe offended in ascending to their backs, and this custom (faith Pollum) did first of all begin a mong the Perfians.

The ancient Germans were fo fingularly exercised in Horsemanship, that standing upon the ground and holding a Spear or Lance in their hands, they mounted without other stirrop or vantage upon their Horses backs; and not only when they were ordinary attired in common garments, but then allo when they were armed, (though Julius Cafar take from them all glory of Chivalry) yet now adayes the invention of Saddles with stirrops, is most easie both for Horse and Horsemen, being then better the Pelethronian invention time.

When the Rider is in his Saddle, and is well feated, he must not sit as in a Chair or Charior, bended together, but rather keep his body upright, only bowing outward his knees, for so shall he be better able to defend himself or offend his adversary; for he must rather seem to stand then to fit on horseback.

The Rider or Master of Horses must spare his Horse in the heat of Summer, (about Dog! Ruffind dayes) and in the cold of Winter, and never at any time to Ride past the twylight of the evening. The Horse being empty, is more prone to make water then being full, and therefore must not be hindered in that desire: and alway after his staling, ride him not too fast, untill his nerves which were extended to let forth the Urine be contracted, setled and drawn together

If in the Winter time a Horse be to passe over a foord of water (which will ascend up above his Abstrus. belly)let him stale first, lest he fall into the Strangury, and also be a little eased of his load.

There is no beast that rejoyceth more in celerity and swiftness then a Horse, because so soon as he is turned out of hand, he instantly runneth away speedily, and doth walke softly as at other times: and this is a pleasure to them, except when they are provoked above their desires : and the counfell of Xenophon when you are to Ride fast or for a wager, is this, bend the upper part of the body forward, firetching out the hand which carryeth the rains; now drawing it in, and then letting it at length again; and therefore it is good in such cases to use thort rains, and if the Horse in his course stretch forth the rains of his own accord, then is it a sign of an unskilful Rider, or of a weak and tireable Horse. Add not Spurs but in great necessity, but guide and provoke him with voice Pollug. and riding rod, for quick and good metled Horses are by the Spur made fierce; and gentle natured Beafts made fluggards like Affes, which by often beating feem to neglect and despise stripes.

You must also shorten and lengthen your journies and times; of Ridings, so as they may neither be certain to the Beast, nor yet over long; and specially after a long journey, take a shorter is you Ride upon the same Horse.

First of all let him be used to plain and equal wayes, and if he be to leap or go up a hill, it was a precept of the old Grecians, that then the Rider must lay the rains in his neck.

The History of Four-footed Beasts.

If the Horse at any time be either more fierce or fluggish then ordinary, he may be holp by these means. Wildeness and fierceness of Horses, is like to anger and rage in men; and therefore occasion ons of offence in word and deed must be avoided: therefore as soon as the Rider is upon his back let him reit a little before he fet forward, and then also let the Horse move but his own pace, for as men are offended with suddain violence and imperious gestures, so also are Horses: but if the Horse being firred to his race, be more forward and hot then ordinary, he must be gently restrained by the bridle; and it is better to qualifie their rage in long and spacious direct journies, then in often windings and turnings.

But if any manbe so simple as to think that by length of journey or race, his Horse will be more meek, because he may be tyred, he deceiveth himself; for as rage in man inventeth hurt. full revenge, and turneth into malice by continuance, so also in Horses it procureth a headlong ruine (if it be not prevented) both to Horse and Rider: and therefore if your Horse be of a generous spirit, never provoke him to ferocity, for as they are wilde and fierce, so are they wicked

and harmful.

It is also better to use light and gentle bridles then heavy and sharp, except the Rider can by his art fo frame the sharp as the gentle bit: and also the Rider must so frame himself in his art of riding, that in the commotion of his Horse, he may not touch any member or part of him, but only his back whereupon he fitteth.

He must also learn his different terms, to incite and stir up his Horse to run forward, which the Grecians call Cloums, or elfe to reftrain him and keep him in, which they call Poppy mus, the one closeth

the lips, and the other toucheth the palat.

If the Horse be searful of any thing, you must shew the thing to him plainly, that so by custom he may learn not to be skittish, and let him smell thereunto, till he searn not to be afraid; but if men beat them, they do but fear them more; for while they are fo ill handled, they fuspect that the things whereof they are afraid are the cause of their stripes. In like fort when they go on the one side, or turn back again, it is good to use the Spurs, because they encrease their terrour and perverfeness; and therefore as peaceable encouragement and friendly perswasion is the best means to perswade a man in his fear, the like course must be taken with a Horse, that so he may go straight on without doubt or trembling; and learn not to account any thing horrible

When a Horse is so tyred and wearied in his journey that a man would judge him unsit for any labour, take off his fieldle and burthen, and put him into fome stable or green field. where he may tumble and rowle over and over, and he shall easily recover. In ancient time, if Horses were to be travelled through snow, they made them boots of sackcloth to wear in their

journey.

Of the disposition of Hotses in general.

A Mong the flocks or heards of Horses, there is not a Captain or leader going before or governing the residue, as among Oxen, Sheep, and Elephants; because the nature of theses more instable and moveable it being a swift and high spirited Beast, and therefore hath received a body furnished with such members as are apt to be swayed by such spirit: for Ladantius truly obferveth in them a defire of glory, because after victory, the conquerours exsult and rejoyce, but the conquered or overcome, mourn and hang down their heads; which thing Virgil expresses in this Verfe :

Insultare solo. & gressus glomerare superbos.

But more plainly Ovid, the triumph of the conquering Horse; saying,

Hic generolus bonos & gloria major equorum s Nam capiunt animis palmam, gaudentque triumpho, Seu (eptem fpatils circo meruere coronam. Nonue vides victor quante sublimius altum 'Attollat caput. & vulci se venditet aura. Celfave cum cafo decoratur terga leone, Quam tumidus, quantoque venit speciabilie acin : Compescatque folum, generoso concita pulsu, Ungula sub spolite graviter redeuntie opimie.

And Pliny affirmeth that when they are joyned together in Chariots, they understand their enconragements of glory and commendation: and therefore there is not any beaft of fo high a flound as a Horfe.

Of the natural disposition of Horses.

Hey love wet places and bathes, for which cause they are called Philolutes, they also love musick, as hath been already declared, and the whole hoast of Army or the Sybarites, taught their Horses to dance at the found of a Prope t and Culius writeth hereof in this manner, So great (1 inth he) was the riot and wantonnels of the Sypaines; that at their common feasts they brought in Horses to dance riot and wall which thing being known by the Crotoniate, they offered them War, and agreed upon the fight: whereupon in the day of battle, the Crotoniats brought with them divers Pipers and Minfirs, who upon a fign given to them, founded their infruments, whereupon the Sybaritan Horses come running and dancing among their adversaries, and so betrayed themselves and their Riders to

The like Rory is reported by Athenaus, of the people called Gardiani; for they also taught their Horses to dance upon their hinder legs; and to work many strange feats with their fore-feet, at the

hearing of certain measures played upon Pipes.

The Bifalians waged War against the Cardians; and they had to their Captain a certain man called A History. Onario, who when he was a Boy was fold to Cardia, and there he served with a Barber: In the time of his service he oftentimes heard, that the Oracle had foretold, how the Cardians should be overcome by the Bifaltans, and therefore he to prevent the worst; run away from his Master, and came home fafe to Bifalia his own Countrey, and was by his Countrey-men created Captain of all their warlike forces; he understanding what tricks the Cardians taught their Horses in dancing, brought out of Cardia certain Pipes, and taught divers Bifaltans to found and play the measures upon them. which the Cardians taught their Horses: whereupon when as they joyned battle with the Cardian Horses (for all the force of the Cardians lay in their Horses) he commanded his Piping Bifaltans to found their mulick, which the Horses understood, who presently stood up upon their hinderlegs, and would not fight any more, or go any further, fo as they were overthrown by their adversaries.

They have also a singular pleasure in publick spectacles, and therefore have been observed to be Solinus. provoked not only by pipes or fuch instrumentall musick, but also by Songs or, vocall harmony, by variety of colours, and by burning Torches. Dion also writeth that he saw a Horse taught to know and to do reverence to a King.

And Textor affirmeth that he faw a Horse at Paris at the trumphs, Tilt, and Turnaments made for the mariage of Lewis the twelfth to Mary, a Lady of Britain, which being commanded by his Rider to salute the Queen, presently did bend both his knees unto her, and then rose again running away as fast as a bird could flie.

Homer feemeth also to affirm that there are in Horses divine qualities, understanding things to come, for being tyed to their mangers they mourned for the death of Patroclus, and also fore shewed Abiles what should happen unto him : for which cause Pliny faith of them, that they lament their loft Mafters with tears, and foreknow battles; Virgil writeth thus of the Horse of Pallas;

> Post bellator equus, positie insignibus. Athon: It lachtymans, guttifque humectat grandibus ora.

Acomfus affirmeth, that Cafar three dayes before he died, found his ambling Nag weeping in the stable, which was a token of his ensuing death, which thing I should not believe, except Tranquillus. in the life of Cefar, had related the same thing, and he addern moreover, that the Horses which were consecrated to Mars for passing over Rubicon, being let to run wilde abroad without their Masters, because no man might meddle with the Horses of the Gods, were found to weep aboundantly, and to abstain from all meat. Whereof there could be no cause given, but the love of their former Mafters. It is also reported of Rodains a Captain to Charles the great, who after the death of the Emperour was made a Monk, his Horse would never suffer any to come on his back except his Mafer, who likewife had abstained from riding many years . But it happened that certain Pagans brake inupon the faid Monastery, whereupon poor Rodaius went unto his Horse, who after many years discontinuance, willingly took up his aged Master upon his back, aud so carryed him untill he triumphed over his adversaries; and no marvel, for Dogs and Horses are most loving to men, if they be brought up carefully, and liberally, they recompense the good turns of their benefactors. It is observed in the nature of Horses, that they seldom hurt a man or childe, except in their madness, yet are there malicious Horfes as well as men. It is reported by Pliny and Tzerzes, that when a foal hath lothis dam, the refidue of the Mares which give fuck, bring it up, and that they are feldom found at variance, except the barren Mares pull away the foals from the natural dama. For there is no creature fo loving to their young ones, as are Mares, neither any fo defirous of young; for which cause, when they are barren themselves, they labour to steal them away from others.

They which were wont to races, would perform it upon Mares newly delivered of foals they tyce Ariffolic. up the foals at home, and led the Mares to the beginning of the race, making the end thereof at the foals stable; and fo putting the Beast forward, the runneth homewards more speedily for the re-

membrance of her foal.

Orus.

Copianus.

Cardan.

Ælianus.

of the fear of Horles, and their enemies in nature.

Orles are afraid of Elephants in battle, and likewise of a Camely for which cause when grine tought against Crassis, he overthrew his Horse by the sight of Camely for a Horse cannot abide to look upon a Camel. If a Horse tread in the soot-path of a Wolfe, the presently falleth to be to look upon a Camer, it allow or more drawing a Charioty come into the place where a Wolf, aftonished: Likewife if two or more drawing a Charioty come into the place where a Wolf. attonuned: Likewise it two the Charlot and they were frozen to the earth, faith Alianus and hath tron, they trans to that a the fame thing of a Horfe treading in a Bears footsteps, and affigneth the reason to be in some secret, betwixt the seet of both Beafts.

we have shewed already, that if a Mare strike a Wolf, or tread in the foot-steps thereoff she prefently easteth her Foal; and therefore the Egyptians, when they fignifie a Woman suffering abortment, picture a Mare kicking a Wolf. The Dextanian Horses being not Gelded, dare fight with Lions, but being gelded, like all other Horses, they are so assaud of Lions, that no stripes, or spurs, is

able to bring them in their presence, the Caropian Horses excepted

All kinds of Swine are enemies to Horses; the Estridge also is so seared of a Horse, that the Horse dares not appear in his presence. The like difference also is betwixt a Horse and a Bear There is a Bird which is called Anclorus, which neveth like a Horse, flying about, the Horse doth many times drive it away, but because it is somewhat blind, and cannot see perfectly, therefore the Horse doth oftentimes catch it, and devourit, hating his own voice in a creature foundise

It is reported by Ariffoile, that the Bustard loveth a Horse exceedingly, for seeing other Beasts feeding in the Pastures, despiseth and abhorreth them, but as soon as ever it seeth a Horse, it flyeth unto him for joy, although the Horferun away from it; and therefore the Egiptian, when they see a weak man driving away a stronger, they picture a Bustard flying to a Horses Horses are also taught to leap, if a Man take him by the rains, and go over the ditch before him, holding him fall, and pulling him to him. But if he be unwilling, then let another come behind him and firike him with a whip, or with a rod, fo will he leap over without delay; and thus when you have used him to leap empty, likewise accustome him loaded. First over smaller, and then over greater hedges. But at the beginning let him leap in fost ground, and being well practised in harder; and when he beginneth to leap, let the Rider put spurs unto him, for so will he performe his leap with more fatety to himself and the Rider; and by custome he may leap and run as well down the hillas up hill; and therefore the Perfians, and Nodrifians use and accustome their Horses to run both down hill, and

These Epithets following, do serve and expresse the nature of Horses; full of stomach, generous, magnanimous, strong, ardent, sharp, covetous, fierce, bolde, threatning, terrible, founing, such were the Hories of Acarnania, Argus, Mycena, Aria, Elia, Epid, Spain, Thessail, Raifellie, of which Countrey was Bucephalus, the Horse of Alexander. Ballasia; a Province addicted to Mahomit, that hany of these excellent, great and swift Horses, whose hooss are so hard, that they need no iron shoots, although they travel over rocks and mountains.

The Arabians also have such Horses, and in the Kingdom of Senega, they have no breed of Horses at all, by reason of the heat of their Countrey, which doth not only burn up all pasture, but also cause Horses to fall into the Strangury; for which cause they do buy Horses very dear, using in slead of Hay, the falkes of Peafe dryed and out afunder, and Millet feed in stead of Oats, wherewithatthey grow exceeding fat; and the love of that people is fo great to Horfes, that they give for a Horfe furnished nine bond-flaves, or if it please them well, fourteen; but when they have bought their Horses, they send for Witches, and observe therein this ceremony.

They make a burning fire with stickes, putting therein certain fuming herbs, afterwards they take the Horse by the bridle, and set him over the smoaking fire, anointing him with a very thin ointment, muttering fecretly certain charmes, and afterwards hanging other charmes about their Neck in a red skin, thut them up close for fifteen dayes together: then did they bring them forth, affirming that by this means they are made more valiant and courgious in war.

The love and knowledge of Horses to men.

Nd to this discourse of Horses belongeth their nature, either of loving or killing men. Of the A nature of Alexanders Horse before spoken of, called Bucephalus, is sufficently said, except this may be added that fo long as he was naked and without furniture, he would fuffer any mante come on his back; but afterwards being fadled and furnished, he could endure none but Alexander his Mafter: For if any other had offered to come near him, for to ride him, he first of all terrified him with his neighing voice, and afterwards trod him under foot if he ran not away. When Alexander was in the Indian Wars, and riding upon this Horse in a certain battle, performed many valiant acts, and through his own improvidence, fell into an ambush of his foes, from which le had never been delivered alive, but for the puissancy of his Horse, who seeing his Master best with fo many enemies, received the Darts into his own body, and so with violence pressed through the midden of his enemies, having loft much blond, and received many wounds, ready to die for paint not once flayed his course till he had brought his Mafter the King fase out of the battle, land fer him on the grounds which being performed, in the same place the gave up the ghost and dyed, cas him on the grant and dysol, the him on the grant and dysol, the his own death he had faved the life of fuch a Gilling. King : for which cause, after Mirander had gotten victory, in that very place where his Horse died.

But this is thought a fiction, to expresse them which by feeding and keeping of Horses, consume their wealth and substance. And thus much for the natural inclination of Horses.

. Comencia e Vid of several kindes of Horses.

Here be several kinds of Horses which require a particular tractate by themselves, and first of Here be leveral kings of stories which require a particular translation of the Martial or great warlike Horse, which for profit the Poet coupleth with Sheep:

Lanifera pecudes & equorum bellica prolesio

The parts of this Horseare already described in the Stallion, the residue may be supplied out of Xenophon and Oppianus. He must be of a fingular courage and docibility, without maime, fear, or other fuch infirmity.

He must be able to run up and down the steepest hils, to leap, and bite, and fight in battle, but with the direction of his Rider : for by these is both the strength of this body and minde discovered; and above all, such a one as will never refuse to labour, though the day be spent : wherefore the Rider must first look to the institution and first instruction of his Horse, for knowledge in martial affaires is not natural in Men or Horses, and therefore except information and practice adorne nature, it cannot be, but either by fear or heady flubborness, they will overthrow themselves and their Riders. First of all they must not be Geldings, because they are fearful, but they must be such as will rejoyce and gather stomach at the voice of musick, or Trampets, and at the ringing of Armour: they must not be asraid of other Horses, and resule to combate, but be able to leap high and far, and rush into the battle, fighting (as is said) with heels and mouth.

The principal things which he must learn are these girst to have a losty and slexible neck, and also Xemphon. to be free, not needing the four; for if he be fluggish and need often agitation to and fro by the hand of the Rider, or elfe if he be full of stomach and fullen, so as he will do nothing but by flattery and fair speeches, he much troubleth the minde of the Rider: but if he run into the battle with the same outward aspect of body, as he doth unto a flock or company of Mares, with loud voice, high neck, willing mind, and great force, fo shall he be both terrible to look upon, and valiantly puils fant in his combate. Wherefore the Rider must so carry his hand, as the mains may draw in the Horses neck, and not so easily, as in a common travelling Gelding, but rather sharply to his grievance a little, by which he will be taught as it were by fignes and tokens to fight, stand William or

The manner of his inflitution may be this; after the drefting and furnifling of your Horse as The inflitutiaforefaid, and likewife the backing, first of all move, stir or walk your Horse genery, until he be well on of a wadike acquainted with the cariage of your hand and whole body, and afterward accustome him to greater, Horic. and speedier pace or exercise, use him also to run longer races, and also by drawing in your hand to hay or flop fuddenly; for there are Horses so instructed, that they can stay sheralely es in their speed dies course upon an instant, without any circumambulation, shaking off the violence of their sourse, like an ordinary trotting Nag, by mounting up a little with their forefeet.

And alway it is to be remembred that after the mounting on horse-back, you must first of at begin on the left hand, bending your hand that way, and also to the right hand when you would have your Hand. your Horse to turn on that side. And above all other things Horses are delighted with erooked

Horses according to the art of Wor, may for checking in the recited in this place. It is manifest by The honour of honoured) and from whom that Equential order is derived, be recited in this place. It is manifest by Strontinus, that the Roman Equestrial order, was in the middle betwixt the Senatours and the common people, for at the first there was no difference betwine Equiter and Audicer, for both of them had for a people, for at the life there had badge, cognifance, or note of their honour, power to wear a ring of gold, and in the Consulthip of badge, cognitance, or note of their monour, powered wear a tring or given and in the Contuiting of Marcin Cicero the title was turned to Equelitial, or name of a Knight, or man at Armes, by that means reconciling themself to the Sandto, and affirming that he was derived from that order, and from that timeleastic she Equelity order, being, as is said before, the peopley and recorded after the people, because of the latter creation thereof : yet had chey nor their baginning atrihis time, but only now they first came into the orders of the Common-wealth; for they were called Celers under Romulus, of one Celer. who at the command of Romulus flow Romain; and fre was made the chief Judge of three hundred. They were afterward called Elevanimes, either because they swayed the minde of them whom they judged, or else which is more probable, because of martialling and instructing their Horfes for war afterward because they took a great company of horfesmen, without all aid of footmen, at the City Troffulum in Thufera, they were called Troffulani, and Troffuli, and garitome ignor rant persons honoured with the title of Troffuli in remembrance of that victory, were ashamed there-

badge both of Peace and War. The Muster of the Horfo among the Romans, called by the Gretan, Hipparchus, and by the Latins, Magistel Equitum, was a degree of honour next tol chel Distan, and Mercius the Dillater made the first Master of horse-men, who was called Spurius, and set him in place next to himfelf. These Equestrial men or Knights of State were wont to be publicans at the least, and it was ordained that no man should be called into that order, except both he, his Father, and Grandfather were free men, and we've worth in value twenty thousand pounds Turm and Thering made this law, but afterward in grew remissering not observed; whereby Both Bondmen and Scribes were rewarded with this dignity from the Emperour, for Orations and pleasing speed ches : vet were the Decurial Judges, chofeir out of this rank; for indeed by puimary infititution on, they were the flower and feddinary of the Roman Gentry! Pliny complaineth charethis dignity which was wont to be a reward for Military men, who had adventured their lives for the honour of their Countrey, was now bestowed corruptly, and for money upon mean bribing persons. It should feem they had every one a Horse of honour given to him for his note, for if one of them had grown fat and unweeldy, not able to manage and govern this Horfe, it was taken from him. And Cato took away the Horse from Sciplo Afraticus, because he had intercepted money , and from hence came the terms of their allowance, as Equeftre es, for that money which was paid for a therewom

The Athenian Orders.

Aristophanes. Calins. Suides.

Knight, and Pararium es, for a double fee to an Equeficial man, the see the house to Among the Athenians, the highest order was of them which were called Pentatofiontedyndi; which had plowed fo much fand as had fowed an 100 buthels of Corne and the next degree were their Equites, Knights, or Horse-men, because for the defence of their City, they were abloevery ones nourish a Horse of war. There were of these in ancient time but 600, and afterward they were in creased unto 1200. and the sacrifices which were made for their bomps and criumphs, were called Hippades: and they had libesty to nourish their long hair which was forbidden to other men, and their tax to the facrifice was at the least half a talent, (which is at the least 300 Crowns) and this facrifice was made for the health of their Horfes. There were two Mafters created over their, to wage and order war; and ten inferiour Governours or Wardens to look to the provision and nourishing of Horses.

Among the Lacedemonians they had four Governments; the Monarchy for the Kings, the Aifford) for the Old-men, the Oligarchie for their Ephori or Commillioners, the Democratie for their Young, men, which governed, managed, and instructed Hories. Nester that ancient Knight was commended for his skill, and had therefore given him the title of Hippotes.

Among the Calcidenfrant there was not a rich man bue shey took him into this Order, and the Cretions likewise did ever highly account hereof, and made a their highest degree of honour, for even the Roman did fometime govern whole Provinces with no other then thefer and Enn ha this in peculiar, that no other Order, no not a Senator might be President or Govern among them The Albams had this degree in high estimate, like as the Germans their Batavi or States. Citizens of Capua were and are difguifed with a perpetuity of this bonour, because in the Latin war, they did not revolt from the Romans; and among all other, the Gaditan were most honoured

of the Harle herewith, for at one time and for one battle they ereated 400. This title hath fored and adorned it

There was one Amierie a Gyrenian most skilful in this practice, and according to the vain humors of men, was not a little proud hereof, and for his love to Blato would need in the Academy thew him and his Scholars his skill, and therefore journing his Horses and Chariot together, made many courses with such an even and delineate proportion, that his Horses and wheels never wandered a hair breadth from the circle or place limited, but ahway kept the same road and footsteps, whereat every one marvelled: but Plate reproved the double diligence and vain practice of the man, saying to him in this manner, It cannot be, that a man which hath travelled and laboured so much in anart or skill of no worth or use in the Common-wealth, that ever he can addict his mind to grave, serious and profitable bufiness, for while be applyethall his parts and powers of body and foul to this, he is the leffeable and more unage to those things which are alone more worthy of admiration.

The ancient custom was, to use other mens Horses in this combate, and therefore in the funeral of Parreclus, Homer bringethim Monelaus, pfingehe Horfe of Agamemnon. There were four feveral places wherein thefe games of Horfes and Charlos were wont to be observed and kept, and they were called after these places, Olympia, Pythia, Namea, and Isbmia, and of all these the Olympiads were the chief, whereof all stories are full, for they were celebrated in Olympus every fifth year inclusively, that is, after the end of every fourth year way have

The writers of Chronicles do agree that the games of Olympus were first instituted by Hercules in the 2752. year of the world, beginning the world from Noahs flood, and they begin to record and number the first Olympiad to be about the 3185, year of the world, about seventeen year before the building of Rome. who has a sale 2797 10

There were of these Olympiade 3 28. and the last of these by computation or account fell about the year of our Lord 534. after the birth of Jefus Christ the bleffed Saviour of the world.

The perfection of thefe games began the twenty five Ohmpiad, at what time Regulate the Theban was pronounced victor sofor then were swift Horses brought into the games, and were called Teleis, thatis, perfect imagificy and growth, and thele are called by Pindara, Monampola afterward came in Spanie with two Hottes, and in flicceffich both Coles, Mares, and Mules ? their courses are thus expressed by Virgil;

> – Ergo animos avumque nerabie. Et quis cuique dolor vilto, que gloria palme; Nonne vides ?: cum pracipiti certamine campum Corripuere, ruuntque effuft carcere cuerus juis! Cum foes werest a invenum sexultantiaque bauris Corda pavor pulfans, illi inftant verbere torta, Et proni dant lora : volat vi fervidus axio. Jamque humiles, jamque elati lublime videmur Aera per vacuum ferri aique affurgere in auras, Nec mora, nec requies se at futva nimbus arena Tollitur: bumescune spumie, flatuque seguentum: Tantus amor landum, tanta est victoria cura. Sin ad bell'a magie ftulinm turmafque feroces. Aut Alphaeretie pralabi flumina Pifa. Pliny.

TOUBLES

And Horace expresseth it in this manner!: Sunt quos curriculo pulverem Olympicum Collegiffe juvat metaque fervidie Evitata, roth; palmaque nobblis Terrarum domines evebit ad deor. distilled a gay syned top a child in

Women were wont to be excluded from these games, untill Cynifes the daughter of Archidamus King vyomen were wont to be excluded from nourished and trained Horses for these currule and Chariot of the Sparians, first of all other women nourished and trained Horses for these currule and Chariot or the spariant, that of all the Horfes to Olympus, the obtained the prize; therefore her Horfes games, and when the brought her Horfes to Olympus, the obtained the prize; therefore her Horfes were confectated to Jupiter Olympius, and their figures remained in Brafe in his Temple.

ere connectated to suppose a Thessalian overcame in the Olympian games with a Mare great with foal: And it is also reported that Milliades the son of Cimon Stefagora (one of the ten Captains of Athens) ran away from Pififtraint the Tyrant, and in the time of his absence, he was twice Victor at Olympus by four Mares, the first time he bestowed the glory upon his cousen German M. biadet, his mothers brothers son, and the second time he took it to himself; for which cause he was slain by the fons of Pififratus; his Mares were also buryed over against him, with an inscription, that they had won four games in Olympus, fo that it appeared, he ran divers times and never shifted victory. At Athens they observed these courses with Horses in honour of Thesens, and called the place of the run-

The Latines call in Stadium, and Curriculum, and it was appointed in some plain valley, according to the proverb. Equus in plantetem ; in the midft whereof was a building called Circui, whereon the beholders flood to look upon the pastime, and there were also places to contain the Horses and Chariots, till they were turned out to run, (called Carceres) according to the verses of Sillur:

> Sic ubi profiluit piceo de carcere praceps de considere Ante fues it victor Equus.

And Horace also

Ut cum carceribus missos rapit ungula currus, doctor Instat equis auriga suos vincentibus, illum Prateritum temnens extremos inter euntem. o difference of a displace of the secondary

And hereof came the proverb (A carceribus ad calcem). fignifying from beginning of the race to the latter end. Eriobthonius invented a Chariot called Harma, and was the first that ever ran in Ohmput with four Horses in the same, of whom Virgill writeth thus: 3,80

> Primus Eriebthonius currus & quatuer ausus Jungere Equos repidifque infisiere vittor.

And from hence came the tearm Quadriga, for a Chariot with four Horses. There was a Chariot in Athens drawn by one Horfe, and the games thereof were called Polemyfteria. Likewise at Remein the Consul-feasts celebrated for the honour of Neptune, they ran with Horses both joyned and

There were likewise games at Rome, called Equitia, and Equitia, celebrated every year, the twelfth of the Calends of May, wherein after the Horfes they courfed Foxes tyed to pieces of wood fet on five; this is called in Latine also Turneamentum; and in Italian by Scoppa, Haglastra; and in French Fermierim. There is also a play with Horses for children call d'Iroia; first invented by Assaulis; when he besieged Alba, and by him brought and taught to the Romans, of which Virgill speaketh, saying;

> Incedunt pueri, pariterque ante era parentuit.
> Frenatis lucent in equis Cornea bina ferunt prafixa baftilia ferro: Pars leves humero pharetras. Tres equitum numero turme, ternique vegentus equation Ductores : puert biffeni quemque fecuti. Epytides longe dedit, infonuitque flagella. Olli discurrerepares, aique agmina terni.
> Diduttis solvere choris, rursusque vocati Convertere vias, infestaque tela tulere. Inde alios ineunt cursus, altesque recursus Adversis spailis, alternosqs, orbibus orbes Impediunt, pugnaque cient simulachra sub armis. Et nunc terga: fuge nudant, nunc spicula vertunt Infensi: fatta pariter nune pace feruntur-Hung morem curfus, atque bac certamina primus Ascanius, longam muris cum cingeres Albam

of the greates Horie matters and nounshers of Hories

Tis reported of King Solomon, that he had forty thousand stables of Hories for Charlos, and twelve thousand for war. The Lybians when they went to war, did fight out of their Chariots. and therefore they were said to fight upon two Horses. The Centaures were the first that ever taught men to fight on Horse-back, and the Roman Tarnia consisted of two and thirty Horse-men, the Captain whereof was dalled Breeure hahe people of Nomades called Surgatii, brought eight thousand Harfe-men at one time into the field, which neither used armour, nor brass, nor iron, except only their daggers and a rope of leather, thongs, wherewithall they entred the battail, and joyning with their enemy, they made certain gins, or loops thereupon, which they calt upon the necks of Horses andmen, and so with multitudes drew them unto them, in which draught they strangled

The Indians use the very felf same Armour on Horse-back that they do on foot, but yet they lead empty Horlesand Chariots to leap up and the winnon, and to gettern their fighting Horles, and the number of their Horlesand were at one time four fore thouland.

When Pharmuches the Arabian, was riding on Horfe-back, there was a Dog an betwirt his Horfes legs, wherewithall the Horse being amazed, suddenly leaved upright, and cast off his Rider, who being bruiled with the falls fell into a Confumption: whereupon the Servants at the commandment of their Malten, brought the faid Horse into the place where he cast his Ridge, and there cut off his less about the knees. There was also a fashion for Horses to fight in bactails without bridles : For Fulvius Flacens, when the Romans overthrew the Celtiberians in Spain, caused them to pull off their bridles from their Horses, that so they might run with all violence, without restraint of Riders upon their enemies : whereupon followed victory : for many times it falleth out that the Horse hath more courage then his Rider, wherefore a good Horfe-man must have skill to annoy his enemy, and defend himlelf; and likewife, to make his Horfe to come off and on without fear or dread, according to necessity.

There is a proverb in Greek, (Charis bippeis) that is, (Searfim equites) the Horsemen are asunder, whereof Suidas giveth this reason: when Darius invaded the territory of the Albenians ranging and destroying at his pleasure, no man daring to abide his forces, at his departure, the Ionians chined up into trees, and fignified unto the Athenians, that the Horse-men had broken rank and were asunder. Whereupon Milliades fet upon the scattered company, and obtained a noble victory.

of fighting in War upon Horses.

"He most cruel and fearful kinde of fight, is the arming of Horses, which were called in antient time Catafrati, and Clibanarii, and Acatafradi, and Extensarii, fighting first of all with focus, and afterwards with sword and shield, casting sometimes also darts at one another, and hearing bows to shoot arrows, their Horses making goom for them, which way soever they went; for with sharp pikes and other crooked-keen-cutting-instruments, fastened to their Armour or Charlos, wheels, in the violence of their course, they wounded, killed, over-turned, or cut signder whasso ever flesh came in their reach.

The amient Horsemen of the Romans had no breast-plates, (as Polybius affirmeth) and therefore they were naked in their fore-parts, providing for the danger that was behinde them, and deland. ing their breaft, by their own telerity : their shields were made of Oxe skins plighted and pasted to-

gether, being a little-round in compass like the fashion of a mana helly.

There was also great use of swift Horses in War, for the Roman Souldiers carryed with chemitimo Dion.

Horses a peece, being taught and exercised like Indiana, when they had need to fite to leap mon their empty Horse, for their sparing of the opiner: and they were therefore called Auphippi heing apt to carry their Masters out of danger, and from hence (Allemen laigh), the Kanana cook the pattern of their Phalana, (called antissomm) with which they used to terrific the Barbarians, setting their blooms. Horses in a double front, so as they appeared headed both wayes; and this was also the culton of Alexander. all the Germans, when the number of their Horse-men was not equall, they mingled the Foot-men, with their Light-horses, who being experienced to run suddenly with the Horse men leaped into the battail, and furprized the enemies flying away : and the same fashion did the Spanigud alo use (Sir abo faith) for the terrifying of their enemies, making the Foor men to fall into the hattell among the

Those which did shoot Darts on Horse-back, were called Hipparonia, and therefore Arifoldment in his discourse of Birds, calleth Hawks by that name, for the resemblance betwist, them and riorses, bearing these Riders. The Hawks are so called in swiftness of oheir course; and because the talons of the Hawk are crooked like bows. Arrianu, writeth that the Horse-men of Alexander carryed spears in their hands fourteen cubits long, whereunto I cannot confent; for eight cubits is a common fize, as much as any Souldier on Horse back is able to use.

In battail there are wings of Horse-men, which are so called, because like wings they cover and In battail there are wings of Fiorie-men, which are to think, because like wings they cover and protect the Army. And there were also Legionary Horse-men, because they were joyned to the Legions of Souldiers, and the company of Elephants, Foot-men, and Horse-men which were wont to go before the King, were called Agents. A company of Horses stellaga Tower in a Quadrangular form in a field, was called Pergus. The Armour of Horses on his front or fore-part, is called Prometopidia , upon the cars Parolia , upon the cheeks Paila , upon the breaft Profternidia , upon the metopiula, upon the cons Parameridia, upon the legs Paracnemidia. And the time of armfides Parapleuridia, upon the ioins rarameriaia, upon the legs a manufament. Find the time of ing a Horle is known of every Souldier.

Of Riding.

He Medes, Persians, and Armenians, were the first that invented the art of riding and shooting, (as Strabo saith) Pausanias cald Neptune Hippeus for no other cause, but that it was supposed he I (as Strato latti) ranjaman and reference trippen to be to Bellerophon. Lyfia the Orator faith, was the first invento, the art of riding. Polydorus ascribeth it to Bellerophon. Lyfia the Orator faith, was the first inventor women were the first of all mortal creatures that first adventured to back Horfes. Others afcribe it to the Centaires: But to leave the Invention, and come to the Art. Das mi in the life of Apolonius, fetteth down the fum of the Art of riding, which briefly is this; To fit straight upon his Horse, to rule him valiantly, to turn him with the bridle which way soever he pleafeth, to beat him when he is stubborn, to avoid Dirches, Gulfs, and Whirpools when he rideth through waters; going up a hill, to lengthen the rains, and to restrain and draw them in going down the hill ; now and then to stroke his hair, and not always to use stripes.

Meritel hath an excellent Epigram upon one Prifeur a rash-headed-hunter, who neither feared Hedges, Hils, Dales, Ditches, Rocks, Rivers, nor other perils; using a bridle to his Horse, but none to his affections; and therefore he telleth him, that he may fooner break a Hunters neck, then take away a Hares life : for there are deceits in the Rocks, Hils, and plain Fields, to shake the Rider from Horse-back to the earth. Thus followeth the Epigram;

Parcius utaris moneo rapiente vereae, Prisces nec in lepores sam violentus eas. Parcius utaris moneo rapiente veredo, Sape fatie fecit prada venator, & acri Devidit excussus nec rediturus equo. Insidias O campus habet : neo fossa, neo agger, Neo fint faxa licet, falleté plana folent.

Nen deerunt qui tama tibi feetacula prestent:

Invidia fait sed leviore cadunt.

Si te deletiant animosa pericula, Thusois (Tutior eft virtus) infidiemur aprie. Quid te frena juvant temeraria? Sapius illis Prifce datum est equitem rumpere, quam leporem.

The best place for riding, is a barren and plain Countrey. It is reported of Claudius, that when he had road a great way in the Countrey upon his enemies, and met no body, he returned back again into his own Camp, and blamed the fluggiffnness of his enemies, because no one of them was feen

It is reported by Ariffole, that the further a man rideth, the more apt he shall be to weep; and the reason is, because of all the motions of the body, riding is the wholesomest, both for the slow mach and for the hips; for a man must not sit on Horse-back, as if he were carryed in a Coach; but rather keep his back-bone upright, not only to be moved by his Horse that beareth him, but also by himself; and there he must sit close to the Horses hips, extending his legs to the uttermost, using not only his eyes to look before him; but also listing up his neck to help his sight: for so the sort pace of the Horse doth corroborate the spirit above all other exercises; likewise, the body and something the sort of the Horse doth corroborate the spirit above all other exercises; likewise, the body and something the sort of the Horse doth corroborate the spirit above all other exercises; likewise, the body and something the sort of the sort of the Horse dother exercises. mach; also it purgeth the senses, and maketh them sharp : yet sometimes by the violent course of a Horfe, the breast of a Man, or fome other part about the reins receive damage, (as fome have obferved :) yet is it not so much to be ascribed to the motion of riding, as to the uneaste pace, or rather to the uneafie feat of the Rider.

The Scythians above all other Nations have the loofest and broadest bodies; and the reason is, because they wrap not their children in swadling cloaths as other people, and likewise because they have no regard unto their sitting upon Horse-back; and lastly, for their continual sloath and ease; for the men use much to ride in Chariots, and Litters, before they get on Horse-back; but after they are accommond therepiers. are accustomed thereunto, they ride so much, that their hips and bones fall full of ach; and they are also thereby made unfit for generation, because in a journey of an hundred miles, they never light to ease themselves and their Beasts.

These men hereaster named, were excellent Riders and tamers of Horses. Automedon, servant of Achilles, Ideus, fervant to Paraimus; Meifeus, fervant to to Turnus; Myrtilus, fervant to Calbilli Comments Cebeiti, fervant to Darius; Annieru, fervant to Cyreneus; Picus to Mesapus; and Laufus Silius to membreth Cyrnas, Durius, Atlas, and Werns.

The Instruments of Riding appertaining to a Horse.

Good Rider must consider the hardness or softness of his Horses mouth, that so he may tem-A per his bit; for a stiffe-necked Horse, is not so much to be guided by rod and Spur, as by bit. and bridle: wherefore it must sometime be hard, and sometimes gentle. The hard bits are called and brune. Where unequal, and indented to a Wolves teeth, whereunto the Horse being accultomed, groweth more tractable and obedient to a gentle bit. According to the faying of Ovid:

> Tempore paret equus lentis animolus habenis. Et placido duros accipit ore lupos.

And Virgill again speaketh to like effect :

--- prensisque negabunt Verbota lema pati, & duris parere lupatia Asper equus, duris contunditur ora lupatis. And Silius faith: Quadrupedem fledit non cedens virga lupatis.

There is also another instrument made of Iron or Wood (called Passomis) and Englished, Barnacles : which is to be put upon the Horses nose, to restrain his tenacious sury from biting, and kicking, especially at fuch time, as he is to be shod or dressed. The Indians were wont to use no bridles, like the Grecians and Celts, but only put upon their Horses mouth a piece of a raw Oxe skin, fastened round about, containing in it certain iron pricks standing to the Horses lips, putting a long round trench through his mouth, to the edge whereof they fasten the rains, wherewithall they guide the beast, The Turkish Horses, and Spanish Jennets have bits, with open circles in the middle, confishing of Leather, or Iron, to restrain the Horses sury. The rains are called Habena, because they make the Horses, Habiles, that is, tractable, and rulable, to be turned, restrained, or put forward, at our pleasure, according to the saying of Silius;

> Ferrato calce, atque effusa largus babena. Cunciantem impellebat equum. And Virgill:

Ipfe ter addutta cironmoaput egit habena?

Neither is there any Horse swift, or slow, noble, or unnoble, that can be guided without these, which must be held continually in the hand of the Rider, they must not be unequal, one longer then another, neither thick, neither weak, nor brickle.

There was a certain golden chain (called Ampin) wherewithal the fore-tops of Horles were wont to be bound or tyed up, and thereupon Homer calleth the Horse of Mars, Chryfampin; and from hence that cultom of womens frontlets, to boadorned with gold and pretious stones. There are also that curons of womens it ontiers, to be adorned with gold and previous itones. There are also other ornaments of Horses called trappings; and in Latine, Phalme, derived from Phalm in Greek; fignifying bright, because they were wont to put a great deallof gold and filter upon them; (as Livin saith) which Horses so trapped; were presents for great Princes: And there is a kind of Abbites stone, wherewithal the Indian do adorn their Horse trappings: and it was apparent in Homes time, that they used little Bels; or sounding pieces of Brass to be sastened to their Horses bridges and trappings: they have all the Control of Parents of Brass to be sastened to their Horses which Warden. pings; they hanged likewife Jewels and Pearls to the breast of their Horses, which Virgill expressed in this manner:

> Instraior ostro alipedes, pitilique tapente Aurea pettoribus, demissa monista pendens. Z. Ab auro, falvum mandum fub dentibus aurum.

A good Horse man mustalso have a paring knife, wherewithat to purge and open his Horses seer: this scalled by Rufins, Roffietus, and by others Soulprunt. There is a kinde of Maricle for the patterns of Hories, (called Numella.) Moreover a good Rider must provide him strrops, (called Subjectures and stephe) which although it be but a new device, yet are they so necessary for every Rider, as without them they cannot long continue. They must not be made too straight for the foot, because that then they do not only hinder motion in that part, and so make it benummed and cold; but allo give occasion of great hure to the Rider in case the Horse fall, except he can so cemper himself to put but a very little part of his foot therein.

There are also Spurs requisite to a Rider (called Galcaria) because they are fastened to the Heel of a man, wherewithal he pricketh his dull Horse when he would have him hasten the journey, and the Grack derive it from Muopt, fighifying a pricking fly, from imitation of which creature it may feem the rook be to be and floring fly in the rook be to be delivered floring fly in the rook be deli they took this invention: but this must be remembred; that they are prepared for the dull and flugge

Of the Horse.

gifh Horse, and not for the free and full of life; for such a Horse being pricked therewith, runneth gith morie, and not for the live and diffdain, then for love of the journey, and many times the torment thereof maketh him by kicking out his heels to cast off his Rider.

maketh min by kicking out his heefs death, whereon he must sit: for the Barbarians did use to ride Lastly, he must have regard to his Saddle, whereon he must sit: Lattiy, he must have regard to ins saudie, which wifer fort of Horse-men have invented a feat for upon bare Horses backs; but fince that time, the wifer fort of Horse-men have invented a feat for

their own security. Martiall writeth hereof thus:

Stragula succindi venator sume veredi, Nam solet a nudo surgere ficus equo.

of Hunting Horses.

Tunting Horses because of their swiftnts, were wont to be called Veredi; according to the faying : Sunt & veredi, cursu pernices : Although they use this kinde also for posts, and performance of speedy journeys. The males are much better then the females, and therefore they seldom use Mares in hunting, because they are not so well able to leap, or endure the Woods, for which cause Gratius writeth in this manner of them :

Restat equos finire notis, quos arma Diane Admittant : non omne meas genus audet in artes. Est vitium ex animo : sunt quos imbellia fallant Corpora: praveniens quendam est incommeda virtus.

Opplanus in his discourse of hunting Horses, (as we have faid already) adviseth to make choise of them by the colour, unto whom Graius consenteth, faying:

Venanti melius pugnant color, optima nigri.

They that are of blewish colour, having variable spotted legs (he saith) are fittest to hunt Harts: they that are of a bright gray, to hunt Bears, and Leopards; they that are bay, or of a reddift colour, to hunt the Boars: they that are black, having glazen eyes, are good against Lyons: and thus much for the hunting Horses.

of Courfers, or swift light running Horses.

Fter theuse of Wagons, and Chariots, which men had invented for their ease in travel, and growing to be weary thereof, by reason of many discommodities, they came also to the ule of fingle Horses, which therefore they called Coursers, and now a days a Horse for Saddle, whereupon men perform their journeys; and the Poets fay, the inventer hereof was Belleropbon the fonof Neptune, to whom his father gave Pegafus the flying Horfe; which therefore they describe with wings, and place for a star in Heaven like an Angel, because of his incredible celerity: others attribute it to the invention of Sefoftris, otherwife called Sefonct ofis, a King of Egypt; fome to Orus, when he waged war against his brother Typhon; For these Horses, are no less profitable in war, then in peace, although none use them in these days, but common Souldiers, yet in antient time the greatel Nobles rode upon them. The Emperor Probus had one of these Horses, which was nothing comely, nor very high, yet would he endure ordinary journeys, to run a hundred mile a day, whereupon his Mither was wont to fay merrily; that he was better for a flying, then a fighting Souldier. The Horles of Spain are of this kinde, which they call Jennets, of Genibus their knees; because when the Rider is on their backs, he must hold his knees close to the Saddle and sides, for his better ease. Like unto these are the Barbary Horses, whom they geld, to keep them from the hardness of the Nerves, which happenth unto them in their heat and travel. There are a kinde of Horses called Lyofacki, and the reason of this name is, as some say; because when they were Foals, they escaped the teeth of Wolves, being set on by them: and therefore they run the more speedily to their dying day, for the wounds of Wolves make a Horse light sooted; but this is not likely, for fear cannot put that into them which is not bred of nature; even as we say, that Uyffer by avoiding Circes cup, of Cycles, was therefore made wise; but rather on the contrary; because he was wise, therefore he did avoid the contrary is the contrary. Circes cup; so likewise we say, that these Horses are not lighter of foot, nor fuller of courage, because they were set upon by Wolves, and delivered by fear; but because nature hath framed them, nimble, valiant, and couragious; therefore they did avoid the Wolf.

Elianus also saith, that these Horses had a wonderful knowledge, and sagacity, to discern be twixt Gracians and other Nations; for when a Gracian came unto them, they loved them, flood fill, and took meat at their hands; but if a Barbarian, or ftranger came unto them, they discerned them by their nose, as a Dog doth the foot-steps of a Beast, lifting up their voyce, they ran as fast away from them as they would from any ravening Beaft. These loved not only their familiars; but about all other things to be neat, fine, and cleanly in Chariots: For if at any time they came through we ter, drawing of a Chariot, they took a pride in cleanling themselves from all durt and sithings, cleaving to their legs or face. And that which is more strange, they were unwilling in race, to be staved or taken out thereof, as appeared by this story, related by Festus. There is faith he in home a great gate called Raiumena, which took his name from the death of a young man, an Hetrarian, who perished there in a race of Chariots, being Conqueror, because his Horses would not stay untill they came into the Capitol, and saw the framed earthen Chariots, which were placed in the porch of jupiters Temple by the Romans, and were appointed to be fashioned in earth by the hand of a cunning Potter, the which being wrought in earth, and put into the furnace, they grew fo great that they could not be taken out whole; at the fight of these, the Horses of Ratumena stood still, but first of all, their master was slain in the course by falling off.

The Horses of Tartation are so incredibly swift, that they will go twenty German miles in One day. There was a race of Horles at Venice (called Lupifere) which were exceeding fwift, and the common tame is, that they came upon this occasion. There was a certain merry fellow, which would become furety for every man, for which he was commonly jested at in the whole City. It fortuned on a day, as he travelled abroad in the Woods; that he niet with certain Hunters that had taken a Wolf, they feeing him, asked him merrily, if he would be furety for the Wolf; and inske good all his damages that he had done to their flocks, and foals, who instantly confessed he would undertake for the Wolf, if they would fee himat liberty the Hunters took his word, and gave the Wolf his life, whereupon he departed without thanks to the Hunters.

pon he departed without thanks to the Hunters.

Afterward in remembrance of this good turn, he brought to the honfe of this furety a great company of Mares without mark or brand, which he received, and branded them with the Image of a Wolf, and they were therefore called Lupifore, from whom descended that gallant race of swift Horses among the Veneti: upon these ride the posts, carrying the letters of Kings and Emperors to the appointed places, and these are said to refuse copulation with any other Horses that are not of their own kinde and linage.

The Persian Horses are also exceeding swift, which indeed have given name into all others. The mellengers of the great Cam King of Tartaria, have their posts so appointed at every five and twenty miles end, of these running light Horses, that they ride upon them, two or three hundred miles a day: And the Pegasarian coursers of France, by the like change of Horses, run from Lyons to Rome in five or fix days.

The Epithets of a swift running courser are these, winged or wing-bearing, Lark-sooted, breathing, speedy, light, stirred, covetous of race, flying, sweating, not flow, victorious, rash, violent, and Pegafean. Virgil alfo describeth a swift and fluggish Horse most excellently in shele verses; fending one of them to the Ring, and victory of running, without respect of Countrey or food, they are to be praised for enriching his master, and the other for his dulness to the mill, the verses are these following.

-Nempe volucrem Sic landamus equum, facili qui plurima palma Fervet, & emultat rauco victoria Circo. Nobilio hic, quocunque venit de gramine, cujus Clara fuga ante altos, & primus in aquore pulvis, Sed venale pecus Coritha, posteritas &

Hirpini, fi rara jugo victoria fedil Nil tibi majorum respetius, grația nullă Umbrarum, dominos pretis mutare jubentut Exiguit tritoque trabunt Epirbedi I collo Segnipedes, dignique molam ver fare Nepolie.

One of these swift light Horses is not to be admitted to race or course untill he be past three year old, and then may he be fafely brought to the ring, and put to the firetching of his leggin a composed or violent page as Vival Girth:

> Carpere mox gyrum incipiat gradibufque fonare Compositie, sinuetque alterna volumina crurum.

Pliny affirmeth, that if the teeth of Wolves be tyed to these Horses, it will make them never to give over in race, and when the Sarmatians were to take long journeys, the day before they gave their Horses very little drink, and no meat at all, and so would they ride them an hundred and fifty

The Arebians also in many regions use to ride upon Mares, upon whom they perform great jour Varionantis. neys, and King Darius did also fight his battails upon Mares which had souls ; for if at any time their affairs went to rack, and they in danger, the Mares in remembrance of their foals at home would carry them away more speedily then any other Horse : and thus much for the light or swift Horses.

Of the Gelding.

They have used to lib their Horses, and take away their stones, and such an one is called in Laline, Canterius, or Cantherius, which is drived of Cauterium, because they were seared with hot irons, or elle from the stronger boughs or branches of Vines, so called, because they were pruped. In French, Cheval Ogre, Camier, Cheuron, and Soppa doth interpret the Spanish, Janetto, to be a Gelding It is faid of Cato Cenforius, that he was carryed and rode upon a Gelding; and of these the Turkish Horses receive the greatest commendations.

The History of Four-footed Beasts.

Grapaldus.

Forasmuch as many Horses by their seed and stones are made very fierce, truculent, and unruly by taking away of chem, they are made serviceable and quiet, which before yeelded unto man very little taking away of this invention may feem first of all to be taken from them which fed divers together in one herd, being taught the intolerable rage of their stoned Horses towards their Colleagues and guides 1 for abating whereof they took from them their male parts.

Camerarius.

Of the manner hereof you may read plentifully in Rufius, and he affirmeth that the Southians and Of the manner nereor you may read prentituting in togeth, and a introduct that the Softhant and Sarmatlant, who keep all their Horses in herds, were the first devisers thereof: For these people Sarmations, who keep all their rapries in locks, which the relationship to rob and forrage, were many times by the neighing of their unruly Horses discovered; for their property is to neigh not only at Mares, but also at every stranger that they see or winde, and for males they were so head strong, that they would divers times carry away and Rider perforce, and againft his will, to his own destruction, in the rage of their natural luft.

Camerarius.

Livius.

Feffus.

Xenophon.

If they be gelded under their dams when they fuck, it is reported by fome; that from fuch their te they be Bened hines their their course their nerves are not hardned, for which teeth never fall away; and beside, in the heat of their course their nerves are not hardned, for which

cause they are the bait of all to run withall.

cause they are the Dest or all to run without.

They use to gold show in March, in the beginning of the Spring, afterward being well nourished, they are no less strong, able and couragious then other unlibbed; also there is a pretty proverb, Carl there in Foss, a Gelding in a Ditch, which is then to be used, when a man undertaketh a business which he is not able, to manage; for a Horse can do much in a plain, but nothing at all in a Ditch. It is reported that Tubellius Tauren, and G. Alelius, fought a combate on Horse-back near the City Capus, and when one had provoked another a good while in the plain fields; Taures descended into a hollow ways telling his fellow combatant, that except he came down unto him, it would be a fight of Horses, and not of Horse-men; whereunto Asilun yeelded, and came down unto the Ditch: at whom his adversary selted, asking him, if he did not know, that a Gelding could do nothing in a ditch. from whence came the common proverb aforefaid.

There is alfo another proverb (Camberius in Porta) A Gelding in the gate, to fignific aman who after he had undertaken the performance of a great exploit, his heart faileth in the very enstance, for it is reported of one Sulpicius Galba, who riding out of the City, his Horse tyred

There is likewife another adage in Plantus, which is this ; Crete bac mulier Camberino ritu affant fomniate. That is to fay, this Woman fleeps standing like a new dreffed Horse, and is applied against them which in a kinde of foolish jesture shut their eyes when they talk or work : and thus much for the Gelding.

of Careering Horses for Pomp or Triumph.

He nature of these Horses is to lift up themselves and rise before, standing upon their hinder legs, which is not possible for any to do without a generous and gallant spirit, and also nimble and strong loins to bear up the hinder legs, for it is not as many suppose, that this power of rising before from the lottness of his legs, but rather from his loins and hips betwist his hinder legs, for when his mouth is a little checked with the bridle he presently bendeth his hinder pasterns and anckles, and to lifteth up his fore-parts, that his belly and yard do appear, and in doing hereof the Rider must not bear his hand hard, but give him the bridle, that so he may do it willingly and with

greater grace of the beholders.

There are some which teach Horses to lift up themselves by knocking their pasterns with a rod, which the Horse understandeth as well as he doth his race, when he is stroke on the back by the Rider. And in teaching of a Horse this seat, it must be observed, that he never have rest until he have learned it, and that at certain figns and tokens, he be taught of his own accord to perform divers and fundry gestures: but if after long riding and copious labour, he begin to understand his Masters pleafure, and rife twice or thrice together, then you may give him the rains, nothing doubting but that he understandeth and will be obedient to the pleasure of the Rider. And in this kinde he is accounted the best careering Horse, which will rise high and oftnest together; neither is there any quality so commendable in a Horfe as this, or that fo draweth and (as it were) fo imprifoneth the eyes of old and young, and other beholders, for which cause Martial Horses for service of War, are to be instruded herein; and thus much for this Horse.

Of load or Pack-borfes.

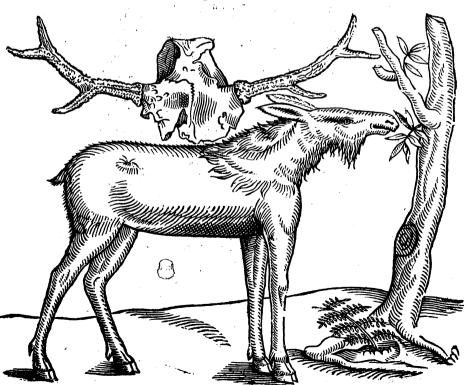

Here they keep Horses in herds and flocks, they have some which are not fit for the saddle, nor for the wars, and therefore are to be employed for the carrying of burthens, or to the Cart; although (as Fefus faith) Mules were first used for carrying and draught; but for for formuch as all Nations beared with the carrying and draught; but for formuch as all the carrying and draught; but for formuch as all the carrying and draught; but for formuch as all the carrying and draught; but for formuch as a line of the carrying Nations have not Mules, they are cherefore inforced to use Horses, and for this purpose the Geldings are much better then the floned Horfes; wherefore the Countrey-men of most Nations take Horfes for this name of the flore the countrey-men of most Nations take Horfes fes, for this purpose, after they be old, past breeding, or have some other blemish in winder limb, whereby they are disabled to travel under a man : for so great is the greedines of our age, that Horfes are not spared to long as they be able to live; according to the common proved (Afinits, equit, Multi ferie nulle) Horses, Mules, and Asses, keep no Holy-days: where the Law of God concerning the Sabbath is not observed; for the nourishing of Horses doth countervail the charges. Among these may be remembred those little Nags called Hinn, and Ginni, spoken of alcharges. All Course of Asses, whereof some are generated betwixt a Horse and an Ass, and others ready in the unit of the and all this, and others fall to be very little, through some sickness which happeneth unto them in their dams bellv: these fall to be very interest using so the faying of Properties: but men detenfits audia est Cynthia manare used with a find a fire of the state of alo Horses called Equi funales, because in their triumphs they were led with a halter next after the criumph.

of Wilde-horfes, the Sea-horfe, and the Hart-horfe, valled Hippelaphus.

N the days of Gordianus there were brought to Rome forty wilde Horses, and in the map of Gordianus Wood, there were pictured three hundred. They are called in Latine, Equiferi ; and in Greek. Hippagroi, they abound in Spain, and in the Alpes, and in the Deferts of Ethiopia there are many of them, which have two long venomous teeth standing out of their mouth: they differ also in their shoofs from other Horses, for they are cloven-sooted like Harts, and they have a long mane growing all along their back to their tail: And if at any time the Inhabitants take them by gins and other Oppianus. flights, they fall so fullen, that they abstain from meat and drink, distaining to be kept in any serviflights, they late to the Wilde Horses of India have but one horn: In the Alpes they are of an ash-co-Albertus. lour, with a black lift down their backs. The wilde Horses of Scytbia, near the River Hypania, are clean white. The wilde Horses of Syria live in flocks and herds together, and in every herd they have one Captain or Master over the residue, and if it fortune that any of the younger Horses leap upon a Mare, this Captain horse runneth after him, never giving over till he hath bit off his stones.

There are wilde Horses in Brushia which are like to other Horses in all parts, excepting their backs. Aristotle. which are so soft and weak, that they cannot endure to be sat upon, neither are they easily tamed. and the people of the Countrey eat their flesh: In Polonia there is a kinde of wilde Horse which hath horns like a Hart, and therefore I take it to be the same which is called Hippelaphus, whose picture is here described as it was taken here in England, by that learned Physician Doctor Cay.

The figure of HIPPELAPHUS.

This

His beaft was brought out of Norway, having a mixt form, betwixt a Hart and a Horfe, having a well compacted body, a long and lean leg, a cloven hoof, a fhort tail, and in all parts you would judge him to be a Hart, but in his head and ears you would judge him to be a Mule, and in his horns judge him to be a Fart, but it his head the salmost as much as an Elks; his mane like a Horses, but a Roe, the upper lip hanging over the neather almost as much as an Elks; his mane like a Horses, but a Roe, the upper up natigning over the interest of their factories, but thinner and standing more upright, without other alteration from their shoulders to their tail, they thinner and training more upright, which back-bone, as long as their other hair; a bunch under have a like briftling mane growing on the back-bone, as long as their other hair; a bunch under their chaps, and upon that a bunch or shaggy hair, the hair about their shoulders is more longer then ordinary, but their necks so short, that they can neither drink their drink, nor eat their meat upon the ground, except they bend down upon their knees. The males in this kinde do only bear horns. and such as do not grow out of the Crowns of their head, but as it were out of the middle on either and full as do not grow out of the obend to the fides: They are fharp, and full of bunches like Harts, no where smooth but in the tops of the speers, and where the veins run to carry mutiment to their whole length, which is covered with a hairy skin: they are not for rough at the beginning, or at the first prosses, specially in the fore-part, as they are in the second, for that only is full of wrinckles: from the bottom to the middle they grow straight, but from thence they are a little recurved; they have only three speers or prosses, the two lower turn away, but the uppermost groweth upright to heaven; yet sometimes it falleth out (as the Keepers of the faid Beaft affirmed) that either by fickness, or effe through want of food, the lest horn hath but two branches: In length they are one Koman foot and a half, and one finger and a half in breadth, at the root two Roman palms. The top of one of the horns is distant from the top of the other three Roman feet and three fingers, and the lower speer of one horn is distant from the lower of the other, two Roman feet measured from the roots: in substance and colour they are like to Harts horns, they weighed together with the dry broken spongy bone of the fore-head, five pound and a half, and half an ounce, (I mean fixteen ounces to the pound:) they fall off every year in the month of April, like to Harts and they are not hollow. The breadth of their fore-heads betwint the horns is two Roman palms and a half, the top of the crown betwixt the horns is hollow on the hinder part, and in that fiecel lyeth the brain which descendeth down to the middle region of the eyes.

Their teeth are like Harts, and inwardly in their cheeks they grow like furrows, bigger then in a Horse; the tooth rising out sharp above the throat, as it should seem that none of his meat should fall thereinto unbruised. This Beast in young age is of a Mouse or Ass colour; but in his elderage it is more yellowish, especially in the extream parts of his body : the hair smooth, but most of all on his legs, but under his belly, in the inner part of his knee, the top of his neck, break, shoulders, and back-bone, not so smooth: In height it was about twenty two handfuls and three fingers, being much swifter then any Horse; the semale beareth every year, as the Keeper said in Norway, two at a

time: but in England it brought forth but one.

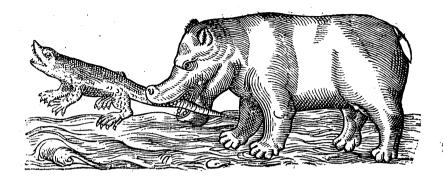

The flesh of it is black, and the fibres broad like an Oxes; but being dressed like Harts flesh and baked in an Oven, it tafted much sweeter. It eateth commonly grass; but in England seldom after the fashion of Horses, which forbear hay when they may have bread; but leaves, rindes of trees, breed and oats, are most acceptable unto it. It reacheth naturally thirty hand breadths high, but if any thing be higher which it doth affect; it standeth up upon the hinder-legs, and with the fore-legs

there imbraceth or leaneth to the tree, and with his mouth biteth off his defire.

It drinketh water, and also English Ale in great plenty, yet without drunkenness; and there were that gave it Wine, but if it drink plentifully it became drunk. It is a most pleasant creature being tamed; but being wilde, is very fierce, and an enemy to mankinde, perfecuting men, not only when he seeth them by the eye, but also by the sagacity of his nose following by foot more certainly then any Horse, for which cause they which kept them near the high ways, did every year cut off their horns with a saw: It setteth both upon Horse and Foot-men; trampling and treading them underfoot whom he did over-match, when he smelleth a man before he feeth him, heattereth a voice like the gruntling of a Swine being without his female: it doth most naturally affect a woman, thrusting out his genital (which is like a Harts) as if it discerned sexes. In Norway they call it an Elk, or Elm, but it is plain they are deceived in so calling it, because it hath not the legs of an Elk, which never bend, nor yet the horns, as by conference may appear. Much less can I believe it to be the Hippadius, because the female wanteth horns, and the head is like a Mules; but yet it may bethat it is a kinde of Elk, for the horns are not always alike, or rather the Elk is a kinde of Horse-hart, which Arifialk calleth Arrochofius of Arracolos a region of Affya, and herein I leave every man to his judgement; reterring the Reader unto the former discourses of an Elk, and the Tragelaphus.

of the SEA. HORSE.

"He Sea-horse, called in Greek, Hippotomos, and in Latine, Equal Fluviatilis; Ic is a most ugly and filthy Beaft, so called because in his voyce and mane he resemble the a Horse, but in his head an Oxe or a Calf; in the residue of his body a Swine, for which cause from Graciam tall him some times a Sea-horfe, and fometimes a Sea-oxe, which thing hath moved many learned men in our time to affirm, that a Sea-horfe was never feen; where unto I would easily subscribe (seth selaje) were it not that the antient figures of a Sea-horfe, altogether refembled that which is here expressed; and was lately to be seen at Constantinople, from whom this picture wis taken It liveth for the most part in Nilur; yet is it of a doubtful life, for it brings forth and breedeth on the land, and by the proportion of the legs, it feemeth rather to be made for going, then for fwimming: for in the night time it eateth both hay and fruits, forraging into corn fields, and dewouring what foever cometh in the way; and therefore I thought it fit to be inferted into this flory. As for the Sea-calf, which cometh sometimes to land only to take sleep; I did not judge it to belong to this discourse, because it feedeth only in the waters.

This picture was taken out of the Coloffus in the Vatican at Rome, representing the River Nilus, and eating of a Crocodile: and thus I referve the farther discourse of this beast unto the History of Fishes, adding only thus much, that it ought to be no wonder, to consider such monsters to come out of the Sea, which resemble Horses in their heads, seeing therein are also creatures like unto Grapes and Swords.

The Orlean Indians do hunt a Beast with one horn, having the body of a Horse, and the head of a Hart. The Æibiopians likewise have a Beast, in the neck like unto a Horse, and the feet and legs like unto an Ox. The Rhinocephalus hath a neck like a Horse, and also the other parts of his body, but it is faid to breath out air which killeth men. Paufanias writeth, that in the Temple of Gabales, there is the picture of a Horse, which from his breast backwards is like a Whale. Lampsacenus writeth, that in the Scythian Ocean, there are Islands wherein the people are called Hippopodes, having the bodies of men, but the feet of Horses; and Lamia hereafter to be declared, hath the feet of a Horse, but in other things the members of a Goat : and thus much for the feveral kindes of Horses, both for them that are properly fo called, and also for any other, which like bastards retain any resemblance of nature with this Noble and profitable kinde of Beaft.

of the Diet of Horses, and their length of life.

Ning thus discoursed of the kindes of Horses, and their several accidents, and uses both for War, and Peace, pleasure, and necessity; now likewise it followers, that we should proceed to their diet, and manner of feeding: wherein we are first of all to confider, that the natural constitution of a Horseishot and temperate. Hot, because of his Levity, and Velocity, and length of life; tem- Russius. perate, because he is docible, pleasant, and gentle towards his Master and Keeper. He therefore that will keep Horses, must provide for them abundance of meat; for all other Cattel may be pinched without any great danger, only Horses can endure no penury. Varro faith, that in feeding of Horses, we must consider three things; First of all, what food the Countrey wherein we live doth yeeld: Secondly, when it must be given: Thirdly, by whom, but specially the place of feeding Horses is to be considered; for although Goats can live in the Mountains, better then in the green fields, yet Horses live better in the green fields, then they can in the Mountains. For which cause when we chuse pasture for Horses, we must see that it be fat, such as groweth in Meddows, that in the Winter time it may be Sunny, and in the Summer it may be open and cold, neither fo foft under-foot, but that the Horses hoofs may feel some hardness, for Horses, Mules, and Asses, do love well green grass, and fruits, yet principally they grow fat with drinking; when they are in the stables, let them have dry Hy. A Mare when the hath foaled give her Barly, and generally at all times in the Winter feafon bullimung, or a mixture of all kindes of grain is fit for them in the house, according to these werses

Indeubi pubentes calamos duravert aftes, Ladent fque urens berb.s ficcavetit omnem Mensibu bumorem, culmilque armarit ariftas, Ordea tum, paleasque leves. prabere memento. l'ulvere qu'netiam, puras sicernere fruges

Cura fit, atque toros manibus percurrere equarums Gandeat ut plausu sonipes letumque relaxet Corpus, & altores rapiat per vifcera succos, Id curent famuli comitumque animofa juventus.

We have shewed already, that they must have straw, or litter to ly upon, and Pollux doth fer down the kindes of meats for Horses, as barley, hay, or French wheat, rice, and hay; for hard and dry meat is fittest for Horses, because it doth not fill them with winde; but all green meat is the ory meat is intention from the first person of inflamation. Three-leaved grass is also good for Horses, especially if they be young, for chaffe, hay, grass, and oats, are their natural and pleasing food: and although grass be moist, yet in the young age of a Horse, he delights in moist meats, for they stretch out his belly, and encrease his growth, but when he is elder, then ought he to be nourished with dryer food; as chaff, Barley, Oats, and such things. For although chaff, by reason of their drynes. make not a Horse fat, yet do they preserve him in perfect strength, for all hard things which are diffolved with difficulty, do retain their force of nutriment longer, but foster meats do not fo; therefore the best dyet or habitude for Horses, is, to retain the mean betwixt fatness and leanness. For fatness ministreth many humors to the nourishment of sickness, and leanness diminisheth natural thrength, maketh the body deformed. In some Countreys they give their Horses Vine branches in the Autuinn, to move their bellies, and increase their strength.

Mitheolus. Dioferrides.

The herb Medica, which aboundeth in Media, is very nourishable to Horses, but the first stalke are refused, saith Aristotle, the residue being watered with stinking water, is most commodious. In Italy they fat their Horses with Trifoly; in Calabria with Sulla, or Arthritica; and the Thracians, near

the River Strymon, with a green Thiftle.

In the Spring time give your younger Horses Bullimung for many dayes together, for that will not only make them fat, but also purge their bellies : for this purgation is most necessary for Horses, which is called soyling, and ought to continue ten days together, without any other meat. giving them the eleventh day a little Barley, and fo forward to the fourteenth; after which day, continue them in that dyet ten days longer, and then bring them forth to exercise a little, and when as they sweat, anoint them with Oyl; and if the weather be cold, keep a fire in the flable : And you must remember when the Horse beginneth to purge, that he be kept from Barley and drink, and give him green meat, or Bullimung, whereof that is best that growth near

But if the Horse go to soil in April, after five days, bring him forth, and wash him all over with water, then wiping his hair from all wet and filth, and loofe hairs, pour upon him Wine and Ovl. pressing it smooth upon his back, down to his skin; so let him be wiped all over again, and carried into the stable, to be dieted with Masline, or Bullinung, as before, except he be troubled with the Glanders, and then he must not feed on it in the day time, lest through the heat of the Sun, he sall

into the mangie, or into madness. It is also requisite; that while we feed our Horses with green Corn, they be let bloud in the veins of the breaft, and also cut in the roof of their mouths, that so those places being emptyed which were stuffed with corruption, the vacuity may be replenished with better bloud; a Horsethus dyeted, shall not only live in more health, and free from fickness, but also be more strong to undergo

his labour.

With the bloud that cometh out of him, mingled with Nitre, Vinegar, and Oyl, you shall anoint him all over, if so be he be subject to the Glaunders, or to the Mangie; and then keep him in the stable five days together, suffering no Curri combe to come upon him, untill the fixt day, feeding him in the mean time with green Corn or Bullimung; and then bring him forth again, washing him all over with water, and rubbing him with a hard while, untill the humor or moistures be wholly wiped off, and he fed as before fourteen days together.

If you please not to keep him in the stable, then in the Spring time, turn him out in some meddow, or green pasture, and there let him seed at his own pleasure; for it hath been often proved, that

fuch a dyet hath recovered may fick Horfes.

It is reported of the Horota, and Gedrusti, and men of Freeseland, the Macedonians, and Lydians, do feed their Horses with fishes: Likewise the Paonians which inhabit about Prasius near the Mountain

Orbelus, do feed their Horses, and all Cattel which they yoak with fishes.

Concerning the drink of Horses we have spoken elsewhere, and therefore we shall not need to say any thing of it here, except that the drinking much, and the Horse thrusting his head in deep into the troubled water, is an unfallible fign of his goodness; and the custom of some is, for to give their Horses master and corn fod together, or else Bear, Ale or Wine, by drinking whereof they encrease their spirits and stomach.

Albertus faith, that some to make their Horses fat, take Snails, and beat them in pieces, so putting them into their meats, whereby they grow to a falle fatnesse, which is easily disloved. By eating of black Hellebor, Oxen, Horfes and Swine are killed: and thus much for the food

of Horses.

Concerning the voice of Horses, the Latins call it Hinnitum, and the Grecians, Phruma, and Phiumstesta; but this is certain, that from their very foaling, the semales have a shrill and sharper voice then the males, which is fuller and broader, untill they be two year old, and after copulation their voice encreaseth, fo continuing untill they be twenty year old, after which time, it falleth and decreaseth again.

The length of a Horseslife (according to Aristotle) is eighteen or twenty years, and if they be well tended and regarded in their youth, it hath been found, that fome have lived unto five and twenty, or thirty year old. The females live longer then the males, because of their generation,

for the immoderate luft of Horses, shortneth their dayes. And it hath been found that a Mate hath lived to forty or fifty years, and a Horse to three and thirty: wherefore I do leave the relation of Pliny and Atheneus, to be censured by the Reader, who affirm, that Horses in their time, lived

Of the Horse.

threeicore or feventy years.

Albeitus also affirmeth, that a Souldier told him for a certain truth, that he knew a Horse which lived till he was threefcore years old, and at that age did fervice in the field. And Awell. Ninbus also affirmeth, that the Riders of Ferdinand the first, told him there was a Horse in their Milters stable of seventy year old. The age of a Horse may be known by his teeth, and the Persian. Bobemian, Epirian, and Sicilian Horses, live longer then the Spanish or Numidian. In their years, the female never groweth after five, nor the male after fix in height or length, so as the males are sooner perfited in the womb then the females, on the contrary the females do looner grow to their perfection after their foaling then the Males.

The males have more teeth then the females, and in each fex they which have fewest teeth, live not so long, and in their old age their teeth grow white. Now their age is discerned by their teeth on this manner, the first four, that is two above and two beneath, be changed after they be thirty year old, and a year after the four next are changed in like manner, again after another year four more are changed, fo that after four year and fix moneths, he loofeth no teeth, except canine, which cometh again in the fift and fixt year; fo that afterwards their age cannot be difeerned, because in the seaventh year, they are all filled. Another unfaigned note of their age, is the hollowness of their temples, and their eye-lids beginning to wax gray, and their teeth hanging out of their mouths. They have also little blacks in the middle of their teeth. Some try the age of their Horses, as a wife and learned man writeth, by considering twelve teeth, six above. and fix beneath, for the old Horses have longer and thinner teeth, which are black at the top, and there are certain broaches or wrinckles in their teeth, which being filled, the mark is faid to be out

Some try the age of their Horses by their cheeks, for they pull up the skin from the bones, and if it will quickly fall back again into his former place, they take it for an affured token of the Horses youth: but if it stand out and fall slowly down, then on the contrary, they judge the Horse to be

old, and thus much for the age and diet of Horses.

Of the uses of Horse-flesh, Mares-milk, and other parts.

Here are certain people in Scythia, which were called Hippophagt, because they lived upon Horse-fiesh; such also were the Sarmatians and the Vandals: likewise in Scythia the lesse, neer Taurica Chersonnesus, the people do not only eat the flesh of Horses, but also their milk, and make Cheese thereof.

Athenaus also affirmeth, that the manner of the ancient Perfians was, upon the fealts of their nativities to roast an Ox, an Asse, a Horse, and a Camel whole, and so set them before

In like fort, they eat Horse flesh and Camels flesh at Damascue; and in Polonia wilde Horses especially that part which groweth under the mane. The Sarmatians made meat of Millet-feed, and Mat. Michou. mingle it with Mares milk, or with bloud taken out of the veins of their legs, wherewithal they make Pan Veneum, puddings, and this is their chief food. So wikewife do the Tartarians, who having a Horle fick, suc off his Ulcer or wound, and fo kill him and eat his flesh. The Gothes also in the dayes of Virgil did drink the bloud of Horses, as appeareth in these Verses;

Profuit incensos astus avertere, & intet Ima ferire pedu, faltentem fanguine venam : Bifalta, quo more folent, acerque Gelonus. Cum fugit in Rhodopen, atque in deferta Getar um, Et lac concretum cum [anguine potat equino.

The Poets do alfo fain, that Pelias the Son of Tirus and Neptune, was educated by a Mare, and Melabor brought up his Daughter Camilla with Mares milk, because she was born wilds, he also bred her among the bushes, according to these Verses;

> Hic natam in dumie, interque borrentia luftra Atmentalis eque mammis, & latte ferino Nutribat, teneris immulgens ubera labria.

The Tartarians drinke Mares milke, which they dreffe like white wine, and call it Change whereof Paulso Venetus rehearseth this story: The King of Tarier, faith he nourisheth above ten thousand milk-white Horses and Mares, and every year, upon the eight and twenty day, of August, they observe a solemn feast, wherein the milk of these white Mares is dressed and ser forth

Afterward the King taketh a bowl full thereof, and powreth it on the ground south him, being fo taught by his Maghiam, to offer Sacrifice to the gods of his Countrey. For they perlivade

The time of their life.

Of the Harfe.

261

him that the Gods lick up that milk spilt on the ground, and afterwards the King drinketh up the him that the Gods lick up that limit ipint of the gods and the Kings linage, or of the Countrey refidue, and befides him no body that day, except it be of the Kings linage, or of the Countrey of Horizeb (for the people of that Countrey have liberty to talt thereof that day) because of a battle which once they obtained for the great Cam.

The property of this milk is to loofen the belly; and because it is thin and hath no fat in it. therefore it easily descendeth, and doth not curdle in the stomach, and it is said, that the therefore it early descendent, and doth the Southland can keep it twelve dayes together, therewithal fatisfying their hunger, and quenching their thirst. And thus much shall satisfie for the natural discourses of Horses: hereafter followeth the moral.

The moral discourse of Horses, concerning Fistions, Pictures, and other devises.

Nd first of all for the moral dignity of Horses, there is a celestial constellation called Hippor A according to these Verses of Aratus thus translated;

> Huic Equus ille jubam quatiens fulgore micanti Summum contingit carut alvo ftellaque jungens

The Latins call this flar Pegalw, and they fay that he is the Son of Neptune and Medula; who with striking his foot upon a Rock in Helicon a mountain of Banta, opened a Fountain, which after his name was called Hippocrene. Others tell the tale in this fort, at what time Bellerophon came to Pretus the Son of Abas the King of the Argives, Antia the Kings wife fell in love with her guelt, and making it known unto him, promifed him half her husbands Kingdom if he would lie with her, but he like an honest man abhorring so foul a fact, utterly refused to accomplish the defire and dishonesty of the luttful Queen; whereupon the being afraid left he should disclose it unto the King, prevented him by her own complaint, informing the King that he would have ravished her; when the King heard this accusation (because he loved Bellerophon well) would not give punishment himself, but sent him to Schenobem the Father of Queen Antia, that he in defence of his Daughters chastity might take revenge upon him, who presently cast him to Chimara, which at that time depopulated all the coast of Lycia : but Bellerophon by the help of the Horse legalun did both overcome and avoid the monster, and being weary of his life, perceiving that there was no good nor truth upon the earth, determined to forsake the world and file to heaven: who coming neer to heaven, casting down his eyes to the earth, trembled to see how far he was distant from it, and so his heart fainting for fear, fell down backward and perished, but his Horse kept on his slight to heaven, and was there placed among the Stars by Justier. Euripedes telleth the tale otherwise, for he saith that Chiron the Centure had a Daughter nourished in the mountain Pelius which was called Theas and afterward Hippe, because of her exceeding hunting on horse-back, she was perswaded by Ædus (the Son of Hellen, a Nephew of Jupiters) to let him lie with her, whereupon she concrived with childe, and when the time of her deliverance came, the fled from her Father into the woods, for fear the loss of her Virginity should be known unto him; but he followed her to see what was the cause of his Daughters departure, whereupon she desired of the Gods that her father might not fee her in travel, her prayer was granted, and she after her delivery, was turned into a Mare, and placed among the Stars.

Others say that she was a Prophetesse, and because she revealed the counsels of the Gods, was therefore metamorphozed in that shape in the place aforesaid. Others say, that because the gave over to worship Diana, the lost her first presence. But to return to the first tale of Bellerophon, who after the death of Chimera, growing proud for his valor attempted to flie to heaven, but Jupiter troubled his Horse with a Fury, and so he shooke off his Rider, who perished in the field, Alecus apo tefe alese, be-

cause of his errour: and Pegasus was placed in heaven. But to come nearer to the description of the Poeticall Horse, Albertus Magnus and some others fay, that it is a Bealt bred in Ethiopia, having the head and feet of a Horse, but horned; and wings much greater then the wings of an Eagle, which he doth not lift up into the air like a bird, but only stretcheth them out when he runneth, whereby his only presence is terrible to all creatures, unto whom he is enemy, but especially to Men. But for the truth hereof (although Pliny and fome others feem to affirm as much) yet will I fet down nothing for truth and certainty, because as the Poets call every swift Horse Volucres, and Alipedes; so the errour of that figure, hath rather given occasion to the framing of this new Monster Pegalus, then any other reasonable Alle-

Likewife I know no cause why the Poets should fain, that Ceres was turned into a Mare, and hid her felf in the herds of Oncies; Nepume falling in love with her, followed her to those fields, and perceiving that he was deceived turned himself also into a Horse, and so had to do with her, whereat Cours was grievously offended, and fell into a great fury, for which cause the was called Erinnys: yet alterwards the washed ber fell in the River Ladon, laying afide all her rage and fury, at the fulness of time the brought forth Ailon.

And the Accodisms also had a certain Den, wherein they had a great remembrance of this ravishment of Ceres, sitting in a Den, wherein they say she hid her self from all creatures and whereunto they offer divine worship. They picture her in a Colts skin, sitting like a woman in all parts, with a long garment down to her ancles, but the head of a Horie with the pictures of many Dragons, and other fuch wilde beafts, holding in one of her hands a Dolphin, and in the othera Dove.

Buall which it is not uneafte for every man to know & conceive their meaning that plenty of food fignified by Ceres, dorth not only maintain Men, Fowls, Beafts and Fishes, but also the immoderate use thereof draweth men to inordinate lust and concupiscence, and that the Gods of the Heathen were

more rather to be accounted Beafts then Men.

Dianals among the Arcadians was called Eurippa, for the finding out of those Mares which Ulifes had loft: which Uly fee erected a statue for Neptune the great Rider, and they say that Hippoly to being torn in pieces by Horses, through the love of Diana, and skill of Afculapius, by the vertue of certain herbs he was restored unto life again: Whereupon Jupiter being sore vexed and angry with A. Sculapim for fuch an invention, deluding as it were the fury of the Gods, killed him with lightning, and thrust him down into hell, because no wretched man would fear death if such devises might take place : which fact Virgil describeth in these Verses :

At Trivia Hippolytum Secretic alma recondit Sedibus, & nynoka Ægeria nemorique velegat, Solus ubi in filvis Italis ignobilis avum Exigeret; verseque ubi nomine Virbim ellet.

Undo etiam Trivia templo lucisque sacratis . Cornipedes at centur equi, qual listore currum Et juvenem monstris pavidi effudere marinis.

The Poets alfo do attribute unto the night, black Horfes, and unto the day white. Homer faith that the names of the day Horses are Lampus and Phaethon; to the Moon they ascribe two Horses, one black and another white; the reason of these inventions for the day and the night is, to signific their foeedy course or revolution by the swiftness of Horses, and of the darkeness of the night by the black Horses, and the light of the day by the white; and the Moon which for the most part is hid Textor. and covered with earth, both increasing and decreasing, they had the same reason to signific her shadowed part like a black Horse, and her bright part by a white one.

The like Fiction they had of Hecate, whom Aufonius calleth Tergemina, because the is descri- Heliodorus. bed with the head of a Horse, a Dog, and a wilde Man, the Horse on the right hand. the Dog on the left hand, and the wilde Man in the middle : whereby they declared how vulgar, illiterate, and uncivilized men, do participate in their conditions, the labours and envie of brute beasts.

We may also read in the Annales of Tacitus, that in his time there was a Temple railed to Equestrial fortune, that is, for the honour of them which managed Horses to their own profit, and the good of their Countrey, and that Fulvius the Praior in Spain, because he obtain ned the victory against the Celtiberians, by the valour and diligence of his Horse-men, was the first that builded that Temple. Likewise, there was another Temple in Baotia for the same cause dedicated unto Hercules.

The ancient Pagans call the God of Horses Hippona, as the God of Oxen Bubona. It is also ap- Calins. parent, that many Nations use to sacrifice Horses, for at Salentinum a Horse was cast alive into the fire and offered to Jupiter. Likewise the Lacedemoniant sacrificed a Horse to the winds. At Rome also they facrificed a Horse to Mars, and thereof came the term of Eque October, which was sacyificed every year in October, in Gampus Martius. This Horse was often take out of a Chariot, which was a Giraldus, Conqueror in race, and stood on the right hand; as soon as he was killed, some one carried his cail to a place called Regia, and for his head there was a continual combate betwixt the inhabitants of the freets, Suburra, and Sacravia, which of them should possesseit; for the Suburrans would have fastened it to the wal of Regia, and the Sacravians to the Tower Mamillia.

The reason why they Sacrificed a Horse, some have conjectured because the Romans were the off-spring of the Trojans, and they being deceived by a Horse, their posterity made that Sacrifice for punishment of Horses: hut it, is more reasonable, that because they Sacrificed a con-Festur, quering Horse, they did it only for the honour of Mars (the God of victory) or else because they would fignifie, that flying away in battle was to be punished by the example of Sacrificing of a swift Horse.

The Carmani did also worship Mars, and because they had no Horses to use in War, they were forced to use Asses, for which cause they Sacrificed an Asse unto him. There is another fable amongst the Poets, that the Methimneans were commanded by the Oracle to cast a Virgin into the Sea to Neptune, which they performed: now there was a young man whose name was Ennellus, which was in love with the said Virgin, and seeing her in the Waters, swum after her to fave her, but both of them were covered with the waters of the Sea; yet after a certain space Emailine returned back again, and brought news that the Virgin lived among the Pharies of the Sca, and that he after that he had kept Neptunes Horses, by the help of a great wave escaped away by swimming; for the Poets sain that Nepunes Chariot was drawn by Horses of the Sea, according to these Verses of Gillius;

. .

Non aliter quotiens perlabitur aquora curru Extremamque petit Phabea cubilia Tethyn Franatis Nepiunus equis-

pictures of Horics.

Munfter.

Holary by the They also faign that the Sun is drawn with two swift white Horses, from whence came that abomination, that the Kings of Judea had erected Horses and Chariots in honour of the and an amount of the Sun, which were fet at the entrance of the Temple of the Lord; which Horses were destoyed by Sun, which were read in holy Scripture. And the manner of their abomination was, that when they Jossan, as we read in mory Scripture. Join the Horses from the entrance of the Temple to the did worship to the Sun, they road upon those Horses from the entrance of the Temple to the did worthip to the oun, they saw applied a Horfe to Apollo according to the chamber of Nethan-melech. The Persians also Sacrificed a Horse to Apollo according to these Verses of Ovid:

Placat eque Persis, radite Hyperiona cinclum, Ne detur fceleti villima tarda deo.

And for this cause the Massagetes sacrificed a Horse (the swiftest of all Beasts) unto the Sun, the swiftest of all the Gods. Philoftratus also recordeth, that Palamedes gave charge to the Grecians to Sacrifice to the Sun rifing a white Horse. The Rhodians in honor of the Sun did cast yearly away into the Sea. the Chariots dedicated to the Sun, in imagination that the Sun was carryed about the Worldina Chariot, drawn by fix Horses.

As the Army of the Persians did proceed forward on their journey, the fire (which they did the ceremony of the Persians call Holy and Eternal) was lifted up on silver Altars; presently after this, there followed the Wise-men, and after those Wise-men came 165 young men, being cloathed with as many red little garments as there are dayes in the year: Instantly upon the same, came the holy Chariots of Inpiter, which was drawn by white Horses; after which, with a resplendent magnitude the Horse of the Sun was seen to appear (for so it was called) and this was the manner of their

Calim.

The King of Indians also (as is said) when the dayes began to wax long, he descended down to the River Indu, and thereunto facrificed black Horses and Buls; for the Buls in ancient time were confecrated to the Rivers, and Horses also were thrown thereinto alive, as the Trojans did in-

Varrinus. Strabo.

The Veneti (which worshiped Diomedes with singular honour) did Sacrifice to him a white Horse: to Xanthus. when the Thebanes made war on the Lacedemonians, it is faid that Cadafus apeared in a vision to Pelopidus, one of the Thebane Captains, and told him that now the Lacedemonians were at LeuGra, and would take vengeance upon the Thebanes, and their Daughters; Whereupon Pelopidus to avert that mischief, caused a young soal to be gallantly attired, and the day before they joyned battle, to be led to a Sepulcher of their Virgins, and there to be killed and facrificed.

The The figures of their vingous, and at their marriages and nuptial Sacrifices, the man took a The The figures of this custome at their marriages and nuptial Sacrifices, the man took a Horse of War armed and surnished, which he led into the Temple; after the Sacrifice ended hedelivered the rains of the Bridle into the hands of his Wife, who led the fame Horse home again: but for what fignification or caufe this site was observed, Ælianu which relateth the story sheweth not, but faith he referreth himself to the Theffalians to declare their own reasons of this observation. And thus much shall suffice concerning the Sacrificing of Horses.

Plutarch. The burial of Horfes.

Another moral-honour done unto them was their burial; For we have shewed already that Volucer the Horse of Verm the Emperour was honourably buried, the Mares of Cinen which had won three games at Olympus, were likewise interred neer his own body. The Scythians at the burial of their Kings used for to strangle one of his harlots, his cupbearer, his Cook, his Horse-keeper, his Messenger, and also Horses and other Cattle; and after a year they do this the second time; taking fifty of his dearest servants which were natural Scythians and strangled them; likewise fifty of his best Horses, out of whose bellies they pull out their bowels and guts, and filling their bellies up again with chaffe, they fow them up; then make they half an arch upon two polts standing up right, and likewise the other half upon two other posts over the Kiugs grave; likewise fallening in the earth divers other sharp posts upon which they put the fifty Horses, so fastening them with thick pieces of timber all along their neck and back, fo that the shoulders of the Horses rest upon the fore arch and their bellies on the hinder, their legs standing upward, then bridle they the Horses, and stretch forth the rains of their bridles unto the posts of the earth, afterwards upon every one of the dead Horsesthey lay a dead man, putting a stake through his back out of his neck, and the neather part of the said stake they fasten in the post, which pierceth or goeth through the Horse; and thus having compassed about the grave of their King, with such Horses and Horses men, they depart, leaving both the one and the other to the consumption of nature, and after this manner did show have all their King. manner did they bury all their Kings.

Adrian buryed his Hunting Horse, Ennomaus his Mares, Partheria and Eriphe. Like wise Miliader, Evagoras, and Augustus the Emperour. At Agrigentum also there are many Pyramides erected upon the Sepulchres of Horses. And thus much shall suffice for the burial of

Horfes.

We have shewed you already how Men and Women have been transformed into Horses, Allanus, according to the fiction of the Poets, as of Saturns, Jupiter, Noptune, Ceres, Hipper, and Pliny. according to Daughters of Chiron. In like fort there have been predictions or oftentations of Fefins. things to come, taken from a Wolf, a Fox, a Serpent, and a Horfe, which were called Au- Predictions or picia Pedifiria.

Of the Herfe.

Augurilms by

Desansatio have been declared by Horfes, for Publim Vatinim in the Macedonian war coming towards Rime in the night time, supposed be fawitwo young men of excellent beauty to meet him. and tell him that Perfet the King was taken by Poulm, which thing he declared to the Senate, but was by them put into prison as a contemier of the Majesty and hondur of that Captain, but afterwas by the letters of Paul that Perfer was taken that very day : whereupon Valinius was water delivered out of Prison, and newarded with land and liberty.

It also appeareth that the same day that Caffer and Robus washed away the sweat of themselves Valer. Man. and their Horses in the lake of Junum, that they watched for the fafety of the Ruman Empire. and their Temple which was joyned so the fame fountain being fast locked, upon a suddain flew open without the hand of man and the state of the

Enest also in Virgit faith suchat he knew war would follow by the appearance of four Horses, which in a green field fet upon a whole Campe, whereupon in Virgil, he speaketh thus rather in the clib cauteth much flaughten. to Anchifes. and velice of mod blended of a booth

Tondentes campum late, candore nivali. 11 1194 Finater Anchifes, Bellum O terra bofpita portas: Bello armantur equi, Rellum bec armenta minantur.

Quatuor bic, primum omen, Equos in gramint widi Al Sed tamen tidem olim curru succedere sueti Quadrupeder, & frana jugo concordia ferre! Spes oft pacie, ait.

Lucan alfo speaketh to the same purpose that Horses presage war ;

Primus ab aquorea percuffis cuspide faxis Thessalicus sonipes bellis feralibus omen

Alexander also writeth, that the Germans were wont to bring up white Horses which were never used to labour, by whose neighing they were forewarned of wars, and of other strange events. It is sulgarly known how Derim came to the Kingdom of Persia, after it was agreed amongst the seven Princes, that he whose Horse did first neigh in the morning in a place appointed, should be faluted King, Ebores his rider in the night time took one of the Mares which he knew his Mafters Horse loved, and led her into the Suburbs, and there tied her, afterward he brought thither Darine his Horse, and led him about her two or three times, and at length suffered him to cover her, and foled them both away together. In the next morning the Princes met as foon as day brake, and road up and down the Suburbs, until at laft they came to the place where the Mare of Dariu was tyed the night before, whereunto the Horse of Dartus ran neighing strongly, and presently it thundred and lightned in a clear day: whereupon the residue of the Princes alighted from their Horses, and did reverence to King Darim, who by divine appointment was thus advanced to the

Although there be some that say Ebores by handling of a Mares genital and keeping his hand warm, untill they came to the place aforesaid, there stroking the Nostrils of his Masters Horse, caused him thus to neigh and win the Kingdom; yet I rather incline to the former opinion which was related by Herodoius in his Thalia.

There have also been Horses of strange fashions, for as we have shewed already, that a Mare did Of Monster bring forth a Hare, fo alfo (Livie faith) an Ox did bring forth a Foal. Nere did shew certain Herme- Horses. bredite Mares, wherewithal his Chariot was drawn, which was a thing worth the fight, that the

Monarch of the world should six upon Monsters.

Julius Cefer had a Horse which had cloven hoofs like a Mans singers, and because he was soaled at that time when the Sooth-favers had pronounced that he should have the government of the world, therefore he nourished him carefully, and never permitted any man to back him but him-Pling." felf, which afterwards he dedicated in the Temple of Venso, for he conceived that such a strange bealt bred in his own flock, was a prediction unto him of great honour. The Palatine of Vilva Had a Dion. Horse foaled with five legs, and Henry the Count-Palatine had likewise a Horse with six legs. Thus Calius. much may suffice for the monster Horses.

In the next place it is good to enquire what the Contaures are, who are described by the Poets to Of Centaures have their forepart like men, and their hinder part like Horses, the occasion whereof is thus related by Pindarus: that Contaurus the Son of Ision, committed buggery with the Mares of Magnetia, under the mountain Pelius, from whence came that monstrous birth in the upper part resembling the Father and in the neather the mother. These faith he possessed the Mountains and Desert places of Thefal, being given to all manner of Latrociny and Deprædation. They were called also Hippremient: And some say that they were first of all nourished by the Nymphes in the mountain Pelin, who afterwards being the first that tamed Horses, were thought to be half Men, and half Horses, because they were seen backward, and from hence came the fable that they were tamed by

Hercules.

Dion.

We

Control of the Honfestill

205

Hercules, which was one of his greateft labours: But yet that no man may wonder or think it impossible that such monstrous creatures should have existence in nature, these authorities following may

riwade lumciently.

Plutarch in his Banket of Wisemen, affirmeth, there was a Horse-keeper which brought into the Plutaren in his panket or vynemen, amenter, which he had got upon a Mare, which had the head house of Perlander an Infant or rather a Monster which he had got upon a Mare, which had the head house of restances an instant or rather a stomether parts like a Horsey Diocles presently judged it neck, hands and voice of a childe, and the other parts like a Horsey Diocles presently judged it neck, hands and voice or a childe, and the state of the world. But Thales told Periander to be a Monfter, and fignified contentions and firifes in the world. But Thales told Periander to be a Montter, and figured contentions and Montter, but a meer natural birth from such a he was of another opinion, namely, that it was no Montter, but a meer natural birth from such a copulation, and therefore advised Perianter, that either he should keep no Riders, or else let The State of the Project of the second them have Wives.

em have wives.

Claudius Cefar allo writeth, that in the time of his reign there was fuch a one born in Theffely, which dyed the same day it was born and Plim that he afterwards saw it seasoned in hony, brought out of Eppt to be flewed to the Emperor. Thefe Centaires, Homes calleth Fera, that is, Fera, wilde out or Egypt to be interest of the Container are faid to bevery like the one to the other, and were also once perions the Lapinos and the Lemaner are tall to bevery his the one of the Centures in a banket being very loving, but they fell afterwards to deadly war, by reason the Centures in a banket being drunk, offered to ravish the females of the Lapinos, for which cause the Lapinos sew them in their jealousie, whereon fell a mortal war : whereby the Poets signification intemperancy in Men and Beasts doth not only bring with it other fins, but also causeth much slaughter. And so I conclude the fory of Gentaures, holding it possible that such should be generated by unclean and natural copulation, but unpossible that they should five long after birth, and therefore the Centaures of the Poets are nothing else but men fitting on Horseback, mistaken for one entire creature which were divided, and fo conclude with the Verse of Horace was to the transfer of the

Humano Capiti cervicem pictor Equinam Jungere fe velit, Hoe monstrum puto Centaurus foret.

of the statues and figures of Horses.

Pollux.

Amianw.

T was no small dignity that the ancient Gephalenes did stamp their money with the picture of a Horse, for furely from them it came, that coin was firk of all called currant, because of the image of a speedy Horse, wherewithal it was imprinted. Textor also writeth, that amongst the ancient there was a custom to make the Chareter of a Horse in the forehead of a bondslave; there was allo images of Horsemen and Horses renowned in many Countries for the honour of both, such were the statues of the Amazons (cald Hippiades) who by Lifter the Orator are said to be the first that ever backed Horses: Such we the statue of Classa, Quintus Martius, Tremulus, Domitianus, and many other both Men and Women: for the Romans had the Equeltrial statues in great reverence and ceremony, no doubt in imitation of the Grectans, but with this difference, that they pictured none but the swift Horses, but the Romans, Horses and Chariots, and from hence came the custome to have

But this custome to have fix Horses in a Chariot was brought in last of all by Augustia. Aristodemus pictured the Chariots and Wagoner. Pisicrates the woman Pitho, with a Wagon Euthycrates, the Son of Lysippus expressed the Equestrial combate at the Oracle of Traphonium with fingular art, allo many Chariots of Medea, the Horse and his carriage. There were allo earthen Chariots at Rome in the porch of Jupiters Temple, as we have shewed before in the discount

When Constantinus the great took a view of the City of Rome, and passing from place, to place, came at length to Forum Trajani, the most exquisite building of all the world, he food amand at the admirable frame of Giants, which were lineally deciphered therein, whereof despairing to imitate any part of that work, he chose only to erect the picture of such a Horse and Prince, asia the middle of the ame was erected in remembrance of Trajane, and fo much he intimated to his followers: close by him stood that Princely Hormifda (a Perfian) who made the Emperor this answer, Ante imperator flabulum tale condi jubeto si vales: Equus quem fabricare disponis lia lue such cedat ut iste quem videmus: O Noble Emperour before you make such a Horse, first of allbuild such a stable; that your work in all parts may be correspondent to this which you propose unto your

Metellus the Macedonian raised two porches which were compassed about with two Horses without inscription or dedication, which now are compassed with the porches of Ollavia, and the row of Equestrial statues in the front of the said buildings, now the greatest ornament of that place, heals brought out of Macedonia. And it is faid that Alexander the great caused Lysippus (that singular workman) to frame the pictures of all those Knights which in his company were slain at the River Grant

cum, and also to place his own picture among them.

In the City of Rome there are two mountains called Equilini, in one of them are the bather of Diocletian, and the great Marble Horses, with two men half naked, holding their rains, being work fingular wormanship, whereof one hath this inscription in Latin letters, Opus Practicine, the work of Praxiteles; the other Opus Phidia, the work of Phidias: and it is clear, that they were brought

thicher by Inderen King of Armenta, for whole entertainment Non caused the Theatre of Pomer to be covered all over with gold in the space of oneday. To begin therefore flait h Master Blundevile) after the discourse of the nature of a Horse honorired. nonoured. I o begin entere los e manufer the knowledge whereof is as needfully profitable as followeth those things which are against nature, the knowledge whereof is as needfully profitable as the other. Things against nature be those whereby the healthful estate of a Horses body is decayed, which are in number three; that is, the causes, the sickness, and the accidents; of the two first in order, and the other promifcaoully as need requireth.

of causes and kinds thereof.

Blundevile.

He causes of sickness be unnatural affects, or evill dispositions preceding sickness, and provoking the lame, which of the melves do not hirder the actions of the body, but by means of ficknieß coming betwixt. Of causes, some be called internal, and some external. Internal be those that breed within the body of the Beaft, as evil juice. External be those that chance outwardly to the body, as heat, cold, or the stinging of a Serpent, and such like. In knowing the cause of every discase, consisteth the chief skill of the Parrier. For unlesse he knoweth the rause of the disease, it is impossible for him to cure it well and skilfully. And therefore I wish all Parriars to be diligent in feeking to know the causes of all diseases, as well in the parts similar, as instrumental, and to know whether such causes be simple, or compound; for as they be simple or compound, so do they engender limple or compound difeates.

Of sickness, what it is, and how many general kinds therebe; also with what order the disastes of Horses are herein destared. And finally, of the four times, belonging to every sickness.

C Ickness is an evillusted contrary to nature, hindering of it self, some action of the body. Office. ness there be three general kinds, whereof the first consisteth in the parts similar; the second in the parts instrumental; and the third in both parts together. The first kind is called of the Latins Intemperies, that is to fay, evil temperature, which is alther fimple or compound. It is simple, when one quality only doth abound or exceed too much, as to be too hot, or too cold; it is compound, as when many qualities do exceed, as when the body is too hot and too drys or too cold and too moilt. The second kind is called Mala constitutie, that is to fay, an evill state or composition, which is to be confidered, wither by the flaspe, number, quantity, or fight of the anember, or parterillatfected or difeafed. The third kind is called Woise is folusio, that is to fay, the loofening or division of the unity, which as it may chance diver fly, to it bath divers names accordingly; for if flich foliaon or divition be ma bong, then it is called a fracture, if it be in any machine part, then it assistanted Wound of Ulcer; in the veins, a Rupture; in the finews, a Convultion of Gramp; and in the sin,

Again, of diseases some be called long, and some there and thort, called of the Latin; Montani, which he perillous and do quickly kill the body. The long do mrny donger by At. Yst moreore, which he perillous and do quickly kill the body. The long do mrny donger by At. Yst moreore, which he fick he which he in the three is fickness by it felf, is that which he in the lating to the lating the la member, hindereth the action chereof by it fell Sichnelaby topleat, is derived out of one member and another, through the neighbourhood and community that is between them a lasthe psin pine had

which dometh from the flomath.

Thus the learned Physicians which write of Mans body, do divide fickaths. But Abril ming of Horfe-leach craft, faith of that fickness, or rather malady for fo he termeth it, using the most general name to all manner of difeafes that be in a Horse) there be four kinds, that is to say, the most malady, the dry malady, the malady of the joynts, and the malady betwire the field and the skin malady is that which we talk the field and the skin malady is that which we talk the field the malady is that which we talk the field the malady is an arrowal and the skin arrowal arrowal and the skin arrowal which some perhaps would call, the mourning of the chein, but not rightly, as shall appear use you hereafter. The malady of the joints tomprehendeth all griefs and foreness that he had joints. And the malady betweet eite heah and the skin is that which we call the Sab, also the which four kinderes state the Arabical four kinderes state state the Arabical four kinderes state the Arabical four kinderes state state the Arabical four kinderes state sta which founkindes of maladies, Preside addeth sture policies, that in the Borcines, the gole of he Reimen Wildian and the Land Reins or Kidnies, and the conkered disagness, and a secondary called a farcine, testing the light formatter and the conkered disagness, and a secondary called a fact and a secondary called a second the laffe of or ye car was a way a hended.

Again, Laurentim Rufim, ufeth an other kind of division of fickness. Of Horses diseases, faith he, fome be natural, and some accidental. The natural be those that do come either through the excelle, or lack of engendring feed, or by error of nature, in this forming the young, or elle by celle, or lack or engenating fire, in that perhaps they be diffafed within and have their feed fome defect of the dam or fire, in that perhaps they be diffafed within and have their feed

The accidental diseases be those that come by chance, as by surferting of cold, heat, and such like thing. But forasmuch as none of shele writers do follow their own divisions. nor handle the parts thereof accordingly: to avoid their confusion, and to teach plainly: I thought good and profitable therefore to ale this my own division land order here follows. lowing.

forme be outward. The inward be those that breed within the Horses body, and are properly called maladies and diseases, whereof forme do occupy all the whole body and fome particular parts or members of the body Y'

Of those then that occupie all the body, and not be accident to any private member, I do first treat, as of Agues, of the Pestilence, and such like, and then of those that be incident to every particular member, beginning at the head, and so proceed orderly throughout all the members even down to the fole of the foot, observing therein so nigh as I can, the felf same order that Guller useth in his book, De locis male affectis, declaring what manner of disease it is, and how it is called in English, and also in Italian, because the Kings stable is never without Italian Riders, of whom our Farriars borrowed divers names, as you shall perceive hereafter. Then the causes whereof it proceeds, and the fignes how to know it, and finally, the cure and diet belonging to the same; and because I find not inward diseases enow to answer every part of the body, I do not let to interlace them with outward diseases incident to those parts, year ather, I leave out no outward disease belonging to any particular member, and to the intent you may the better know to what difeases or forances every part or member of the Horses body is most commonly subject. And note by the way, that I call those outward diseases that proceed not of any inward cause, but of some outward cause, as when a Horse is shouldered by means of some outward cause, or his back galled with the saddle or his fides spurgalled, or his his hoof cloid with a nail, which properly may be called sorrances or

Thirdly, I talk of those diseases well outward as inward, that may indifferently change in any part of the body, as of Impostumes, Cankerous Ulcers, Wounds, Fistulaes, Burnings, Brusings, Breaking of bones, and fuch like.

Fourthly, because most diseases are healed either by letting of bloud, by taking up of veins; by purgation, or else by cauterisation, that is to say by giving the fire: I talk of those four necessary things severally by themselves; and finally I shew you the true order of paring and shooing all manner of hoofs, according as the diversity of hoofs require : and to the intent you may the better inderstand me, you have the perfect shapes of all necessary shooes, plainly fet forth in figures before your eyes. Thus much touching mine order which I have hitherto observed in

Nowit is necessary to know, that to every disease or malady, belongeth four several times, that is to fay, the beginning, the increasing, the state, and declination, which times are diligently to be observed of the Farriar, because they require divers applying of medicine; for that medicine which was meet to be used in the beginning of the disease, perhaps is not to be used in the declination thereof: and that which is requifite, and very needful, to be applyed in the state or chiefest of the disease, may be very dangerous to be used in the beginning. And therefore the Parriar ought to be a man of judgement, and able to discern one time from another, to the intent he may apply his medicines rightly. Hither of causes and sickness in general. Now it is also meers that we speak in general of signes whereby sickness is known.

Of the signes of sickness in general.

Cickness according to the learned Physicians, is known four manner of wayes. First, by insepal Blundeville, Orable or substantial accidents, as by the shape, number, quality, and sight of the part of member disasted. For if it be otherwise formed, or more or lesse in number of quantity) of else otherwise placed then it ought to be, then it is not well. Secondly, sickness is known by alteration of the part of th ration of the quality, as, if it be too hot, or too cold, too moift, or too dry. Thirdly, when the action of any member is hurt or letted, as when the eye-fight is not perfect, it is a manifelt fign that theeye is evill affected or fick. Likewise, when there breedeth no good bloud in the body, it is an evident token that the Liver is not well. Fourthly, sickness is known by the excrements that come from the Beaft, as by dung or fisle; for if his dung be too ftrong of fent, full of whole Corns, of of Wormer, too hard, or too foft, or evill coloured, it is a token that he is not well in his body: fo likewife if his fale be too thick, or too thin, too white, or too red, it betokeneth fome furfer, raw digeflion, or elfe some grief in his reins, bladder or ftones. But Vegetim faith, that it is best known whe ther a Horfe be fick or not, or toward fickness, by these fignes here following; for if he be more flow and heavie in his trotting, or gallopping, harder of Spur then he was won to be, or spreadeth his litter abroad with his feet, often tumbling in the night feafon, fetching his breath fhort and violently, loud fuuffling in the Nose, and casting out vapors at his Nostrils, or lyeth down immediately

Of the Horse.

after his provender, or maketh long draughts in his drinking, or in the night feason is now down, and now on foot, or if in the next, morning he he very hot in his patterns, or betwint his ears, or that his ears hang more then they are wont to do: again, if his eye fight he dim, and his eyes hollow in his head, his hairs standing right up, and his standshollow and empty, when over two or three of these fignes do concur together, then it is to be thought, saith Vegetim, that the Horseis not well, these fignes do concur together, then it is to be thought, saith Vegetim, that the Horseis not well, and therefore he would have him immediately to be separated from his companions that be whole, and to be placed by filmself until his disease be perfectly known and cured, and especially if it be any

Contagious unease.

I have seen divers Farriars here in England to use that for the trial of a Horses, sickness, which I have read in any Author, that is, to seel his shones, whether they be not or cold, and tosmell at his never read in any Author, that is, to seel his sickness the Horse hath. Truly I think that no nostrils, and so by the favour thereof to judge what sickness the Horse hath. Truly I think that no evill way, if they say discern with their sense of smelling, the diversity of savours, that cometh out evill way, if they say discern with their sense ham be humours whereof such favours be bred, and so of his Nostrils, and then aptly apply the same to the humours whereof such farriars smell with orderly to seek out the original cause of his sickness. But I fear me, that more Farriars smell with out judgement, then with such judgement, and no marvell why, sith that sew or none be learned, or out judgement, then with such judgement, and no marvell why, sith that my travail will cause have here brought up, with sliftly Masters. But from henceforth krust that my travail will cause have here been been been understanding already, to be more diligent in seeking after such farriars as san read, and have some understanding already, to be more diligent in seeking after such farriars as san read, and have some understanding already, to be more diligent in seeking after such farriars as san read, and have some understanding already, to be more diligent in seeking after such farriars as san read.

Country, and also to prosit themselves, with good same, whereas now for lack of knowledge they incur much slander.

of the Fever and divers kinds thereof in a Horse.

Blondevile.

Think it will frem strange unto some, to hear that a Horse should have an Ague or Fever, but it was not strange unto the men of old time, as to Abstract, Hierocles, Xenophon, Vegetim, and such like old Souldiers, throughly experimented in Horses griefs. A Fever, according to the such like old Souldiers, throughly experimented in Horses griefs. A Fever, according to the such like old Souldiers, is an unnatural and immoderate heat, which proceeding first from the heart, learned Physitians, is an unnatural and immoderate heat, which proceeding first from the heart, such as the body, and so letteth the actions spreadeth it self throughout all the arteries and veins of the body, and so letteth the actions

Of Revers there be three general kinds, whereof the first, is that which breedeth in the first, being inflamed or heated more then their nature requireth. The second breedeth in the humors, being also distempered by heat. The third in the firm parts of the body, being continually hot. What spirits and humors be, hath been told you before in the keepers Office, of these three general kinds do spring many other special kinds, as Quotidians, Tertians, Of these three general kinds do spring many others, whereunto mans body is subject, Questians, Fevers Heckick, and very many others, whereunto mans body is subject, subject of none of my, Authors do treat, unless Vegetims, who speaketh somewhat of a Fever Quotidian, of a Fever continual, and also of a Fever accidental. He speaketh also of summer, Autumn, and Winter Fevers, without making any great difference betwist them, more then that one is worse then another, by reason of the time and season of the year, so that sin effect all is but, one Fever. Wherefore according unto Absyrus opinion, I will briefly show you first the causes whereosit proceeds, and then the signes how to know it, and finally how to

The Fever chanceth sometime by surfetting of extreme labour or exercise, as of too much travelling, and especially in hot weather, of too swift gallopping and running, and sometime by extreme heat of the Sun, and also by extreme cold of the aire, and sometime it breedeth of crudity or raw digestion, which many times happeneth by over greedy eating of sweet green corn, or of such provender as was not thoroughly dryed or cleanfed: for after fuch greedy eating, and specially such meat, never followeth perfect digestion. The signes to know a Fever be these, The Horse dottem tinually hold down his head, and is not able to lift it up, his eyes are even blown fo as he camou easily open them : yea and many times they be watering, the flesh of his lips and of all his body is lush and feeble, his stones hang low, his body is hot, and his breath is very hot and strong, he standard deth weakly on his legs, and in his going draweth them laftely after him, yea he cannot go but very foftly, and that staggering here and there he will lie down on his side, and is not able to turn him. felf, or to wallow; he for aketh his meat both hay and provender, and is defirous of nothing but of drink, which, as Absyrim faith, is an affured token of a Fever: he also fleepeth but little. The cure and diet. Let him bloud in the face and temples, and also in the palat of his mouth, and the first day give him no meat, but only warm drink, and that by little and little. Afterward give him continually graffe, or elfe very fweet hay wet in water, and let him be kept warm, and fometing walke him up and down fair and foftly in a temperate air, and then let him rest, and when you fee that he begins to amend, give him by little and little at once Barley fair fifted and will folden, and also mundified, that is to fay, the huske pulled away, like as when you blank Almonde. Almonds.

of divers forts of Revers according to Vegetius, and first of that which continueth but one day.

The Fever of one day called by the Greek name Ephemera, or else by the Latin name Diaria, chanceth many times through the rashness and small discretion of the keeper, or some other that letteth not to ride a Horse unmeasurably, either before or after watering, whereby the Horse afterward in the stable entreth into an extream heat, and so falleth into his Fever, which you shall know partly by his waterish and bloud shotten eyes, and partly by his short violent and hot breathing and panting. Moreover, he will for take his meat, and his legs will wax stiffe and seeded. The cure Let him have rest all the next day following, and be comforted with warm meat, then let him be walked up and down fair and softly, and so by little and little brought again to his former estate.

of the Fever continual.

The Fever continual, is that which continueth without intermission, and is called in Italian by the Latin name Febria continua, which ipringeth of some inflamation or extream heat, bred in the principal members or inward parts, about the heart, which is known in this fort. The Horse doth not take his accultomed rest, whereby his flesh doth fall away every day more and more, and sometime there doth appear hot inflamations in his flanks, and above his withers. The cure; Purge his head by squirting into his Nostrils Mans urine, or the Water of an Ox that hath been rested a certain time, to the intent such water may be the stronger, and then give him the drink written in the next Chapter.

of the Fever taken in the Autumn, that is to fay, at the fall of the leaf.

If a Horse chance to get a Fever at the sall of the leas, cause him immediately to be let bloud in the neck vein, and also in the third surrow of the roof of his mouth, and then give him this drink; Take of Jermander sour ounces, of Gum-dragant; and of dryed Roses, of each one ounce, beat them all into sine powder, and put them into a quart of Ale, adding thereunto of Oil-olive sour ounces, and of Hony as much, and give it the Horse lukewarm.

Of the Fever in Summer season.

A Fever taken in Summer season is much worse then in any other time, and especially if it be Blundevile. A taken in the Dog days, for then the accidents be more surjous. The signes be these, his arteries will beat evidently, and he will stied his seed when he staleth, and his going will be unorderly. The cure; Let him bloud in a vein that he hath in his hinder hanch, about four singers beneath the sundament, or if you cannot sinde that vein, let him bloud in the neck vein, toward the withers, and if it be needful you may also give him this drink; Take the styce of a handful of Parssein mingled with Gum dragant, with Ensens, and a few Damask roses, beaten all into fine powder, and then put thereunto a sufficient quantity of Ale made sweet with Hony.

an one a book of the Rever in Winter.

Tor the sever in Winter, it shall be good to take the powder of the drugs last mentioned, and Blundevile. with a quill or reed, to blow it up into his lest nostril to make him to neede. It shall be good also to let him bloud in the neck vein, and in the palat of the mouth, and then give him one of these drinks here following: Take of Ireos six ounces, of round Pepper one ounce, of Bay berries, and of the seed of Smallage, of each one ounce, and lest hith drink them with sodden Wine. Or else take a pinte of good Milk, and put therein of Oile sour ounces, of Sassino one scruple, of Myrrhe two scruples, of the seed of Smallage a spoonful, and make him drink that: or make, him this drink; Take of Aristoloch, otherwise called round Hartwort, one ounce, of Gentian, of Hysop, of Wormwood, of Sotherwood, of each one ounce, of dry sat sigs six ounces, of the seed of Smallage, three ounces, of Ruera handful, bolt them all in a clean Vessel with River Water, until the third part be consumed, and when you seelt look black and thick, take it from the fire, strain it, and give the Hose to drink thereof lukewarii!

As touching his diet, ler his water be alwayes lukewarm, wherein would be put a little. Wheat it is good to quicken the natural heat of the Horle, by rubbing and fretting his body; it shall not be amisse in form fair day to use this Friction, called of the ancient writers Apotoropie, which is made in this fort. Take of Damaske Roses one pound of old Oil a pinte, of strong Vinegar, a pinte and a half, of hists and Rue beaterishto powder, of each one ounceand a half, together, with one bld dry. Nut, beat them and mingle them together, then being strained and made sukewarm, rub and chase all the Horses body therewith against the hair, until he beginneth to sweat, then set him up in the warmest place of the stable; and cover him well.

. 0

Of

Of the Fewer which cometh of ran Digestion, or of Repletion.

Ou shall know if the Fever proceedeth of any such cause, by these signes here sollowing. The Horse will blow at the nose more then he is accustomed to do, seemeth to setch his winde only at his nose, and his breath will be short, hor and dry, you shall see his stanks walk and his back to bear. The cure: Cause him to be let bloud abundantly in the head and palat of his and his back to bear. The cure: Cause must be be to globus applicantly, in the pieud and palet of his mouth, and by squirting warm Vinegar in the morning into his nostrils, force him to nesse: and if he be costive, let his fundament be raked, or else give him a Glysser to ease the pain in his head. And as touching his diet, give him but little provender or hay neither let him drink much nor often, but betwixt times. But in any wise let him be well rubbed and chasted, and that a good while together, and if you use the Friction declared in the last Chapter before in such fort as there is said, it shall do him very much good.

Of the Fever accidental coming of some Vicer in the mouth or throst.

He Horse not being well kept and governed, after that he hath been let bloud in the upper parts; yea, and also besides that of his own partite is subject unto the distillation in his throat, or parts thereabout, the painful swelling or Ulcer whereof, causeth the Horse to fall into a grievous or parts thereapout, the paintal twenting of cheek wheters, tanier to the into a grievous Ague. Whereof, besides the former remedies apt to purge humors, it shall be necessary also, to let him bloud in the vein of the head, and in the palar of his mouth, and to be short; in all those places where the disease causeth most grief. And if the Horse be so sore pained as he cannot swallow down his meat, it shall be good to give him lukewarm water mingled with Barley meal. or Wheat meal, and beside that, to make him swallow down seven sops sopped in Wincone after another, at one time: some use at the second time to dip such sops in sweet Sallet Oil. Thus far Vigetim. of the Restilent Agus.

B!undevile.

IT feemeth by Laurentius Ruffins, that Horfes be also subject to a Pestilent Fever, which almost incurable, is called of him Infirmitus Epidemialis, that is to say, a Contagious and pestiferous disease, whereof there dyed in one year in Rome above a thousand Horses, which as I take it came by some corruption of the air, whereunto Rome in the chief of Summer is much subject, or else corrupt whereof there age an one year in home in the chief of Summer is much subject, or else corrupt corruption of the air, whereunto Rome in the chief of Summer is much subject, or else corrupt humours in the body ingendered by unkind food, by reason perhaps, that the Ciey was then pelleted with more Horse-men then there could be conveniently harbored or fed. Laurania himself rendreth no cause thereof, but only sheweth signs how to know its which be thest. The Horse holdest down his head, eateth lictle of nothing, his syes waterish, and his stankardo continually beat. The Cure: First give him this Glyker, I ake of the pulp of Gologuarida one onnee, of Dragantum one oince and a fall, of Ceutaury and Wormwood, of each one handful of Colorum halfan ounce, boil them in Water, then being strained, dissolve therein, of Aerologuandium six ounces, of Salt an ounce and a half, and half a popud, of Oll-olive, and ministenies have mitha horn, or pipe made of purpose. Make also this Plaister for his head; I ake of Squilla six ounces, of Elder, of Castorum, of Mustard seed and of Ensophing, of each two ounces, dissolve the same in the juice of Dassodii, and of Sage, and lay it to the Temples of his head next unto his eares; or else give him any of these three drinks following. Take of the best Triacle two or businessionics; and distemper it in good Wine, and give it him with a horn; or else let him destikevery morning to eat, a good quantity of Venue hair, called of the Lating, Goldes Veneraly newly and steh gathered, but if it be old, then boil it in Water, and give him the despotion thereof to drink with a horn.

Martins opinion and experience, touching a Horfes, Fever, colonia.

Blundevile.

Hough Martin have not feen to many feveral kinds of Fevera to the of the worthing worth that a Horse will have a fever, and faith, that you half how a by the figures For after the Horse hat been sick two orthree dayes, if you look upost the tongue you that feel almost raw and scalt, with the heat that comes out of his body and handle and handle and heart that comes out of his body and handle and heart that comes out of his body and handle and heart that comes out of his body and handle and heart that comes out of his body and handle and heart that comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart that the comes out of his body and heart the comes out of heart the comes out of his body and heart the comes out of heart the comes of heart the comes of heart the comes out of heart the comes of heart the come For after the Horse hath been sick two or three dayes, it you look upost his tongue you that seed almost raw and scale, with the heat that comes out of his hody, and he will she had trainly and stage when his seed continuance, which seed the hours, most of continuance of continuance, unless you recent it by putting the Horse into a hear, which would be done to some as you're him begin to tremble, either by riding him, or, tying up his legs, and by schafag him we and down in the stable, until he leave that high and then let him be kept, warm, and shad on the bit the space of two hours, that done, you may give him some hay, by a little are heard after warm water, with a little ground malt twice a day, the space of three on some day was him with this tongue with Alomwater, Vinegar & Sage, that it you see that all this prevailants then purge him with this drink, after that he hath safted all one night; Take of Aloss one during of Agarick half an ounce, of Licoras and Annis seeds, of each a dram beaten to powder, and let him drink it

Of the Horse

with a quart of white wine likewarme, and made fweet with a little hony in the morning falling. and let him be chased a little after it; and be kept warm, and suffered to stand on the bit meatlesse two or three hours after, and he shall recover his health again quickly.

of sickness in general, and the Fever.

In general, fickness is an opposite soe to nature, warring against the agents of the body and mind, Markham. feeking to consound those actions which uphold and maintain the bodies strength and lively-hood. Who coveteth to have larger definition of sickness, let him read Vegetim, Kusing, or excellent Mister Elundevile, who in that bath been admirably well-deserving painful. For mine one pars, my miler blank is to write nothing more then mine own experience, and what I have approved in Horses dileases most availeable: and first of the Fever or Ague in a Horse, though it be a disease seldom or not at all noted by our Mechanical Horfe Farriars, who cure many times what they know not, and kill where they might cure, knew they the cause: yet I have my self seen of late (both by and kill where they might cure, knew they the cause: yet I have my self seen of late (both by the demonstrate opinions of others better learned, and by the effects of the disease) some two Horses which I dare avouch were mightily comented with a Fever; though slivers Leeches had thereof given divers opinions, one laying it was the Bots, by reason of his immoderate languishment: another affirmed him to be bewitched, by reason of great shaking, heaviness, and sweating: but I have found it and approved it to be a Fever, both in effect, nature, and quality; the cure whereof is thus; for the original cause of a Fever, is surfer, breeding putrisaction in, the bloud; then when his shaking beginneth, take three new laid figges, break them in a dish, and beat them together, then mix thereto five or fix spoonfuls of excellent good Aquague, and give it him the beat the best of the beginneth beginnethed. in a horn, then bridle him, and in some Close or Court, chase him till his shaking cease, and he begin no swater to drink, but before he drink it; boil therein Millowes, Sorrel, Purflain, of each two or

As for his food, let it be fodden Barly, and now and then a little Rie in the theaf to clenfe and purge him, chiefly if he be dry inwardly and grow coffive. This I have proved uneffectless for this difease, and also much availeable for any other inward sickness proceeding either of naw digestion, too extream riding, or other furfet. Divers ligye written diversly of divers Agues, and I could prescribe receipts for them, but fince I have not been experimented in them all, I mean to omit then, intending not to exceed mine own knowledge in any thing.

of the Pestilence.

The Pestilence is a contagious disease, proceeding, as Pesaganus saith, sometime of overmuch Blundevile.

Tabour, hear, cold, bunger, and sometime of sudden running after long, self, or of the Accention or holding of sale or urine, or of drinking cold water whiles the Horse is the sait sugarings for all these things do breed corrupt humors in the Horses body, whereast the Restliences and the chings do breed corruption of the air, possoning the breath subtrees, the Restlie should live, which also happeneth sometime of the corruption of evill yapors, and exhalations that spring out of the earth, and after great stoods or earthquakes, and sometime by means of sometime both mentions or instead of the Planets, corrupting sometime has an druits of this earth and strength and sometime both Men. Women and structs of this earth and sometime both Men. Women and structs of this earth and sometime divers kind of Cartle, and sometime both Men. Women and structs of the earth and sometime divers kind of Cartle, and sometime both Men. Women and structs as the safety structs are experience. It seemeth that this series do the designs any signes how to know white the safety should be warning, for none of mine Apillors doth designs any signes how to know white the safety and warning for none of mine Apillors doth designs any signes how to know white the safety and warning for none of mine Apillors doth designs any signes how to know white the safety and warning for none of mine Apillors doth designs any signes how to know white the safety and the safety of the safety of the process whereoft as as I can learn, the student death of one or two first, much be the only mean to know that the safety as the plant of the safety and the safety of the process of the safety of the safety of the process whereoft as warning safety of the safety of the

To oblin

of the Diseases in the Head.

Rlundevile.

He head is subject to divers diseases according to the divers parts thereof: for in the panicles or little fine skins cleaving to the bones, and covering the brain, do most properly breed headach and Migram. Again, in the substance of the brain, (which in a Horse is as much in quantity as is ach and Migram. Again, in the indicated the Frentie, madness, sleeping evill, the Palite and forget. almost the brain of a mean roof, and to receive of the brain, and in those conducts through which the spirits fullyes. Finally, in the ventricles or cels of the brain, and in those conducts through which the spirits runers. rinany, in the ventreles of cash do breed the Turnfick or staggers, the Falling evill, animal do give feeling and moving to the body, do breed the Turnfick or staggers, the Falling evill, the Night-mare, the Apoplexy, the Palife, and the Convultion or Cramp, the Catar or Rhume. which in a Horse is called the Glaunders : but first of Head-ach.

of Head-ach.

He Head-ach either cometh of some inward causes : as of some cholerick humor, bred in the the panicles of the brain, or elfe of some outward cause, as of extream heat or cold, of some blow, or of some violent savour. Eumelus saith, that it cometh of raw digestion : but Martin saith most commonly of cold: the signes be these; the Horse will hang down his head, and also hang down his ears; his fight will be dim, his eyes swollen and waterish; and he will for ake his meat The cure. Let him bloud in the palat of his mouth: also purge his head with this perfume; Take of Garlike stalks a handful, all to broken in short pieces, and a good quantity of Frankincense, and being put into a chafing difh of fresh coals, hold the chafing dish under the Horses nostrils, so as the sume may afcend up into his head: and in using him thus once or twice, it will make him to cast at thenose, and so purge his head of all filth, Pelagonius faith, that it is good to pour into his notrils Wine, wherein hath been fodden Euforbium, Centaury, and Frankincense.

of the Frenz y and Madness of a Horse.

He learned Physitians do make divers kindes, as well of Frensie, as of Madness, which are not needful to be recited, fith I could never read in any Author, nor learn of any Farriar, that a Horse were lubject to the one half of them. Ablyrtus, Hierocles, Eumelus, Pelagonius, and Hippocrates, do write fimply de furore or rabie : that is to fay, of the madness of a Horse. But indeed, Vegetiur in his fecond Book of Horse-leach-crast, seemeth to make four mad passions belonging to a Horse, intituling his Chapters in this fort, de Applofo, de Frenetico, de Cardiacia, de Rabiofo, the effects thereof, though I fear me it will be to no great purpole, yet to content fuch as perhaps have read the Author as well as I my felf, I will here briefly rehearfe the same.

When some naughty bloud (faith he) doth strike the film or pannicle of the brain, in one part oilly, and maketh the same grievously to ake, then the beast becometh Appiosum; that is to say, as it Remeth by his own words next following, both dull of minde and of fight. This word Apple am is a strange word, and not to be found again in any other Author, and because in this passion, the one side of the head is only grieved, the Horse turneth round, as though he went in a Mill. But when the boyfon of fuch corrupt bloud doth infect the mid brain, then the Horse becometh Frantick, and will leap and fling, and will run against the wals. And if such bloud filleth the veins of the stomach, of breast, then it is effect as well the heart as the brain, and causeth alienation of minde, and the Body to fweat, and this direafe is called of Vegetius, Laffocardiaca, which if Equus Appiofus chance to have then he becometh Rabiofus, that is to fay, ftark-mad. For faith he, by overmuch hear of the liver and bloud, the veins, and arteries of the heart are choaked up, for grief and pain whereof the Horse biteth himself, and gnaweth his own flesh.

Of two forts of mad Horfes, I believe I have feen my felf here in this Realm. For I faw once a black Sweathland Horfe (as I took him to be) in my Lord of Hunfdon: ftable at Hunfdon, coming this the by chance with my Lord Morley, which Horfe would ftand all day long biting of the manger, there by chance with my Lord Motley, which Horse would stand all day long biting of the many of all the title meat or none suffering no man to approach unto him, by which his doing and partly the residue and complexion. I judged him to be vexed with a melantholy madness called of the ply stands Manie; for rather Melancholis, which cometh of a corrupt Melancholy, and filthy blood or lithings. Tometime sperhaps remaining things, for each of the body, and sometimes perhaps remaining only in the head, for else in the speech, or places next adjoyning. The other mad Horse with some of Master applies, Master of the Jewel house, which with his teeth crushed his Masters high fore singer in pieces, while it he offered him a little Hay to ear where the lost in a manner tile us of his finger in pieces, whilest he offered him a little Hay to eat, whereby he lost in a manner she of his whole hand, to the great grief of all his friends, and also of all the Muses, which were wont to be much delighted. much delighted with fuch passing sweet musick as that his fine quavering hand could sometime make upon divers instruments, but especially upon the Virginals.

This Horfe I fay, though he could eat his meat, drink his drink, and fleep yet if he were never fo little offended, he would take on like a spirit, and both bite and strike at any man that tamenigh him: yea and would bite himself by the shoulders most terribly, pulling away lumps of self. broad as a mans hand: and whenfoever he was ridden, he was fain to be muffed with a muffel of iron, made of purpose to keep him from biting either of his Rider or of himself, which no doubt proceeded of some hinder of his Rider or of himself, which no doubt hot ceeded of some kinde of frenzy or madness, whereunto the Horse was subject; by means that hot kind Of the Horse.

bloud (as I take it) abounded over-much in bim. But now as roughing the caules, figues, and cure bloud (as a sadnes, you shall hear the opinion of old Writers: for Matin never took such cure in of Hories manners and the other Authors before mentioned, fay, that the madness of a Horse cometh either by means of some extream heat taken by travelling, or long standing in the hot Sun, or else by eating over many fitches, or by fome hot bloud reforting to the panicles of the brain; or through cating over of choler remaining in the veins; or elfe by drinking of some very unwholesome water. The fignes be thefe, he will but the manger and his own body, and run upon every man that comes nighbim, he will continually thake his ears, and stare with his eyes, and some at the mouth; and sinigh nim, the will forfate his meat and pine himself with hunger.

[60, as Hippocrates saith, he will forsate his meat and pine himself with hunger.

The cure. Cause him to be let bloud in his legs abundantly, which is done (as I take it) to diverce

the bloud from his head. Notwithstanding it were not amifs, to let him bloud in the neck and brest veins. Then give him this drink: take the roots of wilde Cowcumber, and boil it in harsh red Wine. and put thereunto a little Nicre, and give it him with a horn luke-warm : or if you can get so Cowcumber, then take Rue, and Mints, and boil them in the Wine: it were not amis also to add thereunto a handful of black Ellebarns, for that is a very good herb against madness. Emmelim faith, that if you give him mans dung in Wine, to drink three mornings together, it will heal him: also to take of black Elleborm two or three handfuls, And boil it in a fufficient quantity of firong Vinegar, and therewith rub and chafe both his head, and all his body once or twice a day; for the ofteer his head is rubbed, the better, and often exercise is very profitable to all his body. Some again would have the skin of his body to be pierced in divers places with an hot iron, to let out the evill humors: but if none of all this will prevail, then the last remedy is to geld him of both his stones, or less of one at the least, for either that will heal him, or else nothing. As touching the diet and usage of a mad Horse, the Authors do not agree; for some would have him kept in a close, dark and quiet house, void from all noise, which as deprise saith, will either make him madder, or else kill him out of tand. His diet would be thin, that is to fay, without any provender, and that day that he is let bloud, and receiveth his drink, they would have him fast until even, and then to have a warm mash of Barley meal: yea, me thinks it were not amiss to feed him only with warm mashes and hay; and that by a little at once, untill he be somewhat recovered.

Another of the Head-ach.

He Head-ach, as most are opinionated, proceedeth of cold and raw digestion: the cure is; Take Markham. , a Goose feather anointed with Oyl-de-bay, and thrust it up into the Horses nostrils, to make him neefe; then take a wegath of Peafe-straw or wet hay, and putting fire thereunto, hold it under the Horses nose, so as the smoke may ascend up into his head; then being thus perfumed, take a knife and prick him in the palat of the mouth, so that he may lick up and chaw his own bloud, which done, have great care in keeping his head warm, and doubt not his recovery.

of the Sleeping-evil.

His is a disease forcing the Beast continually to sleep, whether he will or mor, taking his memory Blundevile. and appetite clean away, and therefore is called of the Phyfitians Lefhargus, it proceedeth of abundance of flegm moistning the brain overmuch. It is easie to know it, by the continual fleeping of the Horse. The cure of this disease according to Pelagonius, Vegetius, and others, is in this fort : Let him bloud in the neck, and then give him this drink : Take of Camomile and Mother-wore, of each two or three handfuls, and boil them in a sufficient quantity of water, and put thereunto a little Wheat-bran, Salt and Vinegar, and let him drink a pinte of that every day, the space of these or four days together. It is good also to perfume and chase his head, with Thyme and Pennyroyal sodden together in Vinegar, or with Brimstone and feathers burned upon a chasingdish of coals, under his note: and to provoke him to neede, by blowing Pepper and Pyrethre beaten to powder, up into his nothis: yea and to anoint the palate of his mouth, with Honey and Multard mingled together, and in his drink, which would be always warm water, to put Parsley seed, and Espael seed, to provoke urine. His legs also would be bathed, and his hoofs filled with Wheat-bran, Salt, and Vinegat, sod den together, and laid to fo hot as he may endure it, and in any case suffer him not to sleep, but keep him waking and firring, by continual crying unto him, or pricking him with some sharp thing that cannot pass through the skin, or else by beating him with a whip, and this doing he shart

Another of the Sleeping-evill.

He Sleeping-evill in a Horse, differeth nothing from that which the Physicians call the Lathargy Markham, in men, for it provoketh the Horfe to fleep continually, without delifting, robbing his medory and appetite of their qualities: the knowledge thereof is eafily known by his drowlines, and the cure in this fort : Let one stand by him, and either with fearful noise or stripes, perforce keep him waking; then let him bloud under the eyes, and in the neck, and then take a leaf or two of the best Tobacco, which being dryed and beaten to powder, with a quill blow it up into his nostrils, and give him to drink Vinegar, Salt, and Mustard mingled well together, to which if you put a little

Of the Harfe

Honey, it shall not be amiss; and also when he drinketh any water, put thereto either Fennel-seeds. Anifeeds or Pepper.

Of a Horse that is taken.

Blundevile.

Horse is said to be taken, when he is deprived of his feeling and moving, so as he is able to fin A no manner of way, but remaineth in such state and form, as he was taken in ; which disase is called of the Physicians by the Greek name Catalepsis, and in Latine, Deprehensio, or Congeletio; and of Vegetim, Sideratio; which also calleth those Beasts that have this disease Jumenta sideratitia. The Physicians fay, that it cometh of abundance of phlegm and choler mixt together, or else of melancholy bloud, which is a cold dry humor oppressing the hinder parts of the brain. But Vegether faith, that it comes of fome extream outward cold, striking suddenly into the empty veins, or some extream heat or raw digestion; or else of some great hunger, caused by long fasting. It is easie to

know by the description before mentioned. As touching the cure, Vegetius faith, that if it come of cold, then it is good to give him to drink one ounce of Laferpitium, with Wine and Oyl mixt together, and made luke-warm: if of hear. then to give it him with Water and Honey : if of crudity, then to heal him by fasting: if of hunger. then by feeding him well with Peafe: But Martin faith, that this difease is called of the French men Surprins, and it cometh (as he faith) most chiefly of cold taken after heat, and he wishesh a Horse that is thus taken, to be cured in this sort. First to be let bloud on both sides of the breast, and then to be put in a heat either by continual stirring and molesting him; or else if he will slir by no means, then to bury him all fave the head in a warm dunghill, and there to let him ly until his

limbs have fome feeling. And before you fo bury him, it shall be good to give him this drink: Take of Malmsie three pintes, and put thereunto a quartern of Sugar, and some Cinamon and Cloves, and let him drink it good and warm, and until he be perfectly whole, let him be kept warm, and often exercised and walked up and down in the stable, and thinly dieted, and drink nothing but warm water, wherein if you put some Fennel and Parsley seed, to provoke him to urine, it shall be the better. And if he cannot dung, let him be raked, and have a Glyster made of the broth of Mallows and fresh Butter.

Another of a Horse that is taken.

Markham.

A Horse which is berest of his feeling, moving or stirring, is said to be taken, and in sooth so he is, in that he is arrested by so villainous a disease; yet some Parryers, not well understanding the ground of the disease, confter the word taken, to be stricken by some Planet, or evill spirit, which is falle; for it proceedeth of too great abundance of phlegm and choler, symbolized together the cure is thus; Let him bloud in his ipur veins, and his breast veins, and then by foulding him inabundant number of cloaths, drive him into an extream sweat, during which time of his sweating, let one chafe his legs with Oyl-de-bay; then after he hath sweat the space of two hours, abate his clothes moderately; and throughly after he is dry, anoint him all over with Oyl Petrolium, and in twice or thrice dreffing him he will be found.

of the Staggers.

Blundevile.

His is a dizzinels of the head, called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and of the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, Vertigo; and the Italians, as I remember, Called in Latine, as I remember, Call whence proceedeth a vaporous fpirit, diffolved by a weak heat, which troubleth all the head. The fignes be these; dimness of fight, the reeling and staggering of the Horse, who for very painwill thrust his head against the walls, and for sake his meat. The cure according to Martin is thus:

Let him bloud in the temple veins, and then with a knife make an hole an inch long over thwat his fore-head, hard underneath his fore-top, and raife the skin with a Cornet, thrufting it upward towards the head-stale a good handful, and then put in a tent dipt in Turpentine and Hogs grafe molten together, renewing the tent every day once untill it be whole, and do the like upon the ridge of the rump; but me thinks it were better to do the like, in the powl of his head, or nape of his neek, for fo should the evill humors have both ways the easier and speedier passage: and as couching his diet, let him have continually warm drink, and mafhes; and once a day be walked up and down fair and foftly to exercise his body.

Of the Staggers.

Markbam.

He Staggers is a dizy difeafe, breeding frenzy in a Horfe, which if it be not instantly helped, mortal: the cure is thus; Let him bloud in the temple veins, and then apply to his temple cloth wet in the juyce of Garlike, and Aquavite mixt together: if you crush Garlike, and puts in his case is in the juyce of Garlike, and puts in his ears, it is excellent; or if you flit his fore-head, and loofening the skin from the bone, taints with Turpentine and Sallet-oyl, it will undoubtedly help him.

of the Palling ovil.

"His is a kinde of Convultion or Cramp called of the Laures by the Greek name Epilepfia; in Ital- Blundeville: Lian, Il mothe caduce, depriving the Braft at certain times, and for a certain space of the use of lian, Il morbe coduce, depriving the Bealt at certain times, and for a certain space of the use of seeing, hearing, and seeing, and of all the other senses. And although it be a disease hath hean seldom seen to chance unto Horses of this Countrey, yet it appeareth by Ablyrius, and allo by Vegenius, and divers others, that Horses he subject the neutron. For adsprius writing to his friend Tiberius Claudius saith, that unto Horses chanceth many times the Falling-sickness. The signs whereof are rim Claudius saith, that unto Horses chanceth many times the Falling-sickness. The signs whereof are times the Horse will fall down suddenly, partly through the resolution of his members; and partly through diffension of his sinews, and all his body will quiver and quake, and sometime he will some at the mouth. Vegetius again writeth in this sort; By a certain course of the Moon there and other heasts many times do fall, and du for a sime as well as mon. The signs at heavy Horses and other healts many rimes do fall, and dy for a time as well as men. The fignes whereof are thefe : Being fallen, their hodies will quiver and quake, and their mouths will fome, and when a man would think that they would dy out of hand, they rife fuddenly up and fall to their meat. And by feeling the griftle of their nostrils with your finger, you shall know whether they will fall often or not; for the more cold the griftle be, the oftner, and the less cold it be, the feldomer they will fall. The cure:

Let him bloud abundantly in the neck voins, and within five days after, let him bloud again at the temple veins, and let him Rand in a warm and dark stable, and anoint all hig body with comfortable Ointments, and his head and ears with Oyl of Bay, and liquid Pitch or Tar, mingled together: And also put some thereof into his cars, and then make a Biggen for him of some cole warm skin. as of a Sheepsakin, or elfe of Canvas duffed underneath with Wool, and make him this purging drink. Take of Radith roots two ounces, of the root of the berb called in Latins, Panax or Panaces, and of Scammony, of each one ounce; beat all chefe things together, and boyl them in a quart of Honey, and at fundry times as you shall fee it needful, give him a good spoonful or two of this in a quart of Ale luke-warm, whereunto would be put three or four foonfuls of Oyl. It is good also co blow the powder of Motherwort, or of Pyrethrum, up into his noteils; and if the disease do contime ftill for all this, then it shall be needful to pierce the skin of his fore-bead in divers places within botiron, and to let out the humors oppressing his brain.

of the Night-mare.

His is a difease oppreffing eicher Man or Beaft inthe night feason when he fleepeth, to as the cannot draw his breath, and is called of the Latines, lucubus. It cometh of a continual crudity or raw digestion of the stomach. from whence grees vapours afcanding up into the head, do appreis the brain, and all the sensitive powers, so as they cannot do their office, in giving perfect testing and moving to the body. And it this difease chancing oftence a man, be not outed in time, it may perhaps grow to a worse misobief, as to the Falling evil, Madness, or Apoptery. But I could never learn that Horses were subject to this disease, neither by relation, nor viet by reading, but only in an old English Writer, who sheweth agither cause nor signer, how to know when a Harle hath it, but only teacheth how to cure it with a food foolish charm; which because it may perhaps make you gentle Reader to laugh as well as it did me, for reorgation fake I will there rehear fe it il Take a flint flone that bath a hole of his own kinde, and bang it over him, and write in a bill,

In nomine patries dec. Saint George our Ladies Knight He walked days lo did be night, Until be ber found. He ber beat, and he her bound with the

den Till andy bentroath fhe him pliche. That the would not come within the night; There as Raint George our Ladiet Knight, Named was three times, Saint George.

but part of the body, when it is called of the Littlear by the Greek name would from our tongue a Pallie. It proceeds of cold, gross, and tough humors, oppressing the brain all at once, which that breed partly of gryditics and man digettion; and partly by means of lome hare inches bead, taken by a fall, tripe, or otherwife. Astropething Apoplety, ifew or none writing of the feath-coast undo make any mention thereof: but of the Pallie Vigetye writeth inchild manager, Addorfe (anth-ba) may have the Palife as well as a many which is known by thefelignes : ble will go geowetting and fitting like a Crab, carrying his neck away, itsif in were broken, and goath erookedly with his dege, beat ing his head against the wals, and yet for faketh not his mest non drink, and his provender formers moist and wet. The cure. Lethim bloud in the temple wein, on the contrary dide of the wrying of his neck, and anoint his neck with comfortable Cymement, and fplent in with intention, wood to make

it ftand right, and let him ftand in a warm ftable, and give him fuch drinks as are recited in the next thand right, and let hit this profiteth not, then draw his neck with a hot iron on the contrary fide: that is to say, on the whole fide, from the neather part of the ear down to the shoulders and draw alfo's good long frike on his temple, on that fide, and on the other temple make him a little draw also a good long it the off in the far in this fort #, and from his reins to his mid back, draw little lines, in manner of a ragged flafe. and that will heal him.

Of the Cramp or Convulsion of the Sinews and Muscles.

Convultion or Cramp, is a forcible and painful contraction or drawing together of the A finews and muscles, which do happen fometime through the whole body, and fometime but in one part or member only. And according as the body may be diverfly drawn, fo do the Physical Control of the Physical Contro ficians, and also mine Authors that write of Horse-leech-crast, give it divers names. For if the body be drawn forward, then they call it in Greek, Emprosthotonos; in Latine, Tensio ad an. teriore. And if the body be drawn back, it is called in Greek, Opiftbotonos; in Latine, Tenfoad

posteriora.

But if the body he flark and firsit, bowing neither forward, nor backward, then it is called fimply in Greek, Tetanos; in Latine, Diftenfio or Rigor: which names also are applyed to the like Convulsions of the neck, Notwithstanding, Vegetius writing of this disease, entituleth his chapters de Reborofis, a ftrange tearm, and not to be tound again in any other Author. A Convultion, as I feld before, may chance as well to one part or member of the body, as to the whole body: as to the eye to the skin of the fore head, to the roots of the tongue, to the jaws, to the lips, to the arm, hand or leg; that is to fay, when foever the finew or muscle lerving to the moving of that part, is evill affe. cted or grieved! Of which Convultions, though there be many divers causes: yet Hippocrates bring. eth them all into two sthat is to fay, into fulness and emptiness: for when a Convulsion proceeder either of some inflamation of superfluous eating or drinking, or for lack of due purgation, or of overmuch rest and lack of exercise, all such causes are to be referred to repletion or fulnels. But if a Convulsion come by means of over-much purging or bleeding, or much watching, extream labour. long falting ; or by wounding or pricking of the finews, then all fuch causes are to be referred unto emptiness. And if the Convulsion proceed of fulness, it chanceth suddenly, and all at once builfof emptiness, then it cometh by little and little, and leisurely.

Besides these kindes of Convulsions, there is also chancing many times in a mans singers, legs and

toes, another kinde of Convultion, which may be called a windy Convultion, for that it proceeds of fome groß or toughlyapour, entred into the branches of the finews, which maketh them to fivel like a Lute firing in moift weather , which though it be very painful for the time; yet it may be from driven away, by chafing or rubbing the member grieved with a warm cloth. And this kinde of Convultion or Cramp chanceth also many times to a Horses hinder legs standing in the stable.

For I have seen some my self, that have had one of their hinder-logs drawn up with the Gramp almost to the belly so stiffe and hard, as no man hath been able to stirit; neither could the Horsehim felf fet it down to the ground of a long feason, which I think might be soon remedied : first by continual chafing, fretting, or rubbing his legs with a good wifpe, and then by tying up the other hinderleg, or elfe the foreleg on the fore fide, whereby he should be forced to fet down the pained leg. Thus far I have discoursed of the Convulsion of finews, and of the causes thereof, according to the opinions of the learned Physicians. Now I will briefly shew you the causes, signes, and cure thereof, ac-

cording to the doctrine of mine Authors that write of Horse leech-crast.

Abstrus faith, that this difease doth come, either by driving the Horse into a sweat when he his eth, or for that he hath troden upon some nail, or by taking cold after journeying and sweating in Winter feason, whereby his lips are clung together, or by long lying and reft after sweating, where by the finews of his fore-legs be nummed, or by having some stripe of his privy members; or by long travelling in the cold Mountains, where Snow and Icedoth abound. For Theomaeflui wrutth, that coming out of Paonia, with the King and his Army, and passing over the Mountains to go into Mely, there fell fuch sabundance of Snow, as not only many Souldiers dyed, disting full of the Horses backs, with their Weapons in their hands, being so stark and fife, and cleaving to file to their Saddles, as they could not easily be pulled out of them : but also divers Horses in their going were so nummed as they could not bow their legs: yea and some were found stark dead, standing still on their feet, and iew Horses or none escaped at that time free from this Convulsion of finews, infomuch that Theomiessus his own Horse which the loved dearly, was fore veked therewill. The fignes to know whether a Horse be troubled with the Convulsion in the finews or not be sier,

His head and neck will be so fliffe and flark, as he can bow it no manner of way; his ears will fland right up, and his eyes will be hollow in his head, and the flefthy parts thereof in the great egithers will be turned backward; his lips will be clung fast together, so as he cannot open his month; and his songue fo nummed as he can neither eat nor drink si his back-bone and tail will be fo fiffe se he the not move it one way nor other and his legs to fliffe, as they will not bow, and being laidhe is not the to rife, and specially on his hinder-legs, but falleth down on his buttocks, like a Dog when le stitled on the ground ; and by means of the Convulfior in his back, his bladder also for neighbour hood falle, suffereth, whereby the Horse cannot stale; but With great pain. The cure. 1990 17

Dut him into a sweat, either by burying him all save the head in some warm dunghill; or if he be a Horse of price, carry him into a hot house, where is no smoke, and let him sweat there. Then and oint all his body, head, neck, legs, and all, with Oyl of Cypres, and Oyl of Bay mingled together. Or ele with one of these Quotments: Take of Hogs greafe two pound, of Turpentine half a pound. of Pepper beaten in powder one dram, of new Wax one pound, of old Oyl two pound; boil all these together, and being made very warm, anoint all his body therewith. Or else with this Ointment: Take of new Wax one pound, of Turpentine four ounces, of Oyl-de-bay as much, of Oponanax two ounces, of Deers sewet and Oyl of Storax, of each three ounces, melt all these together and anoint all his body therewith.

It is good also to bath his head with the decoction of Fitches, or else of Lupines; and make him this drink: Take twenty grains of long Pepper, finely beaten into powder, of Cedar two ounces, of Nitre one ounce, of Laserpitium as much as a Bean, and mingle all these together with a sufficient quantity of white Wine; and give him thereof to drink a quart every morning and evening, for the space of three or four days; or elfe this drink: Take of Opopanax two ounces, of Storax three ounces; of Gentian three ounces, of Manna Succary three ounces, of Myrrhe one scruple, of long Pepper two scruples, give him this with old Wine: or make him a drink of Laserpitium, Cumin, Antse seed,

Fenioreek, Bay-berries, and old O. I.

In old time they were wont to let him bloud in the Temples, which Absgring doth not allow, faying that it will cause the sinews of his lips to dry up, so as the Horse being not able to move them, shall pine for hunger. As touching his diet, give him at the first warm mashes, and such soft meat as he may easily get down, and wet Hay, bringing him to harder food by little and little. And in any case, let him be kept very warm, and ridden or walked once a day to exercise his legs and limbs. Theomnessus cured his Horse, as he saith, by placing him in a warm stable, and by making a clear fire without any smoke round about him; and the Horse not being able to open his jaws of himfelf, he caused his mouth to be opened, and put therein sops dipt in a confection called Intigon condium, and also anointed all his body with a Medicine or Ointment called Acopum (the making whereof hereafter followeth) dissolved in Cypres Oyl, which made him to fall into a sweat, and being before half dead and more, brought him again to his feeling and moving, so as he did rife and eat his meat.

Of the Cramp or Convultions of the Sinews or Muscles.

A Convulsion or Cramp, is a forcible drawing together off the sinews, sometimes universally over the whole body; as I have seen one Horse in my life time, and sometimes but in one part or member, as I have known and helps divers. These Convulsions have two grounds, namely, either natural, or else accidental; natural, as proceeding of cold windy humors ingendered in the body, and dispersed into those parts, work there the effects of grievance. Accidental, is by wounding or pricking the finews, of which immediately enfueth a Convulsion If it be natural, and the difease generally dispersed; then the cure is thus: Dig a great deep hole in some old dunghil, and there bury him all fave the head, I fo as he may sweat there for the space of two hours at the lealt; then take him out, and anoint, his body all over with Nerve oil, Turpentine, and Deers suet mingled together on the fire, and bath his head in the juyce of Rue and Camomile.

Then give him to drink old Ale brewd with Cinamon, Ginger, Fenigreek and long Pepper: of each three ounces. As for his diet, let it be warm mashes, sodden wheat and hay, throughly carded with a

pair of Wool-cards: let him be kept very warm and aired abroad once a day at the leaft.

If this Convulfion be but only in one member, then it is sufficient, if every day with hard ropes of hay or fraw you rub and chafe that part exceedingly, and apply there to a little quantity of the Oyl of Pepper. If the Convulsion be accidental, proceeding of some hurt, whereby the sinew is wounded or prickt; then shall you incontinently take up the sinew so wounded, searching the wound with great discretion, and cut it clean in funder; then shall you endeavour to heal up the fame with unquents, plaisters and balms, as shall be hereafter mentioned in the chapters of wounds and ulcers, of what kinde or nature foever,

of the Cold in the Head.

Coording as the cold which the Horfe hath taken, is new or old, great or small, and also ec-A cording as humors do abound in his head, and as such humors be thick or thin, so is the disease more or less dangerous. For if the Horse casteth little or no matter out; of his nose, or hath no Blundersle. very great cough, but only heavy in his head, and perhaps lightly cougheth now and then, it is a fign that he is flopped in the head, which we were wont to call the pole. But if his head be full of humors congested by some extream cold taken of long time past; and that he casteth foul filthy matter out at the note, and cougheth grievoully, then it is a fign that he hath either the Glaunders, or the Strangullion, mourning of the chein, or Confumption of the Lungs. For all fuch diseases do breed for the most part of the rheume or distillation that cometh from the head. Of the cures thereof we leave to feesk, until we come to talk of the diseases in the throat, minding here to shew you how to heal the pose or cold before mentioned.

Rierbietur.

The History of Four footed Beasts.

Marun faith, it is good to purge his head, by perfuming him with Frankincenfe, and also to pro-Warten laith, it is goud to pur ge into acous, by the superior of the bay up into his nostrilis, and then voke him to neeze, by the ulting two Goods feathers dipt in Oyl-de-bay up into his nostrilis, and then voke him to neeze, pyramuning two about the feathers will make him to cast immediately at the to trot him up and down balkan hour, for these feathers will make him to cast immediately at the to trot ium up and down water an nour, que the perfumed with Wheat, Pennyroyal, and Sage lodden note, Lementius Ruffine would have him to be perfumed with Wheat, Pennyroyal, and Sage lodden note, Laurentius Kuffus would investinate be personned which bag would be so close saftened to his head well together, and put into a bag so hor as many be; which bag would be so close saftened to his head well tagether and pur into a wag to horte squary of, and his head also would be covered that all the fayour thereof may ascend up into his noticils, and his head also would be covered that all the layour thereof may arterine up more, he would have you to binde a forcelout amointed and deept warm; and to provoke him to neeze, he would have you to binde a forcelout amointed and (sept warm; and to provose min to de-bay unto a flick, and to thrust that up and down into with Sope; or elfe with Butter and Old-de-bay unto a flick, and to thrust that up and down into his nostrils, so high as you may conveniently go, and let him be kept warm, and drink no cold water. Wea, it shall be good for three or four days, to boil in his water a little Fenigreek, Wheat ter, in ea, it man be good tot beleevery day after that you have purged his head by perfuming him, moal, and a few Anife-leeds. And every day after that you have purged his head by perfuming him, meat, and a rew Anne-icous. And overly any meet of the and down, either in the warm Sun, or by making him to neeze, cause him to be trotted up and down, either in the warm Sun, or or by making min to neeze, cause than sould be done before you water him, and give him his pro-

of the Cold in the Head.

Markham•

He pose or cold in a Horse, is the most general disease that hapneth, and is the easiest perceived, both by Ropping, rathing in the nose, and coughing, the cure thereof is in this fort: If it be but newly taken by fome-careles regard, and immediately perceived, you shall need no other remedy, but to keep him warm every morning and evening after his water, to ride him forth, and to trot him up and down very fast till his cold break, and then gently to gallop him a little, which moderate exercise with warm keeping will quickly recover him again; but if the cold hath had long residence in him, and still encreaseth, then you shall give him this drink three days together: Take of frong Ale one quart, of the best Treakle fix penny-worth, of long Pepper and grains, of each as much beaten to powder, of the juyce of Garleek two spoonfuls, boyl all these together, and give it the Horse to drink; so warm as he may suffer it, and then trot him up and down by the space of an hour or more, and keep him warm, giving him to drink no cold water.

of the diseases of the Eyes.

Bandevile.

Orfes eyes be subject to divers griefs, as to be waterish or bloud-shotten, to be dim of sight, to have the Pin'and Web, and the Haw, whereof some comes of inward causes, as of humors reforting to the eyes, and some of outward, as of cold, hear, or stripe. The second of the second of the

of Weeping or Watering Byes.

His, as Laurenine Russius faith, may come sometime by confluence of humors, and sometime by some stripe, whose cure I leave to recite, because it doth not differ from Manian experience here following * Take of Pitch, Rosen and Mastick, a like quantity, meh them together. Then with a little flick, having a clout bound to the end thereof, and dipt therein, anoint the temple veins on both sides, a handful above the eyes, as broad as a Testern, and then clap unto it immediately a few flocks of like colour to the Horse, holding them close to his head with your hand, untill they flick fast unto his head, then let him bloud on both fides, (if buth fides be infected) a handful under the eyes. Buffin also thinketh it good to wash his eyes once a day with pure pure white wine, and then to blow therein a little of Tartarum, and of Pumice stone, beaten into fine powder.

of Watering Eyes.

Markbam.

Attering eyes come most commonly in some stripe or blow, and the cure is thus: Lay unto his temples a plaister of Turnentine and Direct matter. his temples a plaister of Turpentine and Pitch moken together, then wash his eyes with white Wine, and afterward blow the powder of burnt Allum into the same.

Of Bloud-shotten Eyes, also for a blow or itching, and rubbing in the Eyes.

Blundevile.

Artin never used any other medicine, then this water here following, wherewith he did always heal the foresaid griefs: Take of pure Rose water, of Maimile, of Fennel water, of the state of the same of loves. each three spoonfuls, of Tutia as much as you can easily take with your thumb and singer of Clore a dozen beaten into fine powder; mingle them together, and being luke-warm, or cold if you will wash the inward part of the eye with a feather dipt therein, twice a day until he be whole faith, that to bloud-shotten eyes it is good to lay the white of an Egge, or to wash them with the juyce of Celidony.

Another of Bloud-fhotten Ejes, or any other fore Eye, coming of rheume or other humor.

Il sales of Board Board Deafin

Por any fore eye make this water: Take of the water of Bye bright; of Rose water and Malma Markbain.

Fig., is each three spoonfuls; of Cloves fix or seven beaten to fine powdet; of the juyee of Houseleck two spoonfuls; mix all these contents and wash the Forse eyes therewith once a day, and it will recover him.

The state of the seven in the seven is the seven and the seven in t

of dimness of sight, and also for the Pin and Web, or any other for the Eye.

Tethe Horse be dim of fight, or hath any Pearl growing in his eye, or thin film covering the ball Blundevile.

To his eye, then Ruffin would have you take of Pumice Roise, of Tarnarini and of fat Grante, of each like weight, and being beaten into very fine powder, to blow a little of that in this eye, condinuing to to do every day once or twice, untill he be whole. Martin faith, that he always used to blow a little Sandiyoir into the eye once a day, which fimple he affirmeth to be of fuch force as is will blow a little Sandyour into the eye once a day, which mingre the animeter to the state of the present of the state of the eye very clear and fairs. Ruffus amongst a number of other medicines, praisech most of kill the powder of a black fiint stonies.

For to cure the Pin, Web, Pearl, Film, or other dimness, use this means following: Take of San-Markbam, the powder of burnt Allum, and the powder of black Flint Rone, of each like quantity: and once a day blow a little thereof into the Horses eye, and it will wear away such impersect matter, and make the eye clear.

of the Haw, called of the Italians, Il mighia de gli occhi.

His is a griffle covering sometime more them one half of the eye: It proceedeth of groß and Blundevile. Lough humors, descending out of the head which Haw, as Martin faith, would be cut away in this fort : First, pull both the eye-lide open with two several threds, stitched with a needle to either of the lids. Then catch hold of the Haw with another needle and thred, and pull it out fo far asyou may cut it round the bredth of a penny, and leave the black behinde. For by cutting away too much of the fat and black of the eye, the Horse many times becometh blear-eyed. And the Haw being clean taken away, squire a little white Wine or Beer into his eye.

Another of the Haw?"

A Haw is a groß griffle growing under the eye of a Horse, and covering more then one half of his fights, which if he be suffered will in short sime perish the eye: the cure is thus: Lay your thumbunder his eye, in the very hollow, then with your finger pull down the lid, and with a sharp needle and thred take hold of the Haw, and plucking it out, with a tharp knife, cut it away the compass of a penny, or more, that done, wash the eye with a little Beer.

and the post for a **Of Americk Byes** volume that and describe a set of a continuous se 1 / Egeins writeth De oculo Lunation, but he sheweth neither cause nor figures thereof but only faith Blundeville. that the old men tearmed it fo, because it maketh the eye sometime to look as though it were covered with white, and fometime clean and tell

Martin laith, that the Horse that hath this disease is blinde at certain times of the Moon, infomuch that he feeth alm oft nothing at all during that time, and show his eyes will took yellowifh: yes, and fomewhat reddifh, which difeate according to Martin, is to be bared in this forc: First, all the plater mentioned before in the chapter of Waterish or Weeping eyes, in such order as is there prekribed; and then with a sharp knift make two slirs on both sides of his head an inch long somewhat towards the note, a handful beneath the eyes, not touching the vein; and with a cornet loosen the skin upward the breadth of a groat, and thrust therein a round peece of leather, as broad as a two-penny peece, with a hole in the middt to keep the hole open, I and look to it once a day, that the matter may not be stopped, but continually run the space of ten days, then take the leather out and healthe wound with a little flax dipt in the falve here following : Take of Turpentine, of Honey, of Wax, of each like quantity, and boyl them together, which being a little warmed, will be liquid to ferre your purpose, and take not away the plaisters from the temples until they fall away of themselves, which being fallen, then with a small hor drawing Irong make a star in the midst of each temples. ple-ten where the plaifter did ly. Which far would have shole in the midft made with the button end of your drawing Iron.

Another of Lunetick ar Moon-system to rough

Markbam.

F thefe Lunarick eyes, I have known divers: they are blinde at certain times of the Moon. F these Lunarick eyes, I have known divers: they are blinde at certain times of the Moon, they are very red, fiery, and full of film; they come with over-riding, and extraording heat and fully, the cure of them is thus; Lay upon the Temples of his head a plainten of little little, it is an and Millick molten together very exceeding hor; then with a little round from made for the purpose, burn three or four holes an inch or more underneath his eyes, and anoing those every day with Hogs grease, then put it in his eyes every day with a little Honey, and in short time he will day with Hogs grease, then put it in his eyes every day with a little Honey, and in short time he will recover his fight.

of the Canker in the Eye.

Blundevile.

This cometh of a ranck and corrupt bloud descending from the head into the eye. The signes you shall see red pimpless, some small, and some great, both within and without upon the eye lide, and all the eye will look, red, and he full of corrupt matter. The cure according to Metins thus: First, let him bloud on that side the negle, that the eye is grieved, the quantity of a pottle. Then take of Roch Allum, of green Copperas, of each half a pound, of white Copperas one ounce, and boil them in three pintess of running water, until the half be consumed, then take it from the fire, and once a day wash his eye with this water being made luke-warm with a fine linner fire, and olerafe the eye therewish so of rasir may look raw continuing thus to do every decrease the every short and cleans thus to do every decrease. cloth, and cleanse the eye therewith so off as it may look raw, continuing thus to do every davuntill it be whole.

Of diseases incident so the Ears, and Poll of the head, and first of au Impostame in the Ear.

T Mpostumes breed either by reason of some blow or bruising, or else of evill humors congeated in the ear by some extream cold; the signes be apparent, by the burning and painful swelling of the ear and part thereabout. The cure according to Martin is in this fort. First, ripe the impossume with this plaister. Take of Linsped beaten into powder, of Wheat flower; of each half a pinte, of Honey a pinte, of Hogs greafe, or Barrows greafe one pound. Warmall their things together in an earthen pot, and firsthem continually with a flat slick or slice, until they be throughly mingled and incorporated together, and then fpread fome of this plaint, being warm, upon a peace of linnen cloth, or folk white leather, fo broad as the fwelling, and no more, and lay it warm unto it, and to let it, ramain one whole day, and then renew it with fresh Ointment, continuing fo to do untill it breakly then lance the fore, fo that it may have pillige downward, and tent it to the bottom with a tent of flax dipt in this Ointment : Take of Mel Rosatum, of Oyl Olive and Turpentine, of each two ounges, and mingle them together, and make him a biggen of Canvas to close in the fore, so as the tent with the Ointment may abide within, renewing the tent once a day untill it be whole. But if the Horse have pain in his ears; without any great Iwelling or Importumation, then thrust in a little black Wooll dipt in Oyl of Camodile, and that will heal it, Of the Poll evill.

His is a disease like a Fistula growing betwire the ears and the poll or nape of the neck, and proceedeth of evill humors gathered together in that place, or else of some blow or bruist. for that is the weakest and tenderest part of all the head, and therefore somest offended, which rude Carters do little confider, whileft in their furythey beat their Horfes upon that place of the head with their whip-stocks; and therefore no Horse is more subject to this disease then the Canhorse; and this disease cometh most in Winter season. Ehe fignes. You shall perceive it by the swelling of the place, which by continuance of time will break it felf, rotting more inward then outward, and therefore is more perillous if it be not cured in time; and the fooner it be taken in hand, the better. The cure according to Marin is thus; If it be not broken, ripe it with a plaister of Hogs great laid unto it so hot as may be; and make a biggen for the Poll of his head to keep it from cold; which biggen would have two holes open, so as his ears may stand out; and renew the plainter every day once, untill it break, keeping the fore place as warm as may be.

And if you fee that it will not break to foon as you would have it, then there as it is fofted and most meetest to be opened; take a round hot Iron, as big as your little finger, and sharp at the point, and two inches beneath that foft place, thrust it in a good deepness upward; so as the point of the Iron may come out at the ripelt place, to the intent that the matter may descend downward and come at the neather hole, which would be always kept open joand therefore tent it with a tent of flax dis in Hogs greate, and lay a plainter of Hogs greate alloupon the fame, renewing it every day once the fpace of four days, which is done chiefly to kill the heat of the fire.

Then at the four days end, take of Turpentine half a pound, clean washed in nine sund waters, and after that throughly dryed, by thrusting out the water with a flice on the difference water water with a flice on the difference water wate fide, then put thereunto two yolks of Eggés, and a little Saffron, and mingle them well together. that done, fearch the depth of the hole with a whole quill, and make a tent of a piece of spunge. fo long as it may reach the bottom, and so big asit may fill the wound, and anoint the tent with the aforefaid Ointment, and thrust it into the wound, either with that quill, or else by winding it up with your finger and thumb, by little and little, untill you have thrust it home : and lay on the plaister of your iniger and luke-warm renuing it every day once or twice untill it be whole. But if the swelling cease, then you need not to use the plaister, but only to tent it, and as the matter decreaseth, so make your tent every day lesser and lesser, untill the wound be perfectly whole.

of the Vives.

THe Vives be certain kernels growing under the Horses ear, proceeding of some rank or cor- Blundwile. rupt bloud reforting to the place, which within are full of little white grains, like white falt kernels. The Italians call them Vivole, which if they be suffered to grow, Laurentius Kuffins faith. that they will grievously pain the Horsein his throat, so as he shall not be able to swallow his mear. nor to breath. They be easie to know, for they may be felt, and also seen: The cure according unto Matin, is in this fort: First draw them down in the midst with a hot iron, from the root of the ear fo far as the tip of the ear will reach, being puld down : and under the root again draw two strikes on each fide like a broad arrow head; then in the midft of the first line lance them with a lancer. and taking hold of the kernels with a pair of pinfons, pull them to far forward, as you may cut the kernels out without hurting the vein; that done, fill the hole with white Salt. But Hierocles would have them to be cured in this fort : Take a piece of Spunge sowled well in strong Vinegar, and binde that to the fore, renewing it twice a day untill it hath fotted the kernels; that done, lance the neathermost part where the matter lyeth, and let it out, and then fill it up with Salt finely braved, and the next day wash all the filth away with warm water, and anoint the place with Honey and Fitchflowre mingled together. But beware you touth none of the kernels with your bare finger, for fedt of venoming the place, which is very apt for a Fistula to breed in.

Another of the Vives.

He Vives be certain kernels, growing under the Horses ear, which come of corrupt bloud, the Markbam a cure is diverfly spoke and written of; but this is the best mean which I have tryed, that if you finde the kernels to enslame and grieve the Horse, take a handful of Sorrel, and lay it in a Bur-dock leaf, and rost it in the hot embers like a Wardell; then being taken out of the fire, apply it so hot as may be to the fore part, fuffering it to ly thereunto the space of a day and a night, and then renew it. till fuch time that it ripen and break the fore, which it will in thort fpace do. When it is broken, and the vilde matter taken away, you shall heal up the fore place with the yolk of an Egge, half a spoonful of Honey, and as much Wheat-flowre as will serve to make it thick, plaister-wife, which being bound thereunto, will in three or four days heal the fame.

Of the Cankerous Ulcer in the Nofe.

His difeafe is a fretting humor, eating and confuming the flesh, and making it all raw within, Blundevile. and not being holpen in time will eat through the griftle of the note. It cometh of corrupt bloud, or elfe of tharp humors ingendered by means of some extream cold. The fignes be these: He will bleed at the nose, and all the flesh within will be raw, and filthy stinking savours, and matter will come out at the nofe. The cure according to Martin is thus : . Take of green Copperas, of Allum, of each one pound, of white Copperas one quartern and boil these in a pottle of running water, until a pinte be confirmed, then take it off, and put thereunto half a pinte of Honey; then cause his head to be holden up with a drinking staffe, and squirt into his nostrils with a squirt of head, or rather of Elder, some of this water being slike warm, three or sour times one after another, but betwixt every squirting, give him liberty to hold down his head, and to blow out the filthy matter, for otherwise perhaps you may choke him. And after this it shall be good also without holding up his head any more, to wash and rub his nostrils with a fine clowr bound to a white slicks end, and wet in the water aforesaid; and serve him thus once a day untill he be whole.

Have seen Horses my self, that have bled at the nose, which have had neither sore nor user in their nole, and therefore I cannot choose, but say with the Physicians, that it cometh by means that the vein which endeth in that place, is either opened, broken or fettered. It is opened many times by means that bloud aboundeth too much or for that it is too fine or too subtil and so pierceth through the vein. Again, it may be broken by some violent strain, cut or blow. And finally, it may be fretted or gnawn through, by the sharpness of some bloud, or elle of some other humor contained therein Astoching the cure, Martin faith it is good to take a pince of red Wine, and to pur therein a quartern of Bole Armony, bearen into fine powder, and being made like-warm, to pour the pince half thereof the first day into his nostril that bleedeth, tausing his head to be his prevaileth nor, inquor may not fall out, and the next day to give him the other half. But if this prevaileth nor, then

T'un evele.

then I for my part would cause him to be let bloud in the breast vein, on the same side that he bleed. eth at leveral times: then take of Frenkincense one quince, of Aloes half an ounce, and beat them eth at leveral tunes: then take of Planatucina the whites of Egges, untillit be so thick as Honey, and with soft Hares lair, shrust it up into his nostril, filling the hole so full, as it cannot fall out; or else fill his nostrils full of Asses dung, or Hogs dung, for either of them is excellent good to restrain any flux of bloud.

of the bleeding at the Nose, or to stanch Flux of bloud in any fort

Markham.

T Have known many Horses in great danger by bleeding, and I have tryed divers remedies for the fame, yet have I not found any more certain then this: take a spoonful or two of his bloud and put it in a Sawcer, and fet it upon a chafing dish of coals, and let it boyl till it be all dryed up into powder, then take that powder, and if he bleed at the nose, with a Cane or Quill blow the same up into his nostrils: if his bleeding come of any wound or other accident, then into the wound put the fame powder, which is a present remedy. New Horse-dung, or earth, is a present remedy, applyed to the bleeding place; and fo are Sage leaves bruifed and put into the wound.

Of the discases in the Mouth, and first of the blondy Rifts, or Chops in the Palas of the Mouth.

Blundevile.

His difease is called of the Italians, Palatina; which as Laurentius Russius saith, cometh by eating hay or provender that is full of pricking feeds, which by continual pricking and fretting the furrows of the mouth do cause them to ranchle, and to bleed corrupt and flinking matter, which you shall quickly remedy, as Martin saith, by washing first the fore places with Vinegar and Salt and then by anointing the same with Honey.

Of the Bladders in a Horses mouth, which our old Farriers were wont to call the Gigs. The Italians call them Froncelle.

These be little fost swellings, or rather pusuales with black heads, growing in the inside of his lips, next unto the great jaw-teeth, which are so painful unto the Horse, as they make him to let his meat fall out of his mouth; or at the least to keep it in his mouth unchawed, whereby the Horse prospereth not: Rustine saith, that they come either by eating too much cold grass, or else pricking, duty, and filthy provender. The cure whereof, according to Martin, is in this lost: Six them with a lancet, and thrust out all the corruption, and then wash the fore places with a linke Vinegar and Salt; or elfe with Allum water.

of the Bladders in a Horfes mouth.

Markbam.

Some Horses will have bladders like paps growing in the inside of their lips, next to their great teeth, which are much painful: the cure whereof is thus: Take a sharp pair of shears, and sip them away close to the gum, and then wash the fore place with running water. Allum and Honey boiled together, till it be whole.

Of the Lampass.

The Lampals, called of the Italians, Lampalows, proceedesh of the abundance of bloud, reforting to the first furrow of the mouth. I mean that which is next unto the upper fore-teeth, saming the faid furrow to swell so high as the Horles teeth, so as he cannot chew his meat, but is forced to let it fall out of his mouth. The remdy is to cut all the superfluous flesh away, with a gracked box iron made of purpose, which every Smith can do.

Another of the Lampass.

Markham.

He Lampais is a thick spongy flesh, growing over a Horses upper teeth, hindering the conjunction a on of his chaps, in such fort that he can hardly eat the cure is as followeth. Cut ill that naughty flesh away with a hot iron, and then rub the fore well with Salt, which the most ignorant Smith can do sufficiently.

Of the Canker in the moust.

Blundevile.

This difease as Marin faith, is a rawness of the mouth and tongue, which is full of biffers, so the cannot eat his mast. Which proceeds of forme unnatural lear, coming from the homesh, for the cure whereof, take of Allum half a pound, of Honey a guarter of a pints, of Columbia leaves, of Sage leaves, of each a handful; boy! all these together in three pintes of water, well a pinte be consumed, and wash the fore places therewith so as it may bleed, continuing so to an earl day once untill it be whole.

Auto

Another of the Canker in the mouth.

His difease proceedeth of divers causes, as of unnatural heat of the stomach, of foul feeding, Markbanh.

Toroffbe rust or venome of some bit oo snashl, undiscribe twillook t unnow the contraction. or of the ruft or venome of fome bit on fractel, and icrestly books unto. The cure is thus : Wath the fore place with warm Vinegar, made thick with the powder of Allum, two or three dayes together every time until it bleed, which will hill shappellon and vigor of the exuserated matter: then make this water; Take of sunning water a quarty of Allum four ounces, of Hony four or five foonfull of Woodhine leaves, of Sage feaves, and off Columbine leaves, of each half a handful, boil all thefe together till one half be confirmed, then take it off, and every day with the water warmed, wash the fore until it be whole.

Of the heat in the mouth and lips.

Ometime the heat that cometh out of the stomach breedeth no Canker, but maketh the mouth Blundeville. Shot, and caufeth the Horle to forlake his meat. The cure whereof, as Marin faith, is in this fort: First, turn up his upper lip; and jagge it lightly with a launcer, fo as it may bleed, and then wash both that and all his mouth and tongue with Vinegar and Salt.

Of the tongue being hurt with the bit or otherwife.

TF the tongue be cut or hurt any manner of way, Martin faith, it is good first to wash it with Allum water, and then to take the leaves of black Bramble; and to chop them together fmall with a little Lard, that done, to binde it up in a little clout, making it round like a ball, then having dipt the round end in Hony, rub the tongue therewith : continuing to to do once a day until it be whole.

Of the Barbles or paps underweath the soneue.

THese be two little pape, called of the Italians, Barbole, growing naturally (as I think) in every Horses mouth underneath the tongue, in the neather jawes, which if they floor of any length, Russum faith, that they will hinder the Horses feeding, and therefore he and Manin also would have them to be clipt away with a pair of sheers, and that done, the Horses mouthro be washed with Vinegar and Salt.

of the pain in the teeth and gums, of the Wolfsteeth, and Faw teeth.

A Horse may have pain in his teeth, partly by descent of humors from his head, down into his teeth and gums, which is to be perceived by the rankness and swelling of the gums, and partly having two extraordinany teeth, called the Wolfs teeth, which be two little teeth growing in the upper jawes, next unto the great grinding teeth, which are so paintal to the Horse, as he cannot endure to chaw his meat, but is forced either to let it fall out of his mouth, of elle to keep it hill half chawed, whereby the Horse propercit not but was the hand not but had be will do the like allo when his upper Jaw-teeth be so far grown as they owithing the neather Jaw-teeth is and therewith be so sharp, as in moving his jawes they eut and rase the insides of his circult, even as they were rafed with a knife. And first as touching the cure of the pain in the ceeting that cometil by means of ome distillation . Vegetim faith, it is good to rub all the outside of his guids with fine thatk and firong Vinegar mingled together, or elfe after that you have washed the gums with Vinegar, and trong Vinegar mingled together, or este attertuate you nave wattreathe gums with 'Vinegar to stew on them of Pomegrandte piles. But me thinks that believe this water for mind you well the temple vins, with the plaister before mentioned, in the Chapter of weeping and watershy eyes? The cure of the Who fireeth, and of the Jawiecth, seconding to Markov, is in this fort; 'Pith exist the Horse head to be eyed up to sond raiter or post, and his mouth to be pened why seare, so where you may easily see every part the took? The read a round trong tent to ble, hat a said song and made at the one end in all points like into the Carpenners going with the printer in the bord with a windle or anger, and with your lost and for the edge of your cook it will be bord with a windle or anger, and with your lost and for the edge of your cook it will be soot of the lost of the windle or anger, and with your lost had be to the edge of your cook it will be soot of the lost of the windle or anger and with your lost had been the second of the lost of the windle or anger and with your lost had been all the second of the lost of the water and the second of the lost of the water and the second of the lost of the said of the second of the second of the lost of the second of the second of the lost of the second of the secon Wolfs teeth, on the outfide of the jaw, turning the hollow fide of the tool downward, holding your hand steadily, so as the tool may not slip from the aforesaid tooth; then having a mallet in your nand teadily, so as the tool may not slip from the aforesaid tooth: then having a mallet in your right hand, trike upon the send of the tool one prety blow, and the tead they on shall loosen the tooth, and case it to bend inward: then staying the midst of your tool upon the Horses neather jaw, winch the tooth outward, with the inside or hollow fide of the tools, and thrust 36 Pleas in out of this heat: that done, serve the other Wolfs tooth on the of the inside make matther, and show the inside of his mouth as is aforesaid, then keeping his month skill of en, there other with said aforesaid, then keeping his month skill of en, there of the will be the said of the mallet, and pare all those teeth shorter, running along them even with the said the second of the said and the back or round fide being turned towards the forefaid cheeks, and that the warm and the mouth with Vinegar and Salt, and let him go.

Why the diseases in the neck, withers, and back, be declared here before the difeases in the throat.

T. I Aying hitherto poken of the difeases incident to a Horses head, and to all the parts there-Aving nitherto iponen of the distance should now descend into the throat, as a part neir adjacent to the mouth. But forasmuch as the diseases in the throat have not only affinity with adjacent to the mount, the lungs and other inward parts, which are many times grieved by the nead, but and with the lange shead, and through the throat: I will speak of the diseases incident to the neck, withers, and back of a Horse, to the intent that when I come to talk of incident to the need, without fuch difeafes, as Rheumes and distillations do cause, I may discourse of them orderly without interruption.

of the Crick in the neck.

D Ecause a Crick is no other thing then a kinde of Convulsion, and for that we have spoken suffi-Beiently before of all kindes thereof in the Chapter of Convulsion, I purpose not here therefore to trouble you with many words, but only shew you Rusim opinion, and also Martin experience therein. The Crick then called of the Italians, Soima, or Lucerdo according to Ruffin, and according to Martin is, when the Horse cannot turn his neck any manner of way, but hold it still right forth infomuch as he cannot take his meat from the ground but by times, and that very flowly; Ruffie faith, it cometh by means of some great weight laid on the Horses shoulders, or else by overmuch drying up of the sinews of the neck. The cure whereof, according to Marin, is in this fort. Draw him with a hot iron from the root of the ear on both fides of the neck, through the midft of the fame even down to the brest, a strawdeep, so as both ends may meet upon the breast, then make a hole in his forehead, hard under the foretop, and thrust in a Cornet upward betwitt the skin and the flesh a handful deep, then put in a Goose feather, doubled in the midst and anointed with Hogs grease to keep the hole open, to the intent the matter may run out the space of ten dayes. But every day during that time, the hole must be cleansed once, and the seather also cleansed and fresh anointed, and so put in again. And once a day let him stand upon the bit one hour or two, or be ridden two or three miles abroad, by such a one as will bear his head, and make him to bring it in. But if the Crick he such as the Horse cannot hold his neck straight; but clean awry, as I have seen divers my felf; then I think it not good that the Horfe be drawn with a hot iron on both fides of the neck, but only on the contrary fide. As for example, if he bend his head toward the right fide, then to draw him as is aforefaid only on the left fide, and to use the rest of the cure as is abovesaid, and if need be, you may fplent him alfo, with handsome saves meet for the purpose to make his neck stand right.

mig ato of Wens in the neck.

Wen is a certain kirnell like a tumor of swelling, the inside whereof is hard like a grifle and spongious like a skin full of wrets. Of Wens, some be great, and some be small. Again, some be very painful, and some not painful at all. The Physicians say, that they proceed of gross and vicious humors; but Vegetim faith, that they chance to a Horse by taking cold, or by drinking of wasers, that be extreme cold. The cure according to Martin is thus, Take of Mallowes, Sage, and red Nettles, of each one handful, boil them in running water, and put thereunto a little Butter and Honey , and when the Herbs be foft, take them out and all to bruife them, and put thereunto of oil of Bay two ounces, and two ounces of Hogs grease, and warm them together over the fir, mingling them well together, that done, planter it upon a piece of leather so big as the Wen, and lay it to so hot as the Horse may endure it, renewing it every day in such fort, the space of eight days and if you perceive that it will come to no head, then lance it from the midth of the Wendown ward to deep as the matter in the bottom may be discovered and let out; that done, heal it op with this Salve, Take of Turpentine a quarter, and wash it nine times in fair new water, then put theseunto the yolk of an Egge and a little English Saffron beaten into powder, and make a tent or rowle of Flax, and dip it in that ointment, and lay it unto the fore, renewing the fame every day once untill it be whole.

Of swelling in the neck after blood-letting.

His may come of the fleam being rufty, and to cauting the veinto rankle, or elfe by means of I some cold wind striking suddainly into the hole. The cure according to Martin is thus that anoint it with oil of Camomile warmed, and then lay upon it a little hay wet in cold water, and had to about with a clock it about with a cloth, renewing it every day the space of five dayes, to see whether it will grow to head, or elle vanish away. If it grow to a head, then give it a flit with a lancer, and open it with Cornet that the matter may come out. Then heaf it up, by tenting it with Flax dipt in Turpening and Flore greate molten boss has discovered to the first discovered to the fir and Hogs greafe, molten together, drefling it fo once a day untill it be whole.

WAR More to Banech blond.

Fa Horfe be let bloud when the digue is in the neck, the wan perhaps will not leave bleeding to 1000 as a man would have to which if any finch thing chante, when Riffer faith; it is good to binde thereunto a settle new Morfe dung tompered with challes and frong Vinegar, and not to removelt from thence the space of three dayes, or else to lay thereunto burge file felt, or cloth for all fich things will staunch bloud.

of the falling of the Crest.

This comet for the most part of poverty, and specially when a fat Horse falleth away suddain-Blundevile.

The cure according to Marjin is thus, Draw his Crest the deepnets a straw, on the contrary side with a bot iron, the edge of which from, would be half an inch broad, and make your beginning and ending formewhat beyond the fall, fo as the first draught may go alt the way hard upon the edge of the mann, even underneath the roots of the fame, bearing your hard right downward, fare the neckward, then answer that with another draught beneath, and to far distant from the first with fall is broad, compassing as it were all the fall, but still on the contrary side: and betwiet those two draughte right in the mide, drawa third draught, then with a button iton of an vinch about, burn at each end a hole, and also in the spaces betwirt the draughts, make divers holes distant three fingers broad one from another : that done, to flake the fire anoint it every day ouce, for the flace of nine dayes, with a feather dipt in fresh Butter mouten. Then take Mallows and Sage, of each one a handful boil them well in running water, and wash the burning away untill it be rew fiesh then dre it up with this powder; Take of Hony half a pinte, and fo much unfleck't lime as will make that Hong thick like pafte , then hold it in a fire-pan over the fire untill it be baked fo hardas it may be made in powder, and fprinkle that upon the fore places, with

of the falling of the Creft.

THe falling of the Creft is occasioned most commonly through povercy; yet sometimes I have Markbam feen it chance thorugh the ill proportion of the Creft, which being high, thick and heavy the neck thin and weak underneath, is not able to support or sustain it up, however it be there is remedy for both : if it proceed of poverty, first try by good keeping to get it up again, but if it will not rife, or that the original of the disease he in the ill sashion of the Crest, then let this be the cure, First with your hand raise up the Crest as you would have it stand, or rather more to that side from which it declineth, then take up the skin between your fingers on that fide from which the Creft fiwarveth, and with a fharp knife cut away the breadth of very near an inch, and the length of four inches; which done, flitch up the skin together again with three or four flitches, and by means of flings, weights, or other devices, keep the Creft perforce on that fide, applying thereunto a plaffer of Deers fewer and Turpentine, boiled together, till the fore be healed; and at the felf fame inflant effect. by this manner of infition you draw together and firaiten the skin on that fide, you shall in this fore give liberty to the other fide, whereby the Creft may the eafier accain to his place; Take a her from made in fathion of a knife, the edge being a quarter of an inch broad, and therewith from the upper part of his Creft unto the neather part of the same extending towards his shoulder, draw three lines in this forme I and the same anoint dayly with fresh Butter, untill such time as it be persectly whole. By this manner of cure, you may make any lave-eat'd Horfe, to be as prick-ear'd and comely, as any other Horfe whatfoever.

Of the manginess of the Mane.

THe manginess proceedeth of rankness of bloud, or of poverty, of lowfiness, or else of rubbing Blumbrolle. where a mangy Horse hath rubbed, or of filthy dust lying in the mane for lack of good dreffing The fignes be apparent by the itebing and rubbing of the Horfe, and the Scabe fretting both field and skin. The cure, according to Mertin, is thus; Take of fresh greafe one pound, of Quickfilled half an ounce, of Brimstone one ounce, of Rape oil half a pinte, mingle them together, and shir them contimally in a pot with a flice, untill the Quickfilver be fo wrought with the reft, as you shall peredive no Quekfilver therein. That done, take a blunt knife, or an old Horfe-comb, and ferately all the mangy places therewith untill it be raw and bloudy, and then anoist it with this oliminent, in the funfhine if it may be, to the intene the ointment may fink in sor elle hold before it in a fire-pan or forme broadbar of iron made hot, to make the ointment to melt into the fieth! And if you fee that within the space of three dayes after, with this once anointing, he leave not rubbing, then marke in what place he rubbeth, and dreffe that place again, and you shall fee it heal quickly.

Of the falling of the hair of the Mane.

TT falleth for the most part, because it is eaten with little Wormes, fretting the roots in fundet which, according to Martin, you shall remedy in this fort; Anoine the mane and Creft with Son which, accounting with all the mane and Creft withall, and that will kill the Wormer, within twice or thrice washing.

of griefs in the withers.

To a Horses withers and back, do chance many griefs and sorteness, which, as Russian saith, do sometime proceed of inward causes, as of the corruption of humors; and sometime of onward causes, as of the corruption of humors; causes, as through the galling and pinching of some naughty saddle, or by some heavy burthen laid on causes, as through the gaining and offuch griefs; some be but superficial blisters, swellings, light-the Horses back, or such like. And offuch griefs; some be but superficial blisters, swellings, light-gals or bruisings, and be easily cured. Some again do pierce to the very bone, and be dangerous, and gats or prunings, and be easily the back bone; let us first then shew you the cure of the smaller griefs, and then of the greatering and finall swellings in the withers or back and gallings.

Blundevile.

Hensoeyer you see any, swelling rise, then Martin would have you to binde a little hot Horse dung unto it, and that will asswage it. If not, then to prick it round about the swelling either with a fleam or elfe with a flear pointed knife not too deep, but for as it may pierce the skin and make the bloud to iffue forth. That done, take of Mallowes or elfe of Smallage, two or three handfuls and boil them in running water untill they be fo foft as pap; then ftrain the water from it, and bruife the herbs in a trean difh, putting thereunto a little Hogs grease, or elle Sallet oil, or Sheeps sewer, or any other fresh grease, boil them and stirthem together, not frying them hard, but so as it may be foft and supple, and then with a clout lay it warm upon the fore, renewing it every day once untill the swelling be gone. For this will either drive it away, or else bring it into his head, which lightly chanceth not, unlesse there be some griftle or bone perished.

Ruffin biddeth you, to foon as you fee any swelling rise, to shave the place with a rasor, is sy there unto this plaister & Take a little Wheat slower and the white of an Egge beaten together, and pead it on a little clout, which being laid unto the fwelling two or three dayes and not removed will bring it to a head, and when you come to make it off, pull it away to foftly as you can possible, and wheres you fee the corruption gathered together, then in the lowest place thereof, pierce it upward with a sharp iron somewhat hot, that the corruption may come out, and anoine the fore place every day once with fresh Butter, or Hogs greafes, but if the skin be only chased off without any swelling, then wash the place with Water and Salt, or else with warm Wine, and sprinkle this powder thereon's Take of unfleck't Lime beaten into fine powder, and mingle it with Hony untillit beas thick as any paste, and make rols or bals theof, and bake them in a fire-pan over the fire, untill they be so hard as they may be brought to powder, for this is a very good powder to dry up any galling or fore. The powder of Myrrhe or burnt silk, felt, or cloth, or any old post, is also good for such purposes; but when seven you use this powder of Lime and Hony, let the place be washed, as is aforefaid

Of great swellings and inflamations in a Horses withers.

TF the swelling be very great, then the cure according to Martin is thus; First draw round about the swelling with a hot iron, and then crosse him with the same iron in manner of a cherker, then take a round hot iron having a sharp point, and thrust it into the swelling place on each side up toward the point of the withers; to the intent the matter may iffue downward at the holes. That done, tent both the holes with a tent dipt in Hogs greafe to kill the fire, and also another all the other burnt places therewith, continuing fo to do untill the swelling be asswaged, receiving it every day once, untill the fiery matter be clean fallen away, and then tent him again with withed Turpentine mingled with yolks of Eggea and Saffron in fuch manner as hath been aforefald, tenewing the tent every day once untill it be whole.

If you fee that the fwelling for all this go not away, then it is a figne of fome impostumation with in, and therefore it shall be necessary to lance it, and to let out the corruption; then take of home half a pinte, of Verdigreass two ounces beaten to powder, and mingle it together with the Hony then boil them in a pot untill it look red, then being lukewarm, make either a tent of platter, according as the wound shall require, renewing the same every day once, until it is whole. But the fore may be fovehement, that for lack of looking in time, it will pierce downward bessuing to the fore may be for the fore may be for the fore may be for the fore may be forest for the fore may be forest for the fore may be forest for the forest ward betwirt both floulders toward the intrails, which is very dangerous: yea, and as Rife faith, mortal, because the corruption of the sore insecting the lungs and heart (which be the vitall parts and chief preservers of life) the body must needs decay. And therefore Martin would have you to fill the hole with the Salve last mentioned, and to thrust in afterward a piece of sounds. founge, as well to keep the hole open, as also to suck out the corruption, renewing it every day once untill it be whole. of it halfs in lack.

afithe borns or based knows graning under the sadie side.

Was Of the Horse.

His is a dead skin like a pisas of leather, salled of the Italian Gorno, that is to fay, a horn, Blundeville.

Togethat it, is hard under hand, and cornects by means, of fome first Saddle, pinching the Horle more on the one fidesthen to a the other; or electon both fides equally. The cure whereof according to Maria, is in this forty. A noise them with freeh Butter, of Hogs greafe, untill they be motified and made: folials, as you may either, cut them, or pull them away, and then with the wound with mans sale, or with white Wine, and dry it with powder of unfleck't Lime mixt with Hony.

Of Wens or knobs growing about the Saddle skirts.

Hele be great hard knobs growing most commonly betwixt two ribs, apparent to the eye, which he their hardness feem in come of fome old bruise, and are colled of the haliant, le Cuif. The cure whereof, according to Mertin, is thus ; First mollifie them, by andinting them with Moles greafe every day once or twich, the foars of eight dayer, and if you perceive that it will come to no head with this, then lance it from the middle downward, that the matter may knows out : then kent it with washed Torpentine, yolks of Egges, and Saffron mingled together as is aforesaid, renewing the tent everyday oure until it be whole, decome . The ail

of the Navillgall.

THe Navil gall, is a bruise on the back behinde the Saddle right against the Navil of the Horse and thereof taketh his name; to cometh rither by splitting of the Saddle behinde, or for lack of fluffing, or by means of the hinder buckle freeting that place, or elfe byfome great weight laid on his back; you shall perceive it by the puffed up and spungy flesh, looking like rotten Lights or Lungs, and therefore is called of the lealtans, Palmone, or Pulmonielle. The cure whereof, according to Marin, is thus ; Out it round about with a sharp knife or gasor even to the bone, leaving no rotten flesh behinde : diat done, take the white of an Egge and Sale beaten together and lay that plaisterwise to the fore upon a little cowe, renewing it once a day the space of two dayes. Then take of Honya quartern of a pinte, and of Verdigrease an ounce beat into powder, and boile them together in a pot, firring it fill untill it look red, and being lukewarm, make a plaister with towe and clap it to the wound, washing and cleansing well the wound strft with a little warm Vinegar or white Wine, continuing it once a day untill it begin to heal and skin, then dry it up, by sprinkling thereon this powder following; Take of Hony a quartern, and as much of unsleck't Lime as will thicken the Hony like unto paste, and in a fire pan over the fire, flir it still until it be hard baked, fo as it may be beaten into powder, but before you throw on the powder, wash the wound first with warm Vinegar, continuing so to do untill it be perfectly skinned and whole. Of the swaying of the back.

This is called of the Italians, Malferute, and according to Ruftin and Marthit opinions, cometh Blundeville.

and rolling of the Horfes hinder parts in his going, which will father many times, and fway fointe-times backward, and sometime stdeling, and be ready to fall even to the ground, and the Horfe being laid, is sant able to get up. The cure, according to Martin, is thus; Cover his back with a sheen skin court in the Martin, is thus; Cover his back with a sheen skin court in the Martin, is thus; Cover his back with a Sheeps skin, coming hot from the Sheeps back, laying the fleshie fide next unto his back, and lay a honling cloth upon the same to keep his back as warm as may be, and so let it continue until it begin to smell; then take the old skin away, and lay a new unto it, continuing so to do the space of three weeks. And if he amend not with this, then draw his back with a bot iron out on both fides of the ridge of his back, from the pitch of the Buttocks, unto a handful within the Saddle, and ter every line be an inch distant one from another, and then again overthwart checker-wie, but let not such strokes be over deep, and so burned as every one look yellow, then by fin this charge following; Take Pitch one pound, of Rozen half a pound, of Bole Armony half a pound made in powder, and half a pinte of Tar, and boil all thefe together in a por, firring it untill everything be molten and thoroughly mingled together, then being lukewarm, dawball the burn-ning therewith very thick, and thereupon clap as many flocks of the Horfes colour, as you can make to abide on, and remove it not before it fall away it felf; and if it be in Summer, you may tuth

Blundevile.

of the weakness in the back.

Thoth appear by Laurenius Ruffin, that there is another kind of weakness in the back, called in I doth appear by Laurentee de le reni, that is to fay, the fretting or biting of the reins, which as the Italian, le gotte or morjevatura de le rem, that is co lay, the distribution of that place, whereby all the hinder faid Ruffius faith, proceedeth of abundance of humors reforting to that place, whereby all the hinder parts of the Horie do lose their feeling and firength, and the Horie falleth down on the ground; parts of the morie do lote their techniques, do suffocate the same, and in two or three hours do yea, and such humors resorting to the heart, do suffocate the same, and in two or three hours do yea, and fuch numbered to die. The remedy, according to Ruffius, is in this fort; Let him bloud abundant. came the riotte to die with a hot iron, in fuch fort as is declared in the last Chapter. He ly in the neck, and draw his back with thorugh a river, and to rowel him on his hanches nigh the huckle bones; and to make the hair to grow again, it is good, as he faith, to anoint the place with Hogs greafe, and three leaved graffe stamped together.

of Hidebound.

Idebound, is when the skin cleaveth fo fast to the Horses back, that a man cannot pullir from the flesh with his hand, which Ruellim calleth Coriago; it cometh for the most part of poverty, or else when the Horse after some great heat hath been suffered to stand long in the rain or wet weather, for that will cause the skin to thrink, and to cling to his ribs. It is known by the leanor wet weather, for that will can exhibit and by fast sticking of the skin unto the ribs when you pul at it with your hand. The cure, according to Martin, is thus: Let him bloud on both sides the belly in the flank veins betwix the flank and the girding place: that done, give him this drink; Take a quart of white Wine, or else of good Ale, and put thereunto three ounces of good Sallet Oil, of Cumin one ounce, of Annis feeds two ounces, of Licoras two ounces, beaten all into fine powder, and pive it him lukewarm with a horn. And when he hath drunk, let one standing at his huckle bone, rub him hard with his hand along the back, and overthwart the ribs, the space of halfan hour: that done, fet him in a warm Rable, and let him ftand in litter up to the belly, and cover all his back and ribs with a fack first, throughly soaked in a tub of cold water, and then well and hard wrung, and over that cast another cloth, and gird it fast with a furcingle, stuffing him well about the back with fresh straw, continuing thus to do every day once the space of a week, during which time givehim no cold water, but lukewarm, and put therein a little ground Mault. The wet fack will cause the back to gather heat it felf, and the skin to loofen from the flesh, and if you will bestow more cost. you may anoint all his body wish Wine and oil mingled together, according to the opinion of the old writers, which no doubt is a very comfortable thing, and must needs supple the skin, and looks it from the flesh.

Of the diseases in the throate and lungs, and why the griefs of the shoulders and hips be not mentioned before amongst the griefs of the withers and back.

Ome perhaps would look here, that for fo much as I have declared the difeases of the neck, Dwithers and back, that I should also follow on now with the griefs of the shoulders and hips. But fith that fuch griefs for the most part doe cause a Horse to halt, and that it requireth someskill to know when a Horse halteth, whether the fault be in his shoulder, hip, leg, joint, or foot, Ithinkitis not good to separate those parts asunder, specially fith nature hath joyned them together, thatis to fay, the shoulders to the forelegs, and the hips to the hinder legs. And therefore according to natures order, I will treat of them in their proper place; that is to fay, after that I have sheweld the diseases that be in the inward Horses body, not only above the midriffe, as the diseases of the throat, lungs, breaft and heart, but also under the midriffe, as those of the stomach, liver, guts and of all the rest. And first, as touching the diseases of the throat, the Glaunders, and Strangullion, to all Horses is most common.

of the Glanders and Strangullion, so called according to the Italian name Stranguillion.

Oft Farriars do take the Glanders and Strangullion to be all lone disease, but it is not fo, for the Glanders is that which the Physitians call Tonfile, and the Strangullion is that which they call in I wise Against which they call in Latine, Angina, in Greek, Gynanch, and we commonly call it in English the Squinas cy, or Quinfie. Tonfile, is interpreted by them to be the inflamations of the kirnels, called in Land Glandes, the Italian, Glandule, which lie on both fides of the throat, underneath the root of the tongue nigh unto the fival lowing place a contribution of the throat, underneath the north tongue, nigh unto the swallowing place; of which word Glandes, or Glandula, I think we bottom this name Glanders; for when the Horse is troubled with this disease, he hath great kirnels under neath his jawes, easie to be feen or felt, paining him so, as he can not easily swallow down his mel, which cometh first of cold distillations out of the head: But if such kirnels be not inflamed, they me them to a such a such as the method in the head perhaps go away of themselves, or else by laying a little hot horse-dung and straw unto them, by warmth thereof will diffolve them, and make them to vanish away.

But if they be inflamed, they will not go away, but engreafe and wax greater and greater, and he more painful every day then other, and cause the Horse to cast continually filthy matter at his Note. The cure whereof, according to Martin, is this; First ripe the kernels with this plaister; Take of bran two handfuls, or as much as will thicken a quarcof Wine or Ale: then put thereunto half a bound of Hogs greafe, and boyl them together, and lay it hot to the fore with a cloth, renewing it every day until it be ready to break, then lance it, and let out all the matter, and tent it with a tent of Flax dipt in this falve; Take of Turpentine, of Hogs greafe, of each like quantity, and a little wax, and melt them together, and renew the tent every day until it be whole. Laurentim Kuffius Gith, that this disease is very common to Colts, because in them doth abound fluxible moissure and to be diffolved with every little heat, and to turn to putrifaction; and therefore if the

Of the Horse.

Horse be not over young, he would have you first to let him bloud in the neck vein, and then to lay unto the same sore a ripening plaister, made of Mallowes, Linseeds, Rew, Wormwood, ground Ivy, Oyl of Bayes, and Dialthea, and to anoint his throat also, and all the sore place with fresh Butter: and the fore being ripe, to lance it, or else to rowel it, that the matter may come forth. But if the kernels will not decrease, then pull them away by the roots, and dry up the Ulcerous

place with an ointment made of unfleck't Lime, Pepper, Brimftone, Nitrum, and Oyl Olive. It shall be alfo good to purge his head by perfuming him every day ones, in fuch fort as hath been before declared. And let the Horse be kept warm about the head, and stand in a warm stable, and let him drink no cold water: but if you fee that after you have taken away the kernels, the Horse doth not for all that leave calting filthy matter at the Nose, then it is to be feared that he bath some spice of the mourning of the Chine, for both difeases proceed of one cause, and therefore I think good to speak

of it here presently.

But first I will set down a drink which I have seen proved upon a Horse that I thought could never have been recovered of the same disease, and yet it did recover him in very short space, so as he travelled immediately after many miles, without the help of any other medicine.

A drink for the Strangullion or Glanders.

Ake of warm milk as it cometh from the Cow a quart, or in stead thereof a quart of new Boer Blundrolls. or Ale warmed, and put thereunto of moulten Butter the quantity of an Egge; and then take one head of Garlick, first clean pilled and then stamped small, which you must, put into the milk or drink being made lukewarm, and give it the Horse with a horn, and immediately after the drink be given, catch hold of his tongue with your hand, and having broken two raw Egges, either upon his foreteeth, or against the staffe wherewith his head is holden up, cast those broken Egges, their and all into his throat, making him to swallow down the same; that done, ride him up and down till he begin to sweat, then fer him up covered warm with an old coverlet and straw, not suffering him to eat nor drink for the space of two or three hours after, and let his drink for the space of two or three dayes be somewhat warm, whereunto it is good to put a handful or two of Bran or ground Mile, and in giving the said drink, it shall not be amisse to power some thereof into

Of the mourning of the Chine.

This word, Mourning of the Chine, is a corrupt name borrowed of the French tongue, wherein it is called Morte defehien, that is to fay, the death of the back. Because many do hold this opinion, that this difease doth consume the marrow of the back; for remedy whereof, they use strange kinds of cures. For fome taking it to be a rheume, go about to ftop it, by laying aftrictive, or binding charges to the nape of the neck. Some again, do twine out the pith of the back with a long wire thrust up into the Horses head, and so into his neck and back, with what reason I know not Well, I know that few Horfes do recover that have this difease. Some againg bink that the Lungs of the Horle be rotten, and that the Horle doth caft them out at his Nofe. But, Martin faith, that he hath cut up divers Horses which have been judged to have dyed of the mourning of the Chine, but he could finde never either Back or Lungs to be perished, but only the Liver, and most commonly that fide of the Liver which answereth the Nostril whereat he casteth, whereof we will talk inhis proper place, when we come to speak of the diseases in the Liver. The Italians do call this difeale Ciamorro, the old Authors do call it the moift malady, whereof Theoremessus maketh two differences. For in the oneithe matter which he doth cast atthe Nose is white, and doth not finell atall: and in the other than which he calleth is filthy and flinking corruption whey proceed, both of cold humons congealed to the hour more abounding in the anather in the other a by reason perhaps that the Horse was not cured in time a for of cold first congest, the 1806, and the Count, then the Glanders, and last of all the Mourning of the China, 1. When the Horse, castest master at the Nost hand the congest of th the Nose that is not stinkings he may easily be cured by such remedies as have before edeclared in the Chapter of the Pole shout if the matter be very distry, and sinkings, then in the cure. Notwithstanding it shall not grieve societo write lines, you here; the experience of Theoremestar, and of Lenginia Russian. Theoremestar cure is thus; Take of Water and Hony.

called of the Physitians Hydromel, a quare, and put thereunto three ounces of Oyl, and powre that into his Nostril every morning the space of three dayes; and if that do not profit him, then let that into his monthly every morning the year a quart of old Wine, mingled with fome of the medicine, or rather the precious meat, called of the old writers Tetrapharmacum, and that will reflore him to his or rather the precious meat, canculotte of all difeafes there is none more perillous, hot more to be suspected, then the rheume which cometh of cold, for Horses have large Conduites, and are full of movilure, and therefore if cold once enter, it sindeth matter enough to work on, to breed continuous. monture, and therefore it cold once enternal animarally, descending down to the vitall part in nual distillation, as well outwardly at the Nose, as inwardly, descending down to the vitall part in

fuch fort, as it doth not suffocate the same.

the income only all

fuch fort, as it dott not innocate the jame.

The fignes, according to the faid Ruffiw, be these; the Horie doth cast matter continually at the Nose, sometime thin, and sometime thick, his Noserlls, Bars, and all his outward parts, will be cold to Note, tometime triin, and tometime the body heavy, and he will cough, and have find! appetite to the feeling, his eyes, head, and all his body heavy, and he will cremble and shake. His cure is in this fortal his meat, and lesse to his drink, and sometime he will tremble and shake. His cure is in this fortal Purge his head, partly by perfuming him, & partly by making him to neeze in such fort as hath been before taught in the Chapter of the Pose, which wayes of perfuming and pur ging his head as they be good, to doth Ruffim praise these two here following to be most excellent; the first is this: De good, to doth Angles Plane there wife called Brionie, or wilde Vine, two or three good handfuls. and being bruifed put them into a linnen bag, and fasten the bag to the Horses head, so as he may teceive the fent up into his Nostrils, without touching the hearb with his mouth, and this will cause the humors to run down abundantly. The second medicine; Take of Euforblum beaten into fine powder, three ounces, of the juice of Betes one pound, of Swines bloud half a pound, boyl all these together until they be throughly mingled together, and liquid like an ointment, and then take it from the fire, and put thereunto one ounce more of Euforbium, and mingle them again throughly together, and preserve the same in a box, to use at needful times in this sort; Make two fiffe long rols or tampins of linnen clouts, or such like stuffe, sharp pointed like Sugar loaves: which tampins are called of the Physicians in Latin, Peff., and being anointed with the ointment aforesaid, thrust them up into the Horses Nostrils, and let them abide there in a pretty while, then pull them our, and you shall fee such abundance of matter come forth at his Nose, as is marvellous to behold. Russen also praiseth very much this medicine here

Take as much of the middle bark of an Elder tree, growing on the water fide, as will fill a new following. earthen pot of a mean fize, putting thereunto as much clear water as a pot will hold, and les it boyl until one half be confumed, and then to be filled up again with fresh water, confining 600 do three times one after another, and at the last time that the one half is confumed; take it from the fire; and firain it through a linnen cloth. Then take two parts of that decocition, and one part of Hogs greafe, bt Butter, and being warmed again together, give the Horfe to drink thereof one hornful, and powre another hornful into his Noftril that caffeth and when loever you give him this medicine, let the Horse be empty and fasting, and keep him without meat also two or three hours after, for this is a very good drink for any fickness that cometh of cold. Moreover, open the skin of his forehead, and of his temples, and also of his tail with a fliarp hot iron, that the corrupt humors may issue outward. That done, take hot brickes, or else a pan of fresh butting coles, and hold it nigh unto his belly and flanks, to the intent that they may be throughly warmed, and being so warmed, anoint them all over with Oyl-de-bay, or Dialthea, to defend his body from the cold, and let his head be well covered, and all his belly kept warm. Yea, and it were good to bathe his head fometime, as Ruffin faith, with a bath made of Rew, Wormwood, Sage, Junier, Bay leaves, and Hysop. And let his drink be warm water mingled with Wheat meal; yet, and make it the more comfortable, it were good, as Ruffin saith, to but thereunto some Cinamon, Ginger, Galingale, and such hot pieces. And his meat in Winter season would be no other but todgen. Or warm Mashes, made of ground Malt and Wheat bran: in Summer sason, but some state of the control if he went to graffe, I think it would do him most good, so that he go in a dry warm ground, for by feeding alwayes downward, he shall purge his head the better, as Ruffish faith. This much of the Glanders, and mourning of the Chine. Now we will peak fomewhat drene straight in the control of the opinion of the Authors, though not to the fatisfaction exhall of our Rouble Parriars. but he did indeed on the control of the grown person and the control of the contr English Parriars.

of the Strangullion for Sydinancy; and the sold policy for the strangullion for Sydinancy; and the sold policy for the sold po

He Strangullon, called of the Latines, Angine Daccording to the Phylicians, is an inflament tion of the invard parts of the throat, and as I fall before recalled of the Office Think lider which is as much to lay in English as Strangling, whereof this name breangullion as Think lider will the distance of the Latines the strangling whereof this name breangullion as I soluted the ved, for this difeate doch ftrangle every Man or Beak and therefore is numbred sublight the perillous and tharp difeates, called of the Latiner; "North doint; "of which ftraining the pifficials in Mans body make four differences, The first and worship within the most right worship with the most right body with the part within the most right worship with the most right nor without, appeareth manifestly to be inflamed; and yet the patient is in great peril of stranging the feeth of the first parts of the throat only be inflamed. The first parts of the throat only be inflamed. The first parts of the throat only be inflamed. The first parts of the throat only be inflamed, when the maintenance of the fourth of the first parts of the throat be both inflamed. The fourth of the maintenance of the fourth of the first parts of the firs

neck are inflamed, or the inward joynts thereof fo loofened, as they straiten thereby both the throat. or we fand, or wind-pipe; for short breath is incident to all the four kinds before recited, and they proceed all of one cause; that is to say, of some cholerick or bloudy fluxion, which comes out of the proceed an of one throat veins into those partis, and there breedeth fome hot inflamation. But now to prove that a Horse is subject to this disease, you Thall hear what Abstrain, Hierocles, Vegetim, and others do fav. Abstrum writing to his friend a certain Parriar or Horse-leach, called Assorium, speaketh in this manner; When a Horse hath the Strangullion it quickly killeth him; the fignes whereof he these; Histemples will be hollow, his tongue will swell and hang out of his mouth, his eyes also will be fwollen, and the passage of his throat stopt so as he can neither eat nor drink. All these signes he also confirmed by Hisrocles.

Of the Horse

Moreover, Vegetim rendereth the cause of this disease, affirming that it proceedeth of aboundance of fubtle bloud, which after long travel will inflame the inward or outward mufcles of the throat or weland , or fuch affluence of bloud may come, by use of hot meats after great travel, being so alterative as they cause those parts to swell in such fore as the Horse can neither eat nor drink nor draw his hreath. The rure, according to Wege ha, is in this fort "First bathe his mouth and tongue in hot water. breath. He transaction and the many and then another in the with the goll of a Bull; that done, give him this drink, Take of old Oyl two pound, of old Wine a quare, nine Figs; and nine Leeke heads well flamped and brayed together. And after you have boiled these a while before you frain them, put there are little Nitrum Alexandrinum, and give him a quare of this every morning and evening Abfress and Hieroclet would have you to let him bloud in the palate of his mouth, and also to powre Wine and Oyl into his Nostrils, and allo give him to drink this decoction of Figsand Nitrum fodden together, or elfe to anoint his throat within with Nitre, Oil, and Hony, or elfe with Hony and Hogs dung mingled together, which different not much from Galin his medicines to be given unto man. For he faith, that Hony mingled with the powder of Hoge dung that is whitey and iwallowed down, doth remedy the Squinancy prefently. Abstract also praiseth the oinement made of Bdellium, and when the inflamation beginneth fomewhat to decrease, he faith it is good to purge the Horse; by giving him wilde Cucumber and Nitre to drink. Let his mear be grasse if it may be gotten, or else wet hay, and sprinkled with Nitre. Let his drink also be lukewarm water, with some Barley meal in it. and and a self of an incorrect of

Of the Congle.

OF Coughs, fond be betward and some betward: Those be outward which do come of outward coules as by eating a feather, or bearing a duly or flarp firaw, and such like things which taking his throat cause the him to cought you find the predetive it by wagging and wrying his head in his toughing, and by Ramping fornetime with his foot, labouring to get out the thing that grieverh him, and cannon be The cute, according to Martin, is thus: Take a Willow wand, rolled throughout within fine linner clout, and their anoist it all over with Hony; and thrust it down his throat, drawing your hand to and fro, couche intent it may either drive down the thing that grieveth him, or else bring it up, and do this twice or thrice, anointing every time the flick with fresh Hony.

Of the inward and wet Cough.

Of the inward and wet Cough.

Of inward Coughs, fome by wet, and forme by dry. The wet Cough is that cometh of cold; taken after some great heat given to the identification which being afterward congeated, do cause of the identification and dropping if the judget, And I call it the wet Cough, because the Horse in his coughing will word mouth matter arthis mouth after that it is once broken. The lignes be thele; The Horse will be heavie, and his eyes will run with water, and he will forsake his meat; and when he cougheth, he thrusteth out his head, and reacheth with great pain at the first was though he had a dry Cought until the fleatube broken, and then he will rough more hollow; which is a figure of amendments. And therefore, according to Manins experience, to the intend the fleat may breake foomer, it shall be notestary to keep him warm, by cooking him with a double look. toth, and by littering him up to the belly with fresh straw, and then to give him this drink to factor of Barley one peeds, and Boylicin two or chreegallone of fair water, until the Barley begin to burn, and boyl therewith of bruled kidonas, of Amile feeds or Raisins, of each one pound, then first a let, and to keep the first of the factor of the fac and to that liquor put of Hony a pinte, and a quartern of Sugarcandy, and keep it close in a potto lerve the Horle therewith four leveral mornings, and cash not away the fodden Barley with the refe of the frainings; but make it hot every day to perfume the Horfowithal, being put in a bag and tied to his head, and if the Horfewill eat of it, terhall do him the more good. And this perfuming in Winter featon would be used about een of the clock in the morning, when the Suhis of forms the glock to the intent the Horse may be walked about the Sun thing to exercise him moderately and untill his Cough wear away, fall not to give him warm water, with a little ground Maule. And a fine Cough wear away, fall not to give him warm water, with a little ground Maule. And a fine Cough wear away, fall not to give him warm water, with a little ground Maule. And a fine Cough warm water, which a little ground Maule. And a fine cough warm water, which a little ground may be a fine cough warm water. Cough braketh more and moses for let his waterlevery day be leftle warmed then others to lo sawe! choic night of the lens go lancy of warm waster, and the second yelve be a mark

The state of the s

Rlundevile.

His scemeth to come of some grosse and tough humor cleaving hard to the hollow places of the Lungs which stoppeth the winde-pipes, so as the Horse cannot easily draw his breath, and It the Lungs which reoppetite the winds the Puritick, or elfe break his winds altogether. The figus be if it continue, it will either grow to the said also vehemently, without voiding at the hofe or mouth, the figure of the will cough both often, drily, and also vehemently, without voiding at the hofe or mouth. these; He will cough both often, drily, and also venemently, without volding at the nose or mouth. The cure, according to Martin, is in this fort; Take a close earthen por, and put therein three pinter of strong Vinegar, and four Eggs, shels and all unbroken, and four Garlitk heads clean pilled and bruised, and set the pot being very close covered in some warm dunghil, and there let it stands a whole night; and the next morning with your hand take out the Egges, which will be so, soft as silk, and lay them by untill you have strained the Garlick and Vinegar through a fair clothy the north to that lay them by untill you have strained the Garlick and Vinegar through a fair clothy the north to that lay them by until you have trained the Saries singly dispart in origin a fair cloth, then obtate that liquor a quartern of Hony, and half a quartern of Sugarcandy, and two ounces of Licora, and two ounces of Anife feeds, beaten all into fine powder. And then the Horfe having failed all the night before, in the morning betwint feven and eight of the clock, open his mouth with a tord, and before, in the morning betwint feven and eight of the clock, open his mouth with a tord, and whorle therein one of the Egges, fo as he may swallow it down, and then immediately powre in after a hornefull of the aforesaid drink, being first made lukewarm, and east in another Egge with another hornful of drink, and fo continue to do, untill he hash swallowed up all the Egges, and drunk up all the drink; and then bridle him, and cover him with warmer clothes then he tages, and utuin at all into the ftable, and there let him ftand on the bit, at the bate rack, well nad before, and oring the space of two hours. Then unbit him, and if it be in Winter offer him littered up to the belly, the space of two hours. Then unbit him, and if it be in Winter offer him littered up to the belly, the space of two hours. Then unbit him, and if it be in Winter of him littered up to the belly, the space of two hours. Then unbit him, and if it be in Winter of him littered up to the belly, the space of two hours. Then unbit him, and if it be in Winter of him littered up to the belly, the space of two hours. a nanqual by visitabled with water, and give him not much thereof. And therefore you shall need well dusted and sprinkled with water, and give him not much thereof. And therefore you shall need wen unter and spring provender, which slio must be well cleanfed of all filth and dult, and give him the more provender, which slio must be well cleanfed of all filth and dult, and give him no water the space of nine dayes. And if you perceive that the Cough doth not wear away, then if no water the space walling with the spile; Take of Lard two pound laid in water two hours, then it be in Winter, purge him with the spile; Take of Lard two pound laid in water two hours, then take nothing but the clean fat thereof, and samp it in a morter, and thereto put of Licoras, of Anise feeds, of Fenegreek, of each beaten into powder three ounces, of Aloes in powder two ounces, of Agarick one ounce: Knead these together like paste, and make thereof six bals as big as an Egge. Then the Horse having fasted over night, give him the next morning these pils one after another, anointed with Hony and Oyl mingled together in a platter; and to the intent he may swallow them down whether he will or not, when you have opened his mouth, catch hold of histories, and hold it fall while you whirle in one of the pils; threedone thrust it into his throat with wollingpin, and then let his tongue go untill he hach fwallowed at down a reben give him telligramme all the reft of the pils, and let him fland on the bit wasm clothed and litteredy distinger of three hours at the leaft , and after that give him allittle wee hay, and warm water with hite ground mault in itito, drink , and les bim drink another but waternwater the flace well well And now and then in a fair funny day, it shall be good, so, erot him one hour absorde to break him.

of the Fretized, broken and rotten Lungs.

This proceedeth, as Abstran and Theomorphus faith, either of an extreme Cough, or of vehement running, or leapings or of over greedy drinking after great thirt, for the Lung be included a very thin film or skin, and therefore easie to be broken, which if it, he not cored in time, doth grow to Apostumation, and to corruption, oppressing all the Lungs, which of old Authoris called Vomice, and Supporatio. But Theometica faith, that broken Lungs, and rotten Lungs, who are difceles, and have divers fignes, and divers cures. The fignes of broken Lings be there the Hore draweth his wind short, and by little at once, he will surn his headlothen toward the place griend, and groaneth in his breathing, he is afraid to cough, and yet coughesh as though the his arising he is a fraid to cough, and yet coughesh as though the his reality of his, whose Lungs were fraid, or final bones. The same Theomos headed a friends Horse of his, whose Lungs were fraid, or rather broken as he faith, by continual cating of Sair, with this manner of sure herefollowing the the Horfe have quiet and reft, and then let him blaudiathe, hanches, where the weins hypermone and give him to drink the space of seven dayes, Batlay, on tather Osces hodden in Gours with the you can get no milk, boil it in water, and put therein fomathick collicits of Land and of Beligients you san get no mas, bon it in water, and put therein somethick colloquing that dad objectives, and let him drink that i and let his common drink in Winter season be the decodion of Whete meal, and in the Summer time, the decodion of Barley, and this such faith will bind his dings again together. Feetim utterly disallowed letting of bloud in any such disalers to his is any allowing the Cought by means where obtained by the property of the perfectly. And therefore neither his medicines not mean would be burth, but small gain and cooling. The before distinct that may be sided kinds at a state would be that it is made, and and cooling. The best medicine that may be given himlar all times is this a litake of Penette, in of Linfeed, of each half a pound, of Gum dragant mide Mattick, of Myrrhe, of Signs of More of each one of the control of the flower of each one of the control of the contr flowre, of each one ounces alet allthefethings be heaten sinto 'fine powder, and then infinite whole night in a first interest and then infinite interest in the sinterest in th whole night in a sufficient quantity of warm water, and the next day give him a quart of this late warm parting the next day give him a quart of this late warm, putting thereunto two or three ounces of Oyl of Roses, continuing so to do many dist together, and if the disease be new, this will heal him; yea, and it will ease him very much, although the disease be old, which is thought uncurable. And in Winter season so long as he standeth in the standard standard

tot Of the Hormofile od !

fible, let him drink no cold water, and let his meat be clean without dust, but in Summer season it were best to let him run to graffe; for so long ashe sately graffe, a man hall scantly perceive this

were best to let him run to grasse; for so long as he excellegasse, a man shall feantly perceive this diease. Thus much of broken lungs.

diease. Thus much of broken lungs.

30 f pair for him will be him be a line of the pair for the line of the tollowing into fine powder, and a few Rerfins, and give it him to driftk with wine. But Petim would liave him to be cured in this fore; and with left e to be a fifth out. Take of Figure and Attrofoch. nint of each two ounces, and by Reitoloch one ounce and a half better into polyder, and give fifth that with wine. And he would have you also to draw his breast with a hot iron, to the intent the hue mors may issue forth outwardly.

A l'all and so of Bortness of breath land and and

A Horse may have shortness of breath, by hasty running after drinking, or upon a full stordard, or by the descending of humors unto his throat or hings, after some excicine hear dissolving the faid humors, which fo long as there is nothing broken, may in the beginning be eafly holpen. The fignes be there is The Horse will continually pant, and setch his breath floor; Which will tonne very hot out at his note, and in his breathing he wilkiquife in the note; and his flanks will beat thick : yea and some cannot fetch their breath unfelle they hold their necks right out and straight, which difease is called of the old writers by the Grick name Ontoppica. The cure; Let him bloud in the neck, and give him this drink ! Take of Wine and Oil, of each a pinte, of Frankincense half an othice! and of the juice of Horelightid half a pinte. It is good also to powre into his throat Hony, Butter and Hoge greate moulten together, and made tokewarm! Tiberiae faith, it is good to give him whole Egges, the said all, Reeped and made foft in Vinegar; that is to fay, the fifth day three, the fecond day five, and the third day feven, and to power Wine and oil thio his notirils. I for my part would take nothing but Annis feeds. Licoras and Sugarcandy, beaten all into fine powder, give him that to drink, with Wine and Oil mingled together.

This is a shortness of breath, and the Horse that is so diseased is called of the Italiant, Cavillo pullipp, or Bolfe, which I think is derived of the Latin word Vullim, by changing V. into B. and I think different not much from him that, both broken lungs, called of Vigetim and order old writers Vullim, for fuch shortness of breath comes either of the same cantes, or else much tike i as aboundance of groffe humors, cleaving hard to the hollow places of the Lungs, and stopping the windepipes. And the winde being kept in, doth refort downward, as Ruffim faith, into the Horses guts, and so causeth his flanks to beat continually without order; that is to say, more swiftly and higher up to the back, then the flanks of any Horse that is sound of winde. And if the disease be old, it is feldom or never cured; and though I finde many illedicines, prescribed by divers Anthors, few or none do content me, unless it be that of Vegetting recited before in the Chapter of broken Lungs. And if that prevaileth not, then I think it were not amille according to Ruffin to purge him with this drink here following; Take of Maiden hair, of Ireos, of Africas, of Ferilpreck, of Blundevile.

Raifins, of each half an ounce, of Cardanum, of Pepper, of Bitter Almonds of Badrach, of each two ounces, of Nettle feed, and of Ariftoloch, of each three ounces, of Nettle feed, and of Ariftoloch, of each three ounces, of Nettle feed, and of Ariftoloch, of each three ounces of Agarick, and two ounces of Ood loquintida, together with two pound of Hony, and give him of this a pinte or a quart at divers times: and if it be too thick make it thinner, by putting thereunto water wherein Licorae hath been folden: and if need be, you may allo draw book his flanks chouse with a hot Iron, to reftrain the bating of them, and also flights house the stanks crottle wife with a hot tran, to retrain the bating of them, and also flights him botheris, to give him more air. And if it be in Summer, turn him to graffe; if in Winter, let him be kept warm, and give him how and then a fittle folder will at.

Ruffu would have it to be given him three dayes to gether, and also new five wine to drink, on life other good wine min gled with Licoras water.

Other good wine min gled with Licoras water.

The standard of the st

A Consumption is no other thing but an exulceration of the lungs, proceeding of some fretting or gnawing humor, descending out of the head unto the lungs. And I take it to be that disease which the old Writers are wont to call the dry Malady; which perhaps some would rather disease which the old Writers are wont to call the dry Malady; which perhaps some would rather interpret to be the mourning of the china, with whom I intended not to firiue. But this much I must needs say, that every Floris having the mourning of the Chine in doth equationally call at the nose, but in the dry Malady it is contrary. For all the Authors that write thereof affirm, that the Horse, wouldeth nothing at the nose. And the figures to know the dry Malady, associant to their doctrine, be these: His fieth doth clean consume sway, his bally is gainful and the sijalithmen so hard threached, or rather thronk up 145 if you strike on him with your hand it will sometime and threather thronk up 145 if you strike on him with your hand it will sometime at the will be hold whether and for sake his meats, and though he eaterh is that Abstract faith) yeahe doth not digeth it, nor prospered not withal, he would cough and cannot hur hicking such as though he had eaten small bones. And this disasters judged of all the Authors so be incurable. Notwithstanding they say, that it is good to purge his head with such persons be been shewed you before in the Chapter of the Glauders, and also to give him always Coleworts, choot small with his provender. Some would have him to drink the warm bloud of sucking Pine choot small with his provender. been thewed you program, the Complete on the Complete state of the province of viffication of a saffiv

of the Consumption of the Rieft, and how to make a lean Horse fat.

Apin faith, that if a Horse take a great cold after a heat, it will cause his siesh to wash and and dry, and so cleave fast to his sides and he shall have no appetite unto his meat, and the fillers of his back will fall away, and all the flesh of his buttocks, and of his should ders will be confumed. The cure whoreof is thus: Take two Sheeps heads unflead, boyl then in three gallons of Ale, or fair running water, until the field be confumed from the bone, that done, frain is through a fine cloth, and then put thereunto of Sugar one pound, of Cinamon two ounces, of Conferve of Roles, of Barberries, of Cherries, of each two ounces, and mingle two quinces, of Conterve of Roles, of Barberries, of Cherries, of each two ounces, san pingle them together, and give the Horfe every day in the morning a quart thereof luke-warm, until all he spent; and after every time he drinketh, let him be walked up and down in the dahe, or else abroad if the weather be warm, and not windy, and let him neither eat nor drink in two hours after, and let him drink no cold water, but luke-warm, the space of fifteen days, and let him be sed by little and little, with such meat as the Horse hath most appetite unto. But if the Horse be nesh and tender, and so wax lean without any apparent grief or disease, then the old Writers would have him to be fed now and then with parched Wheat, and also to drink Wine with his water, and eat continually Wheat-bran mingled with his provender, until he wax strong; and he must be often dressed and trimmed, and ly soft, without the which things his meat will do him but little good. And his meat must be fine and clean, and given often and by little at once. Russian faith, that if a Horse eating his meat with good appetite, doth not forall that profeer, but is faith, that if a Horse eating his meat with good appetite, doth not forall that profeer, but is fill lean: then it is good to give him Sage, Savin, Bay-berries, Earth-nuts, and Roares greafe, to drink with Wine: or to give him the intrails of a Barbel or Tench, with white Wine. He saith also that sodden Beans mingled with Bran and Salt, will make a lean Horse sat in very shore

Of grief in the Breaft,

Blundevile.

Aurentius Ruffun writeth of a difeafe called in Imlian, Gravenza di petto, which hath not beenin experience amongst our Farniers, that I can learn. It comes, as Ruffus saith, of the superfluint of bloud, or other humors dissolved by some extream heat, and resorting down the break, paining the Horfe, fo as he cannot well go. The cure whereof according to Kuffing is thus: Let him bloud on both fides of the breaft in the accustomed veine, and rowel him under the breat, and twice a day turn the rowels with your hand, to move the humora that they may iffue forth, and let him go fo roweled the space of fifteen days,

Of the pain in the Heart called Anticop, that is to fay, contrary to the Heart.

"His proceedeth of abundance of ranck bloud bred with good feeding and overmuch refl: which bloud reforting to the inward parts doth, infocate the heats, and many simes cauleth fwellings to appear before the breef, which will grow upward to the neck, and then it killeth the Horse. The fignes: The Horse will hang down his head in the manger, for taking his men, and the roll of the horse will hang down his head in the manger, for taking his men, hould be to the week to be the head of the horse will hang down his head in the manger, for taking his men, hould be to the week to be the head of the his head in the manger, for taking his men, hould be to the week to be the head of the his head in the manger, for taking his men, hould be to the his head of the head of the his head of the head o and is not able to lift up his head. The cure according to Martin is thus: Let him blow on both fides abundantly in the plat veins, and then give him this drink : Take a quart of Malmen and put there are the state of the st fie, and put thereunto half a quartern of Sugar, and two ounces of Cinamon, and give it

Of she Horfe.

him luke-warm, then keep him warm in the \$25 to find him well about the to hach, that the wind offend him no manner of way; and give him warm water with that it always to think, and give him fuch meat as he will eat. And if the twelling do appear; then befides letting him bloud, firike the swelling in divers places with your fleam, that the corruption may go forth; and anoint the plate with warm Hogs grease, and that will either make it to wear away, or else to grow to a head, if it be Covered and kept warm.

Ecause we are in hand here with the vital parts, and that when the Horses be tired with overmuch labour, their vital spirits wax feeble, Tthink it beft to speak of them even here, not with long discouring, as Vegetim uleth; but briefly to show you how to refresh the poor Horse, having need thereof, which is done thiefly by giving him rest, warmin and good seeding as with warm mashes and plenty of provenden. And to give him the drink of Sheeps heads recited before in the Chapter of Consumption of the Aesh'; yea, and also to bath his legs with this bath : Take of me chapter of Communication of the nein; yea, and allo to bath his legs with this bath: Take of Mallows, of Sage, of each two or three handfuls, and of a Rofe-cake; with things together, and being boyled, then put untit it good quantity of Butter of Sallet-oil! Or elfethake him this tharge: Take of Bole Aemony; and of Wheat-flowire, of each half a pound, and a little Rozen bearth into powder, and a quart of firing Vinegar; and mingle them together, and cover all his legs therewith; and if it be Summer turn him to grafe:

Of the diseased parts under the Midriff, and first of the Stomach.

He old Authors make mention of many dileases incident to a Horses stomach, as loathing of meat, spewing up his drink, surfeting of provender, the hungry evil, and such like, which few of our Farriers have observed and therefore I will briefly speak of as many as I think necessary Blundrolle. to be known; and first of the loathing of meat.

Of the losthing of Mear.

A Horse may loath his meat through the intemperature of his stomach, as for that it is too hot or too cold. It his stomach be roo hot, then most commonly it will either instance his mouth and make it to break out in bristers, yea and pethaps cause some Cancker to breed there. The cure of all which things hath been taught before. But if he forsake his meat only for very heat, which you shall perceive by the hotness of his breath and mouth, then bool his stomach by giving him cold water, mingled with a little Vinegar and Oyt to drink, or essentially a feature and water all the mouth of Wine. Of seathing prints and make heat any and water all the mouth of Wine, of each one pinte, and put thereunto three ounces of Mel Roseum, and wash all his mouth with Vinegar and Salt. If his stomach be too cold, then his hair will stare and sand right up, which Abstraia and others were wont to cure, by giving the Horse good Wine and Oyl to drink, and some would sether in Wine Rew, or Sage; some would adde thereunto white Pepper and Myrrhe; some would give him Onyons and Rocket-feed to drink with Wine : Again, there be other fome which prefcribe the bloud of a young Sow with old Wine.

Ablirtur would have the Horle to eat the green blades of Wheat, if the time of the year will ferve for it. Columbia faith, that if a Horse, or any other Bealt, do loath his meat, it is good to give him Wine, and the seed of Gith; or else Wine and stampt Garlick.

Of casting out his Drink.

Tregeting faith, that the Horse may have such a Palsie proceeding of cold in his stomach, as he is not able to keep his drink, but many times to caft it out again at his mouth. The remedy whereof is to let him bloud in the neck, and to give him Cordial drinks, that is to fay, made of hot and comfortable Spices; and also to anoint all his Breast, and under his shoulders with hot Oyls, and to purge his head, by blowing up into his nostrils, powders that provoke neezing, such as have been taught you before.

Of Surfeting with glut of Provender.

The glut of provender or other meat not digested, doth cause a Horse to have great pain in his body, so as he is not able to stand on his seet, but lyeth down, and waltereth as though he had neck, then trot him up and down for the space of an hour; and if he cannot state, draw out his vard and wash it with a little white Wine luke-warm and thrust into his yard either a brusted close of Garlick, or else a little out of the more than the cannot state. Garlick or elfe a little oyl of Camomile, with a wax Candle. If he cannot dung then rake his fundament, and give him this Glyster: Take of Mallows two or three handfuls, and boil them in a pottle of fair running water; and when the Millows be fodden, then strain it, and put thereunto a quart of kesh Butter, and half a pinte of Oyl Olive; and having received this Glyster, lead him up and

down, untill he hath emptyed his belly, then fet him up, and keep him hungry the space of three or four days, and the hay that he eareth let it be sprinkled with water, and let him drink water, where in should be put a little Bran, and when he hath drunk, give him the Bran to eat, and give him little or no provender at all for the space of eight or ten days.

Of another kinds of Surfeting with meat or drink, called of its, Foundaring in the body.

Elundevile.

His disease is called of the old Writers in Greek, Critiblesis; in Latine, Hordesios, it cometh as they say, by eating of much provender suddenly after labour, whilest the Horse is hot and paniing whereby his meat not being digefled, breedeth evill humors, which by little and little dipred throughout his members, and at length do oppress all his body, and do clean take away his strength; and make him in such a case, as he can neither go inor bow his joynts, nor being laid, he is not able to tile again; neither can he stale, but with great pain, It may come also, as they say, of drinking too much in travelling by the way when the Horse is hot, but then it is not so dangerous, as when it cometh of eating too much.

But howfoever it cometh, they fay all, that the humors will immediately refort down into the Hories legs, and feet, and make him to calt his hoofs: and therefore I must needs judge it to be no other thing but a plain foundering; which word foundering is borrowed, as I take it, of the French word Fundu, that is to say, molten. For foundering is a melting or diffolution of humors, which the Italiant call Infusione. Martin maketh divers kindes of foundering, as the foundering of the body. which the French men call most commonly Morfunda; and foundering in the logs and feet; also soundering before and behinde, which some Authors do deny, as Magister Maurius, and Lauremius Russius, affirming that there are sewer humors behinde then before, and that they cannot easily be dissolved or molten, being so sar distant from the heart, and the other vital parts. Whereunto a man might answer, that the natural heat of the heart doth not cause dissolution of humors, hut some unnatural and accidental heat, fpred throughout all the members, which is dayly proved by good expenence. For we see Horses soundered not only before or behinde, but also of all four legs at once, which most commonly chanceth either by taking cold suddenly after a great heat; as by standing still upon some cold pavement, or abroad in the cold winde; or else perhaps the Horse travelling by the way, and being in a sweat, was suffered to stand in some gold water whilest he did drink, which was worse then his drinking : for in the mean time the cold entering at his feet, ascended upward, and congealed the humors which the hear before had dissolved, and thereby when he cometh once to reit, he waxeth stiffe and lame of his legs. But leaving to speak of soundering in the legs, as well before as behinde, untill we come to the griefs in the legs and feet; we intend to talk here only of soundering in the body, according to Mailing experience. The signes to know if a Horse be soundered in the body, be these. His hair will stare, and he will be chill, and shrug for cold, and forsake his mer. Bedsing down his best a superience. meat, hanging down his head, and quiver after cold water; and after two or three days he will begin to cough. The cure, according to Marin is thus : First, scour his belly with the Glyster last mentioned, and then give him a comfortable drink made in this fort : Take of Malmfie a quart, of Sugar half a quartern, of Honey half a quartern, of Cinnamon half an ounce, of Licoras and Anile feeds, of each two fpoonfuls, heaten into fine powder, which being put into the Malmfie, warm them together at the fire, fo as the Honey may be molten, and then give it him luke-warm : that done, walk him up and down in the warm stable the space of half an hour, and then let him stand on the bit two or three hours without meat; but let him be warm covered, and well littered; and give him Hay sprinkled with a little water, and clean sifted provender by a little at once; and let his water be warmed with a little ground Malt therein. And if you fee him fomewhat cheered, then let him bloud in the neck, and also persume him once a day with a little Frankincense; and use to walk him abroad, when the weather is fair and not windy, or else in the house, if the weather be foul: and by thus using him you shall quickly recover him.

of the Hungry Evill.

His is a very great defire to eat, following some great emptiness, or lack of meat, and it is called of the old Authors by the Greek name Buimos, which is as much to fay, as a great hunger proceeding, as the Physicians fay, at the first of some extream outward cold, taken by long travelling in cold barren places, and especially where Snow aboundeth, which outward cold causeth the for mach to be cold, and the inward powers to be feeble. The cure according to Abstrus and Historian eles, is in the beginning to comfort the Horses stomach, by giving him Bread sopt in Wine. And if you be in a place of rest, to give him Wheat-slowre and Wine to drink; or to make him Cakes or Bals of Flowre and Wine kneaded together, and to feed him with that; or with Wine and Nuts of Pine trees. Hierocles faith, if any fuch thing chance by the way whereas no flowre is to be had, then the Dall by he had the state of the way whereas no flowre is to be had, then the ball to had. it shall be best to give him Wine and earth wrought together, either to drink, or elfe to cat in

Of the Difeste in the Liver.

A Li the old Authors speak much of the pain in the liver, but none of them do declare whereof it cometh, or by what means, saving than Hippocrates faith, that some Horses get it by violent. running upon some stony or hard ground. If or my pare think that the liver of a Horse is subject to as many dueafes as the liver of a man, and therefore may be pained diverfly. As fometime by the intemperateness of the same, as for that it is pathaps too hot, or too cold, too moist, or too dry: sometimes by means of evill humors, as choler, or slegm abounding in the same, according as the liver is either hot or cold : for heat breedeth choler, and cold, flegm, by means of which intemperature proceedeth all the weakness of the liver. It may be pained also sometime by obstruction and flonging, and sometime by hard knobs, inflamation, Apostume, or Ulcer bred therein, sometime by Consumption of the substance thereof. The signes of heat and hot humors, be these; loathing of meat, great thirst, and looseness of belly, voiding dung of strong sent, and leanness of body. The fignes of cold, and cold humors be thefe: appetite to meat without thirft, a belly neither continually loofe nor tiprike, but between times, no ftrong fent of dung, nor leanness of hody, by which kinde of fignes, both first and last mentioned, and such like, the weakness and guief of the liver is alfo to be learned and fought out. Obstruction or stopping most commonly chanceth by travelling or labouring upon a full stomach, whereby the meat not being perfectly digested, breedeth gross and tough humors, which humors by vehemency of the labour, are also driven violently into the imall years, whereby the liver should receive good nutriment, and so breedeth obstruction and fromping. The fignes whereof in mans body is heaviness and distension, or swelling, with some grief in the right fide under the short ribs, and especially when he laboureth immediately after meat, which things I believe if it were diligently observed, were easie enough to finde in a Horse, by his heavy going at his fetting forth, and often turning his head to the fide grieved; Of an old obstruction, and especially if the humors be cholerick, breedeth many times a hard knob on the liver, salled of the Physicians Schirrus, which in mans body may be felt, if the body be not over fat : and it is more easie for him to ly on the right side than on the left, because that lying on the left side, the weight of the knob would oppress the stomach and vital parts very fore, by which signes methinks a diligent Farrier may learn, whether a Horse hath any such dilease or not. The inflamation of the liver cometh by means that the bloud either through the abundance, thinnels, boyling hear, or flagports thereof; or elfe through the violence of fome outward cause, breaketh out of the veines and floweth into the body of the liver, and there being out of his proper veffels doth immediately putrific and is inflamed, and therewith corrupteth fo much fleshy substance of the liver as is imbrewed withall; and therefore for the most part, the hollow lide of the liver is confumed , yea, and sometime

This hot bloudy matter then is properly called an Inflamation, which by natural heat is afterward turned into a plain corruption, and then it is called an Impostume, which if it break out and run, then it is called an Ulcer, or filthy fore; Thus you fee, of one evilt sountain may fpring divers griefs, requiring divers cures. And though none of mine Authors, nor any other farrier that I know have waded thus far, yet I thought good by writing thus much, to give such farriers as he wife, discreet and diligent, occasion to seek for more knowledge and understanding them is staught them; and me thinks that it is a great shame, that the Farriers of this age should not know much more than the Farriers of old time, fith that besides that the old mone knowledge is not hidden from them, they have also their own experience ; and time also bringeth every day new things to light. But now to proceed in discoursing of the liver according to the Physitians doctrine as I have begun ; I say then of an inflamation in the hollow side of the liver, the signes be these : loathing of repat, great thirst, loofeness of belly, easie lying on the right side, and painful lying on the lest. Butist the inflamation be on the full fide or fwelling fide of the liver, then the patient is troubled with difficulty of breathing, with a dry cough and grievous pain, pulling and twitching the winds pipe, and to ly upon the right fide is more painful than the left, and the swelling may be felt with a mane hand. But you must understand by the way, that all these things last mentioned be the signes of some great inflamation, for small inflamations have no such signes, but are to be judged only by grief under obe hort ribs and fetching of the breath.

The fignes of Apostumation is painful and great heat. The fignes of Ulcerations is decrease of the hear with feebleness and fainting. For the filthy matter flowing abroad with evill vapours acerupteth the heart, and many times causeth death. The signes of the Consumption of the liver, fall bedeclared in the next Chapter; and as for the curing of all other difeafes before mentioned, springer multiful teach it ere I can write it. Notwithstanding, I cannot think but that such things as are good to heal the like diseases in Mans body, are also good for a Horse; for his lives in liber in sublance and shape to a mangiliver, differing in nothing but only, in greatings, and therefore I would with you to learn at the Physicians bands, who I am lives first, as touching the weakests as the liver, proceeding of the untemperatures the liver, proceeding of the untemperatures class his contrary; that is to say, heat by gold, and drawely by molface; and becomes y they therefore it shall be very necessary for you to learn the qualities, natures; and greaters of heaths, drugs, and all other simples and how to apply them in time. And for to heat the observations drugs, and all other simples, and how to apply them in time. And for to heat the obstruction of the liver, they will counsel you perhaps to make the Forse drinks of hish simples as these

be, Agrimony, Fumitory, Camomile, Wormwood, Licoras, Anife seeds, Smallage, Parsly, be, Agriniony, Juniory, Candide, Sperage, Lupines, the vertues whereof you shall learn in the Herbals: but amongst all simples, there is none more praised than the liver of a Woolf beaten into powder, and mingled in any medicine that is made for any difeafe in the liver!

The cure of an inflamation conflitteth in letting bloud, and in bathing, or fomenting the fore place with fuch herbs and Oyls, as may mollifie and differie humors abroad, wherewith fome fimples that be aftringent would be always mingled : yea, and in all other medicines that be applied to the liver, for any manner of diseases. Simples that mollifie and disperse be these: Linseed Re. nigreek, Camomile, Anife feeds, Melliot; and fuch like things. Simples aftringent be these: Red Rose leaves, Bramble leaves, Wormwood, Plantain, Myrrhe, Mastick, Stirax, and such like. Apostumes are to be ripened and voided. Ulcers must be cleanfed, and scowred downward, either by the belly, or by urine : and therefore the use of such simples as provoke urine in such case is necessary. The old Writers of Horse-leech-crast do say, that when a Horse is grieved in his liver, he will forfake his meat, and his body will waste; his mouth will be dry, his tongue rough and harsh: yea. and it will smell, and he will refuse to ly on that side where his grief is. The cure whereof according to Abstract is in this fort: Let him drink stampt Ireos with Wine allayed with water. He praise also an herb much like unto Calamint; called of Pliny, Polymoria; or let him drink Savory with Wine and Oyl. I think that Agrimony or Liver-wort is as good as the best of them. Abbrus would have his body to be chafed with Wine and Oyl mixt together; and to be well littered that he may ly foft: and his provender that should be given him to be steeped first in warm water; and now and then some Nirum to be put into his drink.

of the Consumption in the Liver.

Believe that no inward member of a Horse doth suffer so much as the lungs and liver, and that not so much by continual, as by unordinate, and untimely travail, labour, and exercise, whereby either the Horses lungs, or his liver do most commonly perish, and is consumed : yea, and some time both. Of the Consumption of the lungs, we have talked sufficiently before : therefore let us shew you here the causes whereof the Consumption of the liver proceedeth. The Physitians fay, that it may come of any humor, but chiefly and most commonly of cholerick matter; shed throughout the substance of the liver, which purifying by little and little, and leisurely, doth at length corrupt and perish all the substance of the liver, which thing in mans body doth sink proteed, as the Physicians say, either by eating corrupt meats, or elfe by continual drinking of

But me thinks that the Consumption of a Horses liver, should come by some extreme heat; inflaming the bloud, which afterward being putrified, doth corrupt and exulcerate the substance of the liver. For after inflamation, as I said before, cometh Apostumation, and Bxulceration, which is very hard to cure, because the substance of the liver is spongeous like unto the lungs. And whilelt the liver is so corrupted, there can be no good digestion, for lack whereof the body receiveth no good nutriment; and therefore must needs also languish and consume. The signes according to Man-

The Horse will forsake his meat, and will stand stretching himself in length, and never cover to ly down; and his breath will be fo strong, as no man can abide it, and he will continually call yellowish matter at the one nostril, or else at both, according as one or both sides of the liver's corrupted; and on that side that be casteth most, he will have under his jaw, even about the might thereof, a knob or kernel as much as a Walnut, which when Martin findeth, he committeeth his carkase to the Crows, taking him to be past cure. But if he were let bloud in time, and had such drinks given him, as are good to comfort and ftrengthen the liver, he thinketh that the Horse might be recovered. I never read any medicine for the wasting of the liver, as I remember, but the only diet, which I found in an old English Book. Let him drink for the space of three days no other thing but warm wort; and let him eat no other meat but Oats baked in an Oven, and let him fland meatless the first night before you give him the wort : But I think it were not amis to put into the wort that he drinketh every morning some good confection of powder made of Agrimony, red Rose leaves, Saccharum, Rosaceum, Diarchadon, Abbatia, Diasantalon, Licoras, and of the liver of a Wolf, and such other simples as do comfort and strengthen the liver; or else to give him the same things with Goats milk luke-warm.

Of the difeafes in the Gall.

IN my opinion the gall of a Horse is subject to divers diseases, as well as the gall of a Man, to obstruction, whereof cometi the fulness and emptiness of the bladder, and likewise the fundament in the gall. But obstruction may chance two manner of ways: First, when the way; wherey che choler should proceed from the liver unto the bladder of the gall as unto his receptacle, is his ped, and thereby the bladder remaineth empty, whereof may spring divers evill accidents: and mitting, the Lax or Bloudy flix. Secondly, when the way whereby fuch choler flould iffue forth of the bladder of the gall down into the guts is flut up, whereby the bladder is over full and shound eth with two much choler, which causeth heaviness, suffocation; belching, heat, thirst, and disposition to angryness. The fignes of both kindes of obstruction in the gall is costiveness and yellowithness of skin infected with the yellow Jaundise. The stone in the gall, which is somewhat blackish, oroceedeth of the obaruction of the conduits of the bladder, whereby the choler being long kept in. waxeth dry, and turneth at length to hard gravel or stones, whereof because there is neither figures nor any grievous accident known to the Physicians, I leave to talk any farther thereof, and the nor any bothat none of mine Authors do make any mention of the gall at all. Notwithstanding

Of the Horfe.

rather to the learned Farriers; and that they may the better understand the inward parts of a Horse; I thought good to write thus much, thinking it no time lost while I may prost them any way. of the difeases in the Spletni

He Spleen, as I have faid before in many places, is the receptacle of melancholy, and of the dregs of bloud, and is subject to the like diseases that the Liver's, that is to say; to swelling. obliruction, hard knobs, and inflamation, for the fubftance of the Spleen is foongeous, and thereoblitution, naraknoos, and innamation, for the inditance of the speech is pongeous, and to receive appear to luck in all filth, and to dilate it felf; wherefore being full it must needs swell, which will appear in the left fide under the short ribs; and such swelling cancet has so streath, and the speech when the body doth labour or travel. It is painful also to ly on the right side, because the spleen being swoln so oppresses the midriste, and especially when the stomach is full of mear, and the patient bath worse digestion then appetite, and is troubled with mich winde, both upward and downward. Moreover the vapour of the humor doth offend the heart, making it faint, and causeth all the body to be heavy and dull; and if such swelling be suffered to go uncured, then if it he a melancholy humor, and abounding over-much, it waxeth every day thicker and thicker, cauffing obliquation not only in the veills & arteries; which is to be perceived by heavine's and grief on the left fide, but also in the Spleen it felf; whereas by vertue of the heat it is hardhed every day more and more, and so by little and little waxeth to a hard knob, which doth not only occupy all the substance of the Spleen, but also many times all the left side of the womb, and thereby maketh the evill acci-

dents or griefs before recited much more than they were.

Now as touching the inflamation of the Spleen which chanceth very feldom? for for much as every inflamation proceedeth of pure bloud', which feldom entereth into the Soleen's I shall not need to make many words, but refer you over to the Chapter of the Liver, for in high case they differ not, but proceeding of like caute, have also like figures, and do require like cure. The old Writers fay, that Horles be often grieved with grief in the Spleen, and specially in Summer season with greedy eating of sweet green meats, and they tall those Flories Lienofor; that is to fay, Soleenetick. The fignes whereof (fay they) are these, hard fwelling on the left fide, short breath, often growing, and greedy appetite to meat. The remedy whereof according to Ablyttus is to make a Horse to freed once a day during a tertain time, by riding him, or otherwife travelling him, and to pour into his left nostrilevery day the juyce of Mirabolans mingled with Wine and Water, amounting in all to the quantity of a pinte. But me thinks it would do him thore good, if his drank it as Hierales would have him to do. Embeltus praifeth this drank. Take of Commin feed and of Honey, of each would have him to do. Embelim praifeth this drink: Take of Cummin leed and by Honey, of Each fix ounces, and of Laferpium as much as a Bean, of Vinegar a pinte; and put all these mothite quarty of water, and let it stand so all night, and the next morning give the Horse thereof to drink; being hept over night sasting. The minesture praiseth the detoction of Capers, especially if the back of the root thereof niny be gotten sodden in water to a styring. Or else make him a drink of Garlick? William, Horsebound, and Wormwood, sodden in harsh Wine: Bad the would have the less side to be bathed in water, and to be hard subbed! And if all this will not help? then to give him the fire, which abspring doth not allow, saying the Spicen lyeth so, as it sannot easily be fired, to do him any good. But for so much as the Liver and Spicen are members much occupied in the ingendring and separating of humore than will accident and where do take their strukking.

to do him any good. But for for much as the Liver and Spleen tyen to as it cannot carny or need in the ingendring and leparating of humors; hany evill accidents and griefs do take their first being and leparating of humors; hany evill accidents and griefs do take their first being and leparating of humors; hany evill accidents and griefs do take their first being and leparating of humors; hany evill accidents and griefs do take their first being and leparating of the first we will fine the first with the body, called of their Cachexid, and the Drophie. But first we will fine to the first late their Cachexid, and the Drophie. But first we will fine to the first late of the or velocity. I have a solution of the first late of the l

that I can learn. And yet the old Writers of Horfe-leech-craft, do feem to make two kindes of that I can learn. All yet the waster, that is to fay, the dry choler, and also the moist choler. The signes of the dry choler, as absyring faith, is great heat in the body, and costiyeness of the belly, whereofitie faid to be dry. Moreover, the Horse will not covet to ly down, because he is so pained in his body

and his mouth will be hot and dry.

It cometh, as he faith, by obstruction of the conduit, whereby the choler should refort into the bladder of the gall, and by obstruction also of the urine vessels, so as he cannot stale. The cureac-cording to his experience, is to give him a Glyster made of Oyl, Water and Naturn, and to give him no provender, before that you have raked his fundament, and to pour the decoction of Mallows mingled with sweet Wine into his nostrils, and let his meat be grass, or else sweet Hay sprinkled with Nitre and Water; and he must rest from labour, and be often rubbed. Hierocles would have him to drink the decoction of wilde Coleworts fodden in Wine. Again of the moist choler of Jaunnim to arink the decotion of the Horses eyes will look yellow, and his nostrils will open wide; his eare and his flancks will lweat, and his stale will be yellow and cholerick; and he will grone when he lyeth down; which difease the said Absirtus was wont to heal, as he saith, by giving the Horse a drink made of Thyme and Cumin, of each like quantity stampt together, and mingled with Wine, Honey. and Water, and also by letting him bloud in the pasterns. This last difease seemeth to differ nothing at all from that which our Farriers call the Yellows. The fignes whereof, according to Martin, be these: The Horse will be faint, and sweat as he standeth in the stable, and forsake his meat: and his eyes, and the infide of his lips and all his mouth within will be yellow. The cure whereof according to him is in this fort: Let him bloud in the neck-vein, a good quantity, and then give him this drink: Take of white Wine, of Ale a quart, and put thereunto of Saffron, Turmerick of each fialf an ounce, and the juyce that is wrung out of a handful of Celandine, and being luke-warm. give it the Horse to drink, and keep him warm the space of three or four days, giving him warm wa ter with a little Bran in it.

of the Tellows.

Markham.

He Yellows is a general disease in Horses, and differ nothing from the yellow Jaundise in men: It is mortal, and many Horses die, thereof: the signes to know it is thus; pull down the lide of the Horses eyes, and the white of the eye will be yellow, the inside of his lips will be vellow, and gums, the cure followeth: First, let him bloud in the palat of his mouth, that he may suck up the lame, then give him this drink: Take of firong Alea quart, of the green ordure of Geefe firained three or four spoonfuls, of the juyce of Celandine as much, of Saffron half an ounce; mixtheletogether, and being warm, give it the Honle to drink:

of the evil habit of the Body, and of the Droplice

Blundevile.

A S touching the drines and Confumption of the Hesh, without any apparent cause why, called of the Phylitians as I faid before Airophia; I know not what to fay more then I have already before in the Chapter of Confumption of the flesh, and therefore refort thicker. And as for the svill habit of the body, which is to be evil coloured, heavy, dull, and of no force, frength, nor livelinels, cometh not for lack of nutriment, but for lack of good nutriment, for that the bloud is corrupted with flegm, choler, or melancholy, proceeding either from the Spleen, or elle shrough weak-pels of the flomach or liver, causing evill digestion, or it may come by soul feeding: yea, and allo for lack of moderate exercise. The Evil habit of the body, is next coufen to the Dropfie, whereof though our Farriers have had no experience, yet because mine old Authors writing of Horse-letthcraft do speak much thereof: I think it good here briefly to shew you their experience therein, that is to fay, how to know it, and also how to cure it. But fith none of them do shew the cause whereof it proceeds; I think it meet first therefore to declare unto you the causes thereof, according to the doctrine of the learned Physicians, which in mans body do make three kindes of Droplies, calling the first Anglarca, the second Afener, and the third Timpanias. Analared, is an universal levelling of the body through the abundance of the water, lying betwixt the skin and the fiesh, and diffreth not from the dilease last mentioned, called Cachewia, that is to say, Evill habit of the bloud, saying that the body is more swoln in this then in Cachenia, albeit they proceed both of like causes as of coldness and weakness of the liver, or by means that the heart, spleen, stomach, and other members serving to digettion, be grieved or difeased. Assists is a swelling in the covering of the belly, called of the Physicians. Abdomen, comprehending both the skin, the fig., sight must be film or panicle saled Personness, through the abundance of some whayith humor entred into the same, which bedde in caules before alleadged, proceedeth most chiefly by means that fome of the vessels within be broke of rather cracked, out of the which though the blond being somewhat gross camps is forth, we the whayish humor being subtil, may run out into the belly, like water distilling through a crate ed not.

ed not.

Timpeniae, called of the commonwithe Timpeny, is a feeling of the aforesaid covering of the belly, through the abundance of windegnited into the same, which is ingeniesed of civily through the abundance of windegnited in the same, which is ingeniesed, or called and evil digettion, and whileft it aboundeth in the storage, or other intrails suding so life on it breaketh in violently through the small conduits among the passicles of the aforesaid covering

not without great pain to the patient, and so by toffing to and fro, winderhat length into the space of the covering it felf. But furely fuch winde cannot be altogether void of moisture. Notwithstanding, the body swelleth not so much with this kinde of Dropsie as with the other

kinde called Afeites. The fignes of the Dropfie is shortness of breath, swelling of the body, evill colour, lothing of meat, and great defire to drink, especially in the Dropsie called Afeites, in which alfo the belly will found like a bottle half full of water : but in the Timpany it will found like a Taber. But now though mine Authors make not fo many kindes of Dropfies, yet they fay all generally, that a Horse is much subject to the Dropsie. The signes according to Abstrus and Hierceles, be thefe: His belly, legs, and stones, will be swoln; but his back, buttocks, and slancks, will be dryed

and thrunk up to the very bones.

Moreover the veins of his face and temples, and also the veins under his tongue will be so hidden. as you cannot fee them; and if you thrust your finger hard against his body, you shall leave the orint thereof behinde, for the flesh lacking natural heat will not return again to his place, and when the Horse lyeth down he spreadeth himself abroad, not being able to lie round together on his belly; and the hair of his back by rubbing will fall away. Pelagonius in shewing the fignes of the Dropsie, not much differing from the Physitians first recited, seemeth to make two kindes thereof, calling the one the Timpany, which for difference fake may be called in English the Winde Dropsie, and the other the Water Dropsie. Notwithstanding both have one cure, so far as I can perceive, which is in this fort : Let him be warm covered, and walked a good while together in the Sun to provoke sweat, and let all his body be well and often rubbed alongst the hair, and let him feed upon Coleworts, Smallage, and Elming boughs, and on all other things that may loofen the belly, or provoke urine; and let his common meat be grass if it may be gotten, if not, then Hay sprinkled with Water and Nitrum. It is good also to give him a kinde of Pulse called Cich, steeped a day and a night in water, and then taken out, and laid fo as the water may drop away from it. Pelagonius would have him to drink Parsly stampt with Wine, or the root of the herb called in Latine, Panax, with Wine. But if the swelling of the belly will not decrease for all this, then slit a little hole under his belly a handful behinde the navil, and put into that hole a hollow reed or some other pipe, that the water or winde may go out, not all at once, but by little and little at divers times, and beware that you make not the hole over wide, lest the kall of the belly fall down thereunto; and when all the water is clean run out, then heal up the wound as you do all other wounds, and let the Horse drink as little as is possible.

Of the Evil habit of the Stomach.

TF your Horse either by inward sickness, or by present surfeit, grow to a loath of his meat, or Markbam. by weakness of his stomach east up his meat and drink; this shall be the cure for the same; First, in all the drink he drinks, let him have the powder of hot Spices; as namely, of Ginger, Anife feeds, Licoras, Cinamon, and Pepper; then blow up into his nostrils the powder of Tobacco to occasion him to seefe, instantly after he hath eaten any mear, for an hour together after. let one stand by him, and hold at his nose a piece of sowre leaven steeps in Vinegar, then anoint all his breast over with the Oyl of Ginnuper and Pepper mixt together.

Of the diseases of the Guss of a Horse, and first of the Colick.

He guts of a Horse may be diseased with divers griefs, as with the Colick, with Costiveness, Blundevile. with the Lax, with the Bloudy flux and Worms. The Colick is a grievous pain in the great gut, called of the Physicians Colon, whereof this disease taketh his name, which gut, because it is very large and ample, and full of corners, it is apt to receive divers matters, and so becometh subect to divers griefs. For sometime it is tormented with the abundance of gross humors gottern! betwitt the panicle of the faid gut, and fometime with winde having no iffue out, fometime with inflammation, and formetime with sharp fretting humors. But fo far as I can learn; a Horse is most commonly troubled with the Colick that cometh of winde, and therefore our Partiers do tearm it the winde Colick. The fignes whereof be thefe: The Horfe will forfake his meat, and lie down and wallow and walter upon the ground, and standing on his feet he will stamp for very pain with his fore-feet, and firike on his belly with his hinder foot, and look often towards his belly, which also towards his flancks will swell, and feem greater to the eye then it was wont to be. The cure whereof according to Martin, is in this fort: Take a quart of Malmile, of Cloves, Pepger, Gnamon, of each half an ounce, of Sugar half a quartern, and give it the Horfe luke-warm, and anoint his flancks with Oyl of Bay, and then bridle him and trot him immediately up and down the space of an hour, until he dung, and if he will not dung, then take him; and if need be provoke him to dung, by putting into his fundament an Onyon pilled and jagged with a knife croft-wile fo as the juycethereof may tickle his fundament; and for the space of three or sour days let him drink no cold water, and let him be kept warm. Rusius was wont to use this kinde of curter Take good big reed a span long or more, and being anointed with Oyl, thrust it into the Horses andament, fashning the outward end thereof unto his tail, so as it cannot slip out, and then having

B'undevile.

first anointed and chated all the Horses belly with some hot Oyl, cause him to be ridden hastily up first anomated and character and the tables will make him to void the winde out of his belly through and down some hilly ground, and that will make him to void the winde out of his belly through and down some many ground, and that warm and fed with good provender, and warm maftes the reed: which done, let him be kept warm and fed with good provender, and warm maftes the reca: which done, let thin de kept wall him drink no cold water until he be whole. Abstruction and Fennel feed, and let him drink no cold water until he be whole. Abstruction and the state of the made or vy neat-meat, and reinfer feet, and eof wilde Cowcumber, or elfe of Hens dung, Nitrum, and would have you to give him a Glyster made of wilde Cowcumber, or elfe of Hens dung, Nitrum, and strong Wine.

of Costiveness, or Belly-bound.

Offiveness is when a Horse is bound in the belly and cannot dung, which may come by glut of provender, or overmuch feeding and reft, whereof we have talked fufficient before, also by winde, gross humors, or cold causing obstruction, and stopping in the guts. The cure whereof, ac. winge, grois numore, or condensing of the decoction of Mallows a quart, and put thereunto half cording to Martin, is in this fort: Take of the decoction of Mallows a quart, and put thereunto half a pinte of Oyl, or in stead thereof, half a pinte of fresh Butter, and one ounce of Beneditte land. a pinte of Oys, or in the fundament with a little Horn meet for the purpose, that done, clap his sive, and pour that into his fundament with a little Horn meet for the purpose, that done, clap his tail to his fundament, holding it ftill with your hand, whilest another doth lead him in his hand, and to him up and down, that the medicine may work the better, and having voided all that in his belly, bring him unto the stable, and there let him stand a while on the bit well covered, and warm littered, and then give him a little Hay, and let his drink be warmed; it shall not be amis also to give him that night a warm math.

of the Lax.

He Italians call this difease Ragiatura, and the Horse that hath this difease Cavallo Arragiato, or Sforate. It may come through the abundance of cholerick humors descending from the liver or gall, down to the guts. But Ruffin faith, that it cometh most commonly by drinking overmuch cold water immediately after provender, or by fudden travelling upon a full ftomach, before his meat be digested, or by hasty running, or galloping immediately after water. If this disease continue long, it will make the Horse very weak and feeble, so as he shall not be able to stand on his legs. Notwithstanding, sith nature feeling her self oppressed, endevoureth thus to ease her self by expelling those humors that grieve her , I would not wish you suddenly to stop it , lest some worse inconvenience grow thereof. But if you see that the Horse looseth his siesh, and war th more dull and feeble then he was wont to be; then give him this drink often experimented by Mertin, and that shall stop him? Take of Bean-flowre, and of Bole Armony, of each a quartern, mingle these things together in a quart of red Wine, and give it him luke-warm, and let him ref and be kept warm, and let him drink no cold drink but luke-warm, and put therein a little Beanflowre, and let him not drink but once a day, and then not over-much, for the space of three or four days.

of the Bloudy flux.

T feemeth by the old Writers, that a Horse is also subject to the Bloudy flux. For Ablynus, Hinnels, and Democritus, say all with one voyce, that the guts of a Horse may be so exulcerated, that he will void bloudy matter at his fundament, yea and his fundament therewith will fall out, which diease they call Dyseneria, which is as much to say, as a painful exulceration of the guts, under the which the old men as it feemeth by the words of Hierocles, and Abstrius, would comprehend the difeste called of the Physicians Tenasmus, that is to say, a desire to dung often, and to do but little, and that with great pain: And also another disease called Pracidentia ani, that is to say, the falling out of the fundament, which the Physitians do account as several diseases. Notwithstanding, for so much as Dyfenteria, and Tenafmus, do spring both of like causes: yea, and also for that the falling out of the fundament hath some affinity with them, I will follow mine Authors, in joyning them all togther in this one chapter.

The Phylitians make divers kindes of Bloudy flux, for sometime the fat of the slimy fish which is voided, is fprinkled with a little bloud, formetime the matter that voideth is mixt with the firaping of the gues, and fomerime it is waterish bloud, like water wherein flesh hath been washed, and fometime bloud mixt with melancholy and fometime pure bloud, and by the mixture of the matter you shall know in mans body, whether the ulceration be in the inner small guts or no; if it be, the matter and bloud will be perfectly mixt together; but if it be in the outward guts, then they be not mingled together, but come out feveral, the bloud most commonly following the matter. this kinde is that disease called before Tenasmus, for that is an ulcer in the right gut serving the fundament; and doth proceed even as the flux doth of fome sharp humors, which being violent driven, and having to pass through many crooked and narrow ways, do cleave to the guis, and with their thannals for all the guis, and with their fharpnels fret them, caufing exulceration and grievous pain. The flux alfo may control of formatting and service of the s of some extream cold, heat or moistness, or by mean of receiving some violent purgation, having therein over-much Scammony, or such like violent simple; or through weakness of the Line, or other members ferving to digeftion. Now as conching the falling out of the fundament the Physisians say, that it cometh through the resolution or weakness of the muscles, serving

to draw up the fundament, which resolution may come partly by over-much straining, and partly they may be loofened by over-much moisture, for which cause children being full of moisture are more subject to this disease then men. And for the self same cause I think that Horses having very moit bodies be subject thereunto. Thus having shewed you the causes of the diseases before recited, I will shew you the cure prescribed by the old Writers. Absprius would have the fundament on the outside to be cut round about, but so as the inward ring thereof be not touched, for that were dangerous, and would kill the Horse, for so much as his fundament would never abide within his body; and that done, he would have you to give him to drink the powder of unripe Pomgranate shels, called in Latine, Malicorium, together with Wine and Water, which indeed because it is aftringent, is not to be misliked: but as for cutting of the fundament, I assure you I cannot judge what he should mean thereby, unless it be to widen the fundament, by giving it long flits or cuts on the outfide; but well I know that it may cause more pain, and greater inflamation. And therefore me thinks it were better in this case to follow the Physitians precepts, which is first to consider whether the fundament being fallen out be inflamed or not; for if it be not inflamed, then it shall be good to anoint ir first with Oyl of Roses somewhat warmed, or else to wash it with warm red Wine,

But if it be inflamed, then to bathe it well, first with a spunge dipt in the decoction of Mallows, Camomile, Linseed, and Fenigreek, and also to anoint it well with Oyl of Camomile and Dill mingled together, to affwage the fwelling, and then to thrust it in again fair and softly, with a fost linnen cloth. That done, it shall be good to bathe all the place about with red red Wine, wherein hath been sodden Acatium, Galles, Acorn cups, parings of Quinces, and such like simples as be astringent, and thento throw on some aftringent powder made of Bole Armony, Frankincense, Sanguin Draconie, Myrrhe, Acatium, and fuch like : yea, and alfo to give the Horse this drink, much praised of all the old Writers. Take of Saffron one ounce, of Myrrhe two ounces, of the herb called in Latine, Abrotonum, named in some of our English Herbals Southernwood, three ounces, of Parily one ounce, of garden Rue, otherwise called Herb Grace three ounces, of Piritheum, otherwise called of some people Spittlewort, and of Hylop, of each two ounces, of Caffe, which is like Cinamon, one ounce. Let all these things be beaten in fine powder, and then mingled with Chalk and strong Vinegar wrought into paste, of which paste make little cakes, and dry them in the shadow, and being dryed, distolve some of them in a sufficient quantity of Barly milk, or juyce called of the old Writers, and alfo of the Phylitians, Cremor Ptifane, and give to the Horse to drink thereof with a horn, for the medicine, as the Authors write, doth not only heal the Bloudy-flix, and the other two diseases before recited, but also if it be given with a quart of warm water, it will heal all grief and pain in the belly, and also of the bladder, that cometh for lack of staling. And being given with sweet Wine, it will heal the biting of any Serpent or mad Dog.

Of the Worms.

N a Horses gurs do breed three kindes of Worms, even as there doth in Mans body, though Blundeville. they be not altogether like in shape. The first long and round, even like to those that children do most commonly void, and are called by the general name Worms. The second little worms having great heads, and small long tails like a needle, and be called bots. The third be short and thick like theend of a mans little finger, and therefore be cald Troncheons: and though they have divers shapes according to the diversity of the place perhaps where they breed, or else according to the figure of the putrified matter whereby they breed: yet no doubt they proceed all of one cause, that is to fay, of a raw, gross and flegmatick matter apt to putrifaction, ingendered most commonly by foul feeding: and as they proceed of one felf cause, so also have they like signes, and like cure. The signes bethese: The Horse will forsake his meat, for the Troncheons and the Bots will covet always to the maw, and pain him fore. He will also lie down and wallow, and standing he will stamp and strike at his belly with his hinder-foot, and look often toward his belly.

The cure according to Martin is thus: Take of sweet Milk a quart, of Honey a quartern, and give it him luke-warm, and walk him up and down for the space of an hour, and so let him rest for that day, with as little meat or drink as may be, and fuffer him not to lie down. Then the next day gve him this drink : Take of Herb-grace a handful, of Sayin as much, and being well stampt, put thereunto a little Brimstone, and a little Soot of a Chimney, beaten into fine powder, and put all these things together in a quart of Wort or Ale, and there let them lie steep the space of an hour or two, then strain it well through a fair cloth, and give it the Horse to drink luke-warm, then bridle him, and walk him up and down the space of an hour: that done, bring him into the stable, and let him stand on the bit two or three hours, & then give him a little Hay. Lawrenium Russium saith, that it is good to give the Horse the warm guts of a young Hen with a Salt three days together in the morning and not to let him drink untill it be noon. Some say that it is good to ride him, having his bit firsh anointed with dung coming hot from the man: fome again use to give him a quantity of Brimtone, and half as much Rozen beaten into powder, and mingled together with his provender, which he must eat a good while before he drinketh.

I have found by often tryal, that if you give the Horse with a horn a good pretty dishful of Sale brine, be it fiesh brine, or Cheese brine, it will kill any of the three kindes of Worms, and make the Horse to avoid them dead in short time after.

of Worms in general.

Markham.

Besides the Bots, there are other Worms, which lie in the great paunch or belly of a Horse, and they be shining, of colour like a Snake, six inches in length, great in the midst and sharp at both ends, and as much as a Spindle: they cause great pain in a Horse belly, as you shall perceive the belly with his foor. The cure is thus. Give him by his continual striking of himself on the belly with his foot. The cure is thus: Give him two or by his continual triving of milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together, or chopt Hay in his provender, eithree mornings together new Milk and Garlick boyled together new Milk and Milk ther of both will ferve: it killeth the worms and maketh them to void.

of the pain in the Kidneys.

Blundevile.

TE thinks that the Kidnies of a Horse should be subject to as many griess as the Kidnies of a Man, as to Inflamation, Obstruction, Apostumes and Ulcers, and specially to obstruction that Cometh by means of fome stone or gravel gathered together in the Kidnies whereby the Horse cannot ftale but with pain; for I have feen divers Horses my self that have voided much gravel in their ftale, which without doubt did come from the Kidnies; but my Authors do refer fych griefs to the bladder and urine, and write of no difease but only of the inflamation of the Kidnies, which is called of them Nephritis, and so it is cald of the Physicians. It cometh, as they say, by some great frain over fome ditch; or elfe by bearing fome great burthen. The fignes whereof be thefe: The Horse will go rolling behinde and staggering, his stones will shrink up, and his stale will be blackish and thick. I think this disease different not from that which we called before the swaying of the back when we talked of the griefs in the back and loins, and therefore refort thither. The cure of this difease, according to the best of the old Writers, is in this fort: Bathe his back and loins with Wine, Oyl, and Nitrum warmed together, after that you have fo bathed him, let him be covered with warm clothes, and stand littered up to the belly with straw, fo as he may lie soft; and give him fuch drinks as may provoke urine, as those that be made with Dill, Fennil, Anise, Smallage, Parlley, Spikenard, Myrrhe, and Cassia. Some say it is good to give him a kinde of pulse called Cich with Wine. Some again do praise Ewes milk, or else Oyl and Deers sewet molten together, and given him to drink, or the root of the herb called Afphodelm, Englished by some Dastadil, sodden in Wine.

of the diseases belonging to the Bladder and Urine of a Horse.

I lerocles faith, that a Horse is subject to three kinde of diseases incident to the Bladder or Urine. the first is called Stranguria, the second Dysuria; the third Ischuria. Stranguria, otherwise called in Latine, Stillicidium, and of our old Farriers, according to the French name Chowdepie, is, whenthe Horse is provoked to stale often, and voideth nothing but a few drops, which cometh, as the Physitians fay, either through the sharpness of the urine, or by some exulceration of the bladder, or else by means of some Apostume in the liver or kidnies; which Apostume being broken, the matter reforteth down into the bladder, and with the sharpness thereof causeth a continual provocation of

Dyjuria is when a Horse cannot pile but with great labour and pain, which for difference sake I will call from hence forth the pain-pifs. It may come fometime through the weakness of the bladder and cold intemperature thereof, and sometime through the abundance of flegmatick and groß humors, stopping the neck of the bladder. Istburia, is when the Horse cannot piss at all, and therefore may be called the piss-supprest, or suppression of urine, whether you will: me thinks always that the shorter and the more proper the name is, the better and more easie it is to pronounce.

It may come, as the Physicians say, by weakness of the bladder, or for that the Water conduits ftopt with gross humors, or with matter descending from the liver or kidnies, or with the stone; yes and sometimes by means of some inflamation or hard knob growing at the mouth of the conduit of for that the sinews of the bladder is nummed, so as the bladder is without feeling: or it may come by retention, and long holding of the water, most of which causes Hierocles also reciteth, adding thereunto that it may chance to a Horfe through over-much rest and idleness, and also bymeans of some extream cold, and especially in Winter season; for the which, warmth of the fire is present remedy. But now mine Authors do not shew for every one of these three kindes of distales several fignes; but only fay, that when a Horfe cannot stale, he will stand as though he would stale, and thrus out his yard a little; and also for very pain, stand beating his tail betwixt his thighes.

Neither do they feem to appoint feveral cures, but do make a hochpoch, mingling them all togs ther: fome of them praising one thing, and some another: For some say it is good to mingle the juye of Leeks with sweet swelling Wine and Oyl together, and to pour it into his right nostril, and then the same of the same o walk him up and down upon it, and that will make him to stale. Some say it is good to give him Smallage feed, or elfe the root of wilde Fennil fodden with Wine to drink; or to put fine sharp On the standard of the root of wilde Fennil fodden with Wine to drink; or to put fine sharp On the standard of the root of wilde Fennil fodden with Wine to drink; or to put fine sharp On the standard of the root of wilder for the standard of the root of the standard of the standar ons clean pilled, and fomewhat bruifed into his fundament, and to chafe him immediately uponis, either by riding him or otherwife, and that shall cause him to state presently. It is goodally bathe all his back and lain with bathe all his back and loins with warm water.

The scraping of the inward parts of his own hoofs beaten into powder and mingled with Wines The fcraping of the inward parts of his own hoofs beaten into powder and mingled with Wine; and poured into his right nothing with which is considered into his right nothing with the considered into his right nothing with the considered into his right into fome Sheeps cot, or other place where Sheep are wont to him the first of the considered in the considered in the considered with the considered with provider in the considered with the considered with the considered in the considered with the consid many of the system of the follow here at hand; agreeing in all points with Laurentius Russian cure, which is in this fort: First, draw oubhis 22 to 32 and walk is well in white Wine, and scour it well, which is in this lott: First, draw outhing and with the well in white Wine, and scour it well, because it will be many times stopped with durt and other baggage together, and hardned like a song and there has a little Coulor of Sandist, with a wind Candid and a brushed song of Sandiste in the conduit, with a wind candid and a brushed song of Sandiste in the conduit of the condui and every day he would have you to give the Horfe Hogs due and deith with and Wine unit had

whole. The repart if it thought it thought it the World as a solve fail would be a the watershares of the feed and unfulfied of the feed and unfulfied of the watershares of the feed and unfulfinds of the World give him red when the odning a different world in the watershare are the world in a world and the watershare and the world and t I or over fat, he will many times pifs bloud, and the rather as I think, ally that fome vern is broken within the Horses body, and then cleer bloud will come forth many times, as the Physitians fav, without any pifs at all. But if the broud be perfectly mingled together with his stale. then it is a figne that it cometh from the Kidnies, having some thone therein, which through vehiment hipping doth free the kidnies and veins the reof, and to shall the bleed, through which while the principal state of the while the w firipe, or from the mulcles bas doctofes bothe fleck of the bladden. The cure according to Pelagnius, Ablytus, Hieroster, and the rest, is thus silet the Horse bloud in the palare of the niouth, to convert the bloud the contrary way; then take of Tragaganer had been deeped in Wine, half an ounce, and of Poppyifesdone dram and one fcruple, and of Surax as mucht and twelve Pine. apple-kernels; he all these things be besteld and mingled well together, and give the Horse thereof every morning, the space of seven days, the quantity of a Hafelding diffempered in a quart of Wine; me thinks that the quantity of a Wal-nut were too little for lo much Wine Some write that it is good to make him a drink with theroot of the herb Apphoditury which fome call Daffadil, mingled with Wheat, flowre and Somach fodden long in water, and forto be given the Hoyle with some Wine added therestato ; or make him a drink of Goassmith and Oyl; itraining theretinto a little Fromenty. Anglolius faith, that it isigood to give the Horse three days together, sodden Beans clean pilled, whereunto would be added some Deers Sewen and a attie Wine,

retain the leed until we be where the same and business is good that the same and all regions would have the flow the following the parts thereabouts, which be the feed vessels: that done to cover him warm that he take ho cold and every day he would have you to give the Horfe Hogs dung to drink with red Wine untill he be whole. I for my part, if I thought it cane af weaken as is aforesaid, which I would judge by the wateriffness of the feed and unlustiness of the Horse, would give him red Wine to drink, and put therein a lietle Againmithe juyee of Blancain, and a little Maltick; and bath his back with vel wine and Oyl of Rose mingled togesher.

On the brid rose

the Tard.

The Cometh, as I take it, through the weakness of sheathers building and the first building and the cometh, as I take it, through the weakness of sheathers building and b

mulcles and linews ferving the lame, naufed at the first (perhaps) by forme great first or fittie on the back. It may come also by wearingsand tiring, Mer remedy whereof, Aspens was Wootto waring the yard with falt water from the Sea, ible may be gotten ; and if noth with water and falt | and if that prevailed not, he would all to prick she outmost skin of the yard with histo needle, but not deep, and then with all the pricks with frong Winegar, and that did make the Horie, as health, to draw up his yard again immediately was, and this alfo will remedy the fulling out of the full mon.
Peleggiu, would have you to put into a the pipe of his yard Honey and Salv boyled to gettle and mide liquid, or alle a quick vision a grain of Eranking sufe, or a clove of Garlick clean pilled, and foreshed bruiled; and alio to pour on his back Will, Wine, Nicro made warm and mingled together. But Martin experience is in this fort : First; wash the yard with warm white Wine, and then inoin it with Oyl of Roles and Honey mingled together, and put it up into the Theath, and make him s Code piece of Canvas to keep it fillings and drefe it this every day once until it be whose. And many cale let his back be kept warm, either with a double oldth, or else with a charge made of bole Armony, Egges, Wheat-flowre, Sanguin Diaconin, Turpentine, and Vinegar; or else lay on a wet lack, which being covered with another dry cloth will keep his back very warm.

. Of the fuelling of the God and Stones.

A Library faith, that the inflamation and swelling of the cod and stones, cometh by means of one wound, or by the singing of some Serpent, or by sighting one Horse with another. For remember, where the work work to bathe the god with water wherein hath been sodden the roots of wife Cowcumber and Salt, and then to anoint it wish an Oincment mdo of Girufa Oyl; Goats getale, and the white of an Egge. Some again would have the codito be bathed in warm Water, Mirrimand Vinegar together, and also to be anointed with an Ointment made of Chalk or of Potters earth, Ore dung, Cumin, Water and Vinegar, or else to be anointed with the fuve of the herb Wilmin, alled of lone Night shade, or with the juyes of Hemiock growing on dunghils t yes, and also to be let bloud in the flanks. But Martin faith, that the swelling of the code someth for the most part after the flanks. But Martin faith, that the swelling of the code someth for the most part after the flanks. fome fickness or surfeting with cold, and then it is a figure of amendment. The cure according to his experience is in this fort. First let him bloud on both sides chestank voins. Then take of Oylos Roses, of Vinegar of each half a pinte, and half a quartern of Bole Armony beaten to powder. Mingle them together in a cruse, and being like-warm, anoint the cods therewith with two or three feathers bound together, and the next day ride him into the water, fo as his cods may be within the water, giving him two or three tuens therein, and so return sail and forthy to the hable, and whenhe is an anoint him again as before continuing thus to do every day once until they be whole. The faid Me tin faith alfo, the code may be willen by means of fone hurt or evill huttors reforting inforthered and then he would have you cover the dods with a charge made of Bole Armony and Vinega wrought together, renewing it every day onto until the swelling go away, or that it break of itel and it it break, then tent it with Mel Rosaum, and make him a breech of Canvas to keep it in, renewing the tent every day once untill it be whole

To feemeth by fome writers, that the womb of a Mare is fub left to certain difeates, though not To many as the womb of a Woman, as to afcent, deftent, falling out, Convullibre Barrenness, aborsement; year Aristotle and others do not let to write; that mentional bloud doth namely void from the Marei as from the Woman; though it be fo little in quantity, as it carnot be well perceived. But fith none of mine Authors have whitten thereof to any purpole, nor any Parier of this time that I know, have had any experience in fuel (matters) will paffe them all over with filence, faving barrennesse, whereof I promised before in his due place, to declare unto you the causes and such kind of sure for the fame, as the old writers have raught. A Mape then may be bir ren through the untemperateness of the womb or matrix, as welf for that it is too hor and flery or electoo cold and moin, or too day, or electoo short, or too narrow, or having the neck thereof turned awry, or by means of fome obstruction or stopping in the matrix; or for that the Mire is too fat, or too lean, and many times Mares go barren, for that they he not well Horied Wel, the cure of barrenness that comeditateough the fault of the matrix or womb according to the old writers is thus ; Take a good handful of Leeks famp them in a inorter with half a glaffe fill fewing, then put thereunto twelve Flies, called of the Apothecaries Canterides, of divers colours if they may, be gotten fithen ftrain all together with a fufficient quantity of water to ferre the Marribers with awo dayes together, by powring the fame into ber nature with a horn or glyfter pipe mateof purpose, and at the end of three dayes next following offer the Horse write her that should cover her; and immediately after that the is covered, wash her nature twice together with cold water. and immediately alteranae incis coveren, want het net de control de partofe.

Another receipt for the fame purpofe.

Ake of Nitrum, of Sparrows dung, and Turpentine, of each a like quantity well wrought together and madedike a Suppository, and put that into her nature, and it will cause her to delice the Horis, and also to conceive. Hipportates saith, that it is good also to put a nettle into the Horis; mounts that should cover her.

The first should cover her.

The first state of the sait, and state of the sait, and sail, and sail,

Blundévile.

TANSpring time Horses many times are troubled with the Troncheons in their fundament, and then steer will rub their tail, and break the hair thereof, and yet in hie tail perhaps, shall be neither Isah, Scurffe nor Scab; wherefore if you rake the Horfe well with your hand anointed with Sope and fear ch for those Troncheons and pull them clean out, you shall cause him to leave rubbing sand if you fee that the hair do fall away it felf; then it is a fign, that it is either eaten with Words, or that there is some Scurffe or Scab fretting the hair, and causing such an itch in his tail as the Hore is alwayes rubbing the same. As touching the wormes, Scurffe or Scab, it shall be good to anomal the sail with Sope, and then to walk it clean even to the ground with strong lie, and charwill kill the Wormer, and make the hair to grow again. And if touch of the tail be worn away, it shall be needed so keep the tail continually wet with a fpunge dipt in fair water, and that will make the hair to grow very fait. But if the Horfes tail be mangy, then healthat like as you do the manginess of the mar before rehearled, Again, if there bread any Canker in the tail (which will confume both fiesh and bone, and as Lowentime Ruffum faith, make the joints to fall away one by one) it shall be good at Marker in faith to wash all his roll with tin faith, to wash all his tail with dana form, or strong water made in this fort: take of green Coppets of Allum, of each one pound, of white Copperas a quartern. Boyl of all these things together is three quarts of running water in a strong earthen pot, untill one half be consumed, and then will be consumed, and then will be consumed, and then will be consumed. a little of this water being made lukewarm, wash his tail with a little clout, or flax bound to the containing to the day of a little clout, or flax bound to the containing to the day of a little clout, or flax bound to the containing to the day of the little clout, or flax bound to the containing to the day of the little clout, or flax bound to the containing to the day of the little clout, or flax bound to the containing to the day of the little clout, or flax bound to the containing to the day of the little clout, or flax bound to the containing to the little clout, or flax bound to the containing to the little clout, or flax bound to the containing to the little clout, or flax bound to the containing to the little clout, or flax bound to the containing to the little clout, or flax bound to the containing to of a flick, continuing so to do every day once untill it be whole.

Of the Scal

He Scab is a foul scurffe in divers parts of a Horses body, and cometh of poverty or ill keeping, or many times by going amongst woods wherein they are infected with water boughs; it is most incident to old Horses, which will die thereof, and chiesty in the Spring time when the new bloud appears: the cure whereof I have spoken before.

How to know when a Horse halteth before in what part his erief it.

Bing now come to talke of the griefs in the shoulders, legs, hips, houghes, joynts and hoofs? Cauling the Horse most commonly to halt: I think it good first to shew you the way how to find in what part of his legs the Horse is grieved when he halteth either before or behind. And first you have to confider that if a Horse halteth before, it must be either in his shoulders, in his legs, or in his feet. If it be in his shoulders and new hurt, the Horse will not lift that leg, but trail it nigh the ground. If it be old hurt, he will cast that leg further from him in his going then the other, and if he beturned on the forefide, then he will halt to much the more. It a Horse halteth in the leg. it is either in the knee, in the shank, or else in the pastern joynt; if it be either in the knee, or pastern joynt, he will not bow that leg in his going like the other, but go very stiffy upon it. If he halteth in the shank, then it is by means of some splent, wind gal, or such apparent grief, apt to be seen or felt. If he halt in the foot, it is either in the cronet, heel, in the toe, in the quarters, or fole of the foot. If it be in the cronet, the grief will be apparent, the skin being broken or swollen some manner of way. If in the heel, as by over-reach, or otherwise, then he will tread most on the toe. If upon any of the quarters, then going on the edge of a bank or hilly ground, he will halt more then on the plain ground, and by the Horses coming toward you, and going from you upon such edge or bank, you hall easily perceive whether his grief be in the inward quarter or in the outward quarter ; the quarter is to be understood, from the mid hoof to the heel.

If he halt in the toe, which is not commonly feen, then he will tread more upon the heel. If the grief be in the fole of the foot, then he will halt all after one fort upon any ground, unleffe it be upon the stones. And to be sure in what part of the foot the grief is, it shall be good first to make him go upon the plain ground, and then upon a hard and stony ground : yea, and also a bankie ground. Thus having declared unto you in general, how to know in what part a Horse is grieved when he halteth before . I think it meet first to shew you orderly all the particular griefs and forances, whereunto the foreparts of a Horse is subject, together with the causes, signes and cure thereof. That done, I will speak of halting behind, and shew you first generally where the grief is, and then particularly declare unto you every grief incident to the hinder parts of a Horse. And lastly, I will ipeak of fuch griefs and forances as are commonly in both parts, that is to fay, as well to the fore legs and fore feet, as to the hinder legs and hinder feet.

Of the grief and pinching in the shoulder.

THis cometh either by labouring and straining the Horse too young, or else by some great burthen; you shall perceive it by the narrowness of the breast, and by confuming flesh of the shoulders, insomuch as the forepart of the shoulder bone will Rick out, and be a great deal higher then the field. And if it be of long continuance, he will be very hollow in the brisket towards the armeholes, and he will go wider beneach at the feet, then above at the knees. The cure, according to Manin, is thus. Give him a flit of an inch long with a sharp knife or rasor upon both sides an inch under the shoulder bones: then with a Swans quill put into the slit, blow up first the one shoulder, and then the other, as big as can possible, even up to the withers, and with your hand strike the windeequally into every place of the shoulders. And when they be full, then beat all the windy places with a good hasell wand, or with both your hands, clapping upon the places puffed the wind, wind so fast as they can walk one after another over all the shoulder; then with a flat slice of iron. loolen the skin within from the fleth; that done, roll the two flits or cuts with two round rols made of the upper leather of an old thooe, with a hole in the middelt that the matter may iffue forth, and let fuch role be three inches broad, and to put in as they may lie plain and flat within the tut? Titleh make a charge to lay upon the same in this fore; Take of Ritch; and Rosen! of earth time pouled! Tar half a pinte, boyl thefe things all together in a pot, and when it is followide the cooled, take a fick with a woollen clout bound fait to the end thereof, and dip it into this that ye and tover and did an the choulder therewith. I take done, clap the end to pound are field by the field of or a righ unto the fame as may be, every other day clearly both the wolness and folly, and folly of the file wolness and folly and folly of the fine as the state of the file wolness and folly of the wounds with two dents of Place dip in The precapets, and biggs state whole the file of the wounds with two dents of Place dip in The precapets, and biggs state whole the fill will lift fall sway off it fame every day once, until the wounds be whole fills while the fill will lift fall sway off it fell, and terms the foregrounds be antilly chick had a frequency of the fill will lift fall sway of the fill, and terms the foregrounds be antilly chick had a frequency of the fill will lift fall sway of the fill while the fill of the fill will be the fill of the fill will be the fill of t

of the wrinching of the Shoulder.

The History of Four-footed Beasts.

His cometh sometime by a fall, and sometime by turning too suddenly in some uneven ground. or by rash running out of some door, or by some stripe of another Horse, or by some studen ftop in passing a Career: you shall perceive it in his going, by trailing his legs upon the ground top in paining a Career, you man possible. The cure, according to Martin, is thus: Let him blood fo close unto himself as he can possible. the quantity of three pintes, on the breaft in the palat-vein, receiving the bloud in a por; and the quantity of three parts of itrong Vinegar, and half a dozen broken Egges, shels and all, and so much Wheat-flowre as will thicken all that liquor. That done, put thereunto Bole Armony beaten much vyheat-nowle as with thickening the many beaten into fine powder one pound, Sanguin Draconin two ounces, and mingle them all together, so as the flowre may not be perceived, and if it be too stiffe, you may make it more liquid or soft, with a little Nowre may not be perceived, and all the shoulder from the mane downward, and betwirt the fore-bowels, all against the hair, and let not the Horse depart out of that place, until the charge be furely fastned unto the skin.

That done, carry him into the stable, and tie him up to the rack, and suffer him not to lie downall that day, and give him a little meat, dieting him moderately the space of fifteen days: during which time he may not stir out of his place, but only lie down, and every day once refresh the should der point with this charge, laying still new upon the old, and at the fifteen days end, lead him abroad to fee how he goeth, and if he be somewhat amended, then let him rest without travelling, the space of one month; and that shall bring his shoulder to perfection. But if he be never the better for this that is done, then it shall be needful to rowel him with a leather rowel upon the shoulder-point. and to keep him rowelled the space of sisteen days, renewing the rowel, and cleansing the wound every other day; and then walk him up and down fair and softly, and turn him always on the contrary fide to the fore; and when he goeth upright, pull out the rowel and heal the wound with a tent of flax dipt in Turpentine, and Hogs grease molten together. And if all this will not serve, then it shall be needful to draw him checker-wise with a hot iron over all the Shoulder-point; and also make him to draw in a plough every day two hours at the least, to settle his joynts for the space of three weeks or a month; and if any thing will help him, thefe two last remedies will help him, and make him to go upright again.

of Splaiting in the Shoulder.

His cometh by some dangerous sliding or slipping, whereby the shoulder parteth from the breast, and so leaves an open rift, not in the skin, but in the slesh and film next under the skin, and so he halteth and is not able to go; you shall perceive it by trailing his leg after him in his going. The cure according to Martin is thus: First put a pair of straight pasterns on his fore-seet, keeping him fill in the stable without disquieting him: Then take of Dialthea one pound, of Sallet Oyl one pinte, of Oyl-de-bays half a pound, of fresh Butter half a pound; melt all these things together in a Pipkin, and anoint the grieved place therewith, and also round about the inside of the shoulder, and within two or three days after, both that place and all the shoulder besides will swell. Then elther prick him with a lancet or fleam, in all the swelling places, or else with some other sharp hot Iron, the head whereof would be an inch long, to the intent that the corruption may run out, and use to anoint it still with the same Ointment. But if you see that it will not go away, but swell fill, and gather to a head, then lance it where the swelling doth gather most, and is soft under the finger, and then tent it with flax dipt in this Ointment : Take of Turpentine and of Hogs greafe, of each two ounces, and melt them together, renewing the tent twice a day untill it be whole.

Of the Shoulder pight. The next medicanting

Blundevile.

His is when the shoulder point or pitch of the shoulder is displaced, which grief is called of the spallato; and it cometh by reason of some great fall forward, rush or strain). The signer be thefe. That shoulder-point will stick out further then his fellow, and the Horse will halt right down. The cure according to Martin is thus : First make him to swim in a deep water up and down a dozen turns, and that shall make the joynt to return into his place. Then make two tough pins of Affiguity od as much as your little finger; tharp at the points, each one five inches long; that done, flittle skin an inch abyoe the point, and an inch beneath the point of the shoulder; and thrust in one of the first point of the skin. And if the print of the skin and inches the skin and inches the skin and inches the skin and inches the skin and it is one of the skin and it is one of the skin and it is print of wood will not pestly pass through, you may make it way in the without the skin. And it is print of wood will not pestly pass through, you may make it way in the within Iron pin. That done make other two holes took to the first blooks, so as the tooker pin may cross the first pin right in the midth with a right cross, and the first pin would be somewhat flat in the midth, to the intent that the other being round. May note the being round. other being round; may pair the hearst without the product the math, to the mean the piece of a little line, formewhat bigger then a whip-cord, and at one one of the pins ends, winder the piece of the pins ends, winder the pins ends and the skin, and faften the last end with a pack-needle and private threat unto the reft of the cord. thread unto the rest of the cord, so as it may not slip: and to do well, both the pricks and the cord would be first anointed with a little Hogs grease. Then bring him into the stable, and let him the the space of nine days, but let him lie down as little as may be, and put on a pastern on the fore leg, so as it may be bound with a cord unto the foot of the manger, to keep that leg always whilest he standeth in the stable more forward then the other. And at the nine days end take out the pricks, and anoint the fore places with a little Dialibea, or with Hogs greafe, and then turn him out to grafs.

Of the swelling of the Fore-legs after great labor.

Reat labour and heat causeth humors to refort down into the legs making them swell. The T cure whereof according to Martin is thus; Bathe them with buttered Beer, or elfe with this bath here following: Take of Mallows three handfuls, a Rose cake, Sage one handful: boil them together in a sufficient quantity of water, and when the Mallows be soft, put in half a pound of Butter, and half a pinte of Sallet Oyl, and then being somewhat warm, wash the swelling therewith every day once, the space of three or four days. And if the swelling will not go away with this; then take Wine lees, and Cumin, and boil themotogether and put thereunto a little Wheat-flowre, and charge all the swelling therewith, and walk him often ; and if it will not serve, then take up the great vein above the knee on the infide, fuffering him not to bleed from above, but all from bund that Fore-legs.

He cause of this grief is declared before in the Chapter of foundering in the body, whereas I shewed you, that if a Horse be soundered in the body, the humors will immediately resort down into his legs, as Martin faith, within the space of 24 hours, and then the Horse will go crouching all upon the hinder-legs, his fore-legs being to fliffe, as he is not able to bow them. The cure where-of, according to Martin, is in this fort: Carter each leg immediately one handful above the knee, with a lift good and hard, and then walk him or chafe him, and so put him in a heat, and being somewhat warmed, let him, bloud in, both the breast veins, referving the bloud to make a charge with-

all in this manner:

Take of that bloud two quarts, and of Wheat-flowre half a peck, and fix Egges, shels and all, of Bole Armony half a pound, of Sanguis Dragans half a quartern, and a quart of strong Vinegar; mingle them all together, and charge all his shoulders, breast, back, loyns, and fore-legs therewith, and then walk him upon some hard ground, sintering him not to stand sint; and when the tharge is dry, refresh it again. And having walked him three or some hours together, lead him into the stable, and give him a little warm water with ground Mault in it, and then a little Hay and provender, and then walk him again, either in the house, or else abroad, and continue thus the space of sour daws; and when all the charge is seen. Sower him and little have been deep the back in the source of sour daws; and when all the charge is seen. of four days, and when all the charge is spent, cover him well with a honsing cloth, and let him both stand and lie warm, and eat but little meat during the four days. But if you see that at four days end he mendeth not a whit, then it is a fignethat the humor lies in the foot; for the which you must fearch with your Butter, paring all the foles of the fore-feet to thin as you hall, fee the water issethrough the fole. That done, with your Butter, let him bloud at both the toes, and let him bleed well. Then hope the viria with a little Hogs grease, and then, tack on the shooss, and Turpentine molten together, and laid upon a little Hogs grease, and then tagether with Tow, to the intent it may be surely stope; Then fill both his feet with Hogs grease, and bran surel together in a stopping pan, so hope of the stopping. And upon the stopping class and bran surel clie two splents to keep the stopping. And immediately after this, take two Egges, beat them in a difficult of the stopping. And immediately after this, take two Egges, beat them in a difficult of the stopping. And suppose so much as will token the same, and make the stopping to the semination of the stopping. gle them well together, and make thereof two plainers, such as well thicken the same, and winningle them well together, and make thereof two plainers, such as may close each foot round shout, somewhat above the cronet, and binds is fall with a list or roller, that it may not fall away, not be removed for the space of three days, but let the sole be cleaned, and new stapped every day not, and the cronets to be removed syry two days, continuing so, to do untill the whole. Dating which time let him rest unwalked right for fear of loosening his hoofs. But if would that he begin to smend, you may walk him tain and softly onices day upon some soft ground, to exercise his less and set; and let him not eat much, nor drink told water. But if this fundering break out above the hoof, which you shall perceive by the loosens of the coffin, above by the cronet; then when you pare the sole. You must take all the fore part of the sole clean away leaving the lees whole. Jou pare the fole, you mult take all the fore-pars of the fole clean away, leaving the heels whole; to the intent the humors may have the freer pallage downward, and then stop him, and dreft him about the cronet as is before laid. The state of the s

OF all other forances, foundering is foonest got, and hardlyest cured: yet if it may be perceived in twenty four hours, and taken in hand by this means hereafter prescribed, it shall be cured in other twenty and four hours, notwithflandings, the fame, reseit hath cured a Horfe that hath been foundered a year and more, but then it was longer in bringing it to pais. Foundering confeits when a Horfe is heared, being in his greate and very fat, and taketh thereon a fadden cold whith thiseth down into his legs, and taketh away the us and feeling thereof. The figs to know it indies

Of the Horse.

Horse cannot go, but will stand cripling with all his four legs together; if you offer to turn him. Horie cannot go, but will train criping with an increase have I feen fit on their buttocks to the ground, and some Horses have I seen fit on their buttocks to

The cure is thus: Let him bloud of his two breast veins, of his two shackle veins, and of his The cure is thus: Let min blood the choofs; if the veins will bleed, take from them three pintes two veins above the cronets of his hinder hoofs; if the veins will bleed, take from them three pintes two veins above the cronets of his minden his neck vein, and take fo much from thence. Save the blood at leaft; if they will not bleed, then open his neck vein, and take fo much from thence. Save the blood at leaft; it they will not bleed, their open shed it grow into lumps; when he hath done bleeding, and let one fland by and fir it as he bleeds, left it grow into lumps; when he hath done bleeding, and let one mand by and the reas will thicken the blood, the whites of twenty Egges, and three or four take as much Wheat flowre as will thicken the blood, the whites of twenty Egges, and three or four take as much Wheat nowre as will till the the bloom, and a pinte of strong Vinegar, incorporate all yolks; then take a good quantity of Bolearminack, and a pinte of strong Vinegar, incorporate all these well together, and withal charge his back, neck, head, and ears; then take two long rags of thele wen together, and withal garter him fo strait as may be above both his knees of his forelegs; then let his keeper take him out to fome ftony causie, or high-way paved with ftone, his torciegs; then let his accept his accept, let him trot up and down for the space of an hour, or and there one following him with a codgel, let him trot up and down for the space of an hour, or and there one ionowing inthe up and give him fome meat; and for his drink, let him have a two, or more: that done, let him have a warm mash: fome three or four hours after this, take off his garters, and fet him in some pond of warm main : joine thite of and fo let him stand for two hours, then take him out and fet him up ; the water up to the line-line, and pare his feet very thin, and let him blood both of his heels and toes; next day pull off his shooes, and pare his feet very thin, and let him blood both of his heels and toes; next day pun on his thooes again, and ftop them with Hogs greafe and bran boiling hot, and splint them then fet on his shooes again, and not the shall be found up, and so turn him out to run, and he shall be found.

of the splent as well in the inside or outside of the knee, as other where in the Legs,

Blundevile.

312

This forance to any mans feeling, is a very griftle, formetime as big as a Walnut, and formetime no more then a Hafel-nut, which is called of the Italians, Spinella, and it cometh, as Laurential Ruffin faith, by travelling the Horfe too young, or by oppressing him with heavie burthens offending his tender finews, and fo caufeth him to hale. It is easie to know, because it is apparent to the eye, and if you pinch it with your thumb and finger, the Horse will thinkup

The cure whereof, according to Martin, isin this fort : Wash it well in warm water, and shave off the hair, and lightly scarifie all the fore places with the point of a rasor, so as the blood may issue forth. Then take of Cantharides halfa spoonful, and of Eusorbium as much, beaten into fine powder, and mingle them together with a spoonful of Oyl-de-bay, and then mele them ha little pan, flirring them well rogether, so as that they may not boil over, and being so boiled hot, take two or three feathers; and anoint all the fore place therewith. That Hone, let not the Horfe fir from the place where you so dresse him for one hour after, to the intent he shake not off the ointment. Then carry him fair and foftly into the stable, and tie him as he may not reach with his head beneath the manger, for otherwise he will cover to bite away the smarting and pricking medicine, which if it should touch his lips, would quickly fetch off the skin. And also let him stand without litter all that day and night. The next day anoint the fore place with fresh butter, continuing so to do every day once for the space of nine dayes, for this shall allay this heat of the medicine, and cause both that, and the crust to fall away of it self, and therewith either clean take away the splent, of at least remove it out of the knee into the leg, and so much diminish it, as the Horse shall go right up, and halt no more through occasion thereof. Laurentius Russius would have the splent to be exceed knifting it least wife and Anathenia. splent to be cured by firing it longst wife and overthwart. I have feen the splent to be clean taken away thus: first having clipt away the hair growing upon the hard place, you must beat it with a good big stick of Hasel almost a foot long, in which stick somewhat distant from the one end thereof would be set fast a sharp prick of a little bit of steel, to prick the fore place therewish. once or twice to make the bloud iffue out, never leaving to beat it first fortly, and then harder and harder until it waxeth foft in every place to the feeling, and to thrust out the blood, partly with the flick, leaning on it with both your hands, and partly with your thumbs : that done, wind about the fore place with a piece of double red woollen cloth, holdingit fo asit may lie close thereunto; then fear it upon the cloth with the flat fide of your fearing iron, made hot; and not red hot, but so as it may not burn through the cloth; that done, take away the cloth, and lay up on the fore a piece of Shoomakers wax, made like a little cake, fo broad as is the foreplace and then fear that into his Legs with your fearing iron, until the wax be throughly moulten dryd, and funken into the fore: that done, fear another piece of wax in like manner into the fore, until it be dryed up, and then you may travel your Horse immediately upon it if you will, for he will not halt no more.

Splent is a forance of the least moment, unlesse it be on the knee, or else a through Splent both which cannot be cured. A Splent is a foundly hard griffle or bone, growing fall on the infide of the thin-bone of a Horfe, where a little making flark the finews compels a Horfe formulation of the flare of th to stumble. The cures are divers, and thus they be; If the Splent be young, tender, and but per

in breeding, then call the Horse, and take a spoonful of that Oyl called Petrolium, and with that Oyl rub the Splent till you make it fost; then take a fleam, such as you let a Horse bloud withal, and strike the Splent in two or three places, then with your two thumbs thruft it hard, and you shall see crush't matter and bloud come out, which is the very Solent : then set him up and let him rest, or run at grasse for a week or more. Others for a young Splent do thus; Take a Hasell stick and cut it square, and therewithal beat the Splent till it besoft, then take a blew cloth and lay upon the Splent, and take a Taylors pressing Iron madehot and rub it up and down upon the cloth over the Splent, and it shall take it clean away. But if the Splent be old and great, and grown to the perfection of hardness, then you must cast the Horse, and with a sharp knife slit down the Splent; then take Cantharides and Euforbium, of each like quantity, and boyl them in Oyl-de-bay, and with that fill up the flit, and renew it for three daves together, then take it away and anoint the place with Oyl-de-bay, Oyl of Roses or Tar: until it be whole.

Of a Malander

Malander is a kinde of Scab growing in the forme of lines, or strokes, overthwart the bent of Blundeville. A the knee, and hath long hairs with Aubborn roots, like the briftles of a Bore, which corrupteth and cankereth the flesh, like the roots of a childes scabbed head: and if it be great, it will make the Horse to go stiffe at the setting forth, and also to halt. This disease proceedeth sometime of corrupt bloud, but most commonly for lack of clean keeping, and good rubbing. The cure, according to Martin, is thus; First wash it well with warm water, then shave both hair and scab clean away, leaving nothing but the bare flesh, whereunto lay this Plaister: Take a spoonful of Sope, and as much of Lime, mingle them together, that it may be like paste, and spread as much on a clout as will cover the fore, and binde it fast on with a list, renewing it every day once the space of two or three dayes, and at the three dayes end, take away the Plaister and anoint the fore with Ovl of Roses made luke-warm, and that shall fetch away the crust-scurfe, bred by means of the Plaifler, which being taken away, wash the fore place well every day once with his own stale, or else with mans urine, and then immediately frow upon it the powder of burnt Oystershels, continuing thus to do every day once until it be whole.

Another of the Malander.

Malander is a peevish forance, and cometh of ill keeping, it is on the fore-legs, just on the Markhaill A inside, at the bending of the knee, it will make a Horse go stark, and stumble much. The cure is in this sort; Cast the Horse, and with some instrument pluck off the dry scab that will flick thereon, and rub it till it bleed, then take and bind it thereto for three days, in which space you shall see a white asker on the fore, then take that off and anoint it with Oyl of Roses or fresh Butter until it be throughly cured.

Of an upper Attains or over-reach upon the back sinem of the shapke, somewhat above the joynt.

He Italiane call this forance Attinito, which is a painful swelling of the master sinew, by means that the Horse doth sometimes over reach, and strike that sinew with the toe of his hinder-foot, which causeth him to halt. The signes be apparent by the swelling of the place, and by the Horses halting. The cure, according to Martin, is thus; Wash the place with warm water, and shave all the hair so far as the swelling goeth, and scarific every part of the fore place lightly with the point of a Rasor, that the bloud may issue forth. Then takeof Cambarides and of Euforbium, of each half an ounce, mingle them together with half a quarten of Sope, and with a flice spread some of this Ointment over all the fore, suffering him to rest there as you dreffe him for one half hour after, and then you may carry him into the stable, and there let him ftand without litter, and tyed as hath been faid before in the Chapter of the Spleen, and the next day dreffe him with the same Ointment once again, even as you did before. And the third day anoint the place with fresh Butter, continuing so to do the space of nine days, and at the nine dayes end, make him this bath; Take of Mallowes three handfuls, a Rose cake, of Sage a har dful; boyl them together in a sufficient quantity of water. And when the Mallowes be soft, put in half a pound of Butter, and half a pinte of Sallet Oyle; and then being somewhat warm, wash the fore place therewith every day once, the space of three or four dayes.

of 4 Nether taint.

The History of Four-footed Beasts.

Blundevile.

His is a little bladder full of jelly, much like unto a Wind-gal, not apparent to the eye, but to the feeling, growing in the midst of the pastern, fomewhat above the frush. It comesh by a strain, or else by some wrench, or by any other over-reach, and maketh the Horse to halt. The fignes be these; The neather-joynt toward the sewter-lock will be hot in feeling, and formewhat swollen. The cure, according to Martin, is in this fort; Tie him above the joynt with a list somewhat hard, and that will cause the bladder to appear to the eye. Then lance it with a sharp lift somewhat hard, and that will cause the shador to eppear to the eye. Then said after pointed knife, and thrust out all the jelly. That done, lay unto it the white of an Egge, and a little Salt beaten together, and laid upon flax or tow, and bind it fast unto the fore, renewing it once a day the space of four or five dayes, during which time let him rest, and then you may boldly labour him.

of an Attaint.

Markham.

N Attaint is a grief that cometh by an over-reach, as clapping one leg upon another, or by A forme other Horfes treading upon his heels. The cure is; Take a sharp knife and cut, out the over-reach, that is, if it be never to deep like a hole, cut it plain and smooth, how broad so ever you make it, then wash it with Beer and Salt, and lay to it Hogs grease, Wax, Turpentine, and Rosen of each like quantity, boyled and mingled together, and this will in few dayes heal him, be it never fo fore.

of an over-reach upon the beel.

→His is a cut, fo as the skin hangs down at the heel, made with the toe of the hinder foot, and is apparent to the eye, and it will cause the Horse somewhat to halt. The cure whereof, according to Martin, is thus; Cut away the skin that hangeth down, and bind a little flax dipt in the white of an Egge mingled with a little Bole-armony, renewing it every day once the space of three or four days, and that will heal it.

of false quarters.

"His is a rift fometime in the outfide, but most commonly in the inside of the hoos, because the infide is ever the weaker part, which fides are commonly called quarters, and thereof this forance taketh his name, and is called a false quarter; that is to fay, a crased or unfound quarter, which name indeed is borrowed of the Italians, calling it in their tongue, Fall quato. It cometh by evill shooing, and partly by evill paring. The fignes be these: The Horse will for the most part halt, and the rift will bleed, and is apparent to the eye. The cure, according to Martin, is thus; If the Horse halt, then pull off the shooe, and cut so much away on that side of the shooe where the grief is, as the shooe being immediately put on again, the rift may be uncovered. Then open the rift with a Rosenet or drawer, and fill the rift with a roll of Toe dipt in Turpentine, Wax, and Sheeps sewet molten, renewing it every day once until it be whole And the rift being closed in the top, draw him betwixt the hair and the hoof with a hot Iron overthwart that place, to the intent that the hoof may shoot all whole downward, and when the Horse goeth upright, ride him with no other shooe, until his hoof be throughly harded again.

Of halting behind, and where the grief is.

Blundevile.

The Horse halt behind, the grief must either be in the hip, in the stifle, in the hough, in the ham in the leg, in the neather joynt, pattern or foot. If he halt in the hip of a new hurt, the Horte will go fideling, and not follow fo well with that leg as with the other; but if it be old hurt, the fore hip will fhrink and be lower then the other. And is best seen, when he goeth up a bill, or upon the edge of some bank, so as the worst leg may go on the higher side, for then he will halt so much more, because it is painful unto him to go so unevenly wrinching his leg. If the grief be in the single then the Horse in his going will cast the slifle joyst outward, and the bone on the inside will be start the start of the source of the single will be start of the start of t bigger then the other. If the grief be in the hough, then it is by means of fome Spayen, a fome other hurt apparent to the eye. And the like may be faid of the ham, wherein may be seen the Selander, or such like apparent sorence, causing the Horse to halt. If the grid be either in the leg, pastern or foot, then you shall finde it by such figures as have been taged you before. And therefore let us now speak of those for ances that are properly incident to the hinder legs.

Of the String balt.

He String-halt is a disease that maketh a Horse twitch up his leg suddenly, and so halt much, it Markham. cometh lometimes naturally, and fometimes casually, by means of some great cold whereby the finews are strained: the best cure thereof, is to dig a pit in some dunghil, as deep as the Horse is high, and fer the Horse in, and cover him with warm dung, and so let him stand the space of two hours, then take him out and make him clean, and then bathe him all over with Train-ovl made warm, and it will help him.

Of a Horse that is hipped, or burs in the hips......

THe Horse is said to be hipt, when the hip-bone is removed out of his right place, which grief is called of the Italians, Mal del ancha. It cometh most commonly by some great stripe or strain, flipping, fliding or falling. The fignes be thefe: The Horse will halt, and in his going he will go fideling, and the fore hip will fall lower then the other, and the flesh in processe of time will consume clean away. And if it be suffered to run so long, it will never be restored unto his pristine estate. The best way, as Martin saith, to make him go upright, is to charge his hip and back with Pitch and Rolen molten together, and laid on warm, and then some flocks of his own colbur to be clapped upon the same, and so let him run to graffe untill he go upright. But the sore hip will never rise again fo high as the other. If the Horse be not hipped, but only butt in the hip, and that newly, then first take of the Oyl de-bay, of Dialthea, of Nerval, of Swines grease, melt them all together. flirring them continually until they be throughly mingled together, and anoint the fore place against the hair with this Ointment every day once, the space of a fortnight, and make the Ointment to fink well into the flesh, by holding a hot broad bar over the place anointed, weaving your hand to and to, until the Ointment be entred into the skin. And if at the fortnights end, you fee that the Horse amendeth no white for this, then flit a hole downward in his skin, and an inch beneath the hip-bone, making the hole so wide, as you may easily thrust in a rowel with your finger, and then with a little broad flice or iron, loosen the skin from the flesh above the bone, and round about the same, so broad as the rowel may lie flat and plain betwixe the skin and the flesh, which rowel would be made of foft Calves Leather, with a hole in the midft like a ring, having a threed tied unto, it, to pull it out when you would cleanfe the hole, and if the rowel be rolled about with flax fast tyed on, and anointed with the ointment under written, it will draw so much the more; and thrust in the rowel first double, and then spread it abroad with your finger. That done, tent it with a good long tent, of flax or tow dipt the little Turpentine and Hogs grease molten together and made warm, and cleanse the hole, and the rowel every day once, and also renew the tent every day for the space of a fortnight. And before you dreffe him, cause him every day to be led up and down a foot paces quarter of an hour, to make the humors come down, and at the fortnights end pull out the rowel, and heal up the wound with the same salve, making the cent every day lesser and lesser until it be whole. And so soon as it is whole, draw with a hot Iron croffe lines, of eight or nine inches long, right over the hip-houe, to as the rowelled place may be in the very midft thereof, and burn him no deeper, but to as the skin may look yellow, and then charge all that place, and over all his buttocks with this charge i Take of Pitch a pound, of Rosen half a pound, of Tar half a pinte; boyl them together, and then being good and warm, spread it on with a clout tyed in a riven flick, and then clap on a few, flocks of the Horses colour. And if it be in Summer, let the Horse run to grasse a while, for the more he travelleth at his own will, the better it is for him.

of stifting, and burts in the stifte.

The Horse is said to be stifled, when the stifling bone is removed from the place; but if it be not removed nor loosened, and yet the Horse halteth by means of some grief there, then we lay that the Horse is hurt in the stifle, and not stifled. The stifle cometh by mans of some blow, or lome great strain, slipping or sliding. The signes be these; If he be slifted , the one bone will stick out farther then the other, and is apparent to the eye. Martin would have you to cure the flifte, in, all points like unto the shoulder pight, faving that the pins need not be so long, because the shifting place is not so broad as the shoulder, and standing in the stable, let him have a pastern with a Ring on his fore-leg, and thereunto fasten a cord, which cord must go about his neck, and let it be so much strained as it was the shoulder. frained as it may bring his fore leg more forward then the other to keep the bone from flarting out. But fife Horfe be but hurg in the ftifle with some ftripe or frain, then the bone will not ftand oue. but perhaps the place may be swollen. The cure, according to Marting is thus; First anoint the place with the Ointment mentioned before, every day once the space of a fortnight; and if the Horse and mentioned before, every day once the space of a fortnight; and if the Horse and the state of the space of a fortnight; mend not with this, then rowel him with a hearen rowel, or elfe with a quill, and let the neather hole be somewhat before the fore place, and cleanse the hole every day, by turning the rowel, continuing fill to anoint the place with the Ointment aforesaid, and that will make him whole.

of foundering behind.

His haps most commonly when a Horse is very fat, and hath his greate moulten within him which is soon done with every little heat. You shall perceive it by his going, for he will be afraid to fet his hinder-feet to the ground, and he will be so weak behind, as he will stand quive-ring and shaking, and covet alwayes to lie down. The cure, according to Martin, is thus: First garring and making, and cover always then force him to go a while to put him in a heat, and being someter him about the houghes, and then force him to go a while to put him in a heat, and being some what warm, let him bloud in the thigh veins, referving of that bloud a pottle, to make him a charge in this fort; Put unto that bloud, of Wheat-flower and of Bean-flower, of each a quarter of a peck, of Bole-armony one pound, of Sanguis Draconis two dunces, fix Egges, shells and all, of Turpentine half a pound, of Vinegar a quart; mingle all these things together, and therewith charge both his hait a pound, or vinegat a quast, ill against the hair. And if the Horse cannot dung, let him bersked, and give him this glyfter; Take of Mallowes three handfuls, and boyl them well in fair Water from and give min this given frainit, and put thereunto half a pound of Butter, and of Sallet Oyl a a pottle to a quart; then firainit, and put thereunto half a pound of Butter, and of Sallet Oyl a a pottie to a quart; the analysis of this belly, give him also this drink to comfort him; Take of quarter of a pinte, and having emptied his belly, give him also this drink to comfort him; Take of quarter or a pinte, and put thereunto a little Cinamon, Mace, and Pepper, beaten into fine powder, and of Oyla quarter of a pinte, and give the Horse to drink of that luke-warm with a horn. and or Oyia quarter of a pince, and given a good while together if he beable to go; if not, then tie him up to the rack, and let him be hanged with Canvas and Ropes, so as he may stand upon the ground with his feet : For the leffe he lyeth, the better ; and pare his hinder-feet thin, untill the dew ground with insteet . To the floors again, stop the hoofs with Bran and Hogs greafe boyled togecome out; and tacking on the shoots again, stop the hoofs with Bran and Hogs greafe boyled togecome out; ther, and let both his feet, having this geer in it, be wrapped up in a cloth even to his pafferns, and there tie the clout fast. Let his diet be thin, and let him drink no cold water, and give him in Winter wet hay, and in Summer graffe.

of the dry Spaven.

Blundevile.

The dry Spaven, called of the Italians, Spavano, or Sparavagno; is a great hard knob as big as a Walnut growing in the infide of the hough, hard under the joynt, nigh unto the malter vein, and caufeth the Horfe to halt, which forance cometh by kinde, becaufe the Horfes Parents perhaps had the like difeafe at the sine of his generation; and fometime by extreme labor and heat diffolving humors which do descend through the master vein, continually feeding that place with evil nutriment, and causeth that place to swell. Which swelling in continuance of time becometh lo hard as a bone, and therefore is called of some the Bone Spaven. It needeth no fignes or tokens to know it, because it is very much apparent to theeye, and therefore most Farriers do take

Notwithstanding, Martin faith, that it may be made lesse with these remedies here follow ing; Wash it with warm water, and shave off the hair so far as the swelling extendeth, and fcarifie the place so as it may bleed; then take of Cantharides one dozen, of Enforblum half a spoonful, break them into powder, and boyl them together with a little Oyl-de-bay, and with two or three feathers bound together, put it boyling hot upon the fore, and let his tail be tyed up for wiping away the medicine; and then within half an bour after fet him up in the stable, and it him so as he may not lie down all the night for fear of rubbing off the medicine, and the next day anoint it with fresh butter, continuing thus to do every day once the space of five or sixdays, and when the hair is grown again, draw the fore place with a hot Iron; then take another hot sharp Iron like a Bodkin, somewhat bowing at the point, and thrust it in at the neather end of the middle line, and so upward betwixt the skin and the flesh to the compasse of an inch and a half. And then tent it with a little Turpentine and Hogs grease moulten together and made warm , renewing it every day once the space of nine dayes. But remember first immediately after his burning to take up the master vein, suffering him to bleed a little from above, and tie up the upper end of the vein, and leave the neather end open, to the intent that he may bleed from beneath until it cease it felf, and that shall diminish the Spaven, or elenothing will do it.

of the Spaven, both bone and bloud.

Markbam.

Doubtless a Spaven is an evill forance, and causeth a Horse to halr principally in the beginning of his grief; it appeareth on the hinder-legs within, and against the joynt, and it will be a little swoln; and some Horses have a thorough Spaven; which appeareth both within and without the Spaven there are a thorough spaven; which appeareth both within and without the Spaven there are a thorough spaven. within and without. Of the Spaven there are two kindes, the one hard, and the other folt, that is, a Bone-Spaven, and a Bloud-Spaven; for the Bone-Spaven, I hold it hard to cure, and therefore the left age of the space. therefore the lesse necessary to be dealt withal, except very great occasion urge; and thus may be holpen.

Cast the Horse, and with a hot Iron slit the flesh that covereth the Spaven, and then lay upon the Spaven, Cantharides and Euforbium boyled together in Oyl-de bay, and anoint his legs round Of the Horse, and

about, either with the Oyl of Roses, and with Unguinnan album gamphiratum. Dresse him thus for three dayes together, then afterward take it away, and foothree dayes more lay unto it only upon flax and unfleck't Lime, then afterward dreffe it with Tar until it be whole.

The Cambarides and Enfonbium, will eat and kill the fpungy bone, the Lime will bring it clean 45 way, and the Tar will fuck out the poifon, and heal all up found: but this cure is dangerous. for it the incision be done by an unskilful man a and he either by ignorance, or by the swarving of his hand, burn in twain the great vein that runs crosse the Spaven, then the Horse is

Now for the bloud Spaven that is easily helps, for I have known divers which have been but newly beginning, helpt only bytaking up the Spaven vein, and letting it bleed well beneath, and then flop the wound with Sage and Salt, but If it be a great bloud Spaven, then with a sharp knife, cut it as you burnt the bone Spaven, and take the Spaven away, then heal it up with Hogs greafe and Turpentine only.

Of the wet Spaven writhrough Spaven.

This is a fost swelling growing on both sides of the hough, and seems to go clean through the hough, and therefore may be called a through Spaven. But for the most part the swelling is on the infide; because it is continually fed of the master vein, and is greater then the swelling on the outlide. The Italians call, this forance Laierda; or Gierdone; which feemeth to come of a more fluxible humour, and not fo viscous or flimy as the other Spaven doth, and therefore this waxeth. mustble humour, and not to yntous or many sature of the parent corn, and energies this waxette not folder, not grower to the nature of a bore as the other doth, and this is more curable then the other. It needs no figures, because in a apparent to the eye, and easie to know by the description thereof before made. The cure, according to Mariii, is thus; First wash, shad farishe blace as before; then take of Cambarides half an ounce, of Enfortum an ounce broken to powder, and Oyl-de-bay one ounce, mingle them well together cold, without boyling them, and drelle the fore therewith two dayea together, and every day after, until the hair be grown again anoint it with fresh Butter. Then fire him both without and within, as before, without tenting him, and immediately take up the mafter vein, as before; and then for the space of nine dayes, anoint him every day once with Butter, until the fired place begin to scale, and then wash it with this bath; Take of Mallowes three handfuls, of Sage one handful, and as much of red Nettles, boyt them in water until they be fost, and put thereunto a little fresh Butter, and bathe the place every day once for the space of three or four dayes, and while the hunning be whole, let the Horse come in

The cure is thus a Binde unto them, (the hair being cut clean away) black Sope and Lime kned together, for three days, then lay that by, and anoint the place with Butter; and heal the fore with Bores greafe and Tanmixt well together.

establed the part of the property of the pring bone. The part of the principle of the princ by lome blow of another Horse, or by firiting his one food against fome full, or Rose of hich like cafualty. The pain whereof breedeth a vifcous and flinsy humor, which reforting to the bones, that are of their own nature cold and dry, waxeth hard, cleaveth to some bone, and in process of time becometh a bone. The fignes be thefe: The Horfowill halt, and the hard swelling is apparent to the eye, being higher then any place of the cronet. The cure according to Martin is thus: Figh washie well with warm water, and shave away all the half, to as the fore place may be all dispersed. Then fearifie it lightly with the point of a rator, to be the blood may five forth. Then if the fore he broad take of Furnism and a course of Control of the course of Furnism and a course of Control of the course of Furnism and a course of Control of the course of Furnism and a course of Control of the course be broad, take of Euforbium one ounce, of Cantharides half an ounce, broken into fine powder, and edge of the drawing Iron be as thick as the back of a meat-knife, and burn him so deep as the skin may look yellow: that done, cover the burning with Pitch and Rozen molten together, and clap thereon flocks of the Horfes own colour, or fomewhat nigh the fame, and also three days often law and also about three days after lay again some of the last mentioned plaister, or Ointment; and all

Of the Horse.

new flocks upon the old, and there let them remain, until they fall away of themselves. But if their Ring-bones, on knobs, breed in any other place, then in the Cronet, you shall cure them as is before faid, without firing them.

Of the Ring-bones

He Ring bone is an ill difease, and appeareth before on the foot above the hoof, as well before Markbath. as behinde, and will be swoln three inches broad, and a quarter of an inch or more of height. and the hair will flare and way thin, and will make a Horse hale much. The cure is 1 Cast the Horse. and with an Iron made flat and thin, burn away that griftle which annoys him; then take Wax, Turand with it sweethe fore: This Plaister will also cure any other wound or ulcer what soever.

Of the Crown-Scab.

His is a kinde of filthy and stinking Scab, breeding round about the feet upon the Cronets, and Blundevile: is an elvistrand painful difease, called in feelian, Crifaria. It feemeth to come by means that the Horse hath been bred in some gold wet soil, striking corrupt humors up to his face; and therefore the Horse that hath this grief is worse troubled in Winter then in Summer. The signes be these: The hair of the Cronets will be thin and staring like briftles, and the Cronets will be always mattering, and run on a water. The cure according to Martin is thus: Take of Sope, of Hogs-greafe, of each half a pound, of Bole-armony a little, of Turpentine a quartern; and mingle them all together, and make a Plaisten, and binde it fast on, renewing it every day once, until it leave running, and then washit with strong Vinegar, being luke-warm, every day once, until the fore be clean dryed up, and let him come in no wet until it be whole.

Of hurts upon the Cronet crossing one foot over another, which the Italian's call Supraposte.

Manin faith, wash it well with white Wine, or with a little stale, and then lay unto it the white of an Egge, mingled with a little Chimny soot and Salt, and that will dry it up in three or sour days, it it be renewed every day once.

Of the Quitter-bones.

His is a hard round swelling upon the Cronet, betwixt the heel and the quarter, and groweth I most commonly on the inside of the foot, and is commonly called of the Italians, Setula or Se-14. It cometh by means of gravel gathered underneath the shooe, which fretteth the heel, or else by the cloying or pricking of some nail evil driven, the anguish whereof lopseness the griftle, and so breedeth evil humors, whereof the Quitter-bone springeth. The signes be these: The Horse will halt, and the swelling is apparent to the eye, which in sour or sive days coming to a head, will break out with matter at a little deep hole like a Fifula. The sure according to Mertin is thus: First, burn about the quitter-bone with a hot Iron, in manner of half a circle, and then with the same Iron draw another right strike through the midst thereof. Then take of Arsenick the quantity of a Bean beaten into fine powder, and put it into the hole, thrufting it down to the bottom with a quill, and flop the mouth of the hole with a little tow, and binde it fo fast with a cloth, and cord, as the Horse may not come at it with his mouth, and so let it rest for that day. And the next day, if you see that the fore looketh black within, then it is a figne that the Arsenick hath wrought well and done his part. Then to allay the burning thereof, tent the hole with flax dipt in Hogs-greafe, and Turpentine, molten and mingled together, and cover the tent with a bollter of Tow dipt also in the Ointment aforesaid, continuing so to do every day once, until you have gotten out the core. Then shall you see whether the loose griftle in the bottom be uncovered or not; and if it be uncovered, then feel with your finger, or with a quill, whether you be nigh it or not. And if you be, then taile the griftle with a little crooked instrument, and pull it clean out with a pair of small nippers, meet for the pupose. That done, tent it again with a full tent dipt in the aforesaid Ointment, to allwage the anguish of the last dressing, and stop it hard, to the intent that the hole may not shrink toguher, or close up; and the next day take out the tent, and tent it a new with the Salve or Ointment taught in the Chapter of the Shakel-gall, renewing it every day once until it be whole, keeping always the mouth of the fore as open as you may, to the intent that it heal not up too falt, and let nottheHorse be in any wet, nor travel, until he be perfectly whole.

Of the Quitter-bone.

O litter-bone is a round hard swelling upon the Cronet of the hoof, betwire the hoof and the Markbam quarter, and for the most part groweth on the inside of the foot : the Original effect thereof is the fretting of gravel underneath the shooe, which bruifeth the heel; or elfe by means of some

flub, or the pricking of some nail, through the pain whereof the griftle is loosened, breeding evil humors, which be indeed the ground of the Quitter-bone: it is to be known by the Horses halfhumors, which he indeed the ground of the Sunctional the thin three or four days will grow uning, and by the apparent swelling to the eye of that part, which in three or four days will grow uning, and by the apparent swelling to the eye of that part, which in three or four days will grow uning. ing, and by the apparent livering to the cycle of the parties at a little hole. The cure is thus: Take a hot Iron, made in fashion of a knife, and with it burn out the flesh, in compass of a Moon, Take a not iron, made in familion of a wint, out too: Then take Verdigreafe, fresh Butter, and Tar, till you come to feel the griftle, then burn it out too: Then take Verdigreafe, fresh Butter, and Tar, molten together, and dip fine Tow therein, stop up the hole, then lay thereon a Sear-cloth of molten together, and dip fine Tow therein, stop up the hole, then lay thereon a Sear-cloth of Deer-sewet and Wax, and so let him rest for the first day: the next day; take of Mel roseum, Oyl of Roses, Wax, and Turpentine, of each like quantity, infine them all on the fire toger ther; and with the Salve dress the fore morning and evening, till it be whole. But if you finde any proud fiesh to grow, then forget not to lay thereon some red Lead, or Verdigrease: and with any proud nein to grow, their torget not to lay their to the wound heal not fafter then the bottom, for fear all have an especial regard, that the upper part of the wound heal not fafter then the bottom, for fear of Fistulating.

of the Gravelling.

Blundevile.

"His is a fretting under the foot, most commonly in the inside, and sometime in the outside. and fometime in both fides together of the heel. It cometh by means of little gravel flores getting betwixt the hoof, or calking, or spunge of the shooe, which by continual labour and treading of the Horse, doth eat into the quick, and the rather, if his heel be soft and weak, or that the shooe do lie slat to his foot, so as the gravel being once gotten in, cannot get out. The signes be these: The Horse will hale, and covet to tread all upon the toe, to savour his heel. The cure according to Martin is thus : First pare the hoof, and get out the gravel with a corner, or draw. er, leaving none behinde, for if you do, it will breed to a Quitter-bone. That done, ftop him with Turpentine and Hogs-grease molten together, and laid on with tow or flax, and then clap on the shoot to keep in the stopping, renewing it every day once until it be whole. And suffer the Horse to come in no wet, until he be throughly whole. If a gravelling be not well stopt to keep down the flesh, it will rise higher then the hoof; and not only require more business in bolstering it, but also put the Horse to more pain.

of Gravelling.

Markbam.

Ravelling is a hurt will make a Horse to halt, and cometh of gravel and little stones, that Igoeth between the shooe and the heart of the foot. The cure is: Take off the shooe, and let him be well pared; then fet on the shooe again, and stop it with Pitch, Rozen, and Tallow, and of Surbating. this shall help.

His is a beating of the hoof against the ground, called of the Italiant, Sobatitura; it comell fometime by means of evil shooing, lying too flat to his foot; or by going long bare foot, and sometime by the hardness of the ground, and high lifting of the Horse. And those Horses that be flat-footed, the coffins whereof are tender and weak , are most commonly subject to this forance. The fignes be these: the Horse will halt on both his fore-legs, and go fliffely and creep ing, as though he were half foundered. The cure according to Martin is thus: Take of his shooes, pare him as little as may be; and if the shooes be not easie, that is to say, long, large, and hollow enough, then make them fo, and then tack them on again with four or five nilk That done, stop his feet with Bran, and Hogs-grease boyled together, so hot as may be; and allo cover all the coffin round about with the same, binding all in together with a cloth, and a lift fallened about the joynt, renewing it every day once, until it be whole, and give the Horse during that while warm water; and let him stand dry and warm, and not be travelled until he be whole.

Of a Prick in the sole of the Foot, by treading on a nail, or any other sharp thing that doth enter into the Foot.

Blundevile.

"He fignes be these: If a man be on his back when he treadeth on any such thing, he shall set The fignes be thele: If a man be on his back when he treadern on any such thing, the that the Horse will lift up his soot, and cover to stand still to have help. And if it chance at any other time, the halting of the Horfe, and the hurt it felf will shew. The cure according to Martin is thus: Pull off the shooe, and pare the foot; and with a drawer uncover the hole, mixing the mouth so broad as a two penny piece, then tack on the shoot again. That done, stop it, by pouring into the hole Turpentine and Hogs-grease molten together, and lay some flax, or tow upon it; and then stop all the Horses foot with Horse-dung, or rather with Cow-dung, if you can get it; and splent it either with sicks, or else with an old shooe-sole, so as the stopping may abide in, renewing it every day once until it be whole, and let the Horse come in no wet. If this be not well cured, or looked to in time, it will caufe the hoof to break above, and to loofen round about and perhaps to fall clean away. But if you fee that it begins to break above, then make a greater

ine beneath by opening the hole wider, and taking more of the fole away, that the fleth may have the more liberty. Then take of Bole-armony half a quartern, Bean-flowre, and two Egges. have the most and mingle them well together, and make a plaister thereof upon Tow, and lay it round about the Cronet, binde it fast on, and so let it remain the space of two days, and then renew it again, not failing fo to do every two days untill you fee it wax hard and firm above. For this plailer being restrictive, will force the humors to refort all downward, which must be drawn out with Turpentine and Hogs-grease as before, until it leave mattering, and then dry it up wish burnt Allum beaten to powder, and strowed uponit, with a little stax laid again upon that, con-

Of Accloyd or Prickt.

he be whole.

tinuing to to do every day once, until it be hardned; and let not the Horse come in any wet, until

A Coloyd is a hurt that cometh of thooing, when a Smith driveth a nail in the quick, which Marklam. will make him to halt. And the cure is; to take off the thooe, and to cut the hoof away, to lay the fore bare: then lay to it Wax, Turpentine, and Deer-fewet, which will heal it,

Of the Fig.

TF a Horse having received any hurt, as before is said, by nail, bone, splent, or stone, or otherwise in the fole of his foot, and not be well dreffed and perfectly cured, there will grow in that place a certain superfluous piece of flesh, like a Fig: and it will have little grains, in te like a fig, and therefore is rightly called of the Italians, Un fice, that is to fay, a fig. The cure whereof according to Matin is thus: Cut it clean away with a hot Iron, and keep the flesh down, with Turpentine, Hogs-greefe, and a little Wax laid on with Tow, or Flax, and flop the hole hard, that the flesh site not, renewing it once a day until it be whole. of a Retreat.

"His is the pricking of a nail, not well driven in the shooing, and therefore pulled out again by the Smith, and is called of the Italians, Tratta messa. The cause of the pricking may be partly the rash driving of the Smith, and partly the weakness of the ing may be partly the rash driving of the Smith, and partly the weakness of the nail, or the hollowness of the nail in the shank. For if the stood weak, the point many times be deth away into the quick when it should go right forth. It statteth and shivereth in the driving into two parts, where of one part raises the quick in pulling out, or else perhaps breakneth clean assigner, and so remaines the shinder, and this kinde of pricking is worse than the cloying, because it will rankle worse, by reason of the slaw of Iron, remaining in the sless. The signes be these if the Smith that driveth such a nail be so, lewd, as he will not look unto it before the Horse depart, then there is no way to know it, but by the halking of the Horse, and searching the soof stift which a hanmer by, knocking upon every clinging. For when you knock upon that nail, where the grief is, the Horse will shrink up his soot. And if that will not serve, then pinch or gripe the shoot with a pair of pinsons round about until you have found the place grieved. The cure according to Marin is thus: First, pulloss the shoot, and then open the place grieved with a Butter or Drayair, so as you may pencive by seeing or seeing, whether there be any piece of nail or not; if there be, to pull it out, and to stop the hole with Turpengine, Wax, and Sheeps sewer molten together, and so poured hot into the hole, and then lay a little Townponit, and clap on the shoot rome in any wet, and it must be so stopped, though it be but pricks without any, piece of nail remaining. And if for lack of looking to is maine, this retreat cause the hoof so break above. maining. And if for lack of looking to it in time, this retreat cause the hook so break above, then cure it with the Plaister restrictive in such order as is mentioned in the last place saving one before this.

Loying is the pricking of a whole nail, called of the Italians, Inchindatura; passing through the quick, and remaining still in the same, and is clenched as other nails he, and so causesh the Horse to halt. The grieved place is known, by searching with the hammer and pinfons, as is before faid: If the Horse halt immediately, then pull off his shope, and open the hole, until it begin an bleed; and stop it with the Ointment aforefaid, in the same page of the Retreat, and clay on the those again a and the hoof may be fo good, and the harm so little, as you may travel him immediately upon it, but if he be ranched, then renew the stopping every day once; let him come in no wet, until it be whole.

of loosening the Hoof.

His is a parting of the hoof from the cronet, called of the Italians, Diffoldiura del unibia which if it be round about, it cometh by means of foundering; if in part, then by the anguish caused by the pricking of the canel nail, piercing the sole of the foot, or by some Quitter-bone, Retreat, Gravelling, or Cloying, or fuch like thing: The fignes be these: When it is loosened by foundering, then it will break first in the fore-part of the Cronet, right against the toes, because the humor doth covet always to descend towards the toe. Again, when the pricking of a canel nail, or such like cankered thing is the cause, then the hoof will loosen round about, equally even at the first. But when it proceedeth of any of the other hurts last mentioned: then the hoot will break right above the place that is offended, and most commonly will proceed no further. The cure according to Martin is thus: First, of which soever of these causes it proceeds, be sure to open the hoof in the fole of the foot, fo as the humor may have free passage downward, and open the most mit above with the Plaister restrictive before mentioned, and in such order as is there written, and also heal upithe wound, as is before taught in the Chapter of a prick in the sole of the foot.

of calling the Hoof.

THis is when the coffin falleth clean away from the foot, which cometh by fuch causes as were last rehearsed, and is so apparent to the eye, as it needeth no signes to know it. The cure according to Martin is thus: Take of Turpentine one pound, of Tar half a pinte, of unwrought Wax half a pinte: Boil all these things together, and stir them continually until they be throughly mingled, and compact together. Then make a Boot of Leather with a good strong sole meet for the Horses feet, to be laced or buckled about the pastern; and dress his foot with the Salve aforefaid laid upon the Flax or Tow, and bolfter or stuffe his foot with fost Flax, so as the Boot may grieve him no manner of way, renewing it every day once until it be whole, and then put him to grais.

Of the Hoof-bound.

Blundevile.

His is a shrinking of all the whole hoof. It cometh by drought, for the hoofs perhaps are A kept too dry, when the Horse standeth in the stable, and sometime by means of heat, or of over-straight shooing. The Italians call the Horse thus grieved Incastellado. The signes be these. The Horse will halt, and the hoose will be hot; and if you knock on them with a hammer, they will found hollow like an empty bottle, and if both the feet be not hoof-bound, the fore foot will be leffer than the other indeed, and appear to to the eye. The cure according to Menth is thus: Pull off the shooes, and shooe him with half Moon shooes called Lunette; the order and shape whereof you shall finde among the Farriers, and rase both the quarters of the hoof with a drawer, from the cronet unto the lole of the foot, fo deep as you shall fee the dew it felf come forth. And if you make two rases on each side, it shall be so much the better, and inlarge the hoof the more. That done, anoint all the hoof about, next unto the cronet round about, with the Ointment prescribed before in the Chapter of casting the hoof, continuing so to do every day once until he begin to amend for the space of a month, and if he goeth not well at the months end, then take off the half shooes, and pare all the foles, and thrushes, and all so thin as yourse fee the dew come forth, and tack on a whole shooe; and stop all the foot within with Hogs greate and Bran boiled together, and laid hot to the foot; renewing it dayly once the space of nine day, to the intent the sole may rife. But if this will do no good; then take away the sole clean, and day on a whole shooe, and stop the foot with Nettles and Salt brayed together, renewing it once and the same sale to the sale to the same sale to the sale but not over hard, to the intent the fole may have liberty to rife, and being grown again, let himbt shod with the lunets, and fent to grass.

of the running Frush.

He Frush is the tenderest part of the hoof towards the heel, called of the Italians, Feliuse, and because it is sashioned like a forked head, the French men call it Furchette, which word out farriers, either for not knowing rightly how to pronounce it; or else perhaps for easiness fake of pronuntiation, do make it a monofyllable, and pronounce it the Frush; in which Frush breedeth many times a rottenness or corruption proceeding of humors that cometh out of the leg, whereby the leg is kept clean from the Windgals, and all other humors and swellings by means that the humon have passage that way. Notwithstanding the discommodity of the sorance is greater then the commodity, because it maketh the Horses seet so weak and tender, as he is not able to tread upon any hard ground. The fignes be thefe:

The Horse will halt, and specially when the passage of the humor is stopt with any gravel give thered in the Frush, and not being stopt it will continually run, the favour whereof will be for strong, as a man is not able to abide it, and in some places it will look raw. The cure according

Of the Horse.

to Martin is thus. First take off the shooe and pare away all the corrupt places; and make them raw fo as you may fee the water iffue out of the raw places; then tack on the shooe again, being first made wide and large enough. That done, take of Soor one handful, of Salt as much; bruile them well together in a dish, and put thereunto the white of three Egges, and temper them together and with a little Tow dipt therein, stop all the foot, and especially the Frush, and splent it so as it may nor fall out renewing it once a day the space of seven days, and then he will be whole. During which time let the Horse rest, and come in no wet, at the seven days end leave stopping him, and ride him abroad, and always when he cometh in , let his fore foot be clean washed, that no gravel remain therein, without doing any more unto him.

of the Frush.

THe Frush is the tenderest part of the sole of the soot, which by humors distilling many times Markbarn. down from the legs, occasion inflamations in that part, which may easily be perceived by the impostumation of the same. The cure is thus: First having taken off the shooe, pare away all the corrupted and naughty matter, until the fore look raw, then nail on a hollow shooc made for the same purpose; and take of soot a handful, of the juyce of House-leek and of Cream, with the white of an Egge or two, as much as will thicken the same: with this stop up the sore, and splint it, so as it may not fall out, renewing it until it be whole: but during the cure, have regard that the fore foot touch not any wet, for that is very much hurtful.

of diseases or griefs indifferently incidens to any part of the body, but first of the Leprose, or universal Manginess, called of the old Writers Elephantia.

"His is a cankred Manginess, spreading over all the body, which cometh of abundance of melancholy, corrupt and filthy bloud. The fignes be these: The Horse will be all mangy and scuryy, full of fcabs, and raw plots about the neck, and evil favoured to look on, and always rubbing and scratching. The cure according to Martin is thus: Let him bloud the first day in the one side of the neck, and within two days after that, in the flanck veins; and last of all, in the vein under the tail. Then wash all the fore places with Salt brine, and rubbing them hard with a wispe of straw hard twiffed, fo as they may bleed well, and be all raw. That done, anoint the place with this Ointment i Take of Quick-silver one ounce, of Hogs-grease one pound, of Brimstone beaten into powder a quartern, of Rape Oyl a pinte; mingle there things well together, until the Quick-filver be throughly incorporated with the rest; and having anointed all the raw places with this Ointment, make it to fink into the flesh, by holding and weaving up and down over it a hot broad bar of Iron, and then touch him no more again the space of two or three days; during which time, if you see that he rubbeth ftill in any place, then rub that place again with an old Horfe-combe, to make it raw, and anoint it with fresh Ointment. But if all this will not help, then with a hot Iron, and blunt at the point, to big as a mans little finger; burn all the mangy places, making round holes, paffing only through the skin, and no further. For which intent it shall be needful to pull the skin first from the fielh, with your left hand, holding it fill until you have thrust the hot Iron through it, and let every hole be a span off one from another, and if need be, you may anoint those holes with a little Sope, and let the Horse be thin dieted, during his curing time.

of the Farcin, called in Italian of some Il verme, and of some Farcina.

THis kinde of creeping Ulcer groweth in knots, following a long some vein, and it proceedeth I of corrupt bloud ingendered in the body, or elfe of some outward hurt, as of spur-galling, or the biting of some other Horse; or of biting of ticks, or of Hogs lice, or such like casualities : Or if it bein the legs, it may come by interfering. It is easily known, partly by the former description, and also it is apparent to the eye. The cure according to Martin is thus: Let him bloud in that vein where it cometh, as nigh the fore placeas may be, and let him bleed well; then fire every knot one by one, taking the knot in your left hand, and pulling it so hard as you can from his body, to the intent you may better pierce the knot, with a blunt hot Iron, of the bigness of a mans fore-finger, without doing the body any hurt, and let out the matter, leaving none unburn'd, be it little or much. That done, anoint every knot to burned with Hogs-greate warmed every day once, until the coars be ready to fall away: and in the mean time prepare a good quantity of old Urine, and when you fee the coars ready to fall, boil the Urine, and put therein a little Copperas and Salt, and few firong Neteles, and with that water being warm, wash out all the coars, and the

That done, fill every hole immediately with the powder of fleck't Rme, continuing thus to do every day once, until the holes be closed up a and if any be more ranker then other. fill those with Verdigreafe; and during this cure let the Horfe be thinly dieted, that is to lay, with firew and water only, unless it be now and then to give him a loaf of bread: for the lower he be kept, the form he will be whole. And in any wife let his neck be yoked in an old borromless pail; for elid

with thort thaves to keep him from licking the fores, and the lefs reft he hath, the better. Or do thus: Take a good great Dock-root clean scraped, and cut thereof five little rundles or takes to be used as followeth First with a knife make a slit right down in the Horses fore-head three inches long then as 10110 weeth First with a kille make a life fight do as you may easily put therein five rundles of Dock, with a Cornet loofen the skin within the flesh, so as you may easily put therein five rundles of Dock, that is to fay, two on each fide of the flit one above another, and put the fift rundle in the very mide that is to lay, two on each inde of the life one ach of the flits two fhort Shoomakers ends, to fervess between the other four: that done, faften to each of the flits two fhort Shoomakers ends, to fervess betwist the other four: that done, taken to said out, and clenfe the fore every day once, laces to tie in the forefaid rundles, fo as they may not fall out, and clenfe the fore every day once, for the vertue of the root is fuch, asit will draw all the flithy matter from any part of the body;

and new roots be thrust into the slit according as you see it needful. of the Farcion.

yea, though the Farcin be in the hinder-legs, which matter is to be wiped away from time to time

Markbam.

THe Farcion is a vilde disease, ingendered of ill bloud, flegmatick matter, and unkindely seed. ing; it appeareth in a Horse like unto little knots in the flesh, as big as a Hasel-nut; the knots will encrease daily and instame, Impostume, and break; and when the knots amount to threescore, they will every night after breed to many more, till they have over-run the Horses body, and with the poylon, which is mighty and also strong soon bring him to his death: This disease is very infectious and dangerous for some Horses, yet if it be taken in any time, it is easie to be holpen: The cure thereof is in this manner: Take a sharp Bodkin, and thrust it through the neather part of his nose, that he may bleed: or if you will, to let him bloud in the neck-vein shall not be amis, then feel the knots, and as many as are foft lance them and let them run; then take strong Lye, Lime, and Allum, and with the same bathe all his fores, and it shall in short space cure him. There is also another manner of curing this difease, and that is thus: Take a sharp lance-knife, and in the top of the Horse fore-head, just between his eyes, make a long slit even to the skull: then with a blunt instrument for the purpose lose the flesh from the scalp a pretty compass: then take Carret-roots cut into since thin round pieces, and put them between the skin and the skull, as many as you can, then close up the wound, and once a day anoint it with fresh Butter: This is a most sure and approved way to care the Farcion, for look how this wound thus made, shall rot, waste, and grow found, so shall the Farcion break, dry up, and be healed, because all the poyson that feedeth the disease shall be altogether drawn into the fore-head, where it thall die and waste away. The only fault of this cure is, it will be fomewhat long, and it is a foul eye-fore until it be whole. Some use to burn this forance, but that is naught and dangerous, as who fo proves it shall finde.

A most approved medicine to care the Farcion.

Markbam.

Ake of Aqua-vita two spoonfuls, of the juyce of Herb of grace as much; mingle them together, then take of Plegants or Bals of Flax or Tow, and Reep them therein, and Rop them hardinto the Horses cars; then take a needle and a thread, and stitch the tips of his two ears together, by means whereof he cannot shake out the medicine, and use him thus but three several mornings, and it will kill any Farcion what soever, for it hath been often approved.

Another medicine of the fame.

SLit every hard kernel with a sharp knife, and fill the hole with an Ointment made of old lard, Sope, and gray Salt, for that will eat out the coar, and cause it to rot, and so fall out of the own accord.

of the Canker, called of the Italian, Il Cancro.

Blundevile.

Canker is a filthy creeping Ulcer, fretting and gnawing the flesh in great breadth. In the be-I ginning it is knotty, much like a Farcine, and spreadeth it self into divers places, and being to ulcerated, gathereth together in length into a wound or fore. This proceedeth of a melandoly and filthy bloud ingendered in the body, which if it be mixt with Salt humors, it canfeth the more painful and grievous exulceration, and fometime it cometh of fome filely wound that is not clean ly kept, the corrupt matter whereof cankereth other clean parts of the body. It is take to be known by the description before. The ture whereof according to Marin is thus? First it him bloud in those veins that be next the fore, and take enough of him. Then take of Allem half, a pound, of green Copperas, and of white Copperas, of each one quartern, and a god handful of Salt: boil all the ethings together in fair running water, from a pottle to a dath And this water being warm, waln the fore with it cloth, and then fprinkle diereth the product of unfleck't lime, continuing fo to do every day and the fpace of infleen days! and they have the transfer of the fore the first the lime do not make the first the fi that the lime do not mortifie the ranck flesh, and keep it from spreading any further; then taked black Sope half a pound, of Quick-filver half an outroet and beat themitogether in a poly with the Quick-filver be to well mingled with the Sope, as you can perceive hone of the Quick-filver it. And with an Iron flice, after that you have walked the fore with the Strong water after cover the wound with this Ointment, continuing thus to do every day once, until the Callet leave spreading abroad. And if it leave spreading, and that you fee the ranck shell is mortifed.

a ward has Of the Horsewill !!

and that the edges begin to gather a skin, then after the washing, dress it with the lime as before continuing fo to do until it be, whole. And in the drefling, suffer no filth that cometh out of the fore to remain upon any whole place about hour wipe it clean away. Abruelle wath in away fore, to remain appear and let the Horle during this cure, be as thinly dieted as may be, and throughly with warm waters of And tenders was to uning anisone; be as a more direction and throughly operations and the od off a superation of the property of the prope

Filtula is a deep hollow grooking Ulcer, and for the molt part fprings of malign humors A ingendered in fome wound, fore, or canker, not throughly healed. He is easie to know by the description before, The owe according to Martin is thus; First, search the depth of it with a quill, or with some other instrument of Lead, that may be bowed every way, meet for the purnole. For unless you finde the bottom of it, it will be very hard to cure: And having found the bottom, if it be in such a place as you may boldly cut, and make the way open with a lancet or rasor. then make a flit right against the bottom, to as you may thrust in your finger, to feel whether there be any bone or griftle perifhed, or spongy or loofe flesh, which must be gotten out, and then, tent it with a tent of flax diptin this Ointmant Take of Hony, a quartern, and of Verdigreald one ounce beaten into powder. Boil them, together, until it look red, furring it continually, left it run over; and being luke warm, dress the tent wherewith, and bollter the tent with a bollter of flax. And if it be in such a place, as the tent cannot conveniently be kept in with a band, then fasten on each side of the hole, two ends of Shoomakers thread right over the bolster to keep in the tent, which ends may hang there as two laces, to tie and untie at your pleasure, renewing the tent every day once until the fore leave mattering. And then make the tent every day leften and leffer, until it be whole. And close it up in the end, by fprinkling thereon a little fleckt lime. But if the Fiftula be in fuch a place as a man can neither cut right against the bottom, or nigh the same ; then there is no remedy, but to pour in fome Strong-water, through fome quill, or fuch like thing fo asit may go to the very bottom, and dry upall the filthy matter, drelling him to twice a day, until ्रिक प्रकार १५० कि विशेष है। जिस्सारिक प्रकार १५० कि विशेष है। the Horie be whole.

This is a great foungy Wart full of bloud, called of the hallans, Mere or Seto, which may grow in any place of the body, and ic hach a root like a Cocks iftone. The cure according to Muttu is thus: Tie it with a thread, so hard as you can pull it, the thread will eat by little and little in fuch fort, as within seven or eight days it will fall away by it felf. And if it be so flat as you can binde nothing about it, then take it away with a sharp, hot Iron, cutting it round about, and so deep as you may leave none of the root behinde, and dry it with Verdigreale. Russim saith, that if it grow na place full of finews, in as it cannot be conveniently cut, away with a hot Iron; then it is good to eat out the core with the powder of Relaigar, and then to flop the hole with flax dipt in the white of an Egge for a day or two; and lattly, to dry it up with the powder of unfleck't Lime and Hony, as before is taught. of painting distince or bear

of Wounds. A grant of the World work I V Ounds come by means of some stripe or prick, and they are properly called wounds, when some whole part is cut or broken. For a wound according to the Physicians, is defined to be a solution, division, or parting of the whole; for if there be no solution or parting, then me thinks it ought rather to be called a bruise then a wound. And therefore wounds are most commonly made with sharp or piercing weapons, and bruises with blunt weapons. Notwithstanding, if by luch blunt weapons, any part of the whole be evidently broken, then it ought to be called a wound as well as the other: Of wounds some be shallow, and some be deep and hollow: Again, some chance in the fleshy parts, and some in the bony and sinewie places: And those that chance in the flefty parts, and some in the bony and sinewic piaces. And those that chance in the flefty parts, though they be very deep, yet they be not so dangerous as the other; and there, fore we will speak first of the most dangerous. If a Horse have a wound newly made, either, its his head, or in any other place that is full of sinews, bones, or grilles. First, Matin, would have you to wash the wound well with white Wine well warmed; That done, to search the borroin of the wound with some instrument meet for the purpose, suffering it to take a stiff winde in the mean while as many be

Then having found the depth, stop the hole close with a clout, until your salve be ready: Then take of Turpensine, of Mel Rosatum, of Oykof Roses, of each a quartern, and a little-unwrought Wax, and melt them together; and if it be a cut, make a handlome roll of clean picked Tow, to long and to big as may fill the hottom of the wound, which tor the most part is not to wide as the mouth of the wound: then make another roll greater than that, to fill up the reft of the wound even to the hard mouth, and let both these rolls be anointed with the ointment aforesaid like-warm. But if the hurt be like a hole made with some prick, then make a stiffe tent, such a one as may teach the bottom, anointed with the aforesaid Ointment, and bolster the same with a little Tow; And if the mouth be not wide enough, so as the matter may easily run forth, if it be in

men place you may do it without multiple passage, and in any wife lieve a special regard, that the

ward, that the matter may have should be paraged, as by binding or staying the seme with the tene may be continually kept in by one means or other, as by binding or staying the seme with the ends of Shoomakers thread as is aforesaid. And if the hole be deep, and in such place as you may not

then make your tent of a Spunge, and so long as it may reach to the bottom, and the tent being

then make your tent of a spunge, and to long as trying of it, you shall easily get it down, and then made somewhat full, with continual turning and wrying of it, you shall easily get it down, and then dress the wound with this twice a day, bleaking the wound every time with a little white Wine luke.

warm. For this Spunge, anointed with the Ointment aforesaid, will both draw and suck up all the

Of the Horse.

Markin.

How toware a wound made with Hangarbufh fhot.

Main faith. First seek with an instrument whether the pellettremain within or not, and if it do, you must get it out with an instrument meet for the purpose. Then to kill the fire: Take a little Vernith, and thrust it into the wound with a feather, anoinging it well within with the feaa new volume that, frop the mouth fair and foftly with a little foft flax, to keep the winde out and on the outsides; charge all the swelling with this charge: Take of Bole-armony a quartern. of Linon the batter into fine powder half a pound, of Bean-flowre as much, and three or four broken Egges. thels and all, and of Turpentine a quartern, and a quart of Vinegar, and mingle them well together over the fire, and being somewhat warm, charge all the sore place with part thereof, and immediately clap a cloth, or a piece of leather upon it, to keep the wound from the cold air, continuing both to anoint the hole within with Vernish, and also to charge the swelling without! the force of four or five days, and at the five days and leave anointing of it, and tent it with actent reaching to the bortom of the wound, and dipped in Turpentine and Hogs greafe molten together, renewing it every day twice until it be throughly killed, which you shall perceive by the mattering of the wound, and by falling of the swelling 1 for so long as the fire hath the upper hand, no thick matter will issue out, but only a thin yellowish water, neither will the swelling asswage. And then take of Turpentine, washed in nine fewbral waters, half a pound, and put thereon three volks of Egges, and a little Saffron, and tent it with that Ointment, renewing it every day once un-

Of burning with Lime or any other fiery thing.

The first of the second of the

til the wound be whole.

Marin faith; First wash away the Lime, if there be any, with warm water. Then kill the fire with Oyland Water beaten together, dressing him so every day until it be all raw, and then anoint it with Hogs-greafe, and firew thereupon the powder of flecked lime, drefling him fo every day once until it be whole,

Of the biting of a mad Dog.

TF a Horse be bitten with a mad Dog, the verom of his teeth will not only pain him extremely, but also infect all his bloudy and make him to dye mad. The cure according to the old Writers is thus: Take of Goats dung, of sleft that hath laid long in Salt, and of the herb Ebulus, called of fome Danewort, of each half a pound, and forty Walnuts. Stamp all these things together, and lay thereof unto the fore, and this will fuck out the venom, and heal the wound. It is good also to give the Horse Treacle, and Wine to drink: yea, and some would have the fore place to of burshby sucks of a Bourge and the such as the such be fiered with a hot Iron.

TF a Horse be hurt with the tusk of a Boar, lay Vitriol, and Copperas thereunto; and the powder I of a Dogs head being burned, but let the tongue be first pulled out and cast away.

Aurentius Ruffius faith; Take a good quantity of the herb called Sanicula, stamp it, and distemper it with the milk of a Cow, that is all of one colour, and give him that to drink, and that Mosther Medicine: for the: same purpose to mount of the city to make the control of the city than a co will heal him.

MAke a plaister of Onions, Hony and Salts stampt and mingled together and lay that to the fore place, and give the Horse Wine and Treacle to drink. Abhitus would have you to give him white Pepper, Rhue, and Thyme, to drink with the Wine.

Of drinking of Horse-leaches.

Te a Horse chance to drink Horse-leaches, they will continually suck his blouds and kill bim wile I remedy, according to Abstrac; is to pour Oylinto the Horles mouth, which will make them to fall away and kill them. Any truth, is to post System the address of the second system of the

F a Horse swallow down Hens dung in his Hay, it will free his guts, and make him to avoid filehy, matter at the fundament. For remedy whereof, Abfrite would have you to give him drink made of Smallage-feed, Wine, and Hony, and to walk him throughly, upon it, that he may empsy his belive

recove a tent, best never so mort. For narry treaming to be old wounds, and therefore must be cared like Pikula's. of Wounds in the fleshy parts.

The the same Ointment and manner of proceeding as before. And if the wound be large, Use the same onthe tent or rolls, you shall be fain to put two or three Shoomakers ends on each fide of the fore, leaving them so long as you may tie them together, and loosen them when you will like laces.

of old Ulcers or Wounds.

O cure an old Ulcer, as Fistula, Gall, or Botch, or any new received wound, these are the best Salves, and miost approved in mine experience : Take of Hony half a pinte, of Deer-lewettwo ounces, of Verdigreale beaten into powder as much; boil all these exceeding well upon the fire, then with the same luke-warm, tent or plaister any venemous fore, and it will recure it. If youtake of Wax, Turpentine, Oyl of Roses, of Hogs-grease, of each like quantity, and half so much Tar a any one of the other simples; melt all these together, and being well incorporated together, either tent or plaister any wound, and it will heal it. Also, if you take the green leaves of Tobacco bruiled, and put them into a green wound, they will healit : the afnes of Tobacco burnt, if they be frewed upon any fore that is neer skinning, it will also skin it perfectly, and it will incarnate well, if the Ulcer be not too deep and dangerous. There be many other Salves, Plaisters, and Unguents which I could let down; but fince I have experienced these for most effectual, I omit the others as siperfluous.

of an hurt with an Arrow.

TF the Horse be hurt with an Arrow, tent the hole with Hogs-greafe and Turpentine moltenoge-I ther, renewing it every day once until it be whole.

of pulling out Shivers or Thorns.

Artin faith, that if it be not very deep, Sope being laid unto it all night will make it to appear, fo as you may pull it out with a pair of nippers. But if it be very deep, then you must open the place with a knife or lancet, and get it out, and afterward heal up the wound as hath been taught you before. Ruffins faith, that the roots of Reed being stampt and mingled with Hony, will daw out any thorn or shiver: and so will Snails, as he saith, being stampt and wrought with styll Butter; and if the place be swoln, he saith it is good to mollisse it with Hogs grease and Hony, which will stand the saith the asswage any new swelling, that cometh by stripe or otherwise.

of bruisings or swellings.

Artin faith, First prick it with a sleam. Then take of Wine lees a pinte, as much Whest-M flowre as will thicken it, and an ounce of Cumin; boil them together, and lay this fomewhat warm unto it, renewing it every day once until the fwelling either depart, or elfe come to a head. And if it do, then lance it, and heal it up as a wound.

of Sinews cut, prickt, or bruised.

Bhundevile.

Ake of Tar, and Bean-flowre, and a little Oyl of Roses, and lay it hot unto the plate. And if this do no good, then take Worms and Saller Oyl fryed together, or else the Ointment works which works the many than the saller oyl fryed together. Worms, which you shall have at the Apothecaries, and one of these will knit it again, if it bent chan a find an clean alunder. July Sale of

The History of Four-footed Beasts.

Blundevile.

Hey be like Geese Lice, but somewhat bigger, they will breed most about the em, neck, and tail, and over all the body. They come of poverty, and the Horse will be alwayes rubbing, and feratching, and will eat his meat, and not profper withal, and with rubalwayes rubbing, and icrattining, and with rubbing he will break all his mane and tail. The cure, according to Martin, is thus; Anoint the place with Sope and Quickfilver, well mingled together, and to a pound of Sope, put half an ounce of Quickfilver.

of Loufiness.

Markham.

Here be Horfes that will be Loufie, and it cometh of poverty, cold and ill keeping, and it is oftness amongst young Horses, and most men take little heed unto it, and yet they will die thereon. The cure is, to wash them three mornings together in Stau-aker and warm water.

How to fave Horses from the stinging of flies in Summer.

Noint the Horses coat with Oyle, and Bay-beries, mingled together, or tie to the headful A of his collar, a sponge dipt in strong Vinegar, or sprinkle the stable with water wherein Herb grace hath been laid in steep, or perfume the stable with Ivie, or with Calamint, or with Gith burned in a pan of coles.

of bones being broken out of joynt.

Bonesetter, whose practised hand, I must needs confesse, to be needful in such business. Notwithstanding, for that it belongeth to the Farriers art, and also for that the old writers do make fome mention thereof, I thought good not to passe it over altogether with silence. Albeit, they speak only of fractures in the legs beneath the knee. For they make little mention or none of bones above the knee, taking them to be incurable, unlesse it be a rib, or such like. If a bone then be broken in the leg, it is easie to perceive, by feeling the roughness and inequality of the place gridded, one part being higher then another. The cure whereof, according to Abfress and Hierards, winthis

First put the bone again into his right place: that done, wrap it about with unwash't wool, bin. ding it fast to the leg with a small linnen roller, soaked before in Oyl and Vinegar mingled together. And let that roller be laid on as even as is possible, and upon that again lay more wool diptin Oyl and Vinegar, and then fplent it with three fplents, binding them fast at both ends with a thong, and let the Horses leg be kept straight, and right out, the space of forty days, and let not the bonds be loosened above three times in twenty days, unless it shrink, and so require to be new drest, and bound again. But fail not every day once, to pour on the fore place, through the splents, Oyl and Vintgar mingled together. And at the forty dayes end, if you perceive that the broken place be lowdered together again with some hard knob or griftle; then loosen the bonds, so as the Horse may go fair and foftly, using from that time forth to anoint the place with some lost greaker Ointment.

of broken bones.

Markbam.

Have not for mine own part had any great experience in broken bones of a Horse, because it chanceth feldom, and when it doth chance, what through the Horfes brutish unrulines, and the immoderate manner of the act, it is almost held incurable; yet for the little experience I have, I have not found for this purpose any thing so soverain or absolute good, as Oyl of Mandrag, which applyed, conglutinateth and bindeth together any thing, especially bones being either shirered or

of bones out of joynt.

Blundevile.

Fa Horses knee or shoulder be clean out of joynt, and no bone broken, Martin saith the readist way is, to bind all the four legs together, in such fort as hath been taught before in the Chapter of Incording, and then to hoife the Horfe fomewhat from the ground, with his heels upward, fo fall the weight and poife of his body, caufe the joynt to shoot in again into the right place; for by this means he pleasured not long fince a friend and neighbour of his, who going with his Cart from S. Albons, towards his own house, his Thiller fell and put his shoulder clean out of joynt, loss hers neither able to rife, nor being holpen up, could frand on his legs: to which mifchance Marila being called, made no more ado, but taking his friends Care-rope, bound the Horfes legs all four together and with a lever being staid upon the Cart wheel, they putting their shoulders to the other shoulders. holfed up the Horfe clean from the ground, the pole of whole body made the bone to return into his right place, with fuch a loud knack or crack, as it might be heard a great way off, and the Horse immediately had the use of his leg, so as he drew in the Cart, and went also safe home without complaining thereof ever after.

Certain receipts of Plaisters, very good for broken bones, taken out of the old Ausbors, writing of Horfe-leach craft.

TAke of Spume argent, of Vinegar, of each one pound, of Sallet Oyl half a pound, of Ammoniacum. and Turpentine, of each three ounces, of Wax, of Rolin, of each two ounces, of Bitumen, of Pitch of Verdigrease, of each half a pound. Boyl the Vinegar, Oyl and Spuma argenti together, until it was thick, then put thereunto the Pitch, which being molten, take the pot from the fire, and put in the Bitumen, without filtring it at all, and that being also molten, then put in all the reft, and set the pot again to the fire, and let them boy! all together until they be all united in one ! that done, frain it. and make it in a plaister form, and this is called Hierocles Plaister.

Another receit for broken bones.

Ake of liquid Pitch one pound, of Wax two ounces of the pureft and finest part of Frankincense one ounce, of Ammoniacum four ounces, of dry Roses, and of Galbanum, of each one ounce, of Vinegar two pintes. Boyl first the Vinegar and Pitch together, then put in the Ammoniacum, diffolved first in Vinegar, and after that, all she rest of the aforefaid drugs, and after they have boyled toges ther, and be united in one, frain it, and make it plaifterwife, and this is called Emplafrum flavum, that is to fay, the Yellow plaister.

An Ointment for broken bones.

Ake of old Sallet Oyl a quart, and put thereunto of Hogs grease, of Spuma nini, of each one pound, and let them boyl together until it begin to bubble above, and let this ointment be very warm when you use it.

Hitherto of all the difeases belonging to a Horse. Now therefore my promise was made unto your to feak of those things wherein the cure of all diseases do confift, that is to say, in letting of bloud, intaking up of veins, in purging, and in giving the fire ; yea, and also order it self bindeth me to treat of the faid things presently, and first of letting bloud.

In how many veins a Horse may be les bloud, and to what end.

S touching the order, time of the year, Moon, and day, and other circumstances belonging to A letting of bloud, we have sufficiently spoken already in the Keepers Office, in the 22 Chapter. litefleth therefore here to flew you what veins should be opened when the Horse is sick of any diseale, according to Vegetim opinion. But first I will rehearse unto you once again, in how many yeing a Horse may be let bloud, and the rather for that I follow Vegetine. A Horse then may be let bloud in the two Temple veins. Item, in the two eye veins, which are easie to finde in the face of the Horse, fomewhat beneath the eyes. Item, in the two palat veins of the mouth. In the two neck veins Item, in the two palat veins which are in the breaft. Item, in the two fore thigh veins. Them, in the four shakle veins before. Item, in the two toe veins before. Item, in the two fide veins, which may be otherwise called flank veins. Item, in the tail vein. Item, in the two hanch veins. Item, in the two hough veins. Item, in the four shakle veins behind. Item, in the two toe veins behind; so that by this account, a Horse may be let bloud in 31 veins. All which veins are easie enough to know, because that every one lyeth in a little gutter, which by feeling foftly with your finger, you thall finde im-

And Vegetim faith, that if any Horse be pained with any grief in his head, as with ach, heaviness, frenzy, falling-evil, or fuch like, then it is good to let him bloud in the two temple veins with a fleam. If his eyes be wateriff; bloudshotten, or grieved with pin, web, or haw, then it is good to frike the eye vein with a fleam. If he have any heaviness or weariness of body, or be diseased in the throat with the strangullion, quinzie, or swelling of the arteries, either within or without, then it is good to let him bloud in the mouth, in the palat veins with a Cornet. If he be yexed with an Ague, or with ony other disease universally hurting the body, then'let him bloud in the neck veins. If his grief bein the lungs; liver, or in any other inward member, then let him bloud in the breft veins which we called before the palat veins. If he be grieved in the shoulder, then let him bloud in the fore-thigh veins above the knee with a lancer, and that very warrily, because that place is full of finews, and if he be grieved in his joynts, then let him bloud in the thakle veins, and that wartly, because that place is also full of sinews.

And if he be foiled on his fore-feet, by foundering or otherwise, then let him bloud in the toe veins, making way first with your drawer, or Cornet in the hoof to come to the vein. If he be difeased in the kidnies, reins, back, or belly, then let him bloud in the flank veins, and in the tail. If he hath any grief in his hips, or houghs, then let him bloud in the hip or hough veins. And if

The History of Four-footed Beasts.

his hinder-legs, joynts, or feet be grieved, then let him bloud in the snake! veins, and toe veins, as is aforefaid.

The order of taking up Veins, and wherefore it is good.

Rlundevile.

He order observed by Martin, is in this fort; First, if the Horse be very curst and shrewd, then rie order obierved by Martin, is in this lote, I may found the vein that you would take up, cast him upon a dunghil, or some straw, then having found the vein that you would take up, marke well that part of the skin which covereth the vein, and pull that fomewhat afide from the marke wen that part of the sain which to the intent you may flit it with a Rafor, without touching the vein with your left thumb, to the intent you may flit it with a Rafor, without touching the vein. vein with your left thumb, to the intent you may any that longst wife, as the vein goeth, and not And cut no deeper then only through the skin, and that longst wife, as the vein goeth, and not And cut no deeper then only through those in and the skin will return again into his above an inch long. That done, take away your Thumb, and the skin will return again into his place, right over the vein, as it was before. Then with a Cornet uncover the vein and make it up, and being bare, thrust the Cornet underneath it, and raife it up, so as you may put a Shoomakers and being bare, thrust the Cornet underneath it, and raife it up, so as you may put a Shoomakers and being pare, thruit the Cornet than the Cornet, to knit the vein when time is. And if your threed underneath, somewhat higher then the Cornet, to knit the vein when time is. And if your Cornet had a hole in the small end to put in the threed, it should be the easilier done. Then the Cornet standing so still, slit the vein longst wife that it may bleed, and having bled somewhat from net transing to this, the tite with a fure knot, somewhat above the flit, suffering it to bleed only from above, then knit it up with a sure knot, somewhat above the flit, suffering it to bleed only from above, then after up with a fure knot, and beneath, and having bled fufficiently, then knit up the vein also beneath the slit with a sure knot, and fill the hole of the vein with Salt, and then heal up the wound of the skin with Turpentine and hil the note of the vein with one, and laid on with a little Flax. The taking up of veins is very needs. ry, and doth ease many griefs in the legs: for the taking up of the fore-thigh veins easeth Farcins, and swellings of the legs; the taking up of the shakel veins before, easeth the Quitter-bone and fwelling of the joynts, feabs, and cratches. The taking up of the hinder veins, helpeth the Farin, Swellings, and both the Spavens; the taking up of the fhakel veins behind, helpeth swelling of the joynts, the pains, and kibed heels, and such like diseases.

of Purging with Purgation or Glyster.

Purgations is defined by the Physicians, to be the emptying or voiding of superfluous humors, annoying the body with their evill quality. For such humors bring evill juyce and nutriment, called of the Physitians Cacochymia, which when it will not be corrected or holpen with good diet, alteration, nor by the benefit of nature and kindly heat, then it must needs be taken away by Purgation, Vomit, or Glyster. But forasmuch as Horses are not wont to be purged by Yomit, as men be, I will speak here only of Glysters and Purgations. And first because a Horse is grieved with many diseases in his guts, and that nothing can purge the guts so well as a Glyster, and especially the thick guts, I wish that our Farriers would learn to know the diversities of Glysters, to what end they ferve, and with what drugs or fimples they should be made, for as the disease requireth, to mult the Glyster be made; some to allay griefs and sharpness of humors, some to binde, some to loosen, some to purge evill humors, some to cleanse Ulcers: but our Farriers use Glysters, only to loosen the belly, and for no other purpole; yea, few or none do that unlesse it be Marin, and such as he hath taught, who is not ignorant that a Glyster is the beginning of nurgation. For a Glyfter, by cleanfing the guts, refresheth the vital parts, and prepareth the way before. And there fore whenfoever a Horse is surfeited and full of evill humors, needing to be purged, and specially being pained in the guts, I would wish you to begin first with a Glyster, lest by purging him by medicine upon the sudden, you stir up a multitude of evill humors, which finding no passage downward. because the guts be stopt with winde and dregges, do strike upwards, and so perhaps put the Horse

But now you shall understand, that Glysters be made of four things, that is to say, of Decocion, of Drugs, of Oyls, or fuch like unctious matters, as Butter and foft greafe, and fourthly of dwen kindes of Salt to provoke the virtue expulsive. A Decocion is as much to say as the broth of artain hearbs or simples boyled together in water till the third part be consumed. And sometime in ftead of fuch Decoction, it shall be needful perhaps to use some fat broth, as the broth of Beef, or of Sheeps heads, or Milk, or Whay, or some other such like liquor, and that perhaps mingled with Hony or Sugar, according as the difease shall require, the Glyster to be either Lenitive, that is to fay, eafing pain; or Glutinative, that is, joyning together; or elfe Abstersive, that is to ay, clean fing or wiping away fish most of the Dandel to fing or wiping away filthy matter, of which Decoction of broth being strained, you shall need to take three pintes or a quart at the leaft. And then into that, you may put fuch drugs thall be needful to the weight of these or four ourses and the production of the weight of these or four ourses and the production of the weight of these or four ourses and the production of the weight of these or four ourses and the production of the weight of these or four ourses are the production of the weight of these or four ourses are the production of the weight of th needful to the weight of three or four ounces, according as the fimples shall be more or less that lent. Of Oyl at the leaft half a pinte, and of Sale two or three drams, and then to be ministed luke-warm with a horn or pipe made of purpole, when the Horse is not altogether full panels but rather empty, be it either in fore-noon, or after-noon. And as touching the time of keeping Glysters in the body, you shal understand, that to Glysters abstersive half an hour or lesse may sum of all the Glysters abstersive half an hour or lesse may fulfic to Glyfters Lenitive, a longer time if it may be : and to Glyfters Glutinative, the longest time of all most peedful most needful.

Of Purcations.

Ourgations for Men may be made in divers forts and forms 1 but Horses are wont to be purged Blundevile. only with pils, or elfe with purging powders put into Ale. Wine, or some other liquor. But the simples whereof such pils or powders be made, would be chosen with judgement and aprly applyed, lo as you may purge away the hurtful humors, and not the good. Learn first therefore to know with what humor or humors the Horle is grieved, be it Choler, Flegm, or Melancholy, and in what part of the body such humors do abound; then what simples are best to purge such humors. and with what property, quality, and temperament they be indued. For some he violent and next confins to poylon, as Scammony, or Coloquintida, Some again are gentle, and rather meat than medicines, as Monna, Cassa, Whay, Prunes, and tich like. And some again be neither too violent, nor too gentle, but in a mean, as Rhubarb, Agarick, Sene, Aloes. The old men did use much to purge Hories with the pulp of Gelouinida, and sometime with the roots of wilde Concumber: and some time with the broath of a fodden Whelp mingled with Nitsams, and divers other things, whereof I

am first have made mention before in the cutting of Hories difesies.

Notwithstanding I would not with you to be rash in purging a Horie after the old mens example. For as their simples many times be very violent, so the quantities thereof by them preferibedare very much, and dangerous for any Horse to take in these days, in the which neither, man nor beaft, as it feemeth, is of fuch force or ftrength as they were in times past. And therefore whenfoever you would purge him with fuch like kinder of Purgations as Martin worth, whereof you have example before in divers places; and whenfoever you lift for knowledge fake to deal with other simples, to prove them first upon such Jades as may well be spaced. For who sover mindeth to burge a Horse well, that is, to do him good and no hurt, had need to consider many things : as the nature of the Horses disease, and the Horses strength; also the nature, strength and quantity of the medicine that he ministreth: the Region or Country, the time of the disease, the time of the year and day. For as the difeases and evil humors causing such diseases are divers, so do they require to be purged with divers medicines, diverfly compounded, wherein confisteth a point of Art to be learned at the Physitians hands, and not at mine)

Again, weak, delicate, and tender Horses may not be purged in such fort, as those that he of a frong flurdy nature. And therefore in such cases the quality and quantity of the simples is not a little to be confidered; neither is the hotness or coldness of the Region to be neglected, nor the time of the disease. For some require to be purged in the very beginning, some not until the matter be throughly digested : and though the disease proceed perhaps of cold and cold humors, vet a man may not minister such hot things in Summer, as he would do in Winter, nor in the contrary case, such cold things in Winter as be would in Summer. And therefore the time and season of the year is also to be observed: yea the day and time of the day. For the more temperate the day is, the better; not in an extreme hot day, for making the Horse to faint; nor yet when the winde bloweth in the cold North, for that will stop and hinder the working of the medicine, but rather in a temperate moist day, when the winde is in the South, if it may be; for that will further and help the working of the medicine, and make the body loose and soluble.

Again for a Horie, whether you purge him with pils or drink, it is helt for him (as Martis faith) to take them in the morning, after that he hath fasted from meat and drink all the night before. And having received his medicine, let him be walked up and down; one hour at the least, and then fet him up, and fuffered to stand on the bit two or three hours without any mest, but in the mean time fee that he be well littered, and warm covered: and at three hours end, offer him a little of a warm mash made with Wheat-meal, or with Bran. or else with ground mault. Give him little meat, or none until he be purged: all which things have been shewed you before in divers places, and therefore I think it not good to be tedious unto you with often recital thereof.

Of Cauterization, or giving the fire, as well astual as potential.

Orasmuch as the Fire is judged of all the old Writers to be the chiefest ramedy, and as it were I the last refuge in all diseases almost whereunto a Horse is subject. I thought good therefore to talk of it in this place; and the rather, for that few or none of our Farriers, unless it be Matin, or such as have been taught, do know how to give the fire, or to what end it serveth. But first you shall understand, that according to the learned Chirpresons, yea, also according to my old Authors, there be two kindes of Cautery, the one actual, and the other potential. The Cautery actual is that, which is done only by fiering of the grieved place with a hot Iron. The potential Cautery is done by applying unto the grieved place foliae medicine corrofive, pursifiantize, or caulitick. But we will speak first of the actual Cautery, shewing you wherefore it is good, then of what metal and fashion your instrument should be made, and finally how and when to me them

Avicen faith, that an actual Cautery moderately used, is a noble remedy to stop corruption of members, to rectifie the complexion of the same, and also to stanch bloud. Howbeit you must beware (faith he) that you touch not the finews, cords, or ligaments, left the member be weakened, or that the Cramp ensueth. Vegetim also writing of Horse-leach craft, praiseth the actual Cautery very much, speaking in this sort: The actual Cautery faith he, bindeth toge-

ther parts loofened, it doth attenuate parts blown and puffed up, it dryeth up superfluous moisture, ther parts 100 lened, it dotti attenuate pathered together into knots, it asswageth old griefs, it rediit looleneth and divident evil matter gathered by any manner of way, reducing them to their fieth those parts of the body that are corrupted by any manner of way, reducing them to their fieth those parts of the body that are corrupted by any manner, of way, reducing them to their priftine chare, and fuffereth no superfluity to grow or increase, for the skin being opened with a horizon, all kind of corruption by virtue of the fire is first digested and ripened, and then disolved, to as the matter doth issue out at the holes, whereby the member of part before offended is now heafed; and eased of all pain and grief; we at he holes being once closed and clean fluit it, that heafed; and eased of all pain and grief; we at he holes being once closed and clean fluit it, that heafed; and eased of all pain and grief; we at he holes being once closed and clean fluit it, that heafed and better knit; and covered with a tougher skin then ever the was before.

Now as touching the suftrument whereof, and of what fashion they should be made, you shall un-Now as touching the mittanent white would have them to be made of Copper, braining derfland, that Vegetim and the other old Writers would have them to be made of Copper, braining dermand that regerine and the better to burn with then Iron. The Chirurgions for mans body do prane Gold that metal to be far better to burn with then Iron. The Chirurgions for mans body do prane Gold that metal to be lar better to the falhion of the Irons, it is to be referred to the kind of fore place and and Silver; but as for the falhion of the Irons, it is to be referred to the kind of fore place and and officer, but as jot the real according to the divertity whereof the influments are to grieved, wherewith you have some with fearing Irons with tharp edges, and fome with blunt and be made of divers fathions, as some with fearing Irons with tharp edges, and fome with blunt and be made or divers laminous, and some like crooked Bodkins, and some like hooks and likkes, and broad edges, some like right, and some like crooked Bodkins, and some like hooks and likkes, and proad edges, some material and fome with a small Button at the one end; in making whereof, the tome with a great backing who ought to be fo skilful as he may be able to make all manner Farriers judgement is most needful, who ought to be for skilful as he may be able to make all manner of Irons that he should occupie, and to after them according as need shall require. And therefore or irons that he modes of the common drawing Iron, and of the Button Iron, like in thought good only here to speak of the common drawing Iron, and of the Button Iron, like in thought good only nete to speak of the common attamned and specially firm you form to those that Marin useth, referring all the rest to your own judgement, and specially firm you form to those that make the fore of what fort they should be made meet to serve your turn in any have been fully instructed before of what fort they should be made meet to serve your turn in any

neare.

Now as touching the use of the instruments, two things are specially to be considered, that is the heating of the Iron, and the bearing of the hand. For the back of the Iron may not bered hot, but only the edge, for fear of yeelding too much heat. And therefore though it he made red hot at the first, yet it shall be good before you occupie it, to cool the back of the instrument in water; and as touching the bearing of the hand, more evenly and lightly it is done; the better and that according as the fineness and thinness of the skin shall require, which is to be judged by the hair. For if the hair be short and fine, then it is a signe of a sine skin, if long and rough, then the tokeneth a thick skin. The fine skin requireth the lighter hand, and not to be burned to geep as the thick skin, yet both must be burned until they look yellow. But the fine skin will lookyeld low with leffer burning then the thick skin. For the thick skin with his long hair doth chokethefire, and therefore requireth a more heavy hand : yea, and more often heating of the inftrument than the thin skin doth, and be fure to draw alwayes with the hair, and not against the hair, in what forme and in what manner of lines hath been taught you before; for those must be made either long, and in what manner of lines hath been taught you before; for those must be made either long, and in what manner of lines hath been taught you hort, deep, shallow, right-crooked, or over-thwart, according as the disease doth require: you have learned also how to allay the heat of the fire, after such drawing. And therefore I have no more to fay here, but only to admonish you according to Vegetius precepts, not to fire any snewie place, nor bone that is broken or out of joynt, for fear of weakning the whole member, nor tober to heavie or uneven hand, as you should thereby deform or missoshion any part of the Hore, nor be too hasty in giving the fire, but to attempt first all other convenient remedites; and when no thing elfe will help to make the fire your last refuge, and yet not fo much to neglect it and abhori, like the ignorant fort, as you will not usuit when need requireth, for lack whereof many Horse go lame, and uncured of divers difeafes. Practife your felves therefore in giving the fire at medful times with judgement and diferetion, fo shall you do it to the Horses benefit, and to your own great praise and profit.

Of Cauteries Potential.

Auteries Potential, as Jobannes Vigo faith, are medicines Corrofive, Putrifactive and Caullick This word Corrofive, is derived of the Latin word Corrodo, which is as much to lay, as to gnaw and free; and of such Corrosives, some be simple and some compound. The simple, as Vigo saith, be fuch as these be, Roch Alum, as well burnt as not burnt, spunge of the Sea somewhat burnt, Limes red Coral, powder of Mercury. Compound Corrofives be these, Unquentum Apostolorum, Unquentum Egyptacum, Unquentum Ceraceum. Medicines Putrifactive, called of the learned fort, Septica, according to Avicen, be those that have strength to corrupt the complexion of the member, and to induce any fear like dead flesh, causing great pain; yea and Bevers, and therefore ought not to be ministed but to strong bodies and in strong diseases, as in Carbuncles, Cankers, Ulcers, and such like, and they be these, Arsinicke, Sublimas, Resalgar, and order medicines compound therewith. Silvin allowed therewith Solvin allowed therewith Solvin allowed therewith Solvin allowed the new of the president and Acontum, but he doth not agree with Avien in the description of the new of the ne description of the putrifactive medicines: For he saith, that they have little pain or none neither be they fo hot and drie as those that are called Escharotica; that is to say, Grustive: which be hot inthe fourth degree, and do breed a crust and scar, and cause great pain; as unfleck't Lime, and the burned dregs of Wine: wherefore it feemeth that Avicens description belongeth rather to the crusing then to the Putrifactive medicines.

Notwithstanding, I must needs say that our Chirurgions and also Farriers, do finde both Median and Refalgar, to be fo sharp, hot and burning things, as when they minister the same to any fart of the body, they are forced to allay the sharpness thereof: the Chirurgions with the juice of Plantain, or Daffadil, or elfe of House-leek, the Farriers with Hogs grease. Medicines Cautick, that is to tain, Burning, are those who is operation are most frong and incline to the nature of the fire. and yet more easily allayed as Vigo writeth, then the medicines Putrifactive, and therefore may be more fafely used. They be made as he faith, of ftrong lie, called Capite sum, or Magistra, of Vitriola Ros mane, Sal Nari, Aqua fortis, of this fort be all those which Vigo calleth the bliftering medicines, as Apium, Cantharides, Ciclamine, Onions, ftrong Garlick, Melanacurdinum, the ftones or grains of Vita Alba, otherwise called Brionie. Moreover, Vigo maketh every one of these Cauteries Potential to excell one another, as it were by certain degrees, faying, that Corrofives be weaker then putrila-Aires, and Putrifactives be weaker then Causticks, and therefore Corrolives work in the upper part. and in foft flesh; Putrifactives, in hard flesh and deep. But Causticks have power to break the skin in hard flesh, and do enter most deeply. The ule of the most part of which things have been taught you before in fundry places, according to Martins experience.

And therefore I leave to trouble you any further, withing you that are defirous to know any more ofthose matters, to read Taugant us writing De piroticis; and Silvius de medicamentorum compositione 1 and John Vigo writing of Surgery, Englished but few years fince. But the old writers, fo far as I can judge by the words of Absprims, and others, that write of Horse-leach craft, do apply this word Cuultick, to fuch medicines as are aftrictive, and binding, called of Martin and other Farriers in these dayes, binding charges, as may well appear by the composition and use here following, recited by Vegetius in this fort.

The receipt of a Caustick used by Chiron, to dry up the superstuous moissure, and to bind parts loosened, and to strengthen parts weakned.

Ake of Bitumen Judaicum two pound, of Bitumen Apollonii two pound, of the purelt part of Frankincense fix ounces, of Bdellium Arabicum two ounces, of Deers sewet two pound, of Populeum two ounces, of Galbanum two ounces, of the drops of Storax two ounces, of common Wax two pound, of Refin Gabial one pound, of Vifeus Italiam three ounces, of Apoxima two ounces, of the juyce of Hylop two ounces, of the drops of Armoniack two ounces, of Pitch one pound.

Another Caustick used by Pelagonius, to dry up Swellings, Bladders, Wind-gals and Splents in the legs and joynes.

TAke Virgin Wax one pound, of Rosin two pound and a half, of Galbanum three ounces, of Alphaltum Judalcum two pound, of Mirrhe fecondary two pound, of Bitumen one pound, of Armoniack fix ounces, of Cafen fix ounces Boyl all these things together in an earthen pot, saving the Appealium, Armoniack and Collum, which being first ground like fine flowre, must be added unto the other things, and after that they have been boyled and cooled, and then boiled all together again, and well firred, fo as they may be incorporated together, and made all one substance. These kindes of Emplaisters or Ointments ought in my judgement to be so called, as I said before, rather binding charges, then Caustick medicines, because there be no such extreme Corrosive or burning simples in thefe, as are before recited. Notwithstanding I refer my judgment to those that be better learned, and so end for being over tedious. For if I would, I could take very good occasion here to speak of divers other medicines, whereof fome are called Anodyna, cafing pain and grief. Martin calleth them Linoges, which are made of Linfeed, Camomile, foft greafe and fuch like things, as are hot in the first degree ; some again are called Narcotica, that is to say, astonying or bringing to sleep, as those that are made of Opinm, Mandragora, Poppie, and such like cold and groffe things. And some are called Sarcotica, that is, Breeding fleth, as Barly flowre and Prankincenfe. And many other kinds of Emplailers, Qintments, waters and falves, which would occupy a book of no fmall volum, to be written hereafter by some other perhaps, if not by my felf. And in the mean time, let this that I may have already written fuffice. www.isi. w. 1836. a.

of the Anticor.

A N Anticor cometh of Superfluity of evill-bloud or spirit in the arteries, and also of inflamation Makham?" A in the liver, which is ingendered by means of too choise keeping, and overmuch rest, which chooketh the vital power, and profiles unassural swallings in the brest, which if they ascend upward and come into the neck, they are instantly death. The cure whereof is in this fort; Let him bleed fo as he may bleed abundantly, then with a fharp knife in divers places out the fwelling : which done, fet a cupping-glaffe thereon, and cup it still the glaffe filled with foul water fall away it felf; then give the Horle to drink three mornings together a pinte of Malmelie well ftirred with Cinamon, Licoras, and a little Bezan frone, and during his ficknows, be his drink be warmed, and mingled

He Cord is a disease that maketh the Horse stumble, and many times fall, and they appear in a Horses fore-legs: this is the cure thereof; Take a sharp knife, and cut a slit even at the top of his nofe, juit with the point of the griftle, open the flit being made, and you shall perceive a white string, take it up with a Boars tooth, or some crooked bodkin, and cut it in sunder, then stitch up the slit and anoint it with Butter, and the Horse doubtless shall be recovered.

of the Millets.

THe Millets is a grief that appeareth in the Fetlocks behind, and causeth the hair to shed, three or four inches long, and a quarter of an inch in breadth, like as it were bare and ill to cure. But thus is the cure; First wash it well with wrong lie, and rub it till it bleed, then binde unto it Hony, unsleck't Lime, and Deers sewet, boyled and mingled together, this do for the space of a week, and it shall be whole.

of the Serew.

Screwis a foul forance, it is like a Splent, but it is a little longer, and is most common-Alyon the outside of the fore-leg, as the Splent is on the inside. The cure is thus; Taketwo spoonfuls of strong Wine Vinegar, and one spoonful of good Sallet Oyl, mingle them together, and every morning bestow one hour in rubbing the forance with it altogether downward till it be gone, which will not be long in going.

The medicines arising out of Horses.

Pliny.

THe Grecians have written nothing at all concerning wilde Horses, because in their Countrey there was none of them usually bred or gotten: yet notwithstanding the same we ought to think that all medicines or any other things, which do proceed from them, are more strong in operation, and have in them greater force and power then any common Horses have, as

it falleth out in all forts of other beafts. The bloud of a Horse (as Pliny affirmeth) doth gnaw into dead flesh with a putrifadive force, the same vertue hath the blood of Mares, which have been covered by Horses: Also the blood of a Horse (but especially of one which is a breeder) doth very much make and help against impostumes, and small bunches which do arise in the flesh. Moreover it is said that the bloud of a young Asle is very good against the Jaundies, and the over-slowing of the gall, as also the same force and effect is in the bloud of a young Horse. The Horse-leaches do use the bloud of Horses for divers diseases which are incident unto them, both by anointing or rubbing the outward parts, as

Purthermore if one do cut the veins of the palat of a Horses mouth, and let it run down into his belly, it will prefently destroy and consume the maw or belly-worms, which are within him. When a Horse is sick of the Pestilence, they draw bloud out of the veins in his spurring place, and mingling the same upon a stone with Salt, make him to lick it up. The bloud of a Horse is also mingled with other medicines, and being anointed upon the armes and shoulders of men or bealts, which are broken or out of joynt, doth very much help them. But a Horse which is weary or tyred, you must cure after this manner; First, draw some bloud out of his matrix or womb, and mingleit with Oyl and Wine, and then put it on the fire till it be luke-warm, and then rub the Horse all over against the hairs.

Vecetim.

Theomnestw.

If the finews of Horses do wax stiffe or shrink in together, it is very necessary that the sick parts should be anointed with the hot bloud which doth proceed from him, for Horses also which are sed

Pliny.

in the field use their flesh and dung, against the biting and stinging of Serpents. We do also finde that the flesh of Horses being well boiled is very medicinable for diversals eases. Moreover it is very usuall and common with the women of Occitania to take the fat or greate of Horses to anoint their heads to make the hair of their heads multiply and increase and certain later Physitians do mingle the marrow of a Horse with other Ointments for a remedy against the

Furnerius.

Cramp. The marrow of a Horse is also very good to loosen the sinews which are knit and fastned togs ther, but first let it be boyled in Wine, and afterwards made cold, and then anointed warmly either by the fire or Sun. If a Horse do labor in that kinde of impostume which they vulgarly all the Worm, either any where as well as in the nose, they do open the skin with a fearing iron, and do fprinkle Verdigrease within the Horses mouth being brent, and being added thereunio sometimes the feed of Henbane.

The teeth of a male Horse not gelded, or by any labour made feeble, being put under the Albertus. head, or over the head of him that is troubled or flarteth in his dream; doth withfland and relift all unquietness which in the time of his rest might happen unto him. Pliny also doth affent that Howre dothheal the foreness of a Horses teeth and gums, and the clefts and chinks of a Horses

Of the Horfan

The teethalfo of a Horse is very profitable for the curing of the Chilblanes which are rotten and Marcellus. full of cortuption when they are swollen full ripe. Marcellus faith, that the tooth of a Horse being beaten and crushed into very small powder, and being sprinkled upon a Mans genital doth much profit and very effectually help him: but the eseth which were first ingendred in a Horse, have this virtue in them, that if they should touch the teeth of Man or Woman who are molested and grieved with the tooth-achithey shall presently find a final end of their pain : if in the like manner a childedo kille the nofe or fnows of a Horfe, he shall never feel pain in his teeth, neither at any Section time shall the childe be bitten by the Horse.

The teeth which do first of all fall from Horses, being bound or fastned upon children in their infancy, do very eafily procure the breeding of the teeth, but with more speed and more effectually if they have never touched the ground, wherefore the Poet doth very well apply these Verses, saying; The first of the second of the

> Colle igiture molli dentes nectentur equinis Qui prima fuerint pulla crescente coduci.

1.

It is also said, that if the hair of a Horse be fastned unto the House of a mans enemy, it will be a means that neither little flies or small gnats shall flie by his dwelling place or aboad in The tongue of a Horse being never accustomed unto wine, is a most present and expedient medicine to allay or cure Pliny. the milt of a Man or Woman (as Cacilius Bientreporteth unto us; that he learned it of the Barbarians.) But Marcellus faith, that the Horfe tongue ought to be dryed and beaten into small powder, and put into any drink, except wine only, and forthwith it will shew the commodity which rifeth thereupon, by eafing either Man or Woman, of the pain of the Spleen or Mile oldivers also do think that a Horses tongue used after this manner; is angood means or preservative against the biting of -Serpents or any other wenemous creatures to have been at him be

But for the curing of any fores or griefs in the inward parts, the genital of a Horse is most of all commended a for as Pliny supposeth, this genital of a Horse is very medicinalis for the loosing of the Pling belly as also the bloud, marrow, or liver of a Goat, but these things do rather dry up and close the billy (as before we have taught) concerning the Goat. of The had been of a

In the heart of Horses there is found a bone, most like unto a Dogs tootherit is faid that the doth drive away all grief or forrow from a mans heart, and that a tooth being pulled from the chiecks or jaw bones of a dead Horse doth shew the full and right number of the fortowes of the party fogrieved. The dust of a Horse boof anointed with Oyl and Water do doth drive away im- Pling a way. pollumes and little bunches which rife in the flesh, in what part of the body soever they be and the dust of the hoof of an Asse anointed with Oyl, Water and hot urine, doct utterly expell an Wens and kernels which do rife in the neck, arme-holes, or any other part of the body, of either

The genital of a gelded Horse dryed in an Oven, beaten to powder, and given twice or thrice in a little hot broth to drink unto the party grieved, is by Pliny accounted an excellent and approved remedy for the seconds of a woman. The soam of a Horse, or the dust of a Horse shoot dryedpis very good to drive away shamefastness being anointed with a certain ritulation ballievscrapings worthe Marcellut Horses hoofs being put in wine, and poured into the Horses postells, do greatly provoke fills wind. The after alfoof an Horses boof, being mingled with wine and water; dorth greatly eafe and brille the difease called the Colick on Stone: as alfolby a perfume which may be made by the hoofs of Horfes being dryed, a childe which is fill bonn is cast out. " the good and to still be in the man and the still be in the sti

The milk of Mares is of fuch an excellent virtue, that it dothe quite expellate person of whel Seas hare, and allother poison whatsoever : drink also mingled with Mares milk, dpth make the body soole and lazable. It is also counted an excellent remedy against the falling sickness no drink the stones of a Boar out of a Mares milk or water. If there be hand filth or marconlying in the mittice of a woman, Hipportates. let her take Mares milk boiled and throughy fixained and prefently the fitth aist excrements will void clean away. If fo heithat a Woman he barriemand cannot conceive; leb her then cake Maper inilk (not knowing what it is) and let her presently accompany with a man, and the will conceive. The mik of a Mare being drunk dhall affwage the labor of the matrice, and doubleans a fill children be sall forth. If khefetd of Henbane; be beaten final and mingle dwith Mares wilk and bounds with a Harts skin; in the time and a couch citie of the second stand standard of the second and a woman, the year's ounces and the boyl them all together to the of them I boyled or to moitgage in and and in the or the country and the boyled or the indigenous particles.

The thinself or latest part of elie-milk of a destendoth very deally gently and wirthout any damper purge the belly. Mares milk being dayly anointed with a licele Hony doth without any paint of punithment take away the wounds of the eyes being new made in the ejemade of Mares milk lock represse and takenaway all wringings or aches in the belly, what sodiet. If you randing a combinish the foam of a klorie, wherewithing young man or youth doth utboo combittle head, it is of finds force as it will is it will cause the fair of his head beither to encrease, or any whit too appears? The foamub a

Horfe is also very much commended for when which have either pain or difficulty of hearing in their ears, or elle the duft of Horfe dung being new made and dryed, and mingled with Oyl of Rose. The grief or foreness of a mans mouth or throat, being washed or anomired with the foam of a Horse which light been fed with Oares or Barly, doth prefently expell the path of the forence, if to be that it be two or three times washed over with the juyce of young or green Sea crab beaten fmail together; but if you tamot gerche Beaterabs which are green fipsinke upon the guicfiche small powder which doth come from dryed Orabs which are based in an Oven made gnetiche iman powder which active me i rom unyew and is, and you that finde prefer remedy of Braffe, and afterward wash the mouth where the pain is, and you that finde prefer remedy. The foam of a Hode being three or four times taken in think, doch quite expeli and drive any the foam of a Hode being three or four times taken in think, doch quite expeli and drive any the Cough. But Mercellar doch aftern that who foother in the best which a distance had a distance that the cough of confusions and the cough. of the lungs, and doth drink the foam of a Herle by at folf along without any drink shall finde present help and remedy: but as Sexum faith, the Horse will presently die after it. The same also being mingled with hot water, and given to one who is troubled with the fame diseases, being in manner part all cure, doth presently present treaten, but the death of the House doth influently enfue. manner part an cure, worth presently present extension, one will doch cause a woman which it very The sweat of a Horse being mingled with Wine, and to drank; doch cause a woman which it very

big and in great labor, to cast a still childe. ganu in great land, sait, (but as Albertus faith only of a Horse) doth breed wind in a man or womans face, being put thereupon, and besides that, doth bring the Squince or Squincy, as also a mans late, being weat. If Swords, Knives, or the points of Spears when they are red fire hot, be a-filthy flinking sweat. If Swords, Knives, or the points of Spears when they are red fire hot, be a-filthy flinking sweat. nointed with the sweat of a Horse, they will be so venemous and suff of poyson, that if a man or woman be smitten or pricked therewith, they will never cease from bleeding as long as life doth last. woman be minuted with an Arrow, and have the fwest of another Morfe, and bread which hath boen brent, being mingled in mans wrine, given him to wink, and afterwards forme of the fame being mingled with Horse grease put into the wound, it will in Aport time procure him sale and help. There

are some which will affure us, that if a man be woulded with the belly worms, or have a Serpent crex into his belly, if he take but the fweat of a Horse being mingled with his wrine, and drink it, it will prefently cause the Worms or the Serpent to Mueforth: The dong of a Horse or Asse which is sed with graste, being dryed and afterward dipped in wite.

and so drunk, is a very good remedy against the bittings and blowle of Scorpions. The lane medicines they do alfo use, being mingled with the genital of a Hare in Vinegar, both against the Storptcines they do and the Shrew-moufe. The force is so great in the possession and Dog or Birch, the his pargeted Urine doth much force, soperally anto their that have a user boil upon them; the chiefest remedy therefore against the lane's the dang of a Horse missinguistic Vinegar, and being warmed put into the scab or force. The dung as well of Africa se of Horse, either raw, sold, or but ned, is excellent good against the breaking forth or istues of the blond.

"The dung of Horfes or Affes being new made or warm and to viapped and par to a green word, doch very cally and speedily stanch the bleeding. If the vein of a Florie be cue, and the bloud to iffue out in too much aboundance, apply the dung of the fame blorfe thro the place where the ven is cut, and the bleeding will prefently reafe, wherefore the Poet with waty well express it is their Verfes following;

> Sive fimm manni cum testie uritur ovi. Es reprimit flutdos miromedicamine curfia.

The fame doth alfo very well drive away the corruption in mens body which doth tank the blod to flinke if it be well and justly applyed unto the corrupt place. The farm affo being mingled with Out of Rofes, and new made, and to applyed the cothe care, doth not only drive away che pain, but allodoth very much help for hearing : There is another remedy allo for the hearing want into to take the dung of a Horfe which is new made, and so make it from a furnace, and thento walk on the middle of the head against the Uvala, and afterward to the aforefaid thank in the limit woollencloth unto the top of the head in the night time. in the interior and to

uda organ

The dung of a young Affe when he is first fooled, given in Wine to the quantity of might adeol a Bean, is a prefent remedy for either man or woman who is troubled with the Jaundiet or the very flowing of the gall : and the same property hath the dong of a young Florie or Bott men by new foaled. But the dung of an old Blorfe, being boiled in fair westeby and afterward firmed and for given to the party to drink, who is troubled with Water in his belly or fromuch, destroyed off let bery a city account

There is also an excellent remedy against the Colidhand Score, which is this, co date is hindful make went for the fame. of theidung of a Horse which bath been fed with Que co and Barly, and not with graffs, and mine very, well it with halfs pinte of Wine, all which a do gnesse will amount amo the weight of eighter ounces, and then boyl them all together untill half of them be boyled or confamed away, and the drink the fame by lieble and little until it be all dounk ap, but stwill be much better for the part that is troubled to drink it up all regester if he handlesse had quied since all yield.

di There is mored for alvery good and easie way by Hopfe dung to sure the Agus or Gas rem form which is thus, to burn the forefaid dung, and to ming to the very that it left thereon in old with and then bear it unto interest uning and to single one very specific the thereof in one and the orbits of first with or first with very speeding produce safe and tiefs. Higher would be supported by the course of the without any water in it, and this will very speeding produce safe and tiefs. What

woman supposeth her childe which is in her womb to be dead, let her drink the milt or spleen of a Horse in some sweet water, not to the smell, but to the taste, and she will presently cast the childe. The same virtue are in the persume which is made of a Horses hops, as also in the dry dung of a Pliny. Horse: There is some which do use this means against the falling sickness, or the sickness called Saint Johns evill, that is to mingle the water or urine which a Horse doth make with the water which cometh from the Smiths trough, and so to give it the party in a potion. There is a very good help Empiricus. cometi from the Shirth Sand and through their Nostrils or secret parts, which is this, to make a passe of Wheat sowre, and beat it and mingle it together with Butter and Egges in the urine of a Horse which hath lately aronk, and afterward to give that passe or the test baked even to asses to the beast

To provoke urine when them yard is floor, there is nothing to excellent as the dung or filth which proceedeth from the which a Horje tach made, heing mingled with wine, and then frained, and afterwards ponted into the Noltrils of the party to vexed.

There are certain Tetters or Ring-wormes in the Ances of Horjes, and a little above the hoofs Dissortides.

in the bending of these parts, there are indurate and hardned thick skins, which being beaten into in the bending of these parts, there are inquirate and narageo units, skins, which being beaten into small powder and mingled with Vinegat, and so drunk, are an exceeding good preservative against Galen. the Falling sickness: the same is also a very good remedy for them which are bitten with any wilde Beast whatsoever. By the Tetter or Ring-worm which groweth in a Horse's knees or above the hoofs, beaten and mingled with Oyle, and so poured in the ears, the teeth of either man or woman which were weak and loose, will be made very strong and sast. The aforesaid Tetter, Pliny, without any mingling with Oyl, doth also heaf and cure the head-ache and Falling-sickness, in either man or woman. The same also being drunk out of Clarret Wine or Muscadel for forty dayes together, doth quite expell and drive away the Colick and Stone If that any man do get and put up the shooe of a Horse being struck from his hoof as he travelleth in his pace (which doth M.el. many times happen) it will be an excellent remedy for him against the sobbing in the stomach called the Hicker.

Of the HY ANA, and the divers kinds thereof.

E are now to discourse of a Beast whereof it is doubtful whether the names or the kinds. The names thereof be more in number, and therefore to begin with the names, it feemeth to me in ge- and other general, that it is the same Beast which is spoken of in Holy, Scripture, and called Zeeb-eret, and neral accidents Aubath, Zephan. 3. Principes urbis Hierofolyma velut Leones jugientes, judices ejus fimiles sunt lupis Velperimi qui offa non relinquunt ad diluculum : Their Princes are roasing Lions, and their Judges are like to night wolves which leave not the bones till the morning, as it is made the prophet Habakkuk, Cap. 1.

Jen 5. calleth them Zeeb-drabath, Wolves of the wilderness and the Prophet Habakkuk, Cap. 1.

useth the word Zeeb-ereb, Wolves of the evening. By which it is made ende to confider and distusse what kinde of Beafts this Hyana may be deemed, for the Hyana, as I shall shew laster-ward is a Greek word. And first of all lives to feel the first of all the wilderward, is a Greek word. And first of all I utterly seclude all their opinions, which translate this word Arabian Wolves, for the Hebrew notes cannot admit fuch a version or exposition : But seeing we read in Oppianus and Tzeizes, that there are kinds of Wolves which are called Harpages, more hungry then the refidue, living in Mountains, very swift of foot, and in the Winter time, coming to the gates of Cities, and devouring both field and bones of every living creature they can lay, hold on, especially Dogs and men, and in the morning go away again from their prey, I take them to be the same Beasts which the Grecians call Hyene, which is also the name of a Fish much like in nature hereunto. It is also called Glanes, and by the Phrygians, and Bythinians, Ganos, and from one of these came the Illyrian or Sclavonian word San, and it feemeth that the Grecians have given it a name from Swine, because of the griftles growing on the back, for an Hyana can have no better derivation then from Hu or Hyn. Julius Capitolinus calleth it Belbus in Latin in the fame place where he recordeth that there were decem Belbi sub Gordiano, ten Hyanaes in the days of Gordianus. And the reason of this name is not improbably derived from Belba a City of Egypt. Findanus a learned man calleth it Grabbies, because it huntesh the Sepulchres of the dead. Albertus in steady of Hyana, calleth it Inna. The Arabians call it Rabe, and Zabo, or Ziba and Azaro. I take it also to be the same Heast which Albertain, is called Latta, and Ana, and Zilio, because that which is reported of these, is true in the Hyana; they frequent graves, having sharp teeth and long nails, being very fierce, living together in herds and flocks, and loving their own kinde most tenderly, but most pernicious and hateful to all graves. then, being very crafty to fet upon a fit prey, defending it felf from the rage of fironger Beaft by their teeth and nails, or elfe by flight or running away. Wherefore we having thus expressed the name, we will handle the kinds, which I finde to be three, the first Hyena, the second Pajio or Debub, the third Crocuta, and Leucrocuta, whereunto by conjecture we may add a fourth, called Mamichora.

The Figure of the first HT & N A.

Hieronymus. Ariftotle.

Oppianus. The (everal paris.

Pliny.

Solinus. Albertus.

Ariftotle. Whether they change fexes yearly.

This first and vulgar kinde of Hyana, is bred in Africk and Arabia, being in quantity of body like a Wolfe, but much rougher haired, for it hath bristles like a Horses maneallalong his back; and in the middle of his back; as a little-crooked or dented; the colour yellowish, but be street on the sides with blew stocks which make him fook more verrible, as if it had so many specific or the stock have the street of the back as shoulded the street of the back as shoulded the street of the st speckled on the mass with diew poets, which make him rook more terride, as it is not to many cyes. The eyes change their colour at the pleasure of the beast, a thousand times a day, for which cause many ignorant writers have affirmed the Tame of the whole body, yet can be not see one quarter so perfectly in the day as in the highit; and therefore he is called Lupus vesserium, a Wolf of the night. The skilling Lapidars strength of Germany affirm that this beast hath a stone in his eyes for of the higher than the skilling Lapidars strength of Germany affirm that this beast hath a stone in his eyes for the little strength of the skilling and the strength of the skilling and the skilling as the skilling and the skilling as the skillin rather in his head) called Hyana of Hyaniu; but the Ancients say, that the apple or puple of the eye is turned into fuch a storie, and that it is indused with this admirable quality, that if a man layit under his tongue, he shall be able to foreter and prophesie of things to come; the truth hersof I leave to the reporters. Their back-Bone stretcheth it self out to the head, so as the neck cannot bend except the whole body be turned about, and therefore whenfoever he hath occasion to wry his neck, he must supply that quality by removing of his whole body.

This Beast hath a very great heart, as all other Beasts have which are hurtful, by rason of their fear. The genital member is like a Dogs or Wolfs; and I marvail upon what oc casion the writers have been so possessed with opinion that they change sexes, and are some time male and another female, that is to fay, male one year, and female another, according to thele Verles .

Si tamen est aliquid mira novitatir in istis Alvenate vices & que modo famina tergo Passa marem est manie esse marem miremur Hyanam.

Ovid.

Both kindes have under their tails a double note or passage, in the mate there is a seissing fitter the same of th fecrets of a female, and in the female a bunch like the fromes of the male, but neither off do other inward, but only outward; and except this hath given tault of this opinion, I cannot learn the ground thereof: only Orm writeth, that there is a Fish of this name which turneth fexy and peradventure fome men hearing fo much of the Fish, might miliake it more easily for the four food

Ælianus.

There engender not only among themselves, but also with Dogs, Lions, Tygers, and Wolves, for the Elbiophin Lion being covered with an Hyana, beareth the Crowns. The Thin, of Wolves, for the Hall speak more afterward, are generated betwint this Beatt and a Wolff; and indeed it is not without reason, the Cod binds of the contract of the contract of the Cod binds of the contract of the contract of the Cod binds of the contract of Beaft, and apply it thereunto. it is not without reason that God himself in holy Scripture calleth it by the name of a Viginia Wolfe, seeing it resembleth a Wolf in the quantity, colour, in voracity and gluttoning in of seein substitute of seeing in substitute of seeing in substitute of seeing in substitute of seeing in subtilty to overcome Dogs and Men, even as a Wolf doth filly Sheep. Their teeth are book Book Book Sheep. both Beafts like fawes, their genitals alike, and both of them being hungry, range and prey inthe night feason.

This is accounted a most subtill and crafty beath, according to the allusive saying of The dispositi-Mantman 3

Fft in cia Pietas Crocodilizafiatia Hyena.

And the semale is far more subtill then the male, and therefore more seldom taken, for they are afraid of their own company. It was constantly affirmed that among eleven Hyanaes, there was found but one female; it hath been believed in ancient time that there is in this bealt a Magical or enchanting power, for they write, that about what creature so ever he goeth round three times, it shall fland stone-still, and not be able to move out of the place: and if Dogs do but come within the compasse of their shadow and touch it, they presently lose their voice; and that this Eliant. the doth most naturally in the fall moon; for although the swiftness or other opportunity of the Philes. Dogs helpeth them to flie away from her, yet if the can but cast her shadow upon them, she effily obtaineth her prey. She can also counterfeit a mans voice, vomit, cough and whitle, by which means in the night time the cometh to Houses or folds where Dogs are lodged, and so making as though the vomited, or elfe whiftling, draweth the Dogs out of doors to her, and devoureth Salina them. Likewise her nature is, if she finde a Man or a Dog on steep, she considereth whether she or he have the greater body, if the, then the falleth on him, and either with her weight, or fome fecret work of nature by firetching her body upon him killeth him for maketh him tenteleffe; whereby without reliffance the eateth off his hands: but if the finde her body to be shorter and leffer then his. then the taketh her heels and flyeth away.

If a Man meet with this Beaft, he must not fet upon it on the right hand, but on the left, for it hath been often feen, that when in hafte it did run by the Hunter on the right hand, he presently fell off from his Horse senseles; and therefore they that secure themselves from this beatt, must be careful to receive him on the left fide, that so he may with more facility be taken, especially (laith Pliny) if the cords wherein he is to be ensnared be fastened with seven knots. Elianus reporteth of them, that one of these coming to a Man assepina Sheep-cot, by laying her lest hand or fore-foot to his mouth, made or cast him into a deed-sleep, and asterward digged about him such a hole like a grave, as she covered all his body over with earth, except his throat and head, whereupon she sat untill the fuffocated and stifled him; yet Philes attributeth this to her right foot. The like is attributed to a Sea-calf, and the fifth Hyana, and therefore the old Magicians by reason of this examinating property, did not a little glory in these beasts, as if they had been taught by them to exertise Dabolical and præstigious incantation, whereby they deprived men of sense, motion, and reason. They are great enemies to men, and for this cause Solinus reporteth of them, that by secret accustoming themselves to houses or yards, where Carpenters or fuch Mechanicks work they learn to call ther names, and fo will come being an hungred and call one of them with a diffind and articulate voice, whereby he causeth the man many times to forsake his work and go to see the person calling him; but the subtile Hyana goeth further off, and so by calling allureth him from help of company, and afterward when the first sime devoureth him, and for this cause her proper Epithet is Emula Textor. ban Vovce-counterfeiter.

There is also great hatred betwirt a Pardalland this Bealt, for if after death their skins be mingled Allanus, together, the hair falleth off from the Pardell skin, but not from the Hyanaes; and therefore when Their enmiry the Egyptian describe a superiour man overcome by an insectiour, they picture these two skins; and with other beasts. fo greatly are they afraid of Hyanaes, that they runfrom all beatls, creatures and places, whereon Gint. any part of their skin is fastened. And Allania faith, that the Lin bird which liveth upon Serpents, is killed by the gall of an Hyena

He that will go fafely through the mountaint or places of this beafts abode, Rafit and Allerius The natural say, that he mult carry in his hand a root of Colloquintida. It is also believed that if a man com- use of their

fay, that he mult carry in his hand a root of Colloquintida. It is also believed that if a man compasse his ground about with the skin of a Crabbodile, an Hyzma, or a Sea-cast, and hang it up in the skins gates or gaps thereof, the fruits anclosed shift the wint of this Beatt, or of the Sea. Kajis. cast and Home skits, that a many cothed with the skins of this Beatt, or of the Sea. Kajis. cast and Home skits, that a many cothed with the skins of this Beatt, or of the Sea. Kajis. cast and Home skits, that a many cothed with the skins of this Beatt, or an Hyzma to signific sailed ship the skins of the skins of an Hyzma to signific sailed ship the skins of the skins of an Hyzma to signific sailed ship that a Pictive allogation and the state of the skins of any præstigious enchantment, seeing that a Pictive allogation the sail of the skins of the skins s or the bloud of this Beaft, refisfeth all kinde of Witchcraft and Incantation. Likewise Pliny writeth, that the hairs layed to Womens lips, maketh them amorous. And so great is the vanity of the Magicians, that they are not, affiamed to affirm, that by the tooth of the upper jaw of this Beat on the right fide bound unto a many arme or any part thereof, he shall never be molested with Dart or Arran or Arrow.

on and natural properties of this bealt. Pliny Solinw.

Porphyrism.

Likewise they say, that by the genital of this beast, and the Article of the back-bone which is called Likewise they say, that by the gential of this bears, and House, keepeth the family in continual conattantios, with the skin cleaving unto it prefet ved in a seffmallest and extreme gut of his intrails, he cord, and above all other, if a man carry about him the smallest and extreme gut of his intrails, he cord, and above an other, it a main early about time higher powers, but also foreknow the successe shall not only be delivered from the Tyrany of the higher powers, but also foreknow the successe

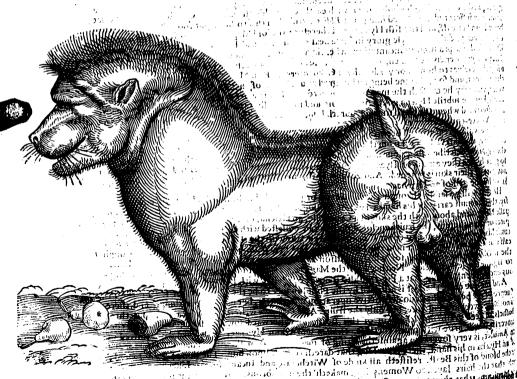

and event of his petitions and futes in Law. Alluarim. Zoroafties.

If his left foot and mails be bound up together in a Linnen bag, and fo fastened unto the right It his lett toot and name be bound up together in a heard or knoweth. And if he cut off the arme of a Man, he shall never forget what soever he hath heard or knoweth. And if he cut off the arme or a man, ne that never torget whattoever who fore feeth him shall fall in love with him. right root with the left hand and wear the lame, who over the right foot is profitable for a Woman that loveth not be fides the Beast. Also the marrow of the right foot is profitable for a Woman that loveth not her Husband, if it be put into her nostrils. And with the powder of the left claw, they which are ner Husband, it it be put into ner notifies. And with the bloud of a Weafit do fall into the hetred of all anointed therewith it being first of all decocted in the bloud of a Weafit do fall into the hetred of all anointed therewith to being first of an accorded in his maw after he is Hair, it fignifieth the death of men. And it the name of any bear be found in the high of the Magicians, that they believe the some of his hunters. And to conclude, such is the folly of the Magicians, that they believe the transmigration of souls, not only out of one man into another, but also of man into beaks. And transmigration of louis, not only out of one and religious votaries departing life fend their fouls into Lions, and the religious women into Hyanaes.

The excrements or bones coming out of the excrements when it is killed, are thought to have rite excrements or nones coming out of the Cartemonius writeth, that in Cappadosia and Messa, by virtue in them against Magical incantations. And Demonius writeth, that in Cappadosia and Messa, by the cating of the hearb Therivarcha, all wilde beafts fall into a deadly fleep, and cannot be recovered but by the afpersion of the urine of this beast. And thus much for the first kinde, now followed

the fecond.

The Second kinds of HT AN A, called Papis or Dabub.

His Beaft aboundeth near Cafares in quantity refembling a 10020 but any the aby different Wolf; the fashion is, being gathered together for one of the hor go before the floating or howling, and all the rest, answering him with correspondent tune: In hair it resembles in The Region and quantity.

and their voices are so shrill and founding, that although they be very remote and far off, yet do anen hear them as if they were hard by : And when one of them is flain, the refidue flock about The lamentarihis carcale, howling like as they made funeral lamentation for the dead.

when they grow to be very hungry by the conftraint of famine they enter into Graves of men. dead.

When they grow to be very hungry by the conftraint of famine they enter into Graves of men. dead.

When they grow to be very hungry by the conftraint of famine they enter into Graves of men. dead.

Milet their dead bodies, Yelis their Relh in Syria, Damakan, and Benniur, eaten by men. He shift alled also Randelos, Abennium, Aldabba, Dabba, Dabba, and Dbobbba, which are derived from the He. The several and the Assistance all him Lehib, his feet and halled allo Manueton, Avertonin, abund is the Arabian name, and the Africans call him Lefiph, his feet and names, os are like to a mans, nether is it hurtful to other Beafts being a base and simple creature. The the parts and so possible to a mans, neither is it hurtful to other Beasts being a base and simple creature. The solour of it is like a Bear, and therefore I judge it to be Assistant, which is ingendered of a Bear and I had therefore I judge it to be Assistant, which is ingendered of a Bear and I had therefore I judge it to be Assistant, which is ingendered of a Bear and I had been in the parts and ingentered on the pa ever bringeth forth twins, a male and a female together.

F. It continually holdeth up his tail, shewing the hole behinde, for at every motion it turneth that, as other Beafts do their head. It hath a fhort tail, and but for that , Thould judge it to be a kinde of Ape; I know not whether it be that kinde of little Wolf which Byllonius faith aboundeth in Cilicia and Afia, which in the night time raveneth and cometh to the bodies of fleeping men, taking away from them their boots, caps, or bridles : when they are four up in the night time they bark like Dogs; but being at liberty they live two hundred in a company to that there is no Beaft fo frequent as thefe in all Chicia.

As for the golden Wolf spoken of by Oppianus, I defer the description of It to his due place for they are not all of one colour : and thus much shall suffice for the second single of Hyens.

Of the CROCUTA.

"He third kinde of Hyena is colled Grocina, not the Gulbraforelaid, but another different from The region, that, which is faid to be an Ethiopian four-footed beaff, because it interpreted betwire proportion, and a Lyones and an Hyena. His teeth are all of one bone, being it is impended betwire proportion, and included in the fieth like as in a case, that they may not be fulled: with their return they break any thing. It is said also by Solinur, that it never winkerh and that their nature stemeth to be tempered betwire a Dog and a Wolf, yet is it more fierce then either of both, more admirable in strength, and especially of the teeth and believ having power to break any thing and especially of the teeth and believ having power to break and digest any hone: it imitately also the voyce of a man to devour thom, as is said before in the Hyena.

In the Region Daebinabader, which is a mediterranean Country in the East state in great and high mountains among to their wilde Beast's are abundance of these Grouvers and at the marriage of

high mountains, among frother wilde Beafts, are abundance of these Crocuater and at the marriage of monius the son of Severus the Emperor, to Plaulla the daughter of Plaullating mongst the speciales set forth for the delight of the beholders, was a combate betwint an Elemant and this Beast, which before that time was hever to be seen at Rome (as Dion reporteth) And sous much for the third ande of thena, except I may adde thereunto that Beaft which the Italians call Loupebat, that is Lupus tains, a Wife-cat, refembling in face a Catwith sharp and harmful classy being betwixt a black and spotted tolour, and wise called an Indian Wolf, and this was to be publickly seen, in the Bishops Cashager sent.

Of the MANTICHORA

His peak of rather Monster (as Cussia writter) is bred astions the sudant status probler ow of such beneath and above, whose greatures, roughness, and seet are the sufficient of the sudant status and the like this is a mans, his eyes gay, and colour rad, his tail like the suite of the sudant course of control with status, casting forest that pointed quils; his voyes like the work of the sumper of the bent sin course as suite as a fart; his wildeness such as can never the sum of the sumper of the best such as the sum of the safe, vernous of them are filed with a title of Anthropophagi, that is to fay, Men-eaters; except only the manner of the same take a Whelp of time pear, they and of the buttooks

and tail thereof, that for the knews be fit to bring the pails, afterwards it is tamed with the peril. This also is the lame Beat which is called Lead contrate the bigness of a wide As , being in tege and Hoofs like a Hart, having An mouth reaching on both indeato his earny and the head and face of a female like purto a Badgara. It is called also Mortives, which in the Person congue fignified a devourer of men ; and thus we conclude the Body of the Bywardor her description, and her deveral kindes: Now followeth the medicines arising but of ther several parts. soutaken i a seches is a tyana, and is a hairs, so the es

The Medicines of the Hyeina all ni radio,

The Oyl in which a Hozist baked eicher alive or dead p doch eicher ale gether bute and make The medicinal whole these which are expublied with the Going of to be the circle after the B green or properties. new, or at the least not of soorlong continuants; it doth fo ture them, that although it may happen to return again, yet it will be much more milde and gentle then before it had been. But the Cylinkich Galen. proceeders from Foxes doth nothing more thrive away the forenamed difease of hen that which like wife is not or prepared outofshall bases forobad bach an exdelend and entirent quality of diffolving and diperfings. The flesh of the Albabeis hoch her and dold, and being bakes with Oyi, Raf doth very much help either man or women which live their joynts, which may happen or come by the receasion of cold : for it is of a flender and diffolute amaires threat the me it thereof

The vanity of the Meet, or Wifesmen, which is witty in pothing but in dreumstance of words, Pliny, doth fav, the best time to take Hiene's, is when the Moon passet over the lighe called Genini, and that for the most part the bairs be kept and preserved. The Manido also affirm; that the skin of an Hyens being spread upon a fore which was bitten by a mad Dogue doth preferrity and without any pain cure the same. The same also being bound to that part of the head, which doth ake, will immediately drive away the pain and grief thereof. Land to a strong strong of a mind you

The same doth very effectually and speedily help them which are troubled with the Gout, or swel- Albertus. ling in the joynts. The flowre of Barley being mingled with the bloud of an Hyana, and fryed or baked over the fire and to taken; doth very much allwage the wringings and wrinchings either in the guts or belly of a man or woman. If the bloud of ah Hyana' being hor be anointed on them which Rafit. are infected with the Leprofie, it will without delay very effectually ture them.

The Hyena's flesh being eaten, doch much avail against the birings of raverous Dogs; but some are of opinion, that the liver being only eaten is of imore fored and power to care or field shem. The Plint acres or finews of an Hrange being beaten to finall powder, and dryed and mingled with Prankincense, together, and so drunk, doth restore sertility and plenty of seed in that woman which

There is also for the biting of a ravenous Dog another excellent remedy, which is this, first to Plint. amoint the place to bitten with the fat or greats of a Sea-calf, or offe to give it in drink : and then'to make the operation more effectual, mingle the marrow of an Hyana, and Oyl that cometh from the Mallick tree and Wax together, and being to applyed and mointed upon the fore, it will prefently cure the same. The same marrow of the Hyene is very good and effectual against the pain and grief in the sinews, as also for the looseness and weakness of the reliability

The marrow which proceedeth from the Chines bone of an Hyme, being mixed with his Gall and Democritus old Oyl altogether, and so bailed until they come unto a fort comperance, and mollifying medicine being anointed upon the finews, doth expel and force away all pain of grief thereof whatforest The fame marrow being bound unto the back of bither man or woman, who are troubled with value phantalies or dreams in their fleep, doth very speedily and very effectually help them. The fat or greafe of an Hyena being burnt, doth drive away all venemous Serpents from the place where te is

The famebeing mingled with leaven, and so being wrought litte a plaister, is a very good cure or remedy for the falling of the hair, or the difease called the Poxes evill. The left part of the brain of Myren an Hyena being either anointed upon the nothing of wither men or beafts, is of fuch vertue, that it will cure diseases upon them which are in a manner mortal. For the Review or Barrenness of women, the eye of an Hjana being mixed with Licoras, and the herb called Dill, and fo taken in drink, is of fuch force and power, that in three days ic withmake them fit for conception, 190, 19.

The teeth of an Hyana ofther touched, or bound in order areo the ceeth of any man or worthin who are troubled with the tooth-ach, will presently ease the pain and vexation thereof. One of the great teeth of an Hyana, being bound with a firing anto any that are troubled in the night times with hadows and phantalies, and which are frayed out of obser fixep with fearful visions, doth very speedily and effectually procupe them case and reft. The roots of an Hyani (called Alasto) being bound upon the right arm of any one which is either oblivious or sorgetful, and hanging down from the arm unto the middle finger or wrift, doth renew and refresh their decayed me-

The palat of an Hyana being dryed and boaten to powder, and then mingled with Egyptian Affum, and so made hot and mixed altogether, being three times turned in any ones mouth, which had the ther fore or wheer in it, will in small time procure them remedy and help of diefr vexation and frouble. The field which groweth upon the hinder part of the neek, being burned, and then exten of taken in drink, doth very speedily help and cure the grief and aches of the forms?

The

Pliny.

Diofcorides.

Marcellus.

Galen.

Pliny.

Marcellus.

Marcellus.

The moulders likewise being used in the aforesaid manner, doth profit much for the healing of any who are vexed with any anguish or pain in their shoulders or sides. The lungs being dryed and any who are vexes with any unguitarion woman which is troubled either with Colick or Stone taken in drink, do eafe any, either man or woman which is troubled either with Colick or Stone taken in arink, an earnany, contentional with Oyl, and so another appropriate belly, it killeth the But being dryed into powder, and mingled with Oyl, and so another appropriate the But being dryed into powder, and mingled with Oyl, and so another appropriate the But being dryed into powder. But peing aryen into powder, and imagine with the bellyan The Heart being used in the aforesid Worms; and expelleth all aches away from the bellyan The Heart being used in the aforesid worms, and taken in drink, doth leafe and help all aches, pains or griefs in the body whatfoever, manner and taken in utilik, what is a state of an Hygna, and feven hairs, and the genital of a Han, The write nein being taken in the skin or hide of a Buck or a Doe, and afterwards hanged about the being bound an cogether in the sam bringe of a plantach her for bringing forth her childe, neck of a woman which is in travel, will greatly hinder her for bringing forth her childe.

If there shall be any fieth or bones of men found in the body of a dead. Hyana, being dryed and

beaten to powder, and then mixed with a certain perfume, they will be very excellent to help the Gowt, or drive away the Convultion of the finews. The kell or can wherein the bowels are con-Cowt, or unive away the convenience and also mixed with Oyl, will be a present remedy against tained, being used in the aforesaid manner, and also mixed with Oyl, will be a present remedy against

the burnings and inflamations of fores, botches, and Ulcers. a diendieb. the chine bone of an Hyana being bruised and beaterwinto small powders and so dryed, and then mingled with the congue and the right foot of a Sea-calf, the gall of an Ox being added thereunto; mingles was the congress and anointed upon the hide or skin of an Hyana; and fo and an on the legs or joynts of them which are troubled with the Gowt, will in fhore time esfe the pain, and rid them altogether of the grief thereof.

The chine bone being allo beaten to powder, and given in Wine to drink, is very profitable and necessary for those which are in fore travel or pain of childe-birth. The first or eighth rib of the fame Beaft, being beaten and mingled with a certain perfume, is very good and medicinable for

fores and botches which do break through the flesh.

Their fieth also being eaten, doth quickly cure and heal the bitings or tearings of a ravenous Dog; but their liver being so used, is more effectual and speedy for the curing thereof. The liver of the aforesaid Beast is also very curable for Agues or quartern Feavers being beaten to powder, and drunk in Wine, before the augmentation or fecond affaults thereof. The fame also is an excellent and speedy remedy for the wringings and aches of the belly, as also for that grievous and painful diseases, the gall of a Sea-scorpion, and of a fish ease called the Colick and Scone. For the same diseases, the gall of a Sea-scorpion, and of a fish called Halops, and of a Sea-crab, and of an Hyana, being beaten to powder, and mixed together, and fo drunk in Wine, is a very good and effectual cure and help. The gall of an Hyana, by it felf alone being rub'd or anointed upon the head of either man or woman whose hairs are fallen off, doth presently procure the hair to renew and grow again; it will also bring hair upon the eye-lide, being rubbed thereuponia

The gall of an Hyana being mingled with Hony, and anointed upon the eyes; doth flarpenand clear the eye-fight, and expel and drive away all blemishes and small skins which cover the fight of the eye; as also the pain in the eyes called the Pin and the Web. But Apollonius Pitaneus doth say, that the gall of a Dog being used in the aforesaid manner, is better to cure the fight of the eyesthen the gall of an Hyana. But Pliny whom I think best to follow, and worthyest to be believed, doth best allow of the Hyana's gall for the aforesaid purpose; and also for the expelling of certain white

foots in the eye, which do hinder the fight thereof.

The gall of a Bear and of a Hygna, being dryed and beaten to powder, and so mixed with the best Hony which is possible to be had, and then stirred up and down a long time together, doth help them unto their eye-fight which are flark blinde, if that it be daily anointed and spread upon the eyes for a reasonable space together: The gall of a Hyana being baked in a cruse of Albenion Hony, and mingled with the crooked herb Creek, and so anointed upon the brows or fore-head of them which are purblinde, doth speedily help them; it doth also ease them which are troubled with the water or rheume which falleth in the eyes. Democritus doth also affirm, that if the brow of either man or woman be anothted with the gall of an Hyana only, it will drive away all darkenings, and blemishes in the eyes, and expel the water or rheume thereof, and also asswige the pain or grief which may come or happen in them whatfoever it be.

The marrow which proceedeth from the chine-hone of an Hyæna, being mixed with his own gall, and with old Oyl, and then baked or boiled in a cruse until it come unto a temperate and mollifying medicine, and then being laid or apointed upon the finews or nerves, who is in those parts troubled will throughly heal and cure any default or pain which may happen thereunto. The gall of a male Hyana being pounded or beaten, and bound about the left thigh of any woman that is bifren, doth help for conception. The gall of the same Beast being drunk in Wine, to the value of a dram, with the decoction or liquor which cometh from Spike-layender, called Oyl of Spike, is a very good remedy and help against the Tympany or swelling of the belly. The gall also being beaten and mixed with the stone called Eat-slesh, is very good and, profitable for them which are troubled with the Gowt. The milt of an Hyana is very effectual to curo and heal any pain or grief in the milt of either man or woman. The lungs being dryed and beaten to powder, and mingled with oyl, and anointed w on the loins of any one who is grieved or troubled in those places, will speedily cure the aches a

The bladder of an Hyæna being drunk in Wine, is a very good and effectual remedy against it griefs thereof. incontinency of man or womans urine, or the running of the reins. But if there be any unite into bladder of the Hyana found when he is taken, let it be poured forth into some clean vessel, and mid

with Oyl which proceedeth from the pulse or corn of India, and so drunk up, and it will much ease and help them who are croubled maninde, and are full of cure and grief. The fecret parts of a feinale Hyana beaten and mixed with the rinde or skin of a Pomgranate, and taken in drink, is very brofitable to cure the inconveniences or pain of a womans fecret parts.

The genital of a male ly ma dryed and beaten to powder, being mingled with a certain perfume Hoth cure and help throse which are troubled with the Cramp, and Convulsion of the linews. The Dieforides. feet of an Hyzala being taken, doth heal and cure those which are fand-blinde, and such as have

feet of an ray sea prong cancers, does used the active those which are land-blinde, and such as have botcheand does breeking through the skin and sless, and also such as are troubled with inflamationary breedings of winds in their bodies; only by touching and rubbing them over.

The dust of cong which is found in the interior parts of an Hyæna, being burned, and dryed interior parts of an Hyæna, being burned, and dryed interior parts of an Hyæna, being burned, and greed interior pa po powders and to taken in uring, is very inculcinable and curable, for those which are greeved with painful exceptant wringings of the belly, and allo for those which are troubled with the bloudy fix. And the same being mingled with Goose-grease, and anointed over all the body of either man or from an, will sake them of any pain or grief which they have upon their body what lover. The dung or fish of any years also, being mingled with certain other medicines, is very excellent to our and heal the birth and tringings of Crocodiles, and other venemous Sements. The dung it for it also very good to burge and real rotten wounds and fores which are full of matter, and

Nemetian ;

-Et placidis Ichneumona quarere ripis, Inter arundineas figeres.

For it will dive in the water like an Otter, and feem to be utterly drowned, holding in the breath longer then any other four-footed Beast, as appeareth by his long keeping under water, and also by living in the belly of the Crocodile, until he deliver forth himself, by eating through his bowels. by hving in the beny distribution by hvi upon him and biting him mortally, but especially a Cat; for it killeth or strangleth her with three bites and strength of her teeth, and because her beak or snout is very narrow or small, it cannot bite any thing, except it of this beast, be less then a mans fist. The proportion of the body is much like a Badgers, and the nose hangeth over the mouth, like as it were always angry; the nature of it is, finding the Crocodile afleep, fud- His entrance denly to run down into his throat and belly, and there to eat up that meat which the Crocodile hath into a Grocodevoured, and not returning out again the way it went in, maketh a paffage for it felf through the dile. Beafts belly.

And because it is a great enemy and devourer of Serpents, the common people of that Countrey The taming of do tame them, and keep them familiarly in their houses like Cats, for they eat Mice, and likewise be- Ichacumons, wrav all venemous Beafts: for which cause as is said before, they call it Pharaobs Mouse, by way of excellency. At Alexandria they fell their young ones in the Market, and nourish them for profit : It ica little Beast, and marvellously studious of purity and cleanliness.

Bellonim affirmeth that he saw one of them at Alexandria, amongst the ruines of an old Castle. which suddenly took a Hen and eat it up, for it loveth all manner of fowls, especially Hens and Their food, Chickens, being very wary and crafty about his prey, oftentimes standing upright upon his hinder-legs, looking about for a fit booty, and when it espyeth his prey near him, it slideth so close Their subtiles to the ground, as is very admirable, until it be within the reach, and then leapeth upon it with in obtaining incredible celerity, flying to the throat, and like a Lion killeth all by strangling. It eateth indifferently every living thing, as Snails, Lizards, Camelions, all kindes of Serpents, Frogs, Mice, and Asps. For Strabo saith, when he findeth an Asp by the water side, it catcheth hold on the tail, and so draweth the Beast into the water, and receiveth help from the flouds to devour her enemy; and whereas we have said already, that the Ichneumon entreth into the belly of the Crocodile, Ammianus Marcellinus, Strabo, Pliny, and Oppianus, maketh thereof this discourse following. When the Crocodile hath filled his belly, and over-glutted himself with meat, he cometh to the

Now there is in Egypt, a certain Bird called Crochillus, whose nature is to wait upon the Crocodile, and with her breath and claws, gently and with a kinde of delight, to pull out the remnants of the meat flicking in the Crocodiles teeth; wherewithal the Crocodile being pleased, openeth his mouth wide, to be thus cleanfed by this Bird, and fo falling fast asseep gaping, watched all the while by the vigilant eye of the Ichneumon, perceiving him to be deeply plunged in a fenseless security, goth presently and walloweth in fand and dirt, and with a singular considence entereth into the gate of death, that is, the Crocodiles mouth, and suddenly pierceth like an Arrow through the Moniters wide throat down into his belly.

The Crocodile feeling his unlooked for evil, awaketh out of fleep, and in a rage or madness, void The Crocoof counsel, runneth to and fro, far and wide, plunging himself into the bottom of the river, where diles behavior finding no ease, returneth to land again, and there breatheth out his untolerable poylon, beating feeling the himself with all his power, striving to be delivered from this unsufferable evil. But the Ichneumon Ichneumon in careth not for all this, fitting close upon the liver of the Crocodile, and feeding full sweetly upon her belly. his intrails, until at last being satisfied, eateth out her own passage through the belly of her hoast. The self same thing is related by Plutareb: but I wonder for what cause the Beast should row! her felf in fand and dirt, to enter into the Crocodiles belly; For first of all, if after her rolling in dirt, the dry her felf in the Sun, yet will not that hard crust be any sufficient armour of proof to defend ber small body from the violence of the Crocodiles teeth, and besides, it encreaseth the quantity of her body, making her more unfit to flide down through the Crocodiles narrow throat: and therefore, the Authors cannot be but deceived in ascribing this quality to her, when she is to enter fatothe Crocodile, but rather I believe, the useth this defence against the Asp, as Aristotle saith, and therefore the Author seeing her so covered with mud, might easily be mistaken in her purpose, For it is true indeed that when the feeth the Afp upon the land, the calleth her fellows, who arm. Their combined themselves as before said before the combate, by which means they are safely preserved from the bases with bitings of their enemies; or if it be true that they wallow themselves in the mud, they do not dry Asp. themselves in the Sun, but while their bodies are moift, slide down more easily into the Crocodiles

Concerning their fighting with Asps, and the arming of themselves as aforesaid, the Egyptien makethis Hieroglyphick of the Ichneumon, to signified weak man, that wanteth and craveth hele of the Ichneumon the Asp fighteth with this Beast, the Ichneumon veth help of others; Pliny also saith that when the Asp fighteth with this Beast, the Ichneumon turnesh to be the saith that when the Asp fighteth with this Beast, the Ichneumon turneth to her, her tail, which the Afp taking for defiance, presently maketh force at it, whereby theis overtaken and destroyed by the Ichneumon, but in my opinion this combate is better expreffed by Oppianns.

For faith he, the Ichneumon covereth her body in the fand, as it were in a grave, leaving nothing For faith ne, the tenneumen coveretti net body in the sexpectation is gated, and for expecteth her enemy. When the Afpe uncovered but her long Serpentine tail, and her eyes, and so expecteth her enemy. When the Afpe uncovered but her long serpentine tail, and her cycs, and the representation from the Afpe effects the rethreatning rage, prefently turning about her tail, provoketh the Ichneumon to combate, effects the result of the result o cipyeth her threathing rage, presently turning about the lift, to her own perdicion. For the Johnsumon and with an open mouth and lofty head doth enter the lift, to her own perdicion. For the Johnsumon and with an open mouth and lofty head doth enter the lift, to her own perdicion. For the Johnsumon and with an open mouth and forty head doth that the head of the Afp being nothing afraid of this great bravado, receiveth the encounter, and taking the head of the Afp being nothing arraid of this great playant, received the poylon: afterwards tearing her whole in his mouth, biteth that off, to prevent the casting out of her poylon: afterwards tearing her whole in his month, piteth that on, to prevent the calling out of the fucces of these two comba-body in pieces, although gathered together wound in a circle; for the success of these two combabody in pieces, although gathered together would find the Afp first bite the Ichneumon, then doth her poyfon destroy her tants, lyeth in the first blow. If the Afp first bite the Ichneumon, then doth her poyfon destroy her tants, lyeth in the firm blow. If the Aip lift blee the Aip, then is the Ichneumon con-adversary; and so on the contrary, if the Ichneumon first bite the Asp, then is the Ichneumon conquerour; and for this cause she covereth her body as aforesaid.

Their comity to all kindes of Serpents, and their cas.

verour; and for this cause the coverent net body as at Crocodile and Asp, but also to their Egs, ruttnermore, this heart is not only thering to the old defroyeth them, yet doth the not which the hunteth out by the fagacity of her nofe, and so defroyeth them, yet doth the not which the municipal providence of God doth notably appear, for the fafeguard of cat them: whereby the merciful providence of God doth notably appear, cat them: whereby the merchan provided et these noisome Beasts are bred, hath provided such mankinde, which in those Countries where these noisome Beasts are bred, hath provided such mankinge, which in those countries where there is a friendly and tameable by the hand and wit an enemy to destroy them, both Egs, and Birds, as is friendly and tameable by the hand and wit

For which cause the blinde Pagans, consecrated this Beast to Latona, and Lucina, and the Heof man. ror which cause the billion raging, content all religion; the Egyptians themselves did worship them, because as their Countrey is above all other plagued with Serpents, so they are much eased by the help of this little Beaft. And when they die, they do not only lament them, but also bury them religiously. And thus much for the description of the Ichneumon. Now followeth their medicinal vertues.

The Medicines of the Ichneumon.

Pliny.

The skin of the Ichneumon, being dryed and beaten into small powder, afterwards mingled with Wine Vinegar, and anointed upon those which are grieved with the venemous or poysonsome bites of the same Beast; doth very effectually and speedily cure them of the same. The pretious some called by the name of Icis, which is very hard, as Horus faith, being burned, and afterward beaten or pounded into powder, is an excellent remedy against the venemous biting of the Ichneumon. It is alfo faid, that all Beafts (but especially the Crocodile) do for the most part hate and detest the social ety of this Beaft. There is moreover a very ranck and venemous poyfon, which proceedeth from the genital or groin of this Beaft.

Avicenna.

Marcellus.

Heredotus.

The hairs of the Ichneumon being taken in a certain perfume, doe very much help and cure those which are troubled or grieved with the Maw-worms. The dung of a Cat, or the dung of this Beat, is very medicinable to be put in any falve, or potion, for the strengthening and confirming of the body, The urine or tail of an Ichneumon, being mixed with the milk of a black Cow, and given unto those which are troubled with that grievous difease, called the Colick and Stone, for the space of three days together in any kinde of drink, will eafily and speedily cure them of their pain. The stones of an Ichneumon, being either beaten in powder, or taken raw, either in Wine or any other drink, is very medicinable, and cureable for the easing of all such as are troubled or grieved with any ach, pain, or difease in their belly : And thus much shall suffice concerning the cures, and medicines of the len-

Of the LAMIA.

The fignification of the word Lamia,

His word Lamia hath many fignifications, being taken fometime for a Beaft of Lybia, fome-I times for a fifth, and fometimes for a Spectre or apparition of women called Phairter. And from hence some have ignorantly affirmed, that either there were no such Beasts at all, or elle that it was a compounded monster of a Beast and a Fish, whose opinions I will briefly set down. Atfleshant affirmeth, that he heard one say, that he saw a great wilde Beast having several parts resembling outwardly an Ox, and inwardly a Mule, and a beautiful Woman, which he called afterwards Emple.

Visions of Phairies.

Waluly all Oa, and inwardly a Mule, and a Deautiful Woman, which he called afterwards Expension When Apollonius and his companions travelled in a bright Moon-shine-night, they faw acetain apparition of Phairies, in Latine called Lamie, and in Greek, Empule, changing themselves from one shape into another, being also sometimes visible, and presently vanishing out of sight agains is soon as a perceived it, he knew what it was, and did rate it with very continued in the latest was and delpitely words, experies the second of the like for their is the head tamedia and a latest and delpitely words. horting his fellows to do the like, for that is the best remedie against the invasion of Phairies. when his companions did likewife rail at them, prefently the vision departed away.

Philoftralus. The Poetical Lamia,

The Poets (ay, that Lamia was a beautiful woman, the daughter of Bellus and Libia, which Jupiter loved, bringing out of Lybia into Italy, where he begot upon her many sons, but justice loved, bringing out of Lybia into Italy, where he begot upon her many sons, but justice loved, bringing out of Lybia into Italy, where he begot upon her many sons, but justice loved in the sale of the were both, punishing Lamia also made a refless estate, that she should never be able to sleep; but sive night and day in continuous mourning, for which occasion she also stealest away and killeth the children of others, where upon came the sable of changing of children and salest a salest and salest exemple. upon came the fable of changing of children? Faplier having pity upon her, gave her exemple that might be taken in and out at her own pleasure, and likewise power to be transformed into what these the would have the mountain and out at her own pleasure, and likewise power to be transformed into what these the would have the world. into what shape she would: And from hence also came the saigned name of Acho, and there where

The Chimera is also faigned to be compounded of a Lion, a Goat, and a Dragon, according torthis Verfe

Prima Leo, postrema Draco, media ipsa Chimeta. "111) ila

There be also many Fishes in the great Sea, about the Isle Tapy above, having the heads of lone, and are wise Panthers, Rams, and other beafts. The Typers of Fishes are also engeshered of Lone, and are wise to big as they. There are also Elone in theirs, (called Fibrales) abboil the bigness of Lopisa Wolves, Camalopardules have their hinder parts like Lions. The Maintabor shall thing cald Demonture Leading to the most the neck, tait, and breast like Lions, and there is an allogorital thing cald Demonture Leading, a Lion Devil, which by Bellumenist, is interpreted to be an allegorital fishing the mingling together reasonable understanding with malkious Surful actions.

It is reported also by Allamus, that in the Island of Chees, a sheet of the above manual to the leasts; in stead of a Lamb, brought forth a Lion, which months to the nature of those beasts; in stead of a Lamb, brought forth a Lion, which months prodigy was seen and considered of many; whereof divers gave their opinions what it did ported namely, that Nicippus of a private man should effect superiority and become a Tyrant; which

Monfters bred

namely, that Nicippus of a private man should effect superiority and become a Tyrant; which thortly after came to passe, for he ruled all by force and violence, not with stand or merry, for Fram (saith Cloero) quasi Vulpecula, via Leonie est violence, that is, France is the property of area,

Calim.

Herodotus.

It is reported that Meles the first King of Sardis, did beget of his Concubine a Lion, and the South-fayers told him that on what side foever of the City he should lead that Lion, it should tenus inexpugnable, and never be taken by any man ; whereupon Meles led him about every tower and rampier of the City, which he thought was weakeft, except only one tower flanding toward the River I melu, because he thought that fide was invincible, and could never by any force be entred, scaled or ruinated. Afterwards in the reign of Crefus, the City was taken in that place

Countries

There are no Lions bred in Europe, except in one part of Thracia, for the Nemean, or Colonian without Lions. Lion is but a fable; yet in Ariffolies time, there were more famous and valiant Lions in that part of Europe, lying betwith the Rivers Achelous and Nessus, then in all Arica and legioned its Xernes led his Army through Paonia Over the River Chidorus; the Lions came and legioned its Camels in the night time: But beyond Neffis towards the East, or Achelous towards the Well, there was never man faw a Lion of Europe; but in the region betwire them which was nice alled the Countries of the Address that the Countries of the Cou the Countrey of the Abderies, there were such store, that they wandered into Olimpi Machini, and Thessair but yet of purpose Princes in Castles and Towers for their pleasures lake, do nouth and keep Lions in Europe, where sometimes also they breed as hath been seen both in Evolution and keep Lions in Europe, where sometimes also they breed as hath been seen both in Evolution for Florence. Peloponness also hath no Lions, and therefore when Homer maketh mention of Diame hunting in the mountains of Erimanism and Tayloria, he speaketh not of Lions; but of Harts and Boars.

Countries of

All the Countries in the Bast and South, lying under the hear of the Sun. To plentifully beed Lyons, and except in hot Countries they breed seldom, and therefore the Lions of Fest. Times. angad, Hippo, and Tunie, are accounted the most noble and additions Lions of Africk, being they are hot Countries. But the Lions of colder Countries share not fail to much french.

itomach, and courage. Thefe Lybian Lions have not half fo bright hair as others, their face and neck are very horrible rough, making them to look fearfully, and the whole colour of their bodies beare very norrible rough, making them to look leating, and whole of their bodies betwist brown and black; Apollonius faw Lions also beyond Nilus, Hithasis, and Ganges: and Strainstructh that there are Lions about Meroe, Astapa, and Astabore, which Lions are very gentle, tame, amrmeth that there are bloss about alled Canu Siriu doth appear, whereof cometh the Dog days, and fearful, and when the Dog flar called Canu Siriu doth appear, whereof cometh the Dog days. that then they are drove away by the bitings of great gnats.

Ethiopia also breedeth Lions, being black coloured, having great heads, long hair, rough feet firy eyes, and their mouth betwixt red and yellow. Cilicia, Armenia, and Parthia, about the mouth of Her, breed many fearful Lions, having great heads, thick and rough necks and cheeks, bright or ther, preed many teartin Lions, the ring B. There are also plenty of Lions in Arabia, fo that a eyes, and eye-lids hanging down to their noses. There are also plenty of Lions in Arabia, so that a man cannot travel neer the City Aden over the mountains, with any fecurity of life, except he man cannot travel neer the City and. The Lions also of Hircania are very bold and hurtful; and have a hundred men in his company. The Lions also of Hircania are very bold and hurtful; and India, the mother of all kinde of beatts, hath most black, sierce and cruell Lions. In Tanana also, and the Kingdom of Narfinga, and the Province of Abasia, are many Lions, greater then those of Babylon and Syria; of divers and fundry intermingled colours, both white, black and red. There ot Baryion and Syria; of diversalia land, for that for fear of them, men dare not fleep out of their own houses in the night time. For whomsoever they finde, they devour and tear in pieces. The their own nouses in the night time. To who made to the bank fide for fear of these Lions, becaufe in the night time they come down to the waterfide, and if they can finde any passage into the barks, they enter in, and destroy every living creature, wherefore they ride at Ancor in the middle

Lions.

Cardanus.

The colour of The colour of Lions is generally yellow, for these before spoken of, black, white and red, are exorbitant. Their hair some of them is curled, and some of them long, shaggy and thin, not sanding upright, but falling flat, longer before, and shorter behind, and although the curling of his hair be a token of fluggift timidity, yet if the hair be long and curled at the top only, it portendeth generous animosity. So also if the hair be hard : for beasts that have soft hair, as the Hart, the Hare, and the Sheep, are timorous, but they which are harder haired, as the Boar and the Lion, are more audacious and fearless.

There is no four footed beaft, that hath hairs on his neather eye-lids like a man, but in flead thereof, either their face is rough all over as in a Dog, or else they have a foretop as a Horse and an Assert a mane like a Lion. The Lionesse hath no mane at all, for it is proper to the male, and as long hairs are an ornament to a Horses mane, so are they to the neck and shoulders of a Lion; neither are they eminent but in their full age, and therefore Pliny faid, Turrigeros elephantorum miramur bumeros, leonum jub.ss. We wonder at the Tower-bearing shoulders of Elephants, and the long hanging manes of Lions. And Ælianus Rationis expertibus mari prastantiam quandam natura largita eft, juba Leo antecellit faminam, ferdens criffa. Nature hath honoured the Male, even in creatures without reason, to be diftinguished from the female, as the mane of the male Lion, and the comb of the male Serpent do from their females. Martial writeth thus of the Lions mane :

> O quantum per colla decus, quem sparfit bonorem, Aurea lunata cum ftetit unda juba!

The feveral

Plutarch.

A Lion hath a most valiant and strong head, and for this occasion, when the Nymphes were terrified by the Lions and fled into Caryfius, the Promontory wherein they dwelled was called Coleon, that is, the Lions-head, where afterwards was built a goodly City. It fortuned as Themisicals went thither to manage the affairs of the Grecians, Epiries the Perfian, prefident of Phrygia, intended his destruction, and therefore committed the business unto one Pifis, with charge that he should behead Themistocles, who came thither to execute that murder ; but it happened as Themistecles stept at the noon day, he heard a voice crying out unto him, O. Themistocles effuge leonum caput ne iffe in leonem incurry; that is to fay, O Themistocles get thee out of the Lions head, lest thou fall into the Lions teeth: whereupon he arose and saved his life.

The face of a Lion is not round as fome have imagined, and therefore compared it unto the Sun, because in the compasse thereof, the hairs stand out eminent like Sunbeams, but rather it is fquare figured like as his forehead, which Ariffole faith, you may chuse whether you will call it a forchead, or Epipedon frontie, that is, the superficies of a forchead; for like a cloud it feeneth to hang over his eyes and nofe, and therefore the Germans call a man that looketh with suchacoune tenance, Niblen of Nubilare, to be cloudy, and it betokeneth either anger or forrow; also it is called Seyibicm afredm, because the Seyibians were alwayes wont to look as though they were ready to fight.

The eyes of a Lion are red, firy, and hollow, not very round nor long, looking for the most part awry, wherefore the Poets style the Lioness Torva leana. The pupils of apples of the eye shine exceedingly, infomuch as beholding of them, a man would think he looked upon fire.

His upper eve-lid is exceeding great, his Nose thick, and his upper chap doth not hang over the neather, but meet it just : his mouth very great, gaping wide, his lips thin, so that the upper parts fall in the neather, which is a token of his fortitude: his teeth like a Wolves and a Dogs, like fawes, lofing or changing only his canine testh, the tongue like a Cats or Leopards, as fharp as a file, wearing through the skin of a man by lickings his neck very fifte, because it consistes but of one bone without joynts, like as in a Wolfe and in Hyana, the flesh is so hard as if it were all a sinew: There are no knuckles or turning joynts in it called Spondyli, and therefore he cannot look backward.

The greatness and roughness of his Neck betokeneth a magnanimous and liberal minde; Nature hath given a short Neck unto the Lion, as unto Bears and Tygers, because they have no Nature nating grants and the earth to feed like an Ox, but to life it up to ratch their prey. His moulders and breaks are very strong, as allothe forepart, of his body, but the members of the hinder part to degenerate. For as Pinn latthe head wis jumped in pedice, the chiefest force of a Lion

hinder part do degenerate. For as Pluy latth, begut vie Jumpa in pediere, the chiefest force of a Lion is in its break.

The part above his throat-hole is looke and lost, and his Metaphrenea or part of his back regains his least (so called), hetwist his shoulder-blades, is very broad. The back bone and ribs are very strong, his ventricle narrow, and not much larger then his maw. He is most subject to wounds in his stanck, because that part is weakest, in all other parts of his body he can endure may blowes.

About his loyns and hip-hone he bath but, the sach the liquesses has bringest amore, but because she bringest forth but, two at a time, for sometimes she bringest more, but because she abounded in milk, and hen meat (which she gestich seldem) and is for the most part sech, turketh all into milk. The tail of a Lion is very long; which they shake estentimes, and by beating their sides therewith, they provoke themselves to fight. The Greview call it Alore: and Alcian maketh this excellent emblem therent upon wrath.

Alcaem veteres candam divere Leonie.
Que flimulonte izas conocipit ille graves,
Luies ghum surgit bilis crassescit de esto.
Felle dosor, furies excitat maomitas.

The neather part of his tail is full of hairs and griffles; and some are of opinion, that there is there in a little string wherewithal the Lion pricketh it selfs, but of this more afterwards.

The bones of Lions have no marrow in them, or effecting some are seement nothing; there—Ælianus, for they are the more strong, solid, and greater then any other beast of their struce, and the males Aristotle, have ever more harder bones then the semale for by striking them togeness; you may beget site, aby the percussion of Flints; and the like man be said of other beasts that live upon stells yet are some of the bosies hollow. The legs of a Lion are very strong and full of Nerves, and in stead of an ankle-bone it hath a crooked thing in his pastern, such as children use to make for sport, and so such a tribe two.

His forefeet have five diftinct toes or clawes on each foot, and the hinder feet but four Hisclawes Pline. are crooked, and exceeding hard, and this segmeth a little miracle in nature that Leopards, Tygers, Cardanu? Pauthers, and Lions, do hide their clawes within their skin when they go or run, that so they might not be dulled, and never pull them forth except when they are to take or devour their prey ; also when they are hunted, with their tails they cover their footsteps with earth, that fo they may not Solinus. be bewraved.

The Epithets of this beaft are many, whereby the authors have expressed their several natures such are these, the curst kind of Lions, full of Stomach, sharp, bold, greedy, blunket, Resheater, Capian Gloman, the Lord and King of the beats; and woods, fierce, wilder, hairy, yellow; firong, fretting teeth-gnashing, Nimean, thundering, raging, Geullan, rough, lowning, or wry-faced, impatient, quick, untamed, free, and mad, according to this faying of the Poet;

Fertus Proposibem infahi Laopis Vim flomaadd adrofulfa notten.

Forasthe Eagle is faigned to feed upon the heart of Prometheu; fo alfo is the Lion the ruler of the heart of man, according to the Attelegions, And from hence it cometh that a man is field to bear a homach when he is angry, and that he fhould be more subject to anger when he is buogry, then when he is full of meat.

Their also are the Epithets of Lions, wrathful, maned, Lybian, deadly, frout, great, Masilian, Man-The Epithen ritanian, Paribian, Physican, Molochean, Carthagintan, preving, ravoning, stubborn, snatching, wrink of Lions, led, truell, blondy, terrible, swelling, valt, violent, Mannasican.

Their also are the Epithets of the Lioneste, African, bold, stony-hearted, vengible, cave-lodg. The voice of ing fierce, vellow, Genulum, Hyrcanian, magninile, Lybian, exuell, from ning, and terrible. By all Lions, which the arrivers.

Of the Lion.

26 I

And therefore cometh Rigitar Leanin, the roaring of the Lion. It is called also Gamitus, and Fremitis. as Virgil, Fremit les ore cruents. And again 3

Hine exaudiri gemitut, iraq; leonum

And when the young Lions have gotten a prey, in token thereof they roar like the bleating of a And when the young Lions have getter plays, with them. The places of their about are in the mountains, according to this faying; Les cacumina montium amat.

ountains, according to this saying, and excellent, for they sleep with their eyes open, and because Their light and their imening are most extended, the light of fire; for fire and fire campt agree:
of the brightness of their eyes, they cannot endure the light of fire; for fire and fire cannot agree:
also their smelling (for which cause they are called Odorsts) is very eminent, for if the Lightess have allo their imening for which came they are all different by the fenfe of his Nole, and for committed adultery with the Leopard, the male different by the fenfe of his Nole, and for committed adultery with the Leopard, the male different his parts, Bears, Hares, Roe-bucks, Pa. Venetus. this cause also they are ramed in Tariaria, and are used for hunting Boars, Bears, Hares, Roe-bucks, wilde Affes, as also for wilde and outlandish Oxen, and they were wont to be carryed to hunting, two Lions in a Cart together, and either of them had a little Dog following them.

There is no beaft more vehement then a fine or female Lion, for which taufe Seminaris the Babiloalen tyrannes, efteemed not the flanghter of a male Lion or a Libbard; but having goten a Lioneste, above all other the rejoyced therein. A Lion when he eareth is most fierce, and allowhen he is hungry, but when he is satisfied and filled he layeth aside that savage quality, and shewish himself of a more meek and gentle nature, so that it is lesse danger to meet with him filled then

hungry, for he never devoureth any till famine constraineth him.

ungry, for he hever defonder in Barbary which turned Moor, and lived in the Kings Court, on a day it was faid in his presence that there was a Lion within a little space of the Court, and the place was named where it lodged. The Englishman being more then half drunk, offered to go and kill the Lion hand to hand, and therewithat armed himself with a Musket, Sword and Dagger, and other complements, and he had also about him a long Knife; so forth went this regenerate English Moor, more like a mad man then an advited Champion to kill this Lion, and when he came to it, he found it a fleep, to that with no perill he might have killed her with his Musket before the fawhim: but he like a fool-hardy fellow, thought it as little hidnour to kill a Lyon fleeping, as a flout Champion doth to firike his enemy behind the back. Therefore with his Musker top he finds the Lion to awake it, whereat the beaft fuddenly mounted up, and without any thankes or warning, let his forefeet on this Squires breft, and with the force of her body overthrew the Champion, and food upon him, keeping him down, holding her grim face and bloudy reeth over his face and eyes, a fight no doubt that made him with himself a thousand miles from her, because to all skelihood they should be the grinders of his flesh and bones, and his first executioner to fend his curfed fool to the Devill for denying Jesus Christ his Saviour. Yet it fell out otherwise, for the Lion baving been lately filled with fome liberal prey did not prefently fall to ear him, but flood upon him for her own fafegard, and meant fo to stand till she was an hungry; during which time, the boot wretch had liberty to gather his wits together, and foat the last, feeing he could have no benefit by his Musket, Sword, or Dagger, and perceiving nothing before him but unavoidable death, thought for the faving of his credit, that he might not die in foolish infamy, to do some exploit upon the Lion whatfoever did betide him; and thereupon feeing the Lion did bestride him, standing over his upper parts, his hands being at some liberty, drew out his long Barbarian knife, and thrust the same twice or thrice into the Lions flank : which the Lion endured, never hurting the man, but suppofing the wounds came fome other way, and would not forfake her booty to look about for the means whereby the was harmed. At last finding her felf fick, her bowels being cut afunder within her (for in all hot bodies wounds work presently) the departed away from the man above some two yards distance, and there lay down and dyed. The wretch being thus delivered from the jawes death, you must think made no small brags thereof in the Court, notwithstanding, he was more beholding to the good nature of the Lion, which doth not kill to eat except he be hungry, then to his own wit, ftrength, or valour.

The Male Lion doth not feed with the female, but either of them apart by themfelves. They eat raw fielh, for which cause the Grecians call them Omesteres, Omoboroi, and Omophagel: the young ones themselves cannot long be fed with milke, because they are hot and dry; being at sberty they never want meat, and yet they eat nothing but that which they take in hunting and they hunt not but once a day at the most, and eat every second day: whatsoever they leave of their meat, they return not to it again to eat it afterwards; whereof some affigined the cause to be in the meat, because they can endure nothing which is unsweet, stale, or striking; but in my opinion they do it through the pride of their natures, refembling in all things a Princely majefty, and therefore from to have one dish ewice presented to their own table. But tame Lions being constrained through hunger, will eat dead bodies, and also cakes made of meal and hony, as may appear by that tame Lion which came to apollonius, and was full to have the foot in its and was full to have the foul in it of Amafir King of Egypt, which story is related by Philofical win the

There was (faith he) a certain man which in a leam led up and down a tame Lion like a Dog whithersoever he would, and the Lion was not only gentle to his leader, but to all other persons

that met him; by which means the man got much gains, and therefore vifited many Regions and Cities, not sparing to enter into the temples at the time of sacrificing, because he had never thed bloud but was clear from flaughter, neither licked up the bloud of the Beatls, nor once touched the field cut in pieces for the holy Altar, but did eat upon Cakes made with meal and hony salfo hread. Gourds, and fod flefh, and now and then at customary times did drink wine. As Apollonius fat in a Temple, he came unto him in more humble manner, lying down at his feet, and looking up into his face, then ever he did to any, as if he had fome special supplication unto him, and the people thought he did it for hope of some reward, at the command and for the gain of his Master : At ialt Apilonim looked upon the Lion, and told the people that the Lion did entreat him to fignific unto them what he was, and wherewithal he was possessed; namely that he had in him the foul of a man, that is to say, of Amesis King of Egypt, who raigned in the Province of Sai. At which words the Lion sighed deeply; and mourned forth a lamentable roaring, gnashing his teeth together, and crying with abundance of tears; whereat Apollonius ftroked the Beaft, and made much of him, telling the people that his opinion was, forasmuch as the foul of a King had entred into such a kingly Beast, he judged it altogether unfit that the Beast should go about and beg his living, and therefore they should do well to fend him to Leontopolis, there to be nourished in the Temple. The Egyptians agreed thereunto, and made facrifice to Amasis, adorning the Beast with Chains, Bracelets, and branches, fo fending him to the inner Egypt, the Priests singing before him all the way, their idolatrous Hymnes and Anthems; but of the transfiguration of men into Lions, we hall fav more afterward, only this ftory I rehearfed in this place to shew the food of tame and en-

The substance, of such transfigurations, I hold to be either Poetical, or else Diabolical. The food therefore of Lions is most commonly of meek and gentle Beasts, for they will not eat Wolves or Bears, or such Beasts as live upon ravening, because they beget in them melancholy; they eat their meat very greedily, and devour many things whole without chewing, but then they fast afterwards two or three days together, never eating untill the former be digefted; but when they fast, that day they drink, and the next day they eat, for they seldom eat and drink both in one day: and if Alianus; any slick in his stomach which he cannot digest; because it is overcharged, then doth he thrust down Philes. his nails into his throat, and by fraining his fromach pulleth it out again; the felf fame thing he doth when he is hunted upon a full belly: And also it must not be forgotten that although he come not twice to one carcaffe, yet having eaten his belly full, at his departure by a wilful breathing upon therefidue, he fo, corrupteth is, that never after any beaft will tafte thereof: for fo great is the Soline. poison of his breath, that it putrifieth the figh, and also in his own body after it is suddainly solini apped up, the intrails flink abominably. The reasons whereof I take to be their great voracity Pliny. which cannot but corrupt in their stomach, and also the seldom emptying of their belly, for they Aristotle. utter their excrements not above once in three days, and then also it is exceeding dry like a Dogs, finking abouninably, and fending forth much winde ; and because their urine smelleth strongly, which allo they render like a Dog holding up one of their legs : They never make water, but first of all they finell to the tree, I mean the male Lion. They fall upon fome creatures for defire of meat, and specially when they are old, and not able to hunt they go to Towns and Villages, to the stables of Ozen, and folds of theep, and fometimes to men and devour them, wherefore they never eat herbs but when they are fick.

Poblim affirmeth that he law them beliege and compasse about many Orices of Africk, and therefore the people took and hanged them up upon croffee and gallowies by the high wayes to the terror of others. Wherefore as they excell in thrength and courage, to also they do in cruelty. The cruelty of devouring both men and beafts, fetting up troops of Horsemen, depopulating the flocks and herds of Lions. Cattel, carrying some alive to their young ones, killing five or fix at one time, and whatsoever they Leo Afer. lay hold on, they carry it away in their mouth, although it be as big as a Camel; for they love Philes,

And therefore the Lions that fet upon the Camels of Xerxes, neither medled with the Men. Oren, nor victuals, but only the Camels: To that it seemeth no meat is so acceptable unto

They hate above measure the wilde Asses, and hunt and kill them, according to the faying of The hatred of the Wileman, Leonum venatio enager, the wilde Affe is the game of Lions, Ecclus. 13. They Lions and thety hate also the Theer, and fight with them for their meat, because both of them live upon flesh, of several ence

Thees commissor (clarissma fama) Leones Et subiers assu, & parch domaere lacertie.

They eat also Apes, but more for Physick then for nourishment. They set upon Oxen, using their own frength very prudently, for when they come to a fall or herd, they terrifie all, that they may take one. They eat also young Bigphants, as we have shewed before in the story of Elephants & Elianus. In the story of Elephants & Elianus. In the makethe country of Elephants of the shewed before in the story of Elephants & Elianus. In the makethe country of the short of the s side maketh a circle with his beil, either in the fnow, or in the dust, and that all Beasts included within the contact of the beast of the state of within the compasse of that circle, when they come into it presently know it, and dare not for their repasse over it (believe this who that lift.)

Their food and eating.

We have spoken already of the Leomophonus how the rendreth a urine which portoner the Limi the noises of wheeles and chariots do also terrifie them, according to the faving of Sente, Lent physical funt and haifimot firepitus pectora. The high framach of a Lion is afraid of a liebe france noise. Authologischath an excellent Epigram of one of Cohels Priefts, who travelling in the flountare by reason of frost, cold, and snow, was driven into a Lions den, and at night when the Lion reason he formed him away by the sound of a Bolk. The time also shall be asserted as well and shall be asserted as well and shall be asserted as well and shall be asserted as well as the same as a second a

They are also asraid of fire, Ardenseson fuers, quant quantity faviles better 3. For us they are also as they are thereby to are filled with natural fire (for which cause by the Egyptians they were dedicated to Parkin) to are they the more assaid of all outlined for a state of the send of the they the more afraid of all outwerd fire, and so sufpicious is the of his welfare, that if he trad upon the rinde or bark of Oke, or the leaves of Ofyer, he rembleth and franders minered. And Democritus affirmeth that there is a certain herb growing no where but in Armenia and Computed which being laid to a Lion, maketh him to fait presently upon his back and the opinion without firring, and gaping with the whole breadth of his mouth, the reaction whereoff Firm field is cause it cannot be bruised.

There is no Beaft more desirous of copulation then a Lioness, and for this cause the males of tentimes fall forth, for fometimes eight, ten, or twelve males follow one Lionels, like fo many Dog one fair Bitch: for indeed their natural conditioning had, there all filtes of the year both of fexes defire copulation, although Arifials frements to be again this because they bring forth of in the foring

The Lioness (as we have showed already) commisseeth adulters by tying with the shift which thing she is punished by her male if the washmor her self-before the come at him; then is the is ready to be delivered. the is ready to be delivered, the flyath to the lodgings of the Libbides and the satisfies them deth her young ones, (which for the most partiare males) for if dies male Lion and ellem, it has eth them and destroyeth them, age bestard and adulacous islam, and when the goeth to site the fuck the faigneth as though the went to hunting.

By the copulation of a Lionel's and an Hyana is the Ethiopian Crocura brought forth. The Area- Forthe dun Dogs, called Leontomiges, were also generated betwixt Dogs and Lions. In all her life long Calius the beareth but once, and that but one at a time, as Efop feemeth to fet down in that fable, where the expressent that contention between the Lionels and the Fox, about the generolity of their young ones: the Fox objecteth to the Lioness, that the bringeth forth but one whelp at a time. but he on the contrary begetteth many cubs, wherein he taketh great delight; unto whom the Lioness maketh this answer: Parere se quidem uhum sed Leonem; that is to say, the bringeth forth indeed but one, yet that one is a Lion; for one Lion is better then a thousand Foxes, and true generosity consisteth not in popularity, or multitude, but in the gifts of the minde joyned with honorable descent. The Lionesses of Syria bear five times in their life; at the first time honorable wards but one, and lastly they remain barren. Herodotte speaking of other Lions, saith. they never bear but one, and that only once, whereof he giveth this reason, that when the whele beginneth to ftir in his Dams belly, the length of his claws pierce through her matrix and to growing greater and greater, by often turning leaveth nothing whole; fo that when the time of littering cometh the casteth forth her whelp and her womb both, together, after which time the can never bear more: but I hold this for a fable, because Homer, Plint, Oppianus, Solinus, Philes, and Elianus affirm otherwise contrary, and besides experience showeth the

When Apollonius travelled from Babylon by the way they faw a Lionefs that was killed by hunters, the Beaft was of a wonderful higness, such a one as was never feen : about her was a great cry of the Hunters, and of other neighbours which had flocked thither to fee the moniter not wondering so much at her quantity, as that by opening of her belly, they found within her eight whelps, whereat Apollonius wondring a little, told his companions that they travelling now into India should be a year and eight moneths in their journey; for the one Lion signified by his skill Philosoft sture one year, and the eight young ones eight moneths. The truth is that a Lion beareth never above thrice, that is to fay, fix at the first, and at the most afterwards two at a time, and lastly but one because that one proveth greater, and fuller of flomach, then the other before him; wherefore nature having in that accomplished her perfection, giveth over to bring forth any more. Within two moneths after the Lioness hath conceived the whelps are perfected in her womb, and at fix moneths are brought forth blinde; weak, and (some are of opinion) without life, which so do remain three dayes together, untill by the roaring of the male their father, and by breathing in their face Physiologist. they be quickned, which also he goeth about to establish by reason; but they are not worth the relating. Ifidorus on the other fide declareth that for three dayes and three nights after their littering, they do nothing but fleep, and at last are awaked by the roaring of their father; fo that it should feem without controversie, they are senseless for a certain space after their whelping: At two moneths old they begin to run and walk. They fay also that the fortitude, wrath, and boldness of Lions, is conspicuous by their heat, the young one containeth much humidity contrived unto him by the temperament of his kinde, which afterwards by the driness and calidity of his compledion groweth viscous and slimie like bird-lime, and through the help of the animal spirits prevalleth especially about his brain, whereby the nerves are so stopped, and the spirits excluded, that all his power is not able to move him, untill his parents partly by breathing into his face, and partly by bellowing, drive away from his brain that vifcous humor; thefe are the words of Phyfiologus, whereby he goeth about to establish his opinion; but herein I leave every man to his own judgment, in the mean season admiring the wonderful wildom of God, which hath so ordered the several natures of his creatures, that whereas the little Partridge can run fo foon as it is out of the shell; and the duckling the first day swim in the water with his dam, yet the harmful Lions, Bears, Tygres, and their whelps are not able to fee, stand or go, for many moneths; whereby they are exposed to destruction when they are young, which live upon destruction when they are old: fo that in infancie; God clotheth the weaker with more honor.

There is no creature that loveth her young ones better then the Lioness, for both shepherds, and hunters, frequenting the mountains, do oftentimes fee how irefully the fighteth in their defence, receiving the wounds of many Darts, and the stroaks of many stones, the one opening her bleeding body, and the other pressing the bloud out of the wounds, standing invincible, never yielding till death, yea death it felf were nothing unto her, fo that her young ones might never be taken out of her Den; for which cause Homer compareth Ajax to a Lioness, fighting in the defence of the Elianur. carcals of Patrogius. It is also reported, that the male will lead abroad the young ones, but it is not Endemus. likely, that the Lion which refuseth to accompany his female in hunting, will so much abase his noble spirit, as to undergoe the Lionesses duty in leading abroad the young ones. In Pangin a mountain of Thracia, there was a Lioness which had whelps in her den, the which den was observed Gillius. by a Bear, the which Bear on a day finding the den unfortified, both by the absence of the Lonand the Liones, entred into the same and slew the Lions whelps, afterward went away, and fearing arevenge, for her better fecurity against the Lions rage, climed up into a tree, and there fat sense the sense was a sense for the sense and father than a sense for the sense f fat as in a fire castle of defence : at length the Lion and the Lioness returned both home, and finding their little ones dead in their own bloud, according to natural affection fell both exceeding forrowful, to fee them fo flaughtered whom they both loved; but finelling out by the foot the murderer, followed with rage up and down untill they came to the tree whereinto the Bear was ascended, and seeing her, looked both of them gastly upon her, oftentimes assaying to get into

the tree, but all in vain, for nature which adorned them with fingular strength and nimbleness, yet the tree, but all in vain, for nature which address that the tree hindring them from revenge, gave had not endued them with power of climbing, so that the tree hindring them from revenge, gave had not enqued them with power of thinbing, to the Bear to rejoyce at her own cruelty, and unto them further occasion of mourning, and unto the Bear to rejoyce at her own cruelty, and

ride their forrow.

Then the male forfook the female, leaving her to watch the tree, and he like a mournful father Inen the male for the losse of his children, wandred up and down the mountain making great moan and for for the losse of his children, wandred up and down the mountain making great moan and for for the lone or ms children, wandled up ming wood, who feing the Lion coming towards him let row, till at the laft he faw a Carpenter hewing wood, who feing the Lion coming towards him let row, till at the land is law a Carpener law by lowerds him, fawning gently upon his break fall his Axe for fear, but the Lion came very lovingly towards him, fawning gently upon his break fall his Axe for fear, but the Lion came very lovingly towards min, lawning gently upon his break with his forefeet, and licking his face with his tongue; which gentleness of the Lion the manperwith his forefeet, and faving his face with his more and more embraced, and fawned on bythe Lion, ceiving he was much afformed, and being more and more embraced, and fawned on bythe Lion he followed him, leaving his Axe behind him which he had let fall, which the Lion he followed nim, icaying ins and believe with his footto the Carpenter that he should take it up: perceiving went back, and made lights with an did not understand his fignes, he brought it himself in his but the Lion perceiving that the man did not understand his fignes, he brought it himself in his but the Lion perceiving that the man fo led him into his cave, where the young whelps lay mouth and delivered it unto him, and so led him into his cave, where the young whelps lay mouth and delivered it discounts, and then led him where the Lionesse did watch the Bear, she all embrewed in their own bloud, and then led him where the Lionesse did watch the Bear, she an emprewed in their own plous, as one that knew her husbands purpose, did fignisse unto the therefore seeing them both coming, as one that knew her husbands purpose, did fignisse unto the therefore leeing them both confider of the miserable slaughter of her young whelpes, and shewing him by man that he mould look up into the tree where the Bear was, which when the man faw, he confignes, that he should look up into the tree where the Bear was, which when the man faw, he confignes, that he should look up into the tree where the Bear was, which when the man faw, he confignes, that he should look up into the tree where the Bear was, which when the man faw, he configues that he should look up into the tree where the Bear was, which when the man faw, he configues that he should look up into the tree where the Bear was, which when the man faw, he configues that he should look up into the tree where the Bear was, which when the man faw, he configues that he should look up into the tree where the Bear was, which when the man faw, he configues that he should look up into the tree where the Bear was, which when the man faw, he configues that he should look up into the tree where the Bear was, which when the man faw, he configues the should look up into the tree where the Bear was, which when the man faw, he configues the should look up into the tree where the Bear was, which when the man faw, he configues the should look up into the tree where the Bear was, which when the man faw, he configues the should look up into the tree where the Bear was, which when the man faw, he configues the should look up into the tree where the Bear was, which when the man faw, he configues the should look up into the tree where the Bear was, which when the should look up into the tree where the Bear was, which when the should look up into the tree where the Bear was, which when the should look up into the tree where the Bear was, which when the should look up into the tree where the bear was, which where the bear was the should look up into the tree where the bear was, which when the bear was the should look up into the tree where the bear was the should look up into the tree where the bear was the should look up into the tree where the bear was the should look up into the tree where the bear was the should look up into the tre rignes, that he mould look up into the free whete the bear when the man law, ne conjectured that the Bear had done some grievous injury unto them; he therefore took his Ax and jectured that the Bear had done some grievous injury unto them; he therefore took his Ax and jectured that the Bear had down headlong, which hewed down the tree by the roots, which being so cut, the Bear tumbled down headlong, which the two furious Beafts feeing, they tour her all to pieces: And afterwards the Lion conducted the man unto the place and work where he first met him, and there lest him, without doing the less violence or harm unto him.

Neither do the old Lions love their young ones in vain and without thanks or recompence, for in pence of young their old age they requite it again, then do the young ones both defend them from the annoyance of enemies, and also maintain and feed them by their own labor; for they take them forth to hurting, and when as their decrepit and withered estate is not able to follow the game, the younger pursueth and taketh it for him : having obtained it, roareth mightily like the voice of some warning pursuern and rances to the clar that he should come on to dinner, and if he delay, he goeth to seek him where he left him, or elfe carryeth the prey unto him at the fight whereof, in gratulation of natural kindness, and also for joy of good success, the old one first licketh and kisseth the younger,

and afterward enjoy the booty in common betwixt them.

Admirable is the disposition of Lions, both in their courage, society and love, for they love their nourishers and other men with whom they are conversant: they are neither fraudulent nor suspicious, they never look awry or squint, and by their good wils they would never be

Their clemency in that fierce and angry nature is also worthy commendation, and to be wondelooked uponredat in such Beafts, for if one proftrate himself unto them as it were in petition for his life, they often spare, except in extremity of famine; and likewise they seldom destroy women or children: and if they fee women, children, and men together, they take the men which are strongest, and refuse the other as weaklings and unworthy their honor; and if they fortune to be harmed by a Dart or stone by any man, according to the quality of the hurt, they frame their revenge; for if it wound not, they only terrifie the hunter, but if it pinch them further, and draw bloud, they increase their

There is an excellent story of a Souldier in Arabia, who among other his colleagues, rode abroad on geldings to see some wilde Lions: now geldings are so fearful by nature, that where they conceive any fear, no wit or force of man is able by four and rod to make him to come near the thing it feareth, but those which are not gelded are more bold and couragious, and are not stall afraid of Lions, but will fight and combate with them. As they road they faw three Lions together, one of the Souldiers feeing one of them stray and run away from his fellowes, cast a Dart at him, which fell on the ground neer the Lionshead, whereat the Beaft stood still a little and paused, and after ward went forward to his fellowes. At last the Souldier road betwint him and his fellowes which were gone before, and run at his head with a spear, but missed it, and fell from his Horfe to the earth, then the Lion came unto him and took his head in his mouth, which was armed with a Helmet, and pressing it a little did wound him, taking of him no more revenge, then might require the wrong received, but not the wrong intended; for generally they hurt no more then they

There is an obscure Author that attributeth such mercy and elemency to a Beast which he call the Marketin Contract of the Cont leth Melosus, for he persecuteth with violence and open mouth stout men, and all whom heisables resist, but yet is afraid of the crying of children. It is probable that he mistaketh it for the Lion for besides him, I have not read of any Beast that spareth young children. Solinus affirmeth the many Captives having been fet at liberty, have met with Lions as they returned home, weak, raged, fick, and different first an

lick, and difarmed, fafely without receiving any harm or violence.

And in Lobia the people believe that they understand the petitions and entreatings of the that speak to them for their lives; for there was a certain Captive woman coming home spin into Geiulia her native Countrey through many woods, was fet upon by many Lions, againft when the used no other weapon but only threatnings and fair words, falling down on her kness use then beleeching them to spare her life, telling them that the was a ftranger, a captive, a wanderer weak, a lean and loft woman, and therefore not worthy to be devoured by fuch couragious and Pinn. generous Beafts, as they: at which words they spared her, which thing the confessed after her lafe Solme. return: the name of this woman was called Juba Although about this matter there be fundry comions of men, fome making question whether it be true, that the Lion will spare a prostrate Suppliant, making confession unto him that heis overcome; wethe Romans did so generally believe it, that they caused to be inscribed so much upon the gates of the great Koman Palace in these two Verles; a Sagali sasa

Textor.

Itis reported allo, that if a Man and another Beaff be offered at one time to a Lion to rake his Albertur. choise whether of, both he will devoure, he spareth the Man and killeth the other Bealt. These Lions are not only thus naturally affected, but are enforced thereunto by chance and accidental harmes a anmay appear by these examples following : Mentor the Spracusian as he travelled sh Stria met with a Lion, that at his first fight fell profirate unto him, rolling him self upon the earth like fome diffressed creature; whereat the man was much amazed, and not understanding the meaning of this Beaft, he indevoured to run; away; the beaft fill overtook him, and met him in the face, licking his footsteps like a flatterer, shewed him his heel, wherein he did perceive a certain fwelling, whereat he took a good heart, going unto the Lion, took him by the leg, and feeling a folint flicking therein, he pulled it forth, fo delivering the Beaft from pain; for the memory of this fact, the picture of the man and the Lion were both pictured together in Syracufic, untill Hinles sime ashe reporteth. The like story is reported of Elpis, the Samian, who coming into Africk by thip, and there going a shore, had not walked very far on the Land, but he met with a gaping Lion, at which being greatly amazed, lie climed up into a tree, for a funch as there was no hope of any other flight, and prayed unto Bacchui (who in that Country is esteemed as chief of the Gods) to desend him, as he thought, from the jawes of death; but the Lion seeing him to climb into the tree flood fill, layed himself down at the root thereof, destring him in a manner, by his heavie roaring, to take pity upon hims gaping with his mouth and shewing him a bone sticking in his teeth, which through greedingle he swallowed which did so pain him that he could ear nothing ; at the last the man perceiving his minde (moved by a miracle) laid aside all fear, and came down to the dumb speaking distressed Lion, and cased him of that misery; which being performed, Pliny, he not only thewed himfelf thankful for the prefent time, but like the best natured honest man, ever forfook shore, but once a day came to shew himself to the man his helper, during the ime that they abode in those quarters; and therefore Elpis did afterward dedicate a Temple unto Buchw in gemembrance thereof. And this feemeth to me most wonderful, that Lions should know the vertue of mens curing hands above other creatures, and also come unto them against nature and kinde, but fo much is the fonce of evill and pain, that it altereth all courses of favage minds and organizes, and sinds in mislings ! أنبيد مروانهم

When Androffera fervant run away from a Senator of Rome, because he had committed some of. Elianur. fence (but what his offence was bknow not) and came into Africa; leaving the Cities and places in- Gellins. habited to come into a defert region: Afterwards when Andiothe had obtained a Maller being Confull of that Province of Africa, he was compelled by dayly ffripes to run away, that his fides A notable might be free from the blows of his Mafter, and went into the foldary places of the fields, and the flory of a Lion. landes of the wilderness and if he should happen to stand in head of mean; he did purpose to end his life by fome means or otherly and there he was fo schortched with the hear of the Sun, that at last finding out a cave, he did gover himfelf from the hear of it therein; and this cave was 4 Lions den. Burafter that the Lion had returned from hunting, (being very much pained by feel on of a thorn which was fastened in the bottom of his foot) he uttered forth such great lamentation & pitlful rearings, by reason of his wound, as that is should seem, he did want some body to make his ipoan unto for remedy, at last comingito his cave, and finding a young man hid therein, he gently looked upon him, and began as it were to flatter him and offered him his foor; and flid as well as he could pray him to pull out the piggo of pline which wanthere fastened. But the man'ar the first was very fore afraid of him, and matto and other rechoning but of nitbarh : but after that he fast field k huge favage healt, for meek and genete, began to think with inmielf, that furely there was fome bre on the bottom of the Beaft, because hellisted up his foot so unto him and then taking courage unto him, lifted,upthe Linna foot, and foundin the bottomofit a great piece of fplint, which he plucked forth, and fo by that magnetical the Hillin of his paint, and pressed forth the matter which was in the wound, and slidten your puriously withous any great fear throughty dry it, and wipe away the bloud in the loud in the lands of in the loud in the lands of interest of the lands of the land from the state of the state of

With the which cure the Lion being very well pleased because he handled him so currecully and friendly not only gave him fortance ompence his life, but also went dayly abroad to fortage and brough not only gave him fortance ompence his life, but also went dayly abroad to fortage and brought homethe facted for his prey. Androle whom all this while feven for the space of three years he kep familiarly, without any north of trucky or evil fature in his deny and there the Min and the Beal lived mutually acoust commans other man roadking his mean in the hot Sin, and the Beal lived mutually acoust commans other man roadking his mean in the hot Sin, and the

their revenge

The History of Four-footed Beasts.

the Lion eating his part raw, according to kind. When he had thus lived by the space of three the Lion eating inspectian, according to the pears, and grew weary of such habitation, life, and fociety, he bethought himself of some meanto years, and grew weary of such habitation, life, and fociety, he bethought himself of some meanto years, and grew weary of fuel mantender, some abroad to hunting, the man took his journey away depart; and therefore when the Lion was gone abroad to hunting, the man took his journey away depart; and therefore when the Laon was golded three days (wandering up and down) he was apfrom that notpitality, and after he had the told his long life and habitation with the Lion, prehended by the legionary Souldiers; to whom he told his long life and habitation with the Lion, prenenaed by the legionary Soundiers, Senator of Rome; which when they understood, they also and how he ran away from his Master a Senator of Rome; which when they understood, they also

fent him home again to Rome to the Senator. And being received by his master, he was guilty of so great and foul faults, that he was con-And being received by institution, the was con-demned to death, and the manner of his death was, to be torn in pieces of Wild beafts. Nowthere demned to death, and the manner of the searful, cruell, and ravening beafts, and among them many were at Rome in those days many great, fearful, cruell, and ravening beafts, and among them many were at Rome in those days many given the taking of the man, the aforesaid Lybian Lion with Lions: it fortuned also that shortly after the taking of the man, the aforesaid Lybian Lion with whom he lived long, seeking abroad for his companion and man-friend, was taken and brought whom he lived long, learning actioned, who was the most fierce, grim, fearful, and savage, to Rome, and there put among the residue, who was the most fierce, grim, fearful, and savage, above all other in the company, and the eyes of men were more fastened upon him then all other above all other in the company, and to his execution, and cast in among these savage beside. When Androcles was brought forth to his execution, and cast in among these savage bealts, this Lion at the first sight looking stedsastly upon him, stood still a little, and then came beaus, this fail at the poor toward him foftly, and gently, smelling to him like a Dog, and wagging his tail: the poor toward min lostry, and gently, more looking for any thing but present death, trembled and was examinate and pright in the presence of such a beast; not once thinking upon the Lion that had nourished him so long, but the Beast Accepti beneficit memore mindful of former friendship, licked gently his hands and legs, and so went round about him touching his body, and so the man began to know him, and both of them to congratulate each other in that their imprisoned occurrence, and to fignific to all the beholders their former acquaintance and conversation, the man by stroking and kissing the Lion, and the Lion by falling down prostrate at the man

Gillius.

In the mean time a Pardall came with open mouth to devour the man, but the Lion role up against her, and defended his old friend and she being instant, the Lion tour her in pieces, to the great admiration of the beholders, as it could not otherwise chuse. Then Gasar which had caused those spectacles, sent for the man, and asked him the cause of that so rare and prodigious an event, who incontinently told him the story before expressed. The rumor whereof was quickly spred abroad among the people, and tables of writing were made of the whole matter, and finally all men a greed that it was fit that both the man and the Lion should be pardoned and restored to liberty? and afterward (faith Appion) all the people and beholders of that comedy were stuters to the Senat for the accomplishment thereof, and so the man was pardoned, and the Lion was given unto him for a reward or suffrage, who led him up and down the streets in a learn or slip; Andrete receiving money, and the Lion adorned with flowers and garlands, and all men that saw or met them sid, Hit eft Leo hofpes hominis, ble est homo mediem leonis : Here goeth the Lion which was this Mant Hoff maket is the man which was this Lions Physitian.

justice of Lions.

Seneca alfo in his book De beneficite, out of Gellius weiteth fo much of another Lion ; and indeed there is no man or other Beaft more fixed and constant in their love and friendship, or more A flory of the ready to revenge the breach of amity and kindeness, then is a Lion ; as appeareth by this flory of Eudemu, who writeth of a certain young man, that he nourished eogether many years a Dog, a Bear and a Lion, who lived in perfect peace and concord without breach, fnarling, or appearance of anger. On a day as the Bear and Dog played together and biting one another gently, it happened that the Dog fastened his teeth (in sport) deeper then the Bear cold digest, and therefore presently he fell upon him, and with his claws tour out the fost part of his belly, whereof be prefently dyed : the Lion fitting by, and feeing this cruelty, and breach of love, amity and conord among them that had fo long lived together, fell to be inflamed to revenge that perfidie, and list a true king of Beafts, measured the same measure to the Bear as he had done to the Dog, and ferred him with the same sauce, tearing him instantly in pieces.

Ælianus.

There is also in the life of S. Ferome, a flory of alion that was cured by him, as you have readdefore the Lion was by Elpie, and that the Reaft in gratitude of that good turn, did ever afterwird follow the Asse which brought him home his carriage and provision through the woods will at his the Lion being afleep, the Affe was ftolen away, for forrow whereof the Lion put himfelf in the Affe flead, to bear burthens as he did; within thort time after he found out the Affe in the there hable, and brought him home again; but I am of Erafram minde contenting this flory, that the Author thereof took upon him to write wonders and not south.

Textor.

The Kings of Egypt and Syria did keep tame Lions, to accompany them into their wart, which were Diodorus. led about their own bodies for their guard and cuffolly, againft all peril and invalion.

The clemency of Lions in sparing men.

It is also very pertinent to this place, to express the clemency of these Beats towards the Marin and fervants of Jejus Chrift, both men and women, that fo we may obfarve the performance in accomplishment of that Prophesie, Plat. 91. They should walke upon the Aspe, and the Catality, and seight tread upon the Lion and the Dragon: This we are not to articipate to the rather of lion, but of the rather to the rather but father to the over-ruling hand of our and their Creator, who in remembrance of in on promife, and advancement of his own glory, stoppeth the mouth of Lions, and reflected violence both of living creatures and elements; wat I will not impose any necessity of pelicy of periods. flories upon the Reader, for I my felf report themmet for truth, but because they are with Bush a no Of the Lion !!

When S. Alithony went about to make a grave for the interring of the carkais of Poulthe first Ann. Textor. excite, and wanted a shovel or spade to turn up the earth, there came two Lions, and with their claws opened the earth fo wide and deep, that they performed therein the office of a good grave-maker. The Prophet Daniel was call unto the Lions, to whom (according to the Bubylonian story) was given for their dict every day, two condemned men, and two sheep, and yet by power of the Almighty whom he ferved, the Angel of the Lord came down and ftopt the Lions mouths, fo that in extremity of hunger, they never fo much as made force at him, but fate quietly at his feet like fo many late Dogs; by which means he escaped all peril and corments of death. Eleutherius being cast to the Lions at the command of Adrian the Emperor, and Prifes a Noble Virgin, at the command of Claudius Cafer, both of them in their several times, tamed the untamed Beafts and lescaped death.

Macarius being in the Wilderness or Mountains, it fortuned a Lioness had a den neer unto his cell, wherein the had long nourished blinde whelps, to whom the holy man (as it is reported) gave the use of their eye and fight; the Lioness requited the same with such gratification as lay in her nower, for the brought him very many theep-skins to clothe and cover him. Primus, and Falicianus, Thracus, Vitus, Modesfius, and Crescentia, all Martyrs, being cast unto Lions received no harm by them at all, but the beafts lay down at their feet, and became came, gentle, and meek, not like themfelves, but rather like Doves. When a Bear and a Lion fell upon Tecla the Virgin, a Martyr, a Lione's came and fought eagerly in her defence against them both. When Mutina, the daughter of a Conful could not be terrified or drawn from the Christian faith by any imprisonment, chains, or drines, nor allured by any fair words to facrifice to spolle, there was a Lion brought forth to her, at the commandment of Alexander the Emperor, to defroy her; who affoon as he saw her, he lay down at her feet wagging his cail, and fawning in a loving and fearful manner, as if he had heen more in love with her presence, then desirous to lift up one of his hairs against her. The like may be faid of Daria, a Virgin, in the days of Numerian the Emperor, who was defended by a Lioness; but I spare to blot much paper with the recital of those things (which if they be true) yet the Authors purpose in their allegation is most profane, unlawful and wicked, because he thereby goeth about to establish miracles in Saints, which are lone agone ceased in the Church

Some Martyre also have been devoured by Lions, as Ignatius Bishop of Autioch, Suprus and Men devoured Perpetus, he under Trajan the Emperor, and they under Valerian and Galienus. In holy Scriby Lions. nure there is mention made of many men killed by Llons. First of all it is memorable of 1 Prophet, 1 King, 13. that was fent by the Almighty, unto Jereboum ,2100 cry out against the Altar at Beibel, and him that erefted that Altar, with charge, that he should neither eat nor drink

Afterward an old Prophet which dwelt in that place hearing thereof, came unto the Prophet, and told him that God had commanded him to go after him; and ferch him back again to his house to eat and drink; wherewithal being deceived; he came back with him contrary to the commandment of the Lord given to himself . whereupoh as they fat ar ment, the Prophet that beguiled him, had a charge from God to prophetic against him, and so he did? afterward as he went homeward a Lion met him and killed him, and Rood by the corps, and his Als, not eating of them till the old Propher came and took him away to bury him.

In the twentieth chapter of the same Book of Kings, there is another story of a Prophet, which as he went by the way he met with a man, and bade him in the mme of the Lord to wound and shite him, but he would not, proferring picy before the fervice of the Lord : Well faid the Prophet unto him) feing thou refuseft to obey the stone of the Lord, Bekeld as from as those are departed, a Lion fhall ment the and defirey thee t and to it came to pasty for being out of the presence of the Prophet, a li on met him and tore him in Dieces.

The Idolatrous people that were placed at Younfalon by the King of Bubil, were destroyed by Lin J one; and unto the complete of God his judgements, I will adde other but of humane fishes. Pa-begge a King of Ambracia, meeting a Lionete leading her whelps, was full deapy for upon by her and torn in pieces, upon whom Ovid made these verses: The Mount noed by gire Gramma in gemen

Fæta tibi occurrat patrio popularie in arvo, Sitq; Paphagea causa leana necia.

Hya the brother of Hyades, was also flain by a Lioness. The people called Ambraciote in Africk, do Elianut. most religiously worthing Lionels; because whotable Tyrant which did oppresentem was fisher by fach an one. There is a Mountain near the River Indan (osiled Linear) of a Shepheard to maned, Plutareb. which in that Monmain did most superfittionly worthip the Moon, and contempedall other Gods, his farifices were performed in the night fedfor par lengthe faith the Atthew) the Opdebed surgey with him, fentunto him schapts of Lions who core him in pieces, leaving the monument bettinds but the same of the Mountain for the accident of his cruel death. The Inhabitancof that Mountain wear in their ears a certain rich ftone (called Elisele) which is very black, and bred no where old bod a, and es be Occidend.

There is a known flory of the two Bublindan levers, Drumun and Thubey who in the night sime had covenanted to meet at a Fountain near the Sepulchre of Minut; and Toubleoming thicker first,

าไม่ไดล้เ**ยไ**ด้และ () เลย () สหา

as the face by the Fountain, a Lione's being thirfty, came thitherto drink water, (after the flaughter as the late by the rountains being stated and let fall her mantle; which the Lionefs finding tore of an Ox:) at fight whereof, Thisbe ran away and let fall her mantle; which the Lionefs finding tore of an Ox: y at fight whereof, I blue that Afterward came Pyramus, and seeing her mantle all bloudy and it in pieces with her bloudy teeth. Afterward came Pyramus, and seeing her mantle all bloudy and to in pieces with ner bioudy teetin. Allet was him, being before him at the appointed place had been torn afunder, suspecting that she that loved him, being before him at the appointed place had been torn aumaer, impecting that the tracking deep drew forth his fword, and thrust the same through killed by some wilde beast, very inconsiderately drew forth his sword, and thrust the same through his own body, and being scarce dead, Thisbe came again, and seeing her lover lie in that diffrei, his own body, and being itale used, and drawn them into one place, and there one fear had as one love, one cause, one affection had drawn them into one place, and there one fear had as one love, one cause, one anection are also facrifieed her felf upon the point of one and the lame wrought one of their destructions, she also facrifieed her felf upon the point of one and the lame

ord. There was also in Scytbia a crue! Tyrant, (called Therodomas) who was wont to cast men to Lions to be devoured of them, and for that cause did nourish privately many Lions: unto this cruelty did The state of the s

Ovid allude, faying : "

Therodomenteos ut qui sensere Leones. And again:

Non tibi Therodomas crudusq; vocabitur Atreus.

Unto this discourse of the bloud-thirsty cruelty of Lions, you may add the puissant glory of them, Men that have who bottl in Sacred and prophane stories are said to have destroyed Lions. When Sampsin went men that have will both met him roaring to destroy him, but the Spirit of overcome Li- down to Timnath, it is faid, that a young Lion met him roaring to destroy him, but the Spirit of the Lord came upon him, and he rore it in pieces like a Kid; wherein he was a Type of Jesus Chrift, who in like fort being fet upon by the roaring of the Devil and his members; did with facility (through his divine nature); utterly overthrow the malice of the Devil. Afterward Samples went down to the Philistine woman whom beloved, and returning, found that Bees had entred into the Lions carcais, and there builded, whereupon he propounded this Riddles A viraci exist cibus, & ex forti egressa est aulordo : Out of the devourer came meat, and out of the stong

Beraiab the fon of Jehoiada one of Davids Worthies, did in the Winter time in the fnow kills Lion came fweetnels. in a ditch : David himfelf feeding his fathers flock, flew a Lion and a Bear which had robbed him of a amb.
It is reported of Perdicons (one of the Captains of Alexander) a valiant man, that he went alone

into the Den of a Lioness, but not finding har therein, took away her whelps , and brought them forth to the admiration of all men; for the Lionese both among the Barbarians and Gradien is accounted the strongest and most unresistable beast. In the Northern parts of the World shith Parts faming) near the monuments of Alema and Hyllus, the fort of Eleicutes there was a Lion which flew many people, and at last also Euppurche only fon of King Megareus , whereat the King grew to forrowful and angry, thirding after revengen that he promised to the many that could overcome him his daughter, and the fuccettion of his Kingdom : There was a noble and valiant young man called Alcathar, who undertook the action and killed the Lion, for which thing he obstained both the Wife and the Kingdom according to the promife of Megarens, and therefore in thankfulnels of fo good fortune, he builded there a famous Temple, dedicating it to Diana Agretrian and Apilo We have spoken before of Lysimachut; cunto whom we may add Polydamas the Scottsam who in Agreus ...

all things he took in hand, propounded unto himfalf the stample of Meroyles, and did kills long monftrous flature and higuels, being marmed, , inthe Mountain Olympus ; as at another time beheld Buls leg to fast in his hand, that while she Beast stroye to loofe himself, he left the hoof of his lost behinde him. When Hercules was a boy or ftripling, he flew the Teumeffan Lidn in Thumeffat a Mount team of Beolia, and pulled off his skin which ever after he wore in flead of a cloke This Lionia life called a Nemean Lidn, yet fome are of apinion that the Nemean Lion, was another called allothe Men lorch san because having killed the fon of Molorchus haperinaded Heroular which did fojourniwithim,

And upon the den of the Lion, was a Temple builded and dedicated to fapiter Nemauti. Kajimi speaking of the New temple builded and dedicated to fapiter Nemauti. Kajimi speaking of the New temple builded and dedicated to fapiter Nemauti. sides, was, in dain by a Fronces. The property of Administ ing of the Nemagn Lion, telleth this flory theraupon swhereas faith he the faid Lion could not be killed with any five death of the his flory theraupon swhereas faith he the faid Lion could not be killed with any five death of the head killed with any fword, dart; or other fhat p inftrumed by the rower tops him in pieces with his back withousell weapons; and afterward ware his skin innemerobance of that victory and happened a day, that as hereavelled be mer with his triend Selation and ho wasted children; ob whom he we intrested that he mouldingle for the mer with his triend Selation and how he would not be mer with his triend Selation and he was the moulding to form the weather than the moulding to form the mer with the moulding to form the mer with the moulding to form the mer with the mer with the men with the mer with th intreated that he would make facrifice to flupter for shippin that weed on garment, and also for a for for, s. lon. Hereules yealded, and taking the goldenication in his hand, made the familie and polication to Trains. plication to Jupiter, that Telumon might have a fon, and as he facrificed, an Eagle flew after then, which in Guest is called the same of which in Guek, is called deter, wherefore when Hernicalan the femerohe changed Telemen that is for flowing the called deter, wherefore when Hernicalan the femerohe changed Telemen that is an Eagle: and to the was; but afterward he was called distance of wore continually that Lions skin which was given him by Hercules: and therefore he could not be wounded: But I take this to be but a fable: rather this was the truth; Aian was a valiant fouldier. and so warily carried himself in many battails, that he never received wound, but at last he slew himself with his own sword, thrusting it through his neck; and for this cause it was fabled, that he never could be wounded; by a vertue (as was imagined) conferred on him from Hercules. Ovid hath a witty fiction of one Phyllius, who fell so deeply in love with a little boy, that at his pleasure he took many wilde Beafts, Birds, and Lions, and tamed them to the delight of his Amafini: at length the infatiable Boy required him to do the like by a Bull, which he had overcome, but Phyllivi denying that request, they Boy presently cast himself down from a Rock, and was afterward rurned into a Swan; by which the Poet declareth, the unmerciful regard which wretchless and childiff mindes bear towards the greatest labours and deserts of the best men; and that in such society a man is no longer beloved, then he giveth; also the denial of one small request cannot be endured, although a thousand good turns have gone before it; wherefore such mindes may well be translused into Swans, which for fake their owners and breeders, going and swimming far from their first and proper habitation.

Having but mentioned such a story, it is not exorbitant to add in one word other fictions of Me. Men transfiramorphofing, and transfiguring men into Lions, which we promifed in the former discourse of Ama. gued into Li-

fy and Apollonius, when I discoursed of the food of Lions.

And first of all, it is not unproper to remember the caution of Timaus the Pythagordan, who fictions, affirmeth, that the mutation of men into beafts, is but a fiction brought in for the terrour of wicked men, who feeing they cannot be restrained from vice, for the love of well doing, they may be deterred for the fear of punishment, which is meant by such beastly transfigurations.

And this thing is thought to be most consonant to the opinion of Plato, for in consideration of the Olympiedorus. habit, and not of the kinde; a good house-keeper, and charitable nourishing man, is said to be transmuted into a tree: He which liveth by catching and fnatching to ferve his own concupifcence. into a Kite; he which for love of military discipline and Martial affairs, into a Lion: he that was a Tyrant and a devourer of men into a Dragon: and Empedocles also said, that if a man depart this natural life, and be transmuted into a brute beast, it is most happiest for him if his soul go into a Lion: but if he loofe his kinde and fenses, and be transmuted into a plant, then is it best to be metamorphosed into a Laurel or Bay-tree. And for these causes we read of Hippo changed into a Lion, and Atlas into a Liones, and the like I might say of Protess, of the Curetes, and others; and generally all the Eastern wise men believed the transmigration of spirits from one into another, and infinnated to much to their symmists and disciples, making little or no difference betwirt the natures of men and brute beafts. Therefore they taught that all their Priests after death were turned into Porphyrim, lions, their religious Vestals or women into Hyana's, their Servants or Ministers in the Temples, about the service of their vain Gods into Crows and Ravens; the Fathers of families, into Eagles and Hawks; but those which served the Leontick Altars, meaning Nemeca facra, instituted for the honour of Herenkes, were transformed diversly : but of all these we have already expressed our opinion; namely, to believe and think so basely of mankinde, created after Gods Image, as once to conceive or entertain one thought of fuch passing of one from another, were most lewd and Diabolical; but to conceive them as allegories, by which the mindes of the wife may be instructed in divine things, and God his judgements; as it is Poetical, so is it not against any point of learning, or good

As that which hath been already expressed most notably describeth the nature of the Lions The underwhich so that succeedeth hath the same use for the manifestation of the dignity and honour of flanding of

First of all therefore, to begin with his understanding, and to shew how meer he cometh to the nature of man. It is reported by Ælianus, that in Lybia they retain great friendship with men, enjoying many things in common with them, and drinking at the same Well or Fountain. And if at any time he being deceived in his hunting, and cannot get to fatisfie hunger, then goeth he to the boules of men, and there if he finde the man at home, he will enter in and deffroy, except by wir, policy, and strength, he be resisted; but if he finde no man, but only women, they by railing on him and rebukes, drive him away, which thing argueth his understanding of the Libian tongue; The entering houses, are these:

Att not thou ashamed being a Lion, the King of Beasts, to come to my poor cottage to begineat at the bunds of a weman? and like a fick man distressed with the weakness of body, to fall into the hands of a woman, that by her mercy thou may statian those things which are requisite for thy own maintenance and suffertives in the Mountaint, and live in them, by hunting the Hart and other Beasts, provided in nature for the Lions food, and not after the fashion of little base Dogs, come and live in houses to take meat at the bands of men and women.

By such like words she enchantesh the minde of the Lion, so that like a reasonable person, overcome with firong arguments, notwithstanding his own want, hunger, and extremity, he cantely his eyes to the ground ashamed and afflicted, and departeth away without any enterprise : Neither ought any judicious or wife man think this thing to be incredible; for we fee that Horfes and Dogs which live among men, and hear their continual voyces, do differn also their tearms of threatting, chiding, and rating, and fo stand in aw of them; and therefore the Lions of Lybia, whereof

Of the Lion.

Leo Afer.

many are brought up like Dogs in houses, with whom the little children play, may well come to

the knowledge and understanding of the Maurifian tongue.

It is also faid they have understanding of the parts of men and women, and discern sexes, and are It is also said they have understanding the fight of womens privy parts. And unto this may be indued with a natural modelty, declining the fight of womens privy parts. And unto this may be added the notable flory of a Lion in England, (declared by Cranizius) which by evident token was able to diftinguish betwirt the King Nobles, and vulgar fort of people.

The anger of Lions, and the lignes thereof. Adamantius. Albertus.

As the ears of Horses are a note of their generosity, so is the tail of Lions, when it standeth As the ears of Hories are a note of their gentle, meek, unmoved, and apt to endure any thing, immoveable, it sheweth that he is pleasant, gentle, meek, unmoved, and apt to endure any thing, ummoveable, it ineweth that he is please, ight of men he is feldom found without rage. In his an which falleth out very feldom, for in the fight of men he is feldom found without rage. In his an which rattern out very lettom, for in the agree was the read his own fides, and lastly leapeth upon ger, he first of all beateth the earth with his tail, afterwards his own fides, and lastly leapeth upon ger, ne tritt of an ocateti the catter upon his prey or adverfary. Some creatures use to wag their tails, when they see suddenly those which are his prey or adversary. of their acquaintance, as Dogs, but Lions and Buls, do it for anger and wrath. Thereafon both of or their acquaintance, as Abes, Aphrodifeus. The back-bone of such Bealts is hollow, and conone and other, is thus remarked by Arthur to the tail, and therefore there is in the tail a kinde of animal taineth in it marrow, which reacheth to the tail, and therefore there is in the tail a kinde of animal tainetin in it marrow, which cause when the Beast seeth one of his acquaintance, he waggeth motion, and power. For which cause when the Beast seeth one of his acquaintance, he waggeth motion, and power. The fame reason that men shake hands, for that part is the readiest his tail by way of salutation for the same reason that men shake hands, for that part is the readiest nis tail by way of naturation for the Buls and Lions are constrained to the wagging of their and number member of metal angry men are light fingered, and apt to ftrike: for when they cannot tails for the lame reason that angly investment from the bark if they be Dogs, or have sufficient power to revenge, they either speak if they be Men, or else bark if they be Dogs, or mave numerical power their tail if they be Lions; by that means uttering the fury of their rage to the ease of nature, which they cannot to the full defire of revenge.

But we have shewed before that the Lion striketh his sides with his tail, for the stirring up of himself against dangerous perils, for which cause Lucan compareth Calar, in his warlike expeditionat Phar latin, against his own Countrey, before his passage over Rubicon, (whilest he exhorted his souldiers) to a Lion beating himself with his own tail in these verses;

Inde mora solvit belli, tumidumq; per amnem, Signa tulit propere : ficut squallentibus arvie Æftifera Lybies, vifo Leo cominus hofte, Subsedit dubius, totam dum colligit iram ; Mon ubi fe fava fimulavit verbere caude,

Erexita; jubas, vafto & grave murmur biatu, Infremuit : tum torta levis si lancea Mauri Hareat, aut latum subeant venabula peliui, Per ferrum tanti fecurus vulneris exit.

There are many Epigrame, both Greek and Latine, concerning the rage, force, friendship, and lociety of Lions with other beafts, whereof these are most memorable: the first of a Hare, which through sport crept through the mouth of a tame Lion, whereof Martial writeth in this fort, teaching her to flie to the Lions teeth against the rage of Dogs in these verses :

Ricibus bis Tauros non eripuere magistri, Per quos prada fugamita; redita; lepus. Quedq; magie mirum, velocier exit ab hofte. Nec nibil à tanta nobilitate vefert.

Tutior in fold non eft cum currit arena: Neo caveæ tanta conditur ille fide. Si vitare canum morfus, lepus improbe, quaris, Ad que confugias, ora Leonis habes.

There is another of the same Poets, about the society of a Ram and a Lion, wherein he wondereth, that fo different natures should live together, both because the Lion forgetteth his prey in the Woods, and alfo the Ram, the eating of green grafs, and through hunger, both of them confirming ed to tafte of the same diffest and yet this is no other, then that which was foretold in holy Scripture, the Lion and the Lamb should play together: the Epigram is this;

Masyli Leo fama jugi, pecorifq; maritus Lanigeri, mirum qua posuere fide, Ipfe licet videm, cavea Stabulantur in una,

Et pariter socias carpit uterq; dapes, Neo fætu memorum gaudent, nec milibus berbu, Concordem Satiat Sed rudis agna famem.

For we have shewed before, that a Lion in his hunger will endure nothing, but siercely falleth upon every prey, according to these verses of Manilius:

Quis dubitet, vasti que sit natura Leonis? Qualq; suo ditlet signo nascentibus artes? Ille novas femper pugnas, nova bella ferarum Apparat, & pecorum vivit Spolio, atq, rapinis. Hoc babet, bec studium postes ornare Superior Pellibus, & captas domibus configere pradu, Atq; parare metum (ylvis & vivere vapto.

The bunting and taking of Lions.

Concerning the hunting and taking of Lions, the Indian Dogs, and some other strong Hunters which are begotten of Tygers, amongst the Indians, and those of Hyroania, especially do this thing sails noted by Mariuan, concerning the fortitude and courage of a Dog, saying:

Et truculentus Helor certare Leonibus audens.

In the Province of Gingui, which is subject to great Cham King of Tuttaria, there are very many In the Province of Origin, which are very great and cruel: and in that Region the Dogs are accounted to bold and firong, as they will not fear to invade or fet upon the Dogs are accounted to pass, that two Dogs and a hunting Archer fluing on Horfe-back do kill and defroy a Lion: for when the Dogs perceive the Lion to be near them, they fee upon him with great barking, but especially when they know themselves backed with the help of a man, they do not cease to fire the Lion in his hina der parts and tail: and although the Even doth oftentimes threaten their with his from ing and terrible countenance, turning himself this way and that way, that he might tear them in pieces. notwithflanding the Dogs booking warlly unto themselves, are not easily harr by him. efecially when the hunting Harfe-man following them, doth feek the best the his Dart in the Lion, when he is hitter of the Dogs, for they are wife enough to confider their own help. But the Lion, then flyeth away is fearing sleft the barking and howling of the Dogs, may bring more company both of Mamand Dogsanto him. And if he can be becaked filmfelt rightly unto fome tree, that he may anjoy the fame for a place of defence for his back, then the mine himself with a fcornful grinning, he fighteeth with all his force against the Dogs. But the Plunter confine heater Paulut. upon his Horse, ceaseth norto throw Darts at the Lion until he kill him s neither doch the Lion Veneins. feel the force of the Darts until he be flam, the Dogs do unto him fo great ball and trouble.

If a Lion be feen in the time of hunting, being afhamed to turn his back, he doth a little litter away himself is oppressed with a multitude: but being removed from the sight of the Mitters, he doth halfily prepare for flight, thinking that his fname is cleared by concerling himfelf and there-

fore knoweth that the Woods cannot give telbimony of his feat He doth wans in his flight the leaping which he wieth in purfulng other Beafls He doth craftily diffemble and abolish his foot-steps to descrive the Hunters : Pollan affirmeth; that if a Hunter do fight against any wilde Beasts, as a Bore, he must not straddle with his legs wide abroad, but keep them together within the compass of a foot, that he bray keep his ground steds and fure, even as the manner is in Wreftling : for there are some wilde Beafts as Panthars and Lions, when they are hunted, and are hindred in their course by their Hunters; if they be any thing near eliem, do prefently lean upon them. But the froke which is given ought to be directed or leveled right against the breaff, and the heart, for that being encestrickenite incurable. Xenophon faith, in his Book concerning hunting, that Lions, Leonards, Brars, Pardals, Lynxes, and all other wilde Brafts of this fort which inhabit Defent places (without Grees) are taken about the Pangean Mountain, and the Mountain called Cyrene, about Macedony : forme in Olympua, Myfine, and Paulus : fortie in Myfine above Spries and in other Mountains which are fit for the Breeding and mother thing Beatly of this lide. But they are taken packly in the Mountains by poylon of Wolf bane; for the Marphe's of the Region (because that tan admit months under of hunting as by New and Dogs) but minging this with that thing in which every wilde Beaft delighteth ; the Hunters do caff it unto them

There are forme, also which do descend down in the night time, who are taken in regard that all the ways by which they should afcondunto the Mountains are stopped with Mutts-men, and weapons, neither being fo excluded, are they taken without great peril unto the Hunts-men.

There are forme also which make piorals or great dirches in the ground od carefy Bions, in the midit whereof, they leave a profound frony pillary upon which in the highprimettleweie's Goar; will do hedge the pigfals round about with boughed left that it might be frend leaving he entrance into the lame. can hear both the other at the farther ends: fome fetting round about in-warlike manner, holding pitchy fire-brands in their right hands, and bucklers in their left, for with those they make a very pirchy hre-brands in their right hands, and but her brands, but the wilde Beafts in an incredible great noise and clamor, and with shewing their fire brands, but the wilde Beafts in an incredible great noise and clamor, and with shewing spread abroad invade the Beafts, and the Foot-men that is a being spread abroad with the graing our set the being spread abroad with the graing our set the being spread abroad with the graing our set the being spread abroad with the graing our set the beafts. tear : Therefore when an the morie-men being terrified with the crying out of the Hunters. likewife do follow with a great noife: the Lions being terrified with the crying out of the Hunters. not daring to relift, give place; and aswell for fear of fire, as of the men, they run into the new and are taken: like as fishes in the night time, by fire are compelled and driven into the nets of

The History of Four-footed Beasts.

The third.

Leo Afer.

Pliny.

Ariftotle.

Albertus.

e niners. The third manner of hunting is done with leffer labour: that is, four frong men armed with the ture manner of manner of manner with though of leather, and having helmets upon their heads, that only their eyes, nofes, and lips may appear, with the brandishing of their tire-brands, rustein uponly their eyes, noise, and nos may appears, with the lightning or burning of his eyes being inflamed, breaketh forth into a great roaring, and with the lightning or burning of his eyes being inflamed, breaketh forth into a great roaring, and with the lightning of bushing on them, as if it were fome from or tempest: they with a firm and confuch celerity rustleth upon them, as if it were fome from or tempest: they with a firm and conthant courage abide that brunt: and in the mean while that he covereth to catch any of them in his teeth or claws, another of them; provoking him behinde doth smite him, and with a loud noise or clamour doth yex him: then the Lion in hast leaving the first which he had taken in his mouth, turneth back his mouth unto the hinder: each of them in feveral parts do ver him. but he breathing forth warlike strength, runneth here and there, this man he leaveth; that he but he preatting forth warness trength, runners here and energy and man he reaveth, that he finatcheth up on high: at the length being broken with long labour, and wearyed, foaming in his mouth, he lyeth down straight upon the ground, and now being very quiet they bifide him, and take him from the earth as if he were a Ram. I do also finde that Lions are intricated in fnares or traps, bound unto fome post or pile, nigh unto fome narrow place, by which they were wont to pals.

Bug Pluny faith, that in times past it was a very hard and difficult manner to catch Lions, and that

the chiefel catching of them was in Ditches.

ie chiefest catching of them was in Ditches. In the Mountain Zaronius in Africk, the strongest men do continually hunt Lions, the best of which being taken, they fend them unto the King of Eeffe: and the King ordereth his hunting in this manner; in a very spacious field there are little hutches built of that height as a man may fland upright in them: every one of these is thut with a little gate; and within standeth an strict man. the Lion being raised, and forced to that place the dores being open, then the Lion seeligthedores open, tunneth with great force, which being thut again, he is provoked to anger : Afterwird they bring a Bull to combate with him, where beginneth a cruel fight, in which, if the Bull Mall kill the Lion, the honour of that day is finished; but if the Lion overcome him, all the armed men. which in number are almost twelve, come forth to fight against the Lion; some of them having Boar-spears of fix cubits long : but if the armed men shall feem to overcome the Lion the King commandeth the number to be diminished, and if on the contrary, the armed men be overcome, the King with his Nobles fitting in an high place to fee the hunting kill the Lich with Crois bows; but it cometh oftentimes to pais, that every one of them is flain before the Lion.

The geward of those which combate with the Lion, is ten golden Growns, together will a new garment : neither are any admitted unto this fight, except they are of a most pregnant and valorous itrength, and born in the Mountain Zalag, but those which do first of all provoke and give on set

to the Lions, are born in the Mountain Zarenius.
To conclude this discourse of the hunting of Lions. If it fortune that he be followed withmen and Dogs, yet in the plain fields he never mendeth his pace, as some writers affirm, oftentimes turning about and tooking upon his purfuers, as it were to dare their approchment, and to give defiance unto all their pretences: yet having gotten the thickets, he looketh to first letty with his best celerity and speed, so wisely tempering his fear before his foes, that it may feem a boldness, and so politickly when he thinketh no eye feeth him; to longer dissembleth with himself, but runneth away like a fearful Hart, or Hare; laying down his ears, and striking his tall between his legs, like a Cur-dog, feldome times looking behinde him, but moft irefully upon thof that come before him, especially if he receive from them any wound, whereanto Handland, Sollen a bear of lar, apos

When Juba King of Moore (the Father of him which when he was a childe was brought in triumph) travelled through the Wilderness with an Army of fouldiers, to repress certain rebels in one part of his Dominion, which had shaken off his government, and to settle them again in one part vallegiance. There was a noble young Souldier in his Train, of the race of the Nobility, and not only very strong, but also well experienced in hunting, and by the way he with other of his fellows met with a Lion, at whom he presently cast a Dart, and gave him a fore wound, but not mortal; after the wound received, the Lion went away guilty of his hurt, and the young men mortal; and the young tien did not profecute him, but went forward on their journey: After a whole year, the King returned homeward the same way, and his company that he carryed with him, among whom was this young gallant that wounded the Lion: The Lion having recovered his hurt, and having his Den near the way and place of his harm, perceiving a return of the Army, went furiously among them, and found out the man whose hand had wounded him, and could not by any help of his affociates be stayed from a revenge, but tore the young fouldier in pieces, and departed away fife, for the refidue feeing his rage, ran all away, thinking him to be some Devilin the likeness of

After the taking of Lions, it followeth that we should intreat of their taming, and first of Ofthe taming all, they which are tamed in their infancy while they are whelps, are most meek and gentle, full of of Lions. foot and play, especially being filled with meat; so that without danger, a stranger may meet with them: but being hungry, they return again to their own nature, for asit is true (which Seneca faith) Leonibus manus magister inserit, osculatur Tigrim suus custos, that is to say; The, Master of a Lion may put his hand in his mouth, and the Keeper of a Tyger may kis him, yet is it alfo to be feared, Tigres Leonefg: nunquam feritatem exuunt, aliquando submittunt, & cum minime expellaveris, turvitus maligna redibit. Lions and Tygers do never leave off their wildeness, although sometimes they yeeld, and seem to be submiss, yet upon a sudden when a man expecteth not, their malignant wrath breaketh forth, and they are exasperated.

Whereforeafter they grow to be old, it is impossible to make them utterly tame; yet we read indivers stories of tame Lions, whether made so from their littering, or else constrained by the Art of man, such are these which follow ; Hanno had a certain Lion, which in his expeditions of war carryed his baggage, and for that cause the Carthaginians condemned him to banishment, for said they, Male credi libertas ei, cui in tantum ceffit etiam feritas, It is not fafe to truft fuch a man with the government of the Common-wealth, who by wit, policy, or strength, was able to overcome, and uterly to alter the wilde nature of a Lion: for they thought he would prove a Tyrant, that could Calius. bring the Lion to such meekness, as to wait on him at Table, to lick his face with his tongue, to

smooth his hand on his back, and to live in his presence like a little Dog.

The Indians tame Lions and Elephants, and fet them to plough. Onemarchus the Tyrant of Cattana, Elianus. hid Lions with whom he did ordinarily converse. In the Countrey of Elymin there was a Temple of Admir, wherein were kept many tame Lions which were fo far from wildeness, and fierceness, that they would imbrace and falute the people that came in there to offer: Also if any one called them togive them meat, they would take it gently, and depart from them with quietness. Likewise in the Kingdom of Fes, in a plain called Adecien, there are certain Forrests wherein live tame and gentle Lions, which if a man meet, he may drive away with a fmall flick or wand without receiving any harm. And in another region of Africk, the Lions are so tame, that they come daily into Cities, and go from one ftreet to another, gathering and eating bones; from whole presence neither women Leo Afer. nor children run away. Likewise in many parts of India, they have Lions so tame, that they lead Æliansi. them up and down in learns, and accustom them to the hunting of Boars, Bulls, and wilde Asses, like Dogs; for their nofes are as well fitted for that purpose, as the best Hounds; as we have shewed before of the King of Tartary.

And the best means of taming them is the rule of Apollonius, which he said was the precept of Pha. The best teoter, which is, that they be neither handled too roughly, nor too mildely, for if they be beaten with means to tame fripes, they grow over flubborn; and if they be kept in continual flatteries, and used over kinde- Lions. ly, they grow over proud: For they held opinion, that by an equal commixtion, of threatning, and fair speaking, or gentle usage, by which means they are more easily brought to good desired conditions : and this wisdom the Ancients did not only use in the taming of Lions, but also in restraining. of Tyrants, putting it as a bridle to their mouths, and a hook in their nostrils, to restrain them from fury and madness.

Allerius faith, that the best way to tame Lions, is to bring up with them a little Dog, and oftentimes to beat the same Dog in their presence, by which discipline the Lion is made more tractable to the will of his Keeper. It is faid of Heliogabalus, that he nourished many tame Lions, and Tygers, and other such noisome beasts, calling himself their great mother; and when he had made any of his friends drunk in the night time, he shut them up together (who quickly sell asleep) through the heaviness of their heads, who being so asleep, he turned in amongst them some of his sorefaid children, both Lions, Bears, Tygers, and such like: at whose presence in the morning, his drunken friends grew fo amazed, that oft times, fome of them fell dead for fear: and to conclude,

there is a flory in a certain Epigram, of a Lion wandering abroad in the night time, for the avoiding of frost, and cold, came into a fold of Goats: at the fight whereof the Goat-heards were much afraid, calling in question not only the lives of the flock, but also their own; because every one of them, thought himself bound to fight unto death in defence hereof: whereupon

The History of Four-footed Beasts.

according to the manner of men in extremity, they all made their prayers, defiring God to be deliaccording to the manner of men in extremely, such as to it came to pals; for after the Lion had lodged wered from the Lion, and according to their wishes so it came to pals; for after the Lion had lodged vered from the Lion, and according to their winnered in the morning, without doing any harm to in the warm fold of Goats a whole night, he departed in the morning, without doing any harm to in the warm foid of Goals a whole ingue, he departed man or beaft; wherefore I take this Lion to be of the tame kinde, and as in all beafts there are different or beaft; wherefore I take this Lion to be of the tame kinde, and as in all beafts there are different or beaft; wherefore I take this Lion to be of the tame kinde, and as in all beafts there are different or beaft; wherefore I take this Lion to be of the tame kinde, and as in all beafts there are different or beaft; where the tame to be of the tame kinde, and as in all beafts there are different or beaft; where the tame to be of the tame kinde, and as in all beafts there are different or beaft; where the tame to be of the tame kinde, and the tame to be of the tame to be of the tame to be of the tame kinde, and the tame to be of the tam man or beatt; wherefore I take this Lion to be of the feelin Dogs, some of them being more apt after rences both of natures, and inclinations, as we may see in Dogs, some of them being more apt after rences both of natures, and inclinations, as we may be so that in the the manners of men, and to be ruled by them then others; fo also I see no reason, but that in the the manners of men, and to be tured by them them should be more inclinable to obedience, subjective, and royal nature of Lions, some of them should be more inclinable to obedience, subjective, and royal nature of Lions, some of them should be more inclinable to obedience, subjective, and royal nature of Lions, some of them should be more inclinable to obedience, subjective them. nerce, and royal nature of Land, John once won, they never afterwards utterly shake off ther ction, and submission; whereunto being once won, they never afterwards utterly shake off ther vassalage and yoke of them which overcome them.

Plutarcb.

From hence it came, that there were so many spectacles at Rome; as first of all Lucius Syla, The triumphs, in the office of his ædility, or overfight of the Temple, brought into the Roman circle or ring, one games and in the omice of his country, the same of the hundred great mancu Lions took, which Archers, and Dart-casters, to fight with them and destroy And him Pompey the great, in the same place brought in a combate, confishing of fix them. After this twores and among them there were three hundred fifty maned Lions: Also he in. fituted hunting of Lions at Rame, wherein were flain five hundred. Cafor when he was Dictator, presented in spectacle four hundred Lions. Quintus Scenola caused Lions to fight one with another. presented in specialis in the civil War, after the battail of Pharjalia, did first of all cause Lions to But Marcus Anionius in the civil vvar, after the battail of Lowing fate, with one Chberna Jeffer; be yoked, and draw the Chariot of triumphs; where he himself sate, with one Chberna Jeffer; which thing was not done, without flew and observations of a prodigious and monstrous action, and especially in those times, wherein it was interpreted, that as the noble spirits of those Lions were so much abased, and vassalaged, in stead of Horses to draw a Chariot, they being in nature the King of Beafts, fo it was feared that the ancient Nobility of Kome, the grave Senators, and gallant Gentlemen, Commanders of the whole Common-wealth, should in time to come, through civil wars, and pride of the people, be deprived of all honour, and brought down to the basek offices of the whole State. Antoninus Pius nourished a hundred Lions. Domitian the Emperor, called for Acilius Gabrio the Conful, into Albania, about the time that the games were celebrated, for the prosperity of youth and young men, which were called Juvenalia, to fight with a great Lion, and Acillius coming wifely into the combate, did eafily kill him. In ancient time when Lions could not be tamed, they did discern them by their teeth, and nails, and so taking as it were the sling and poyfon from the Serpent, and the weapons wherein confisfeth all their strength, they were without all peril, sent into the publick Assemblies, at the time of their general meetings, and great fests. Martial hath an excellent Epigram, of the great Lion before exhibited in publick speciacle by Domities, wondering that the Mallylian and Aufonian Thepheards were so afraid of this Lion, and made as greats noise, and murmur, about his presence, as if he had been a heard of Lions, and therefore he commendeth the Libian Countrey for breeding fuch a beaft, and withal expresseth the joy of the shepheards for his death, as are shown in these verses following:

> Auditur quantum Massla per avia murmur, Innumero quoties fylva Leone furit : Pallidus attonitos ad plena mapalia paftor Cum revocat tauros, & fine mente pecus : Tantus in Ausonia fremuit modo terror arena : Quis non effe gregem crederet ? unus erat, Sed cujus tremerent ipfi quoq; jura Leenes, Cui diadema daret marmore pilla Nomas.

O quantum per colla decus, quem fpurfit homerem Aurea lunate cum fetit unda jube ! Grandia quam decuit lotum venabula pellut, Quantaq; de magna gaudia morte tulit ! Unde tuis Lybie tam felix glorid filvie? A Cybelet nunquiù venerat ille jugit? Anmagie Hereule Germanice missi ab ostro Hanc tibi vel frater, vel pater ipfe feram?

Tame Lions become wilde

We have shewed already that Lions although never so well tamed, become wilde again, and this through hunger, which breaketh through stone walls, according to the common proverb, and therefore maketh them to defroy whatloever cometh in their way, according to these verses of

> Impafius ceu plena Leo per ovilla turbans, (Suadet enim velena famet) manditg; trabitg; Molle pecus, mutumq; metu, fremit ore cruento.

Such a one was the Lion of Borfius Duke of Ferrura, who being in his cave would devou Bulk Bears, and Boars, but with a Hare or little Whelp he would play, and do them no harm; at li leaving all his tamable nature, he destroyed a young wench, who oftentimes came unto him to come and stroke his mane, and also to bring him meat and flowers, upon whom Stroza made these

Sustulit ingratus cui quondam plurima debens Pettendafq; jubas, & fera colla dabar.

The like unto this also, was the tame Lion that Marital speaketh of, who returning to his first Ture, destroyed two young children, and therefore he faith justly, that his cruelty exceeded a cruelty of war, the Enigraphics his cruelty of war; the Bpigram is this:

Verbera fecuri folitus Leo ferre magistri, Infertamq; pati blandus in ora manum. Dedidicit pacem fubito, ferit ate reverla. Quanta nec in Lybicis debuit effe jugis. Nam duo de tenera puerilia corpora turba. Sansuineam taftris que renovabat tumum. Sevus & infaliz turiali dente peremit. Martia non vidit majus arena nefas.

Having thus spoken of the taming and taking Lions, it also now followeth to entreat of the length of their life, and the diseases that are incident unto them, with their several cures: first therefore. ot their ine, and they live very long, as threefcore, or fourfcore years: for it hath been feen, that The length of when a Lion bath been taken alive, and in his taking received some wound whereby he became lame, a Lions life, or lost fome of his teeth, yet did he live many years; and also it is found that some have been taken and their disor ion touch which were all fallen out of their head through age, and Elianus faith, that a Lion cafes. and a Dolphin, do both confume away through multitude of years. The fickneffes wherewithal they are annoid, are not very many, but those which they have are continual: for the most part their intrails or inward parts, are never found, but subject to corruption, as may appear by their spittle. and also by their biting, and scratching of their nails; for a man lightly touched by them at some Albertus. times is as much poyfoned, as the biting of a mad Dog; also by reason of his extreme hot nature, every each other day he suffereth one sickness or other, at which time he lyeth prostrate upon the earth, roaring not all the day long, but at certain hours, and in his wrath he is confumed through the heat inclosed in his own body. And in his best estate he is afflicted with a quartane Ague, even Cardan. then when he seemeth to be in health, and except this disease did restrain his violence and malice by weakning of his body, he would be far more hurtful to mankinde then he is and this is to be under-Rood, in the Summer time he falleth into this difease sometime at the fight of a man, and is cured by the bloud of Dogs, according to Albertus and Physiologus, when he seeleth himself sick, through abundance of meat, he falleth a vomiting, either by the strength of nature, or else helpeth himself by eating a kinde of grafs, or green corn in the blade, or elfe rapes; and if none of these prevail, then he falleth, and eateth no more till he finde ease; or else if he can meet with an Ape, he devoureth and eateth his fleth, and this is the principal remedy and medicine which he receiveth against all his difeases, both in youth and age; and when he groweth old, being no more able to hunt Harts, Boars, and such beasts, he exerciseth his whole strength in the hunting and taking of Apes, whereupon he liveth totally; and for these causes, there is a comparison betwixt the Lion and the Dolphin, in Elianus. Leoni, & Delphino multa sunt communia, uterq; imparat, ille terrenis, bic aquatilibus bestiis, semulle ambo tabefount, & oum funt in agritudine, illi terrestris simia medetur, buic marina quoq; simia remedio eft t that is, the Lion and the Dolphin do agree in many things, both of them are Kings, this rukth over the beasts of the Earth, and that over the beasts of the Sea; both of them consume through age, and long life; and as the Lion recovereth by eating an Ape of the Earth, so is the Dolphin cured by eating an Ape of the Sea; and thus much for the diseases and cures of Lion.

Unto this natural discourse of Lions belongeth the use of their parts, both outward and inward, The use of a and also the several pictures and statues erected for their singular monuments. First therefore with Lions several theskins of Lions were the ancient Moores and Barbarians, inhabiting betwixt the Mountain Caucalus Paris. and the River Cophena, and so they appeared to Apollonius and his companions; as also in the skins of Panthers, with both which, they did not only clothe themselves in the day time, but also slept upon them in the night; and therefore Hercules is pictured wearing a Lions skin, that the world might be admonished, what was the antient attire of their fore-fathers. Virgil describeth Aventinus covered with a Lions skin in this fort:

—— Quem fulva Leonis Pellis obit totum prafulgens unquibus autes. Iple pedes tegmen torquens immane Leonis. Terribili impexum seta, cum dentibus albis, Indutus capiti. &c.-

And Eneas sleeping upon a Lions skin, saying :

--Fulviq; insternor pelle Leonis. And elsewhere, Pracipuumq, toro, & villosi pelle Leonis Accipit Aeneam -

Adrefits was commanded by the Oracle to marry his Daughters to a Boar and a Lion, when they came a wooing unto them. Whereupon Tydeus came in a Boars skin, and Polynices in a Lions skin, unto whom he gave his Daughters in marriage, taking it to be the meaning of the Oracle, that men clothed in those skins should be the Husbands of his Daughters. From hence came the common proverb; Induitis me Leonis exervium, you put upon me a Lions skin, to signifie a man that taketh upon him more then he is able to perform, and spend more then their condition will afford, and the beginning of the proverb was taken from Hercules, who clothed in a Lions

skin as we have faid before, and bearing in one hand a Club, and in the other a Bow, in which attire

he went down to Hell to fetch out Cerberus.

Ridiculous imitation.

Caritus.

Rasis.

Albertus.

Marcellus.

tick for to be

invincible.

The fat of L

Afterwards there was one Bacobus, which clothed with the same weed, and armed with the same Afterwarus there was one parenon, while evelt, went down to Hell, to hear the fained disputaweapons in like lort, in the limitation of Affebylin, at the fight whereof Herculet langhed, telling tion betwire the two Poets, Euripides, and Affebylin, at the fight whereof Herculet langhed, telling tion perwixe the two roets, partitioner, all become him, because he was wanton, tender, and effeminate. nim, that fuch apparet the nothing at an occurrence want the true substance; a glorious outside, and For it is not available to have a rich ceremony, and want the true substance; a glorious outside, and ror it is not available to have a field Champion, and the heart of a bale Coward; the outward frems a shameful inside; the armour of a Champion, and the heart of a bale Coward; the outward shews a mamerin initia; the armout of profanels. Others do think that the proverb was taken from of holinels, and the inward love of profanels. or nonners, and the liver Cumanut, who being weary of his fervitude and bondage, flipt collar, and ran that: As called Afinus Cumanut, who being weary of his fervitude and bondage, flipt collar, and ran away into the wilde Woods, where finding by chance a Lions skin, he crept into it, and wore away into the whole vyous, whereof he ruffled up and down the Woods, to the terrour of all the it upon his body, under colour whereof he ruffled up and down the Woods, to the terrour of all the it upon his body, under colour whereof he ruffled up and down the Woods, to the terrour of all the Beafts, both with his tail and his fearful voice: and the Cumants themselves, which had never seens Beaus, potti with the tail and ins leather the fath. In this fashion he domineer'd a good time, Lion, were not a little afraid of this counterfeit beaft. In this fashion he domineer'd a good time, Lion, were not a nece alranger to Cuma, who seeing the counterfeit personate Afe-lion by the until at last there came a stranger to Cuma, who seeing the counterfeit personate Afe-lion by the way, having oftentimes feen both Lions and Affes, knew it for an Afs in a Lions skin; for if all other way, maying of the proved true, namely the length of his ears; wherefore he beat him well. and brought him home to his Master, before whom he pulled off the Lions skin, and then his Master knew him to be his Afs. From which Secretes concludeth wifely, that no man ought to be afraid of outward greatness, because though the As was clothed with a Lions skin, yet he was but an Afs. or outward greatness, because though sarments, the faying of Lylander the Lacedemonian doth fufficiently prove; for when he was blamed for his outward pomp, whereby he beguiled others, therefore condemned for foolish hypocrific, he made this answer, Que Leonis pervenire pellis non potest, sulpinem essuife decuerit, every man ought to have two sutes of apparel, one of a Fox, and another of the Lion. For whither the Lions skin cannot come, the Fox will creep, and where the Fox cannot come, the Lion can. Clothes wrapt in a Lions skin killeth moths: also a mans body anointed with the fat of a Lion mingled with Garlick, fo as the favour of the Garlick may overcome the Lions greafe, he shall never be molested with Wolfs. Also if the folds of Sheep be compassed about with the melted grease of Lions, there is no Wolfs, nor ravening beatts will annoy the flock. And so great is the sear of Lions to Wolfs, that if any part of a Lions grease be cast into a Pountain, the Wolves never dare to drink thereof or to come near unto it. Also Pliny affirmeth, that if an Amulet be made of Lions greafe, no man shall be harmed, wounded, or killed. by treachery or deceit: but you must understand, that this was an invention of the Magicians or Wisemen, that by such pretences and promises of great matters, they might inflinuate themselves into the favour of Princes and Noble men, and so make fools of the world; and therefore they prescribe the fat which is taken from betwirt the eye-lids, or from the right part of their mouth or teeth, and the hairs from the neather chap. It is likewise affirmed, that a man anointed all over with the bloud of a Lion, shall never be deltroyed by any wilde Beaft.

There is an herb which Democritus calleth Helianthe, growing in the Maritime Mountains of Cilicia, and Ibemi,cita, wherewithal the fat of Lions decocted with Saffron, and Paulm Wine, with which all the Kings of Persia were anointed, to make them beautiful bodies to look upon. And above all other things, the Magitians prescribed this composition, to make a man invincible; the tail and head of a Dragon, the hairs of a Lions fore-head, and the marrow of his bones, the foume or white mouth of a conquering Horfe, bound up together with a Dogs claws in a Harts skin, with the nerves of a Hart or Roe. The dung of a Lion drunk in Wine, maketh a man for ever more to

abhor Wine.

It was also wont to be observed, that when Lions for sook the Mountains and Woods, to come and live in fruitful and fertil foils, it did fore-shew some great drought; and the like divination did Agarifia the Mother of Pericles make upon her dream, when the was with childe, for the thought the brought forth a Lion, and fo in short time after she brought forth Perièles, who was a valiant man, Alex. ab Al. and a great Conqueror in Gracia. The fight also of a Lion as a man travelleth by the high ways, is very ominous, and taken for an evil figne. There was also a Prophese given out by Pylbia, concerning Cypfelus, the fon of Aetion, which faid in this manner ;

> Concipit in petris aquila entoura Leonem Robustum, fevum, genua & qui multa resolvet. Hac bene nunc animis verfate, Corinthia proles, Qui colitis pulchram Pallenem, altamq, Corinthum.

Amonster like a Lion. The Images and several statues of Lions.
